123. Canteen Covers. The cloth cover will be cared for and repaired in accordance with the general instructions governing cloth equipment. The chape of webbing which holds the double hook is particularly subject to wear, but is easily replaced. Covers first issued were provided with double hooks of steel with brass rollers. These should be replaced with the all brass double hook now provided as soon as the chapes become badly worn.

124. These covers are provided with the Carr fastener. These fasteners are designed to open only in one direction in prolongation of the longer axis of the socket, so that in replacing sockets, due to defect or to too tight fit, they should be replaced so that this axis is in the direction of natural pull. An application of this principle would leave the front socket as it hangs on the belt in its present position, but would change the rear socket to a position approximately vertical.

125. Much difficulty has been had with the snap fasteners of these covers, due largely to the fact that sufficient allowance had not been left for the unusual shrinkage of this article, which brings an excessive strain on the fasteners. Wherever fasteners are defective or the cover is too tight the sockets should be raised approximately one-half inch. Snap fasteners sometimes stick, due to mud or dirt getting in behind and wedging the spring. Almost invariably such fasteners can be opened by grasping the socket section in one hand and the stud section in the other and twisting and pulling at the same time. If this fails it may be pried open, using the tack puller in the tool handle of the arm repair chest. On being opened, if uninjured, the socket should be freed from dirt by moving the spring from side to side and blowing. A drop of sperm oil will assist. An improvised spreading tool similar to that furnished for belt fasteners may be made by grinding down a broken firing pin.

126. The following are general instructions for replacing injured Carr fasteners:

(a) To Remove Defective Sockets. Pry up teeth of socket and remove washer on inside of cover; pull socket free from the outside.

(b) To Replace the Socket on the Canteen Cover. Locate the place for the socket by punching the cover with the canteen socket punch, using a piece of wood on the inside of the cover. Place the socket on the cover to engage the punching, taking care that the junction of the spring in the socket will be toward the top. Engage the washer with the socket from the inside and crimp the teeth of the socket.

(c) To Replace the Cap and Stud on the Canteen Cover Flaps. Place the cap on the flap and lay the flap over the anvil so that the Carr fastener cap will rest in the recessed cap of the anvil. Place the Carr fastener stud on the projection of the cap and resting the canteen stud set on the stud, deliver one or more smart blows with a hammer. If Carr fasteners are not available, repair snap fasteners as described under cartridge belts may be used. (For illustration of tools see Plate VI.)

127. If snap hooks break on mounted canteen covers, remove hook and chape and replace with double hook and chape. It has been prescribed that the canteen, model of 1910, issued mounted men, should be carried in the saddlebag.

The double hook is better adapted to dismantled work than the snap hook.

128. Cartridge Belts, Caliber .30. These belts should be repaired in accordance with the general instructions for the repair of cloth and web equipment. The greatest wear has occurred on the pocket flaps. Provision has been made to supply these pocket flaps separately and such changes have been made in recent designs of the belt as to permit the pocket flap to be readily replaced within the organization. The rear pockets when worn with the full pack also wear badly. Repair pockets are now issued to replace these worn pockets and obviate the necessity for replacing the entire pocket section.

129. To replace a worn flap, it is merely necessary to remove the three eyelets, if present, and rip open the seam. A new flap can then be inserted, and the seam resewed. To replace a worn pocket, cut off the worn pocket and overcast the ragged edges. The top of the repair pocket should be stitched securely to the top of the belt, but the bottom may be merely whipped in place to keep it from flapping.

130. Excessive wear is caused by the practice of inserting both clips with bullet end down and the failure to use the retaining strap. The retaining strap, if pushed down into the bottom of the pocket, tends to shorten the pocket and cause the flap to stretch tightly over the clips. The insertion of both clips with bullets down tends to stretch the top of the pockets. The tightly stretched webbing wears at every projection.

131. The webbing over the rear billet of the pocket sections has also been found to wear. This will largely be reduced by a change in design, but for belts now in service which have begun to wear at this point a protecting strip of cloth extending across the width of the belt may be added with advantage.

132. Snap Fasteners. Considerable trouble has been experienced, particularly along the southern border, from snap fasteners sticking, due to an accumulation of dirt caked behind the spring. It occurs mostly with fasteners that have remained closed for weeks or in fasteners which, having stuck, were deformed in opening. When a fastener sticks it should not be forced open, but grasp the pocket in one hand and the flap in the other and by twisting and pulling at the same time work it open. This will almost invariably be successful. But if this fails pry the fastener open, using the tack puller of the tool handle of the arm repair chest.

133. To ease the spring of fasteners that stick a tool has been provided which spreads the spring to the limit of the hole in the socket. See Plate V.

This spreading tool forms part of the set furnished post or regimental ordnance officers, but an equally efficient tool may be improvised by rounding off the end of broken firing pins. At least one such improvised spreading tool should be provided for each squad and the men encouraged to use it on every occasion when a socket starts to cause trouble. This should practically eliminate all trouble from this cause in the future. From time to time all snap fasteners should be opened and closed to see that they function properly. It may well be made a feature of the regular weekly inspection. A convenient way to spread and oil the spring at the same time is to dip the end of the spreading tool in sperm oil and force it a few times into the socket.

134. Difficulty has also been experienced in infrequent cases by studs pulling out. Both of these difficulties have been largely overcome, it is

believed, by improvements in the design of the fastener. Should a snap fastener not function satisfactorily or be insecure, it should be immediately replaced. For such repairs a special repair fastener has been provided and a set of tools furnished each post or regimental ordnance officer. See Plates V and VI.

135. The following general instructions are given for the replacement of defective snap fasteners:

(a) To Remove a Defective Socket. Place the cap in the five-eighths-inch hole of the anvil and drive out with the cap punch, taking care not to puncture the cap with too heavy a blow. (Until new anvils with holes and cap punches are issued, use a piece of wood with a five-eighths-inch hole and a 10-penny wire nail, squared off.)

(b) To Replace a Cap and Socket on a Cartridge Pocket Flap. Place the cap over the hole in the flap and lay the flap on the anvil so that the cap will rest in the recessed cap on the anvil. Place the socket over the projection of the cap with the axis of the spring parallel to the axis of the pocket. Insert the socket set into the socket and deliver one or more smart blows with a hammer. Great care should be taken to hold the socket set in line of the socket and cap.

(c) To Remove a Defective Stud. It is not easy to remove a defective stud. Fortunately there will be little occasion to remove a stud except when it is pulling out. Grip the head of the stud on the arm repair vise and with pliers and screw driver work the part off.

(d) To Replace a Stud on a Cartridge Pocket. Place a washer on a post, crimped edge up, and insert the post from the inside into the hole in the pocket. Place a washer on the post, crimped edge down, and the stud over this. Insert the anvil into the pocket and rest the snap fastener post on the post of the anvil. Rest the cartridge pocket with the anvil on a solid body, observing at the same time that the end of the interior retaining strap will not be caught under the anvil. Now place the stud set over the stud and deliver one or more smart blows with a hammer.

136. **Cleaning Rods, Models of 1910 and 1913.** Before using see that the sockets are cleaned out thoroughly and, in assembling, that the shoulders of the several joints are tight together. In using this rod, great care should be exercised to see that the rod is not bent. This is avoided by guiding the rod near the breech with the hand not used in forcing the rod through the bore. As parts become unserviceable they should be replaced by requisition on the proper supply officer.

137. **Cups, Model of 1910.** The general instructions in regard to the care of aluminum applies, but it should be remembered also that excessive heat will damage aluminum. In using the cups for cooking never allow contents to evaporate entirely.

138. The most frequent damage encountered is the pulling out of the hinge rivets. Much of this trouble can be overcome by keeping the rivets tight. If they pull out they should be replaced, using the repair rivet provided. The rivet should be driven home from the inside, and, with the head supported on a rivet block or piece of iron, the end is riveted over by light blows until a dome-shaped head is made. This head should then be formed and the rivet tightened, with the set furnished for the purpose. The sliding lock can be readily replaced with the wire cutter. If the hinge wire rusts out, the broken ends should be punched out and a new hinge pin put in and the ends riveted over. In cups of first issue, the wire was of steel; in cups of later issue, with a noncorrosive wire hinge, little trouble may be expected. If no hinge wire is available, a finishing nail of proper size may be used.

PLATE V.

139. Fork, Model of 1910. The fork is made of noncorrosive metal, and as a sanitary measure should be kept clean by washing with hot water and soap. The tines of the fork should never be used to pry open tops of cans, to extract corks, etc. Never permit knife, fork, or spoon to remain in vinegar or other foodstuffs for a long period, as verdigris will form. This corrodes the metal and is poisonous.

140. Haversack, and Pack Carrier. The haversack has been modified considerably with a view to increasing its serviceability. The principal changes are the substitution of a 2-inch webbing for the cloth portion of the suspenders, and the substitution of an over and under buckle for the sliding buckle as the adjustment feature of the front, pack, and rear suspenders. This gives nearly double the adjustment and facilitates repair should a snap hook break. A snap hook with replaceable spring has also been substituted for the snap hook with fixed spring and the wire hook of first issue. The meat-can pouch has also been made larger and the method of attaching has been improved. If no haversacks of later issue, as described above, are in the post or regiment, one may be obtained as a model on special requisition. When repairs are made involving replacement of parts they should follow as nearly as practicable the later issue.

141. To keep the number of items to be supplied as low as possible, whenever practicable repair materials are furnished in quantity by the yard and will be so requisitioned for by organizations. The quantities required may be readily determined by referring to the articles to be replaced as they appear on the drawing. For convenience the following table is given of the length and width of webbing required by the principal straps and suspenders:

Suspender, cotton webbing, heavy, 2 inches wide, 17 inches.

Front belt suspender, cotton webbing, heavy, 1 inch wide, 20.5 inches.

Rear belt suspender, cotton webbing, heavy, 1 inch wide, 14 inches.

Pack suspender, cotton webbing, heavy, 1 inch wide, 18 inches.

Haversack binding strap, cotton webbing, heavy, 0.625 inch wide, 11.5 inches.

Buckle chape, cotton webbing, heavy, 0.625 inch wide, 4 inches.

Carrier binding strap, cotton webbing, heavy, 0.625 inch wide, 32 inches.

It is not contemplated that requisitions shall be submitted in inches or fraction of inches, but rather yards and the larger fractions of yards.

142. The portion of the suspender which passes through the loop of the hook is particularly subject to wear. If the adjustment is shifted from time to time—say a quarter or a half an inch—it will do much to distribute the wear. The wire hooks and the snap hooks with fixed springs, as the supply of these on hand is exhausted, will be replaced by the new snap hook with replaceable spring. In some cases it may be necessary to use the wire cutter as pliers to force the spring into its seat. Broken coupling straps should be replaced with leather strap, if available, otherwise with three-quarter inch olive-drab webbing, until leather straps are obtainable.

143. Hand Ax, Model of 1910. Handles may be replaced by requisition on the proper supply officer. In the field split handles should be wrapped with cord.

144. Hand Ax Carrier, Model of 1910. General rules for the repair of web and cloth equipment apply. Hanger chape for double hook requires $6\frac{1}{2}$ inches 2-inch cotton webbing.

145. Knife, Model of 1910. The knife blade is of tempered steel, and when put away for long periods should be covered with a light film of oil to prevent rust. The knife should be kept clean. Do not use the blade of the knife as a pry. If only the point be broken the blade can be ground down to a new point. If a greater portion of the blade is broken off the knife should be replaced.

146. Magazines, Pistol. To remove a broken or defective spring force the magazine follower down until a nail or piece of wire may be slipped through one of the holes in the side of the magazine just under the follower. The follower may then be shaken out and the spring replaced.

147. Meat Can, Model of 1910. The meat can is made of sheet aluminum. This metal is attacked by an alkali, such as the concentrated solution resulting from partially evaporated hard water, or such as is used in the curing of ham, bacon, etc., and by fatty acids in general. The carrying of meat of any kind or other greasy substance in the meat can for a long period will result in the corrosion of the aluminum.

148. If the rim of the meat can becomes deformed, it should be straightened out before further use in such a manner as to permit the cover to lock in the body tightly. If the rivets securing the hinge to meat can become loose, a few blows of the hammer on the outside ends of rivets, the heads of the rivets being backed up on a piece of metal, will tighten them. If the hinge pin becomes loose, a nail can be used to replace it, the nail being cut with a service wire cutter and the ends of the nail headed over slightly with a few blows of a hammer. The meat can should be used until it becomes perforated or permanently unserviceable.

149. Pick Mattocks, Model of 1910. If the blade of the mattock is deformed it should be straightened in a vise. Broken handles should be replaced by requisition on the organization ordnance officer. In the field cracked handles should be wrapped with cord.

150. Shovel, Model of 1910. Do not use the side edges of the shovel blade as a mattock, as such treatment will deform the blade. If the blade becomes bent it should be straightened with a hammer on a block of wood. In the field split handles should be wrapped with cord.

151. Spoon, Model of 1910. The spoon is also made of noncorrosive metal and is cared for as described for the fork.

152. Wire Cutter, Model of 1910. Do not drop the wire cutter or otherwise subject the insulation to injury. It is brittle and may easily be chipped. If the soft rubber tips become loose or lost, they should be cemented on with rubber cement, care being taken that the surfaces to which the cement is applied are perfectly dry. If practicable, the surfaces should be cleaned with benzine or gasoline and sandpapered.

Paragraphs 153-221 have been omitted because they have no application to Infantry.

REPAIR OF ARMS, SIGHTS, AND RANGE FINDERS.

222. Repair of arms is limited primarily to the replacement of unserviceable parts. In this manner they may be continued in a serviceable condition indefinitely, but for the purposes of accounting and issue the identity of the arm is considered to rest in the numbered part—in hand arms, the blade; in firearms, the receiver. With the exception of the cavalry saber, old model, which can not be repaired within the organization, the necessary tools and parts are issued for replacement so that complete repairs may be made within the organization.

223. Automatic Machine Rifle, Caliber .30, Model of 1909. The automatic machine rifle is literally a machine, a gas engine, and as such requires unusual care, and it is subjected to unusual wear and strain. That it may be handled efficiently, the principles of its operation and its individual peculiarities must be thoroughly understood. Because of the technical considerations which arise in connection with their maintenance, automatic machine rifles and guns are placed under armament officers, and problems of repair or replacement not covered directly in the manuals or other general instructions should be referred

promptly to them in accordance with the general orders published on that subject. The disposition of parts not expendable rests with the armament officer. (A. R., par. 1538.)

References: Ordnance Department Pamphlet No. 1926, dated March 19, 1912, "Cleaning and care of rifle," pages 33-36; Ordnance Department Pamphlet No. 1926A, dated December 30, 1913, "Dismounting the rifle," pages 11-14; "Assembling the rifle," pages 14-16; "Breakages," page 17; "Malfunctioning of parts," pages 19-23.

224. Automatic Pistol, Caliber .45, Model of 1911. This pistol, like the automatic rifle, is a gas-operated machine, semiautomatic in its operation. It has relatively few parts and requires but reasonable care. The working parts must be kept clean and lightly oiled to insure proper functioning. Unserviceable parts are easily replaced. Slides which require rebluing may be exchanged by organization commanders without the action of a surveying officer.

References: Ordnance Department Pamphlet No. 1866, revised February 14, 1914, "To dismount and assemble," pages 11-13; "Important points," pages 16-17.

225. Bayonet and Bolo. The only parts likely to require replacement are the bayonet-scabbard catch, bayonet-scabbard spring, and the bayonet catch. These are replaced by removing the grips which are secured by the bayonet screws and the bayonet nut. The bolo is similarly repaired.

226. Colt Double-Action Revolver, Caliber .45, Model of 1909. This arm, which was issued only to troops serving in the Philippine Islands, is now being withdrawn from the service. Repairs are infrequent. Revolvers which are unserviceable or irreparable within the organization will be surveyed and turned in.

References: Ordnance Department Pamphlet No. 1927, revised June 30, 1913, "To dismount and assemble," pages 7-8; "Important points," pages 9-10.

227. Cavalry Saber, Model of 1913. All parts can be disassembled by removing the two grip screws and the screw at the end of the pommel. The guard which is the most likely part to require replacement can readily be replaced.

Reference: Ordnance Department Pamphlet No. 1715, pages 18-19.

Paragraph 228 has been omitted because it has no application to Infantry.

229. Rifle, Caliber .30, Model of 1903. The regular service is thoroughly familiar with the repairs and replacements hitherto authorized. They are well described in the ordnance pamphlet.

References: Ordnance Department Pamphlet No. 1923, revised March 20, 1914, "Precautions," pages 32-35; "Care of the rifle," pages 37-39; "Repairs," pages 44-45.

230. Telescopic Sights and Range Finders. These are optical instruments of great accuracy and value and as such should be handled with great care. The instructions regarding their adjustment and care are given in detail in the appropriate pamphlets. These should be followed explicitly. When disassembling is authorized it should only be done by a competent person, preferably under the supervision of an officer.

231. Telescopic Musket Sight. These sights are fitted and adjusted to a special selected rifle. It is not intended that this sight should be permanently separated from the rifle to which it belongs. In other words, the rifle and its telescopic musket sight constitute a unit. Should the sight require repairs, except as noted hereafter, or should the barrel of the special selected rifle require replacing, the rifle and sight will be surveyed and turned over to the proper supply officer for immediate shipment to the designated arsenal.

232. The rubber eye cap must not be deformed in putting the sight into its pouch. Should it become so deformed as to be unserviceable it will be

replaced, a special requisition to be submitted for the necessary eye cap. If the eye cap is not wholly ruined it may be re-formed by boiling until plastic and re-forming over a wooden form similar in shape to the inner surface of a new rubber eye cap.

Reference: Ordnance Department Pamphlet No. 1957.

233. Range Finder, Self-contained (80-centimeter). These instruments, while identical in function, may be of different models. Very delicate adjustments are of necessity a feature of these instruments; and while they have been made surprisingly rigid they require reasonable care to insure the best results. They should be intrusted only to careful and responsible persons. When difficulties are encountered which are not provided for in the pamphlet, prompt and full report should be made to the department commander.

Reference: Ordnance Department Pamphlet No. 1909 (in course of preparation).

INACCURATE RIFLES.

234. Acceptance Test. The determination of unserviceability of rifle barrels on account of inaccuracy has been by actual test since July, 1913. This test, described in Bulletin 24, 1913, has been recently amended (Bulletins Nos. 15 and 31, War Dept., 1915) to eliminate from the actual test of firing by the use of suitable gauges those barrels which experience has shown, with but few exceptions, will be entirely serviceable or unquestionably inaccurate. This should do much to eliminate the labor of testing the rifles of a regiment.

It was also found that the conditions under which the accuracy test was usually fired introduced, of necessity, conditions tending to produce inaccuracy and that the standard actually attained approached closely to that required of new rifles, so that many barrels turned in as inaccurate were entirely serviceable. The mean radius has therefore been increased to 6.5" and 13" for 300 and 500 yards, respectively.

It will usually be found most convenient and it is much to be preferred that this test be made at the end of the target season. Such an arrangement has the advantages that—

(a) The range is in commission.

(b) The performance of the rifles of the command is a matter of immediate knowledge, which should exclude from the test many of the rifles merely thought to be inaccurate.

(c) The men who fire are in the best condition by reason of their recent practice.

(d) The weather conditions are usually most favorable.

In selecting men for testing rifles officers should be selected, if practicable, or men chosen because of their known integrity and ability at slow fire.

REPLACEMENT OF INACCURATE RIFLE BARRELS.

235. Heretofore, when rifle barrels were found inaccurate according to the prescribed accuracy test (Bulletin 24, W. D., 1913, as amended), the entire rifle was replaced. Hereafter when barrels are found inaccurate by test, the procedure will be as follows:

(a) The rifles submitted for accuracy test by organizations, having been tested by the officer designated to conduct test in accordance with instructions of Bulletin 24, War Department, 1913, as amended, his report on the same, in duplicate, having been approved by the commanding officer, is presented to the proper ordnance supply officer, who will immediately submit special requisition for the necessary number of barrels and receivers, assembled, to replace the number of unserviceable barrels shown on the report.

(b) Organization commanders on the completion of the test will submit to the action of a surveying officer such rifles of the organization as are found inaccurate. No articles other than inaccurate or unserviceable rifles will appear on the survey report, and for each rifle the following information will be given: Number of rifle, arsenal, number of target seasons fired (if exact number is unknown, then the maximum number known), the mean radius of dispersion at the ranges tested (as shown by the report of test), together with any other information which would enable the surveying officer to determine if the rifle was rendered unserviceable through fair wear and tear in the service.

(c) On receipt of the barrels and receivers, assembled, the ordnance supply officer will hold them for issue until such time as it will be practicable to make the adjustment of the front sight (movable stud), and on the direction of the post or regimental commander he will issue, on the approved survey reports referred to above to the various organizations the number required as shown thereon. The unserviceable barrels and receivers will be replaced by new barrels and receivers within the organizations in accordance with the instructions given in Ordnance Department Pamphlet No. 1923 (revised Mar. 20, 1914, pp. 36-37); the former will be turned over to the supply officer for shipment to an arsenal.

236. Due to the tendency of wood to change its shape under varying conditions of moisture, in assembling stocks to barrel and receivers, the following precautions should be taken:

(a) **See that the Upper Band Does Not Bind.** If the upper band binds tightly, scrape the stock until it slips on easily. If it is difficult to insert the upper band screw, ream out the hole in the stock until the screw slips readily into place.

(b) **See that the Receiver Bears on the Stock in Rear of the Recoil Lug.** With the rear guard screw tight, loosen and tighten the front guard screw. If there is an appreciable amount of space between the receiver and the stock, shim up with paper or thin cardboard on the flat surface in rear of the recoil lug until good bearing is obtained. It would be well to inspect rifles that have been long in storage for similar defects.

237. The Adjustment of the Front-sight Movable Stud. When it becomes opportune to make this adjustment for the rifles found inaccurate during the year, an officer should be especially selected, by reason of his interest in and knowledge of shooting, to supervise this work. The necessary number of selected riflemen and pitmen should be detailed to assist in the work, together with such artificers or mechanics as are required.

238. A range of 100 or 200 yards is required—a 200-yard range is preferred. Targets should be prepared by painting on the back of standard targets black crosses with vertical and horizontal arms approximately 20 inches long. If the targets are to be used on a 100-yard range, the width of the vertical and horizontal arms should be 2 inches; if on a 200-yard range, these arms should be 4 inches wide. These widths at their respective ranges correspond to one-half point windage. Starting with the movable stud centrally located, it should be adjusted until four out of five shots lie within the vertical lines. This should give a mean error of probably less than one-fourth point of windage. The firing should be done under favorable weather conditions and everything done to insure accuracy of firing. This adjustment of the front sight is not difficult and should seldom require more than 10 shots per rifle. If it is remembered that a movement of the movable stud corresponding to one-half point of windage moves the center of impact the width of the vertical line at the target, the proper amount to move the front sight can readily be determined and verified by firing a string of shots.

239. The movable stud having been properly adjusted, its position should be immediately marked by a pencil mark across the joint. This marking should, as soon as it is practicable, be made permanent by nicking with the five-sixteenths-inch cold chisel, furnished in the kit of tools for securing the front sight. The movable stud is issued undrilled. To secure it in place it is necessary to drill a hole for the front-sight screw. For this purpose the kit of tools is issued each post or other supply officer.

240. **Securing the Movable Stud.** To secure the movable stud proceed as follows:

(a) With the vise of the arms repair chest secured to a bench or box and its jaws protected by cloth or copper vise clamps, support the butt of the rifle on the bench and grasp the muzzle at the fixed stud in the vise.

(b) See that the movable stud has not been moved, as shown by the chisel mark, and, with one of the small drills securely clamped in the chuck of the breast drill, drill a hole in the movable stud approximately three-sixteenths inch deep, using the hole already drilled in the fixed stud as a jig or guide.

CAUTION. Be careful not to burr the thread in the fixed stud. Keep the drill well oiled. Put little pressure on the drill until it has been well started or the drill may be broken or the stud moved.

(c) Change the drill for a reamer and ream out the hole already drilled.

Caution. Feed the reamer in very slowly or it may wedge and break.

(d) On the possibility that the threads in the fixed stud have been injured in drilling, the thread should be cleaned out with one of the taps, using the tool handle of the arms repair chest as a handle.

(e) Screw the front-sight screw well home.

241. The ammunition required for adjusting front sight will be furnished by the organization to whom the rifles belong.

War Department,

Office of the Chief of Ordnance,

Washington, July 12, 1915.

COMPONENT PARTS OF BAYONET, MODEL OF 1905.

(Twelve in number.)

Bayonet Blade.
 Bayonet Catch.
 Bayonet Grip, Left.
 Bayonet Grip, Right.
 Bayonet Guard.
 Bayonet Nut.

Bayonet Rivets (2).
 Bayonet Scabbard Catch.
 Bayonet Screw.
 Bayonet Spring.
 Bayonet Washer.

DESCRIPTION AND NOMENCLATURE OF RIFLE.

The Rifle is shown in Figs. 1 and 2.

The Barrel, with the Fixed Stud and Fixed Base attached, is shown in Fig. 3. It is 24.006 inches in length, and the rifling consists of four plain grooves, 0.004 inch deep. The grooves are three times the width of the lands. The twist is uniform, one turn in 10 inches.

The muzzle is rounded to protect the rifling, and the tenon at the rear is threaded for the purpose of securing the receiver to the barrel.

United States Rifle, Caliber .30, Model of 1903.

Fig. 3.

On the top in rear of the fixed stud is stamped the Ordnance escutcheon, the initials of the place of manufacture, and the month and year. Those manufactured prior to 1906 are stamped "05" without the month.

The removal from the barrel of the fixed stud, fixed base, or receiver should never be attempted except by competent workmen, in armories fully equipped with the necessary tools and appliances.

The Receiver, Fig. 4, top view, Fig. 5, right side view, and Fig. 6, front end view, has the hole A, called the well, which receives the bolt; the magazine opening B; the channel C, for the top locking lug; the cut-off seat D; the cut-off thumb piece recess E; ejector pin hole F; clip slots G; cocking piece

groove H; sear nose slot I; extracting cam J; sear pin hole K; gas escape hole L; recoil lug M, in which is the hole for the front guard screw; the recesses for the bolt locking lugs N N; the locking cams O O; the locking shoulders P P; the safety shoulder Q; and the cartridge ramp R.

On the upper surface of the front end is stamped the serial number of the rifle and the place of manufacture.

The Bolt, Fig. 7, top view, Fig. 8, rear view, and Fig. 9, front view, has the handle A; the locking lugs B B, which sustain the shock of the discharge, the one on top being slotted to allow the passage of the point of the ejector; the safety lug C, which comes into play only in the event of the locking lugs yielding under powder pressure; the extractor collar groove D; extracting cam E; sleeve clearance F; safety lock spindle notch G; sleeve lock notch H; firing pin hole I; cocking cam J; cock notch K; extractor tongue groove L; gas escape hole, not shown in cut, between the locking lugs; the rim M; and two small circular notches, not shown in cut, on the left side of the slotted locking lug; this side of the lug rotates 90° when the bolt is drawn back for loading, and one of the notches engages with the bolt stop pin A, Fig. 10, in either single or magazine loading, retaining the bolt in place in the open position.

The Bolt Stop, Fig. 10, consists of the pin A and the flat spring B, riveted together in manufacture. The pin projects through its hole in the receiver just in front of the cut-off opening, and is held in place and operated by the spring which fits into a slot in the receiver in the rear of the magazine.

The Sleeve, Fig. 11, top view, and Fig. 12, left side view, has the barrel A, which is threaded for the purpose of securing the sleeve to the bolt; the safety lock seat B; the safety lock plunger groove C; the recesses D, for retaining the safety lock when turned to the right or left; the recess E, for retaining safety lock in dismounting bolt mechanism; the bevel F, for dismounting the safety lock from the sleeve; the sleeve lock recess G; and the sleeve lock pin hole H. There are also the safety lock spindle and firing pin holes, the cocking piece groove and the undercut for the rear end of the bolt. None of the last four is shown in the cut.

The Sleeve Lock, Fig. 13, left end view, and Fig. 14, under side view, has the spindle A, which is bored out to receive the sleeve lock spring; the latch B, and the sleeve lock pin groove C. It is designed to prevent accidental turning of the sleeve when the bolt is drawn back.

The Sleeve Lock Spring and Pin are shown in Fig. 15.

The Firing Pin, Fig. 16, consists of the firing pin rod A and the cocking piece B, which are made separately, the former being screwed into the latter and riveted in assembling; the length of the rod is so adjusted that when the front end of the cocking piece bears against the interior shoulder of the sleeve

the striker point will project the proper distance beyond the face of the bolt. Other parts are the knob C, lug D, cocking cam E, nose F, sear notch G, locking shoulder H, locking groove I, neck J, and head K.

The Firing Pin Sleeve, Fig. 17, sectional view, fits over the front end of the firing pin and the rear end of the striker, covering the joint hole, and prevent-

ing accidental separation of the firing pin and striker; its rear end forms the front bearing for the mainspring.

The Striker, Fig. 18, has the point A, the body B, the shoulder C, and the joint hole D, by which it is secured to the firing pin. The annular grooves on

the striker retain the lubricating oil and prevent the accumulation of rust thereon.

The Mainspring is shown in Fig. 19.

The Extractor, Fig. 20, inside view, Fig. 21, top view, and Fig. 22, front end

Fig 19.

view, has the hook A, by which the cartridge case is extracted from the chamber; the tongue B, which rides in its groove at the front end of the bolt; the lug C C, which is undercut to receive the ears on the lugs of the extractor collar; the gas escape hole D, and the back rest E, which is curved to fit the circle of the bolt.

The Extractor Collar, Fig. 23, end view, and Fig. 24, side view, has the ears A A, which fit in the undercuts on the inside of the extractor, by which means and with the assistance of the extractor tongue and groove the extractor is held in place. The collar is bent into position on the bolt in manufacture, and should not be removed unless proper tools are at hand to replace it.

The Ejector, Fig. 25, has the point A, the heel B, and the ejector pin hole C. It is hinged on the ejector pin in its recess in the left side of the receiver, ejection being accomplished by the slotted lug on the bolt coming in contact with the heel when the bolt is drawn to the rear.

The head of the Ejector Pin, Fig. 26, is slotted for the purpose of providing sufficient tension to hold the pin in its place during the process of assembling.

The Safety Lock, Fig. 27, rear and side views, consists of thumb piece A, the spindle B, spring C, and plunger D, assembled in manufacture. It has the cam E, the locking groove F, the cocking piece groove G, the plunger hole H,

and the bolt clearance I. The spring and plunger are shown in Figs. 28 and 29, respectively; the latter, projecting into its groove in the sleeve, under the action of the spring, prevents any movements of the safety lock to the rear; and when in the recesses in the groove retains the safety lock turned either to the right or left or in the vertical position for dismounting bolt mechanism. The words "Safe" and "Ready" impressed on opposite sides of the thumb piece indicate that the firing mechanism is locked or ready for firing.

The Guard, of which the body of the magazine forms a part, is shown in Fig. 30, top view, and Fig. 31, right side view. Its parts are: guard bow A,

front tang B, rear tang C, front guard screw stud D, magazine walls E, rear end of magazine F, floor plate pin hole G, front guard screw hole H, rear guard screw hole I, trigger slot J, floor plate lug slot K, floor plate spring hole L, floor plate catch slot M, ramp N, and the lightening cut O.

The Guard Screw Bushing, Fig. 32, fits tightly into the stock between the receiver and the rear tang of guard, and serves as a stop for the screw, preventing its being screwed down tight enough to bend the guard.

The Guard Screws, front and rear, Figs. 33 and 34, secure the guard to the receiver.

The Floor Plate, Fig. 35, inside view, and Fig. 36, sectional view, has the tenon A, which fits into a groove at the front end of the magazine and with the assistance of the floor plate catch retains the floor plate securely in its place at the bottom of the magazine; the lug B, which is slotted to receive the floor plate catch and has a tenon on its front end which fits into a slot in the

magazine; the cavity C, through which the floor plate catch is released by means of the end of a bullet; the magazine spring recess D, and the magazine spring seat E.

The Floor Plate Catch, Fig. 37, hinges on the Floor Plate Pin, Fig. 38, and

is operated by the Floor Plate Spring, Fig. 39. Its function is to retain the floor plate in its seat.

The Magazine Spring is shown in Fig. 40; the smaller end slides into the undercuts on the follower, and the larger end fits in the same way into the undercuts in the floor plate.

Fig. 35.

Fig. 36.

The Follower, Fig. 41, top view, and Fig. 42, right side view, has the rib A, which serves to locate the cartridges in the magazine and guides the last cartridge into the chamber; the front stop for the magazine spring B; the rear stop for magazine spring C; and the lugs D, in which are the undercuts for the magazine spring.

The Cut-off, Fig. 43, side view, Fig. 44, rear view, and Fig. 45, outer edge, has the thumb piece A, body B, magazine fire groove C, dismounting groove D, cut-off spindle hole E, cut-off plunger hole F, cut-off screw hole G, and the serrature H. The words on opposite sides of the thumb piece indicate to the

firer whether the magazine is "on" or "off." When the cut-off thumb piece is turned down, indicating "off," and the bolt is drawn to the rear, the rear end

Fig. 41.

Fig. 42.

of the slotted locking lug stops against the projecting front end of the cut-off body. The piece is then ready for single loading. When the cut-off thumb

piece is turned up, indicating "on," and the bolt is drawn to the rear, the rear end of the slotted locking lug stops against the shoulder at the rear end of

the magazine fire groove. The piece is then ready for loading from the magazine. When the cut-off thumb piece is in the intermediate position, the dismounting groove D permits the bolt to be drawn entirely out of the receiver.

The Cut-off Spindle, Fig. 46, has the cut-off screw groove A and the dismounting groove B.

The Cut-off Screw, Fig. 47, goes through the cut-off from the outer edge of the thumb piece, its end fitting into the groove in the cut-off spindle.

The Cut-off Spring, Fig. 48, and the Plunger, Fig. 49, retain the cut-off in its seat in the receiver with the thumb piece turned up for loading from the magazine, down for single loading, or in the intermediate position for permitting the removal of the bolt. The spindle head works in a groove in left side of receiver, having three small notches corresponding to the above positions of the cut-off.

The Sear, Fig. 50, top view, and Fig. 51, right side view, has the sear nose A,

pin hole B, trigger slot C, trigger pin hole D, and sear spring seat E, which is occupied by the Sear Spring, Fig. 52, its upper end bearing against the receiver.

The Sear Pin, Fig. 53, hinges the sear in the receiver.

The Trigger, Fig. 54, right side view, and Fig. 55, front view, is hinged in its slot in the sear by the Trigger Pin, Fig. 56. It has the finger piece A, which is knurled to prevent slipping of finger; the bearing B; trigger pin hole C; heel D; and the stop E.

The Front Sight, Fig. 57, is secured in its slot in the movable stud by the Front Sight Pin, Fig. 58; the pin is tapering, and its small end is driven in from the right and the ends upset to prevent accidental removal.

The Fixed Stud and Movable Stud, with Front Sight in place, are shown assembled, Fig. 59, right side view, and Fig. 60, front view. The Fixed Stud A has a slot B, which, bearing on a lug on the upper side of the barrel, prevents

lateral displacement of the stud; and hole C, for the Stud Pin, which prevents longitudinal displacement of the stud. The Movable Stud D has the front sight pin hole E. It is held by the undercut slot in the fixed stud and secured from lateral displacement by the Front Sight Screw F. The recess for this screw is not drilled in the movable stud until the correct position of the movable stud has been determined. The rear face G, of both the fixed stud and movable stud, is serrated to prevent any reflection of light from this surface interfering with the aiming.

Fig. 61.

Fig. 62.

The Fixed Base, Fig. 61, rear end view, and Fig. 62, right side view, has the holes A and B, for the base pin and base spline, respectively, by which it is firmly secured to the barrel and lateral and longitudinal movement prevented; the undercut D, for the tenon of the hand guard; the lightening cuts E; the barrel hole F; the pivot lug G, for the movable base; the undercut H, for the lip on the rear end of the movable base; the undercut I, for the windage screw and the lip on the front end of the movable base; the lug J, on the top

Fig. 63.

Fig. 64.

of which are two zero marks for the wind gauge graduations, and the chamfer K, the seat for the windage screw collar. This chamfer is carried to the rear to permit of the assembling of the fixed base and the windage screw. On the left side of the front lug the chamfer corresponding to K is merely a conical recess for the head of the windage screw.

The Base Spline locates and prevents the base from turning on the barrel.

The Base Pin, similar to the base spline, prevents longitudinal movement of the base on the barrel.

The Movable Base, Fig. 63, top view, and Fig. 64, right side view, has the ears A, in which are the holes B, for the joint pin, which serves as a hinge for the leaf; the wind gauge graduations C, each point of which corresponds to a lateral deviation of 4 inches for each 100 yards; the lip D, which fits in the undercut in the rear end of the fixed base; the spring opening E; the spring seat F, which is undercut to admit the lip on the front end of the base spring; the lip G, in which is a worm gear for the engagement of the windage screw; the pivot hole H, for the pivot lug on the fixed base, and the shoulders I, on which the front end of the leaf rests when down. The hole K is made for convenience in manufacture.

The Windage Screw consists of the screw, collar, spring, knob, and pin, Figs. 65, 66, 67, 68, and 69, respectively. The taper head of the screw fits into

the conical recess in the left side, and the taper of the collar into the chamfer in the right side of the fixed base; the thread on the screw engages the worm gear in the lip of the movable base. Under the action of the spring, lost motion due to wear is prevented between the windage screw and the movable base and between the windage screw and the front lug of the fixed base.

The Base Spring, Fig. 70, top view, and Fig. 71, side view, has the lip A, which fits in the undercut in its seat in the movable base; the free end B, and the hole C, by which, with the aid of a drift made for the purpose, the spring is assembled or dismounted by driving it into or out of its seat in the movable base.

The Joint Pin, on which the leaf hinges, is shown in Fig. 72. It is cylindrical, with rounded ends, and fits tightly in the ears of the base.

The Leaf, Fig. 73, top view (when down), and Fig. 74, right side view, has the joint A, in which is the joint pin hole; the rib B; the undercut C, for the drift slide, and the sighting notch D. The free end of the base spring bears against the lower end of the leaf and maintains it in either its lowered or raised position. The leaf is graduated from 100 to 2,850 yards. The lines extending across one or both branches of the leaf are 100-yard divisions, the longer of the short lines are 50-yard and the shorter lines 25-yard divisions.

The Drift Slide, .05 Peep, Fig. 75, top view (leaf down), has the peephole A, 0.05 inch in diameter; the field view B; the drift slide pin C, riveted to the slide in manufacture, and the notches D. The lines on either side of the peephole and lower notch enable the drift slide to be accurately set at any desired graduation on the leaf.

As the slide is moved up or down on the leaf the drift slide moves with it and at the same time has a lateral movement in the undercut between the branches of the leaf, thus automatically correcting for drift. This movement corrects for all drift up to 600 yards, but for only part of the drift beyond that range.

Fig. 73.

Fig. 74.

Fig. 75.

With the leaf up, ranges from 100 to 2,350 yards can be obtained through the peephole; from 100 to 2,450 yards through the lower notch at the bottom of field view; and from 1,400 to 2,750 yards through the upper notch in the upper edge of the drift slide.

Fig. 76.

Fig. 77.

Fig. 78.

The 2,850-yard range is obtained through the sighting notch in the upper end of the leaf.

With the leaf down and using the battle sight notch in slide cap the sights are set for 547 yards or battle line firing for the down position of the slide.

Fig. 79.

Fig. 80.

Fig. 81.

Fig. 82.

Fig. 83.

The Slide, Fig. 76, top view (leaf down), Fig. 77, front view (leaf down), and Fig. 78, right end view, has the leaf slot A; the clearance B, for the open notch in the drift slide; the slide cap screw hole C; slide binding screw hole D; slide cap pin hole E, and the dovetailed groove F, for the slide cap.

The Slide Cap, Fig. 79, top view (leaf down), and Fig. 80, cross section,

Fig. 84.

Fig. 85.

has the battle sight notch A, slide cap screw hole B, slide cap pin hole C, the groove D, for the drift slide pin; and the clearance E, for the upper notch in the drift slide.

The cap is attached to the slide by entering the dovetailed groove at the right and by the slide cap screw at the left, thus securing the slide to the leaf. The Slide Cap Screw is shown in Fig. 81.

The Slide Cap Pin, Fig. 82, is inserted in the pin hole E, in the slide, Fig. 76,

Fig. 86.

Fig. 87.

Fig. 88.

and fitting into a groove in the Slide Binding Screw, Fig. 83, prevents the accidental removal of the latter.

The Stock is shown in Fig. 84, top view, and Fig. 85, right side view. The parts are the butt A; small B; magazine well C; barrel bed D; air chamber E, which reduces the charring effect of a heated barrel on the stock; hole for

Fig. 89.

Fig. 90.

butt plate screw, small, and seat for the butt plate tang F; butt swivel plate seat G; mortise for receiver tang lug and hole for rear guard screw H; mortise for sear and slot for trigger I; cut-off thumb piece recess J; mortise for recoil lug on receiver K; bed for fixed base L; grasping grooves N; shoulder for lower band O; bed for lower band spring P; shoulder for upper band Q;

channels for decreasing weight R; upper band screw hole S; and the stock screw hole T. The large hole in the butt is for decreasing weight, and the smaller one is a pocket for the combination oiler and thong case or spare part container.

The initials of the inspector and the year of fabrication are stamped on the left side in the rear of the cut-off thumb piece recess.

The Hand Guard, Fig. 86, right side, and Fig. 87, bottom or inner surface, has the swell A, for the protection of the rear sight; the shoulder B, for the lower band; the shoulder C, for the upper band; the rear tenon D, which enters the undercut in the fixed base; the front tenon E, which enters the undercut in the upper band; the clearance F, for the windage screw knob; air

Fig. 97.

Fig. 98.

Fig. 99.

chamber H, and recess I, for the Hand Guard Clips which are shown in Fig. 88. The hole shown in the cut near the rear end of the inner surface is made for convenience in manufacture. At the swell A a groove is cut for sight clearance.

The Butt Plate is represented in Fig. 89 and Fig. 90. The parts are toe A;

tang B; cap hole C; cap ears D, through which are the pin holes; spring lug E; hole for butt plate screw, large, F; and hole for butt plate screw, small, G. A notch is cut into the edge of the cap hole to facilitate the opening of the cap. For this purpose the flange of the head of a cartridge case can be used. The butt plate is checked for the purpose of insuring a firm seat at the shoulder in firing.

The Butt Plate Cap, Fig. 91, Fig. 92, and Fig. 93, has the pin hole A and the thumb notch B. The cap is hinged between the ears of the butt plate on the butt plate pin and is retained either closed or open by the free end of the Butt Plate Spring, Fig. 96, which bears on the heel C. The cap is checked to match with the butt plate.

The Butt Plate Pin, Fig. 95, after being driven into the holes in the ears of the butt plate and cap, has its ends slightly upset.

Fig. 104.

Fig. 105.

Fig. 106.

Fig. 107.

The Butt Plate Spring Screw, Fig. 94, secures the spring to the lug on the butt plate and is firmly screwed against the spring.

The Stock Screw and Nut, Fig. 97, are assembled transversely through the stock between the magazine well and slot for trigger. The thread end of stock screw is upset when in place.

The large and small Butt Plate Screws, Figs. 98 and 99, secure the butt plate to the stock.

The Butt Swivel includes the plate, swivel, and pin assembled.

Fig. 108.

Fig. 109.

The Butt Swivel Plate, Fig. 100, has the holes A for the swivel screws; B for the swivel, and C for the swivel pin.

The Butt Swivel, Fig. 101, is retained in the plate by the Butt Swivel Pin, Fig. 102.

The Butt Swivel Screws are the same as the butt plate screw small (see Fig. 98).

The Upper Band, Fig. 103, has the bayonet lug A; the ears B, in which are the holes for the stacking swivel screw; the upper band screw hole C, and the undercut D, for the front tenon on the hand guard.

The Upper Band Screw, Fig. 104, secures the band to the stock, the thread under the head engaging the hole in right side of the band.

The Stacking Swivel, Fig. 105, is hinged by the lug A between the ears B, of the upper band, on the Stacking Swivel Screw, which is like the screw shown in Fig. 106, but slightly longer. The threaded end of the screw is upset, after assembling, to prevent its being lost.

The Lower Band Swivel, Fig. 107, is hinged by its lug A, between the ears of the lower band, on the Lower Band Screw, Fig. 106. The threaded end of the screw is upset when in place.

The Lower Band, Fig. 108, has the ears A and the screw holes B; the front or upper end is designated by the letter "U." The lower band and swivel are split between the ears in order to give better adjustment to the stock and hand guard and permit removal of the band without marring the stock.

The Lower Band Spring, Fig. 109, has the notch A, which holds the band in place, and the spindle B, which retains the spring in the stock.

THE BAYONET, MODEL OF 1905, AND BAYONET SCABBARD.

The Bayonet, Model of 1905, is shown in Fig. 110, right side view, with guard and tang, cross-sectioned, and right grip removed, and in Fig. 111, upper or back view, with blade cut off a short distance from the guard.

The blade A, the tang B, and the pommel C are forged in one piece; the front or lower edge is sharp along its entire length and the back for a distance of 5 inches from the point.

The blade is stamped on its left side with the ordnance escutcheon and the initials of the place and year of manufacture, and on the right side with the letters "U. S." and the serial number.

Immediately in the rear of the guard D the tang swells and is recessed to receive the scabbard catch E and the bayonet spring F. The swell in the tang also serves as a seat for the guard, which is riveted to the blade in manufacture.

The opening in the tang and pommel for the bayonet catch H connects with the recess in the swell of the tang and allows the front end of the bayonet catch to enter its seat in the bayonet scabbard catch. The undercut groove I receives the stud on the upper band when the bayonet is fixed, the bayonet being held in place by the bayonet catch projecting through the hole K.

The Bayonet Guard, Fig. 112, rear view, has the barrel hole A; the mortise B, for the blade; the cut C, for the bayonet scabbard catch and scabbard mouthpiece hook; and the clearance cut D, for the scabbard mouthpiece hook. There are also two holes for the bayonet rivets not shown in cut, by means of which the bayonet guard is riveted to the blade.

The Bayonet Scabbard Catch, Fig. 113, side view, has the thumb piece A; the hook B, which retains the bayonet in the scabbard by engaging the scabbard mouthpiece hook; and the hole C, which receives the point of the bayonet catch.

The Bayonet Spring is shown in Fig. 114.

The Bayonet Catch, Fig. 115, side view, has the point A; the hole B, which is a clearance for the bayonet screw; and the hook C, which, projecting from the hole K, in the pommel, engages the bayonet lug on the upper band and retains the bayonet in its place on the rifle.

The Bayonet Grip, Right, outside view, is shown in Fig. 118. The hole is counterbored to receive the Bayonet Washer, Fig. 119. A corresponding hole

Fig. 110.

Fig. 111.

in the left grip is counterbored to receive the Bayonet Nut, Fig. 120. The washer the right grip receives the head, and the nut in the left grip receives the thread of the Bayonet Screw, Fig. 121, by means of which the grips are attached to the tang of the bayonet. The inner surfaces of the Bayonet Grips, Right and Left, are shown in Figs. 117 and 116, respectively; there are the

clearance cuts, A for the bayonet catch, B for the shoulder on the pommel, C for the swell of the tang, and the hole D for the bayonet screw.

The Bayonet Scabbard, Model of 1905, Fig. 122, side view and edge view, and Fig. 123, cross section of upper end, has the wooden body A, made in two pieces and glued together; the rawhide cover B, which increases the strength

of the scabbard; the leather cover C; the mouthpiece bushing P; the mouthpiece top D; the mouthpiece body Q, riveted to the wooden body by the rivets E E; the mouthpiece hooks F F, either of which by its engagement with the hook of the bayonet scabbard catch on the bayonet retains the bayonet in its place in the scabbard; the scabbard hook G, attached to the body by

the hook rivet H, which passes through the inside and outside washers I and K, and the stop washer L; the fastener M, and the drain eyelet N. An offset on the lower end of the hook, traveling in its recess in the stop washer, limits the oscillation of the hook to 50 degrees on each side of the vertical.

Note: The cavalry is equipped with the United States rifle, caliber .30, model of 1903, but without the bayonet or bayonet scabbard.

Fig. 122.

Model of 1906.

Fig. 123.

Fig. 124.

Fig. 125.

Model of 1910.

The Bayonet Scabbard, Model of 1910, Fig. 124 and Fig. 125, consists of a wooden body covered with rawhide, over which is sewed a duck cover, or is fitted a woven fabric cover, olive-drab in color. The bayonet is held fast in the scabbard by means of two mouthpiece hooks on opposite sides of the mouthpiece top. The scabbard is fastened to the belt or pack of the soldier by a double-hook which is attached to the scabbard by the duck hanger sewed to the cover.

APPENDAGES.

The Drift Slide No. 4 and Drift Slide No. 6 are furnished, two of each for every ten rifles. The two drift slides have peepholes respectively 0.04 inch and 0.06 inch in diameter; and have drift slide pins assembled to them.

The Oiler and Thong Case, Fig. 126, furnished for every alternate rifle, is carried in the butt of the stock. It consists of a nickel-plated brass tube, about 6 inches long and $\frac{3}{4}$ inch in diameter, divided transversely, near the center, by a partition, with both ends fitted with screw caps. In one section

Fig. 126.

is carried a small supply of sperm oil, and in the other the thong and thong brush used for cleaning the bore of the rifle. The cap on the oil section is fitted with a wire, flattened at its point, which reaches to the bottom of the section and is used for applying oil, a drop or more at a time. The oil is only for the lubrication of working parts. The cap is also provided with a leather washer to prevent leakage. The cap on the thong section has a

Fig. 127.

leather pad on its outer surface, which prevents the noise that would result from the oiler striking the butt plate cap. The oiler should always be inserted in the stock so that the leather-tipped cap will be next to the butt plate cap. The parts as shown in cut are: Thong case body A and B; oiler collar D, into which the cap is screwed; oiler cap washer E; oil dropper C and F, and thong case cap G.

Fig. 128.

The Thong and Thong Brush are shown in Fig. 127. The thong tip A, into which the thong brush B is screwed, is provided with a rag slot C; the thong cord is knotted in the hole D in the tip, and also in the hole E in the weight. In cleaning the bore by means of the thong, the brush or rag should always be drawn from the muzzle toward the breech.

The Spare Part Container, Fig. 128, furnished for every alternate rifle, con-

sists of a cylindrical block of wood (hard maple), 5.8 inches long and 0.785 inch in diameter. Slots and recesses are cut for holding three spare parts—a striker, an extractor, and a firing pin. The container is carried in the butt of the stock.

The Front Sight Cover, Fig. 129, right side view, and Fig. 130, front view, is made of sheet steel and pressed into shape. It is then case-hardened, giving it sufficient spring to cause it to hug closely the barrel and front sight stud, thereby retaining its position on the barrel.

Fig. 129.

Fig. 130.

ACCESSORIES.

The Screw-driver, Fig. 131, has the large blade A, the small blade B, the spur C, the pin D, and the rivet E. The large blade should be used for the large butt plate screw, the butt plate spring screw, and the guard screws; the

Fig. 131.

small blade for all other screws, except the cut-off screw, for which the spur should be used. The pin serves as a drift in removing the butt plate cap, ejector, floor plate catch, sear and trigger pins, and the lower band spring.

Fig. 132.

The Barrack Cleaning Rod, model of 1916, Fig. 132, is made of brass rod, 0.25 inch in diameter, and of sufficient length so that the bore can be cleaned from the breech end. It has the knob A, the steel collar B, and a brass sleeve C riveted on the end of the rod. The knob swivels on the rod between

the collar and the sleeve. The other end has a socket for connection with the thong brush issued with the rifle. This rod is intended for use in garrison and camp service.

The Cleaning Rod, model of 1916, supersedes the cleaning rod, model of 1913, although the latter will be issued until the supply is exhausted. Unserviceable cleaning rods, model of 1913, are used partly in the manufacture of the model of 1916 rod and should be turned in to the Commanding Officer, Springfield Armory, by proper authority for this purpose.

The New Rod is a jointed brass rod, 0.25 inch in diameter and 36.187 ($36\frac{7}{32}$) inches long. It is made of four sections; the handle section with knob, Fig. 133; the second section, Fig. 134; the third section, Fig. 135; and the brush section, Fig. 136, to which is attached the thong brush issued with the rifle.

Fig. 133.

Fig. 134.

Fig. 135.

Fig. 136.

One cleaning rod with a cleaning rod case of olive-drab webbing is packed with each ten rifles, but issues are based on one cleaning rod case for every 8 rifles.

This rod and case are intended for use in field service only.

THE ASSEMBLED PARTS AND THEIR OPERATIONS.

Most of the operating parts may be included under the Bolt Mechanism and Magazine Mechanism.

The Bolt Mechanism consists of the bolt, sleeve, sleeve lock, extractor, extractor collar, safety lock, firing pin, firing pin sleeve, striker, and main-spring. It is shown, assembled, in Fig. 137. The parts shown in the cut are handle A, sleeve B, safety lock C, cocking piece D, safety lug E, extractor F, extractor collar G, locking lugs H, extractor tongue groove I, and gas escape hole J.

The bolt moves backward and forward and rotates in the well of the receiver; it carries a cartridge, either from the magazine, or one placed by hand in front of it, into the chamber and supports its head when fired.

The sleeve unites the parts of the bolt mechanism, and its rotation with the bolt is prevented by the lugs on its sides coming in contact with the receiver.

The hook of the extractor engages in the groove of the cartridge case and retains the head of the latter in the countersink of the bolt until the case is ejected.

The safety lock, when turned to the left, is inoperative; when turned to the right—which can only be done when the piece is cocked—the point of the spindle enters its notch in the bolt and locks the bolt; at the same time its cam forces the cocking piece slightly to the rear, out of contact with the sear, and locks the firing pin.

The bolt mechanism operates as follows: To open the bolt, raise the handle until it comes in contact with the left side of the receiver and pull directly to the rear until the top locking lug strikes the cut-off.

Raising the handle rotates the bolt and separates the locking lugs from their locking shoulders in the receiver, with which they have been brought into close contact by the powder pressure. This rotation causes the cocking cam of the bolt to force the firing pin to the rear, drawing the point of the striker into the bolt, rotation of the firing pin being prevented by the lug on the cocking piece projecting, through the slot in the sleeve, into its groove in the receiver. As the sleeve remains longitudinally stationary with reference to the bolt, this rearward motion of the firing pin, and consequently of the striker, will start the compression of the mainspring, since the rear end of the latter bears against the front end of the barrel of the sleeve and its front end against the rear end of the firing pin sleeve.

When the bolt handle strikes the receiver, the locking lugs have been disengaged, the firing pin has been forced to the rear until the sear notch of the cocking piece has passed the sear nose, the cocking piece nose has entered the cock notch in the rear end of the bolt, the sleeve lock has engaged its notch in the bolt, and the mainspring has been almost entirely compressed.

During the rotation of the bolt a rear motion has been imparted to it by its extracting cam coming in contact with the extracting cam of the receiver, so that the cartridge case will be started from the chamber.

The bolt is then drawn directly to the rear, the parts being retained in position by the cocking piece nose remaining in the cock notch and locked by the sleeve lock engaging its notch in the bolt.

To close the bolt, push the handle forward until the extracting cam on the bolt bears against the extracting cam on the receiver, thereby unlocking the sleeve from the bolt, and turn the handle down. As the handle is turned down the cams of the locking lugs bear against the locking shoulders in the receiver, and the bolt is forced slightly forward into its closed position. As all movement of the firing pin is prevented by the sear nose engaging the sear notch of the cocking piece, this forward movement of the bolt completes the compression of the mainspring, seats the cartridge in the chamber, and, in single loading, forces the hook of the extractor into the groove of the cartridge case. In loading from the magazine the hook of the extractor, rounded at

its lower edge, engages in the groove of the top cartridge as it rises from the magazine under the action of the follower and magazine spring.

The position then occupied by the parts is shown in Fig. 138, and the piece is ready to fire.

To pull the trigger, the finger piece must be drawn to the rear until contact with the receiver is transferred from its bearing to the heel, which gives a creep to the trigger, and then until the sear nose is withdrawn from in front of the cocking piece.

Just before the bolt is drawn fully to the rear, the top locking lug strikes the heel of the ejector, throwing its point suddenly to the right in the lug slot. As the bolt moves fully to the rear, the rear face of the cartridge case strikes against the ejector point and the case is ejected, slightly upward and to the right, from the receiver.

Double loading from the magazine is prevented by the extractor engaging the cartridge case as soon as it rises from the magazine and holding its head against the face of the bolt until ejected.

It will be noted that in this system of bolt mechanism the compression of the mainspring, the seating of the cartridge in and the starting of the empty case from the chamber are entirely done by the action of cams.

The piece may be cocked either by raising the bolt handle until it strikes

Fig. 139.

Fig. 140.

the left side of the receiver and then immediately turning it down or by pulling the cocking piece directly to the rear.

In firing, unless the bolt handle is turned fully down, the cam on the cocking piece will strike the cocking cam on the bolt, and the energy of the mainspring will be expended in closing the bolt, instead of on the primer; this prevents the possibility of a cartridge being fired until the bolt is fully closed.

The opening and closing of the bolt should each be done by one continuous motion.

The Magazine Mechanism includes the floor plate, follower, magazine spring, and cut-off.

Fig. 139 represents a cross section through the ejector with the magazine loaded. The parts shown are receiver A, bolt B, firing pin C, ejector D, clip slots E, bolt locking lug channels F, magazine G, follower H, magazine spring I, and floor plate J.

Fig. 140 shows a cross section through the magazine with the magazine empty, and with cut-off "on," shown in projection. The parts are receiver A,

bolt B, firing pin C, cut-off D, rear lug shot E, bolt locking lug channels F, magazine G, follower H, magazine spring I, and floor plate J.

To charge the magazine, see that the cut-off is turned up showing "on," draw the bolt fully to the rear, insert the cartridges from a clip, or from the hand, and close the bolt. To charge the magazine from a clip, place either end of a loaded clip in its seat in the receiver and, with the thumb of the right hand, press the cartridges down into the magazine until the top cartridge is caught by the right edge of the receiver. The manner in which the cartridges arrange themselves in the magazine and the position of the follower and compressed magazine spring are shown in Fig. 142. The cartridge ramp guides the bullet and cartridge case into the chamber. The magazine can be filled, if partly filled, by inserting cartridges one by one.

Pushing the bolt forward, after charging the magazine, ejects the clip.

When the cut-off is turned down, the magazine is "off." The bolt can not be drawn fully back, and its front end projecting over the rear end of the upper cartridge holds it down in the magazine below the action of the bolt. The magazine mechanism then remains inoperative, and the arm can be used as a single-loader, the cartridges in the magazine being held in reserve. The arm can readily be used as a single-loader with the magazine empty.

When the cut-off is turned up, the magazine is "on"; the bolt can be drawn fully to the rear, permitting the top cartridge to rise high enough to be caught by the bolt in its forward movement. As the bolt is closed this cartridge is pushed forward into the chamber, being held up during its passage by the pressure of those below. The last one in the magazine is held up by the follower, the rib on which directs it into the chamber.

In magazine fire, after the last cartridge has been fired and the bolt drawn fully to the rear, the follower rises and holds the bolt open to show that the magazine is empty.

PRECAUTIONS.

If it is desired to carry the piece cocked, with a cartridge in the chamber, the bolt mechanism should be secured by turning the safety lock to the right. Under no circumstances should the firing pin be let down by hand on a cartridge in the chamber.

To obtain positive ejection, and to insure the bolt catching the top cartridge in magazine, when loading from the magazine, the bolt must be drawn fully to the rear in opening it.

When the bolt is closed, or slightly forward, the cut-off may be turned up or down, as desired. When the bolt is in its rearmost position, to pass from loading from the magazine to single loading it is necessary to force the top cartridge or follower below the reach of the bolt, to push the bolt slightly forward and to turn the cut-off down, showing "off."

In case of a misfire it is unsafe to draw back the bolt immediately, as it may be a case of hang-fire. In such cases the piece should be cocked by drawing back the cocking piece.

It is essential for the proper working and preservation of all cams that they be kept lubricated.

DISMOUNTING AND ASSEMBLING BY SOLDIER.

The bolt and magazine mechanism can be dismounted without removing the stock. The latter should never be done, except for making repairs, and then only by some selected and instructed man.

TO DISMOUNT BOLT MECHANISM.

Place the cut-off at the center notch; cock the arm and turn the safety lock to a vertical position, raise the bolt handle and draw out the bolt. (Fig. 141.)

Hold bolt in left hand, press sleeve lock in with thumb of right hand to unlock sleeve from bolt, and unscrew sleeve by turning to the left. (Fig. 142.)

Hold sleeve between forefinger and thumb of the left hand, draw cocking piece back with middle finger and thumb of right hand, turn safety lock down to the left with the forefinger of the right hand, in order to allow the cocking piece to move forward in sleeve, thus partially relieving the tension of mainspring; with the cocking piece against the breast, draw back the

Fig. 141.**Fig. 142.**

firing pin sleeve with the forefinger and thumb of right hand and hold it in this position (Fig. 143) while removing the striker with the left hand; remove firing pin sleeve and mainspring; pull firing pin out of sleeve; turn the extractor to the right, forcing its tongue out of its groove in the front of the bolt, and force the extractor forward (Fig. 144) and off the bolt.

TO ASSEMBLE BOLT MECHANISM.

Grasp with the left hand the rear of the bolt, handle up, and turn the extractor collar with the thumb and forefinger of the right hand until its lug is on a line with the safety lug on the bolt; take the extractor in the right hand and insert the lug on the collar in the undercuts in the extractor by pushing the extractor to the rear until its tongue comes in contact with the

rim on the face of the bolt (a slight pressure with the left thumb on the top of the rear part of the extractor assists in this operation); turn the extractor to the right until it is over the right lug; take the bolt in the right hand and press the hook of the extractor against the butt plate (Fig. 145) or some

Fig. 143.

Fig. 144.

Fig. 145.

rigid object, until the tongue on the extractor enters its groove in the bolt.

With the safety lock turned down to the left to permit the firing pin to enter the sleeve as far as possible, assemble the sleeve and firing pin; place the cocking piece against the breast and put on mainspring, firing pin sleeve,

and striker (see Fig. 143). Hold the cocking piece between the thumb and forefinger of the left hand, and by pressing the striker point against some substance, not hard enough to injure it, force the cocking piece back until the safety lock can be turned to the vertical position with the right hand; insert the firing pin in the bolt and screw up the sleeve (by turning it to the right) until the sleeve lock enters its notch on the bolt.

See that the cut-off is at the center notch; hold the piece under floor plate in the fingers of the left hand, the thumb extending over the left side of the receiver; take bolt in right hand with safety lock in a vertical position and safety lug up; press rear end of follower down with left thumb and push bolt into the receiver; lower bolt handle; turn safety lock and cut-off down to the left with right hand.

TO DISMOUNT MAGAZINE MECHANISM.

With the bullet end of a cartridge press on the floor plate catch (through the hole in the floor plate), at the same time drawing the bullet to the rear; this releases the floor plate.

Raise the rear end of the first limb of the magazine spring high enough to clear the lug on the floor plate and draw it out of its mortise; proceed in the same manner to remove the follower.

To assemble magazine spring and follower to floor plate, reverse operation of dismounting.

Insert the follower and magazine spring in the magazine, place the tenon on the front end of the floor plate in its recess in the magazine, then place the lug on the rear end of the floor plate in its slot in the guard, and press the rear end of the floor plate forward and inward at the same time, forcing the floor plate into its seat in the guard.

TO COMPLETE DISMOUNTING.

(Not to be done by soldier.)

The bolt and magazine mechanism having been dismantled, proceed as follows:

1. Turn safety lock to dismantling bevel on sleeve and remove it by striking the thumb piece a light blow.
2. To dismount the sleeve lock, drive out sleeve lock pin from the top and remove lock and spring, being careful not to lose the spring.
3. Remove front sight pin (see directions for replacing broken parts, p. 709) and remove front sight.
4. Press in rear end of lower band spring and drive forward the lower band by a few sharp blows on the lug and then on top with a hardwood block.
5. Remove upper band screw and drive upper band forward, in the same manner prescribed for the lower band.
6. Move upper band forward on barrel until stopped by movable stud, and then remove lower band by slipping it over upper band and movable stud. To remove upper band entirely from barrel requires the removal of the front sight screw and the movable stud.
7. Draw hand guard forward until free from the fixed base and remove.
8. Remove guard screws and guard. It may be necessary to tap gently on the front and rear of the guard bow to loosen.

9. Remove barrel and receiver from stock.
 10. To remove the lower band spring, drive its spindle out of its hole in the stock from the left.
 11. Unscrew the butt swivel screws and remove the butt swivel plate from stock. The butt swivel, consisting of the plate, swivel, and pin, permanently assembled, is issued complete.
 12. Unscrew butt plate screws and remove butt plate from stock.
 13. Unscrew butt plate spring screw and remove the butt plate spring; drive out butt plate pin (see direction on p. 47) and remove butt plate cap.
 14. Remove cut-off by loosening the screw in the end of the thumb piece until it disengages the groove in the cut-off spindle; insert the blade of a screw-driver in the notch in the rear end of the spindle and force it out. Remove the spring and the plunger, being careful not to lose them.
 15. Remove the ejector by driving out the ejector pin from the upper side.
 16. Remove sear and trigger by driving out the sear pin from the right, being careful not to lose the sear spring.
 17. Remove trigger from sear by driving out the trigger pin from either side.
 18. Remove floor plate catch and spring by driving out the pin from either side.
 19. Remove bolt stop by inserting a small punch or end of striker in the hole in the left end and forcing it from its pocket.
- The leaf should never be removed from the movable base except for the purpose of making repairs.
- The fixed base and the fixed stud should never be removed from the barrel.
- The barrel should never be unscrewed from the receiver. The barrel and receiver may be assembled only at ordnance establishments properly equipped for this work, for which reason requisitions should always call for barrels and receivers assembled and not for barrels alone.

TO ASSEMBLE AFTER DISMOUNTING.

Reverse and follow in inverse order the operations of dismounting.

In assembling the sleeve lock to the sleeve, be careful to compress the lock and spring while driving in the pin from the bottom of the sleeve.

To assemble the safety lock and sleeve, insert the safety lock spindle in its hole in the sleeve as far as it will go; then, with the thumb piece vertical and pressed against some rigid object, introduce the point of the tool provided for this purpose between the safety lock spindle and the safety lock plunger, forcing the latter into the thumb piece until it slips over the edge of the sleeve. Further pressure on the safety lock thumb piece, together with the gradual withdrawal of the tool, will complete the assembling.

In assembling pins and screws, note directions for replacing broken parts on page 709.

The floor plate spring and the cut-off spring are alike, except in length. The latter being the longer, care should be taken not to substitute one for the other.

CLEANING THE RIFLE.

See instructions for repair and care of small arms and ordnance equipment (page 645).

PACKING OF RIFLE.

The rifles are issued in arm chests containing:

- 10 United States Rifles, Caliber .30, Model of 1903.
- 2 Drift Slides, No. 4.
- 2 Drift Slides, No. 6.
- 10 Front Sight Covers.
- 5 Oiler and Thong Cases.
- 5 Thongs and Thong Brushes.
- 5 Spare Part Containers, with contents.
- 1 Cleaning Rod, Model of 1913, and Cleaning Rod Case.
- 2 Screw Drivers.

1 Book, Description and Rules for the Management of the United States Rifle, Caliber .30, Model of 1903, Form 1923.

The interior of the arm chest is provided with wooden packing strips for the purpose of securely holding the rifles in place in transportation. The arrangement of this packing and of the rifles should be carefully observed when arms are received from an arsenal, in order that the same method may be used if for any reason the rifles should be shipped away from the post. Rifles should never be shipped in these chests unless all of the packing strips have been properly assembled with the rifles in the chests.

The ends of these chests are provided with narrow pockets for the reception of the front sight covers, screw drivers, extra drift slides, and descriptive pamphlet which are shipped with the rifles.

ARM LOCKER FOR UNITED STATES RIFLE, CALIBER .30, MODEL OF 1903.

This chest is issued at the rate of one per company or troop for use in the safe-keeping of the surplus rifles of a company or troop. It is provided with reinforcing angle irons which secure the bottom of the chest to the sides; and with blind strap hinges, hasps, and staples for securing the cover to the body of the chest. Two padlocks with chains and keys are also issued with each arm locker.

REPAIR OF RIFLE.

The following spare parts will be issued for repairs of arms in the hands of troops:

ARM REPAIR CHEST, MODEL OF 1910.

In place of the company repair kit formerly issued, the arm repair chest has been adopted for future issue. This chest will be issued to each organization armed with the rifle, and to each regimental or post ordnance officer for cleaning, repairing, and preserving arms and equipments. The chest contains the following tools, cleaning material, and spare parts:

TOOLS.

1 Anvil.

1 Bullet Jacket Extractor.

10 Drifts, for the following pins and springs—

No. 1. Assembling and dismounting base spring.

No. 2. Removing trigger and butt plate pins.

No. 3. Starting front sight and sleeve lock pins.

No. 4. Drawing out pins started with No. 3.

No. 5. Removing joint, sear, and ejector pins.

No. 6. Starting floor plate pin and removing bolt stop.

No. 7. Driving out floor plate pin and lower band spring.

No. 8. Starting windage screw pin and slide cap pin (2).

No. 9. Removing pins started with No. 8.

1 Eyelet Awl, for putting eyelets in belt.

1 Eyelet Set.

3 Files, 6-inch; flat, round, and three-square, with handles.

1 Hammer, steel.

1 Hammer, brass.

1 Handle, tool, containing 10 tools.

1 Oiler, with cap.

2 Pliers, flat and round nose.

1 Saw, crosscut, detachable handle.

2 Screw Drivers, fitting the following screws—

No. 1. Guard, large butt plate, and butt plate spring screws.

No. 2. Stacking swivel, lower band, butt swivel, small butt plate, upper band, and bayonet screws.

- 1 Set No. 1, for upsetting ends of the lower band and stacking swivel screws.
- 1 Tool, for assembling safety lock on sleeve.
- 1 Vise, 1.25-pound.

CLEANING MATERIAL.

- | | |
|-----------------------------------|----------------------------------|
| 2 Cosmic, pints. | 250 Cut Patches (Tampa flannel). |
| 250 Cut Patches (cotton flannel). | 3 Sperm Oil, pints. |

SPARE PARTS (RIFLE).

- | | |
|---|---|
| 2 Base Springs. | 5 Front-sight Pins. |
| 2 Bayonet Catches. | 2 Leaves. |
| 2 Bayonet Springs. | 2 Lower Band Screws. |
| 2 Bolts, with extractor collars, assembled. | 2 Mainsprings. |
| 15 Cocking Pieces and Firing Pin Rods, assembled. | 2 Movable Bases. |
| 5 Cut-off Plungers. | 3 Safety Locks, complete, each consisting of: |
| 5 Cut-off Springs. | 1 Safety Lock Thumb Piece. |
| 2 Cut-off Screws. | 1 Safety Lock Plunger. |
| 6 Drift Slides. | 1 Safety Lock Spindle. |
| 5 Ejector Pins. | 1 Safety Lock Spring. |
| 4 Extractors. | 5 Slide Binding Screws. |
| 5 Ejectors. | 10 Slide Cap Pins. |
| 2 Floor Plate Catches. | 5 Slide Cap Screws. |
| 2 Floor Plate Pins. | 6 Slides and Slide Caps, assembled. |
| 2 Floor Plate Springs. | 3 Sleeves, assembled. |
| 5 Front Sights. | 1 Stacking Swivel. |
| 10 Front-sight Covers (appendages to rifle). | 2 Stacking Swivel Screws. |
| | 15 Strikers. |
| | 2 Windage Screws, assembled. |

SPARE PARTS (BOLO).

- | | |
|--------------------|-----------------------|
| 2 Bolo Catches. | 4 Bolo Catch Springs. |
| 4 Bolo Catch Pins. | |

TOOLS FOR REPAIRING SADDLES, MODEL OF 1912.

- | | |
|--------------------------------|---------------------------------|
| 1 Screw Driver, Model of 1912. | 1 Socket Wrench, Model of 1912. |
|--------------------------------|---------------------------------|

Note: Issued to organizations equipped with saddles, model of 1912.

TOOLS FOR REPAIRING SNAP FASTENERS.

- | | |
|-------------------------|-------------------|
| 1 Anvil. | 1 Socket Set. |
| 1 Canteen Stud Set. | 1 Spreading Tool. |
| 1 Canteen Socket Punch. | 1 Stud Set. |
| 1 Cap Drift. | |

FOR SHOES.

- 2 Neat's-foot Oil, quarts.

FOR BELTS.

50 Eyelets.

| 50 Washers for Eyelets.

SPARE PARTS (PISTOL).

2 Extractors.

| 2 Recoil Springs.

2 Firing Pin Springs.

| 2 Sear Springs.

1 Mainspring.

| 2 Stock Screws.

TOOLS FOR CLEANING PISTOL.

10 Cleaning Rods.

| 10 Screw Drivers.

10 Thong Brushes.

The tools named above must be handled carefully and with skill to avoid injuring the heads and threads of screws and defacing other metallic parts.

PARTS WHICH ARE MOST LIABLE TO REQUIRE REPAIR.

Bolt Stop. Worn by continual contact with bolt.

Cocking Piece. Nose worn from neglect to keep it lubricated.

Lower Band Swivel and Screw. Screw, if not riveted in place, works loose and, with swivel, is lost.

Safety Lock. Thumb piece knocked off by blow.

Stacking Swivel and Screw. Screw, if not riveted, works loose and, with swivel, is lost.

Stock. Bruises, cuts, pieces chipped from different points, broken at small.

Striker. Point burned by defective cartridge, or broken at the joint hole by snapping with the chamber empty.

REPLACING BROKEN PARTS.

Butt Plate Pin. This pin has both ends upset; the burr on one end must be filed off and the pin driven out with a drift; when a new pin is put in, its ends must be upset with light blows of a hammer.

Front Sight. The burr on the left side must be filed off and the pin driven out from the left with a drift; when the new front sight is in place, a new pin is driven in from the right and its left end upset with light blows of a hammer.

Lower Band Screw. This screw, when in place, has its end upset and riveted over the band ear. It should never work loose, if properly assembled, and when it has to be removed to replace an injured swivel the burr on the end should be filed off and the screw taken out, the end being again upset when the screw has been returned to its place.

Stacking Swivel Screw. As the screw is made long and its end upset, it should be kept well screwed up at all times. It is removed to replace a broken swivel and replaced as explained in preceding paragraph, care being taken to upset the end only.

Trigger Pin. This is a straight pin and can be driven in or out from either side.

INJURIES WHICH DO NOT RENDER PARTS UNSERVICEABLE.

Bolt. The entire flange at front end may be broken off, except a small portion on the opposite side from the extractor hook, which is required to hold, in connection with the extractor hook, the empty case while it is being drawn to the rear for ejection.

If automatic ejection be not considered, the entire flange may be dispensed with.

Butt Plate. Bruises, cuts, or wearing.

Butt Swivel. Bent.

Cocking Piece. Moderate wearing of nose. The nose can wear until raising and lowering the bolt handle fails to cock the piece.

Extractor. Moderate wear or break of edge of hook.

Floor Plate. Bent or bruised.

Guard. Bent, bruised, or cut.

USING THE RIFLE WHEN CERTAIN PARTS OF THE BOLT AND MAGAZINE MECHANISM ARE WANTING.

The parts not essential, or only so to a degree, are the ejector, safety lock, cut-off, bolt stop, sleeve lock, floor plate, magazine spring, and follower.

In the absence of the ejector, the empty cases drawn to the rear by the extractor can be removed from the receiver by the finger.

The safety lock being merely a precautionary device, its absence does not affect the usefulness of the arm.

In the absence of the cut-off, the arm can be loaded from the magazine, but the magazine can not be held full in reserve; in single loading with the cut-off wanting and magazine empty, the soldier should be instructed to load directly into the magazine, as otherwise the forward motion of the bolt will be stopped by coming in contact with the follower. In this case, care should be taken in drawing the bolt back not to draw it from the receiver.

The absence of the bolt stop and sleeve lock does not affect the usefulness of the arm.

The absence of the floor plate, follower, and magazine spring only prevents the use of the magazine, but does not prohibit the use of the arm as a single-loader. The soldier should be taught to appreciate these facts.

REMARKS.

Complaints have not infrequently been received that a mainspring was too weak to perform its office, when the fault rested with the soldier, who in sighting inadvertently raised the bolt handle with his hand before pulling the trigger, and thus caused the force of the spring to be expended in closing the bolt, instead of in exploding the cartridge.

All cams and bearings should be kept slightly oiled to prevent wear.

When firing many successive rounds care must be taken that unburned grains of powder do not collect and pack in the locking lug recesses of the receiver, as this will interfere with the perfect closing of the bolt. Such accumulations can be blown out from time to time, or, when packed, removed by a knife or the screw driver.

Except when repairs are needed, the following parts will constantly be injured if allowed to be dismantled by the soldier for cleaning; and when

repairs are necessary, they should be removed only by a company artificer, or some one familiar with the handling of tools and delicate mechanisms, viz.: Bolt stop, cut-off, safety lock, sleeve lock, front sight, movable stud, lower band, upper band, and stacking swivel screws.

Unless the screw driver is handled carefully, and with some skill, the screws are sure to be injured either at the head or thread.

Fig. 146.

Fig. 147.

Fig. 148.

The Bullet Jacket Extractor is shown in Figs. 146, 147, and 148. This extractor consists of a steel cylindrical plug provided with lands and grooves on the sides. To use the extractor, it is inserted in the muzzle of the barrel hollow end (see Fig. 149) first. The extractor is then urged down the barrel by pressure applied with the cleaning rod until the jacket and extractor fall out into the chamber. (See arm repair chest, model of 1910, page 707.)

Fig. 149.

Fig. 150.

1. The Aiming Device, Fig. 149, in place on the rifle, and Fig. 150 in detail, is intended for use in aiming drill and is issued to infantry, cavalry, and engineers at the rate of four per company. With this device the instructor may give a visual demonstration and thereby convince the soldier of the errors made in aiming.

2. The device consists of yoke A, which by means of the spring clips B

embraces the small of the stock, the bracket C to which the collapsible arms D are held, and the eye E, which is closed by the shutter F. The eye is provided with a stop pin G to hold the shutter in an open position. Tension washers are furnished for the joints to lend stiffness to the mechanism.

3. To use the device it should be seated firmly on the rifle at the small of the stock. The rifle should then be placed on an improvised rest, or aiming stand. The instructor sights the rifle very accurately, bringing the point of aim, the front sight, rear sight, and the pin hole in the shutter F all into line. Then he throws back the shutter of the aiming device so as to expose the large aperture in the eye E. He requires the recruit to verify the sight setting.

4. Then the instructor may change the position of the rifle either slightly or considerably and require the recruit to explain how the line of sight lies with reference to the point of aim, or if very wide of the mark he may direct him to sight the piece and bring the line of sight back on the mark. The recruit uses only the large aperture, which is practically the same as if he did not have the aiming device at all. The instructor then drops the shutter and shows him conclusively that he has been looking along the right or left side of the front sight, or has failed to look through the middle of the rear sight notch, or has taken a full sight when he said he was taking a half sight, etc.

Tool Rolls have been issued to post and regimental supply officers and coast defense ordnance officers, containing a breast drill, with reamers, taps, and twist drills, a combination screw driver and wrench, a cold chisel and file, for the purpose of correctly locating the fixed stud, movable stud, and front sight on barrels of rifles in the case of repairs, replacements, etc. This tool roll also contains a rifle bore gage with its container and a defective cartridge extractor.

The use of the rifle Bore Gage is covered in Par. II, Bulletin No. 15, War Department, 1915, as amended to date.

The Defective Cartridge Extractor is used to remove defective shells from the chamber, the heads of which have been stripped off in firing. The extractor, having the extractor pin pushed to the rear, is inserted in the chamber as far as it will go. The extractor pin is then pushed forward, thus expanding the extractor and gripping the shell. Then the lever is pushed forward, withdrawing the extractor with the shell.

Telescopic Sight. To properly equip a special class of shots, who, in action, may be employed as sharpshooters, especially selected rifles are fitted and targeted with telescopic sights. The rifle should not be separated from its telescopic sight, as both are given the same serial number, are nicely fitted and accurately targeted together, and for manufacturing reasons are not interchangeable. Therefore, in case of repairs to either the sight or rifle, which can not be accomplished in the organization, both the sight and the rifle should be turned in to an arsenal.

AMMUNITION FOR UNITED STATES RIFLE, CALIBER .30, MODEL OF 1903.

BALL CARTRIDGE, MODEL OF 1906.

The Caliber .30 Ball Cartridge, Fig. 151, consists of the case, primer, charge of smokeless powder, and bullet. The case is of cartridge brass. It has a conical body joined to the neck by a sharper cone, called the shoulder. The neck is the seat of the bullet and is very nearly cylindrical. The front end of the case is called the mouth and the rear end the head. The mouth edge of the case is crimped on the bullet, when the cartridge is assembled, in order

to keep the bullet secure in the case. The head of case is grooved to provide for extraction of cartridge from the chamber of the rifle and is provided with a primer pocket and vent. The initials of the place of manufacture, the number of the month, and the year of its fabrication are stamped on the head of case.

The primer consists of the cup, percussion composition, disk of shellacked paper, and anvil. The cup is of gilding metal and contains 0.46 grain of nonfulminate composition composed of tersulphide of antimony, potassium chlorate, and sulphur. A disk of shellacked paper covers the composition to protect it from moisture and to prevent electrolytic action. The anvil is of brass and is assembled over the paper. After the primer is assembled to the case a drop of shellac is placed on the head of the primer to make the joint waterproof.

The charge is of pyrocellulose composition very similar to the powders used as propelling charges in field and sea coast guns. The grains are cylindrical, single, perforated, and graphited. The normal charge weighs from 47 to 50 grains, varying with the lot of powder used.

The bullet has a core of lead and tin composition inclosed in a jacket of

Fig. 151.

cupro-nickel. It weighs 150 grains, and the point is much sharper and offers less resistance to the air than that of any previous model in the United States service. The bullet is cannellured to receive the crimp of the case, and the base of the bullet is flat. The neck of the case is shellacked before loading, and a pressure of at least 75 pounds is required to seat the bullet in the case; this, with the addition of the above-mentioned crimp, makes the case waterproof.

The standard muzzle velocity of this ammunition in the rifle is 2,700 feet per second. The instrumental velocity measured at 78 feet from the muzzle is 2,640 feet per second, with an allowed mean variation of 20 feet per second on either side of the standard.

The cartridge complete weighs about 395.5 grains, its weight varying slightly with variation in the weight of the powder charge.

Five cartridges are packed in a clip.

The Clip, Fig. 152, consists of the body A and the spring B, both of brass. On the exterior of the sides of the body are the stop lugs C, which seat the clip in its slots in the receiver of the rifle. The top edges of the slides are folded inward, forming flanges, which, fitting into the grooves in the heads, hold the cartridges in place. The spring is secured to the bottom of the body by two sets of interlocking lips E. The spring is provided with narrow tongues D, which, when the clip is filled, are pressed into the grooves of the outside cartridges, holding the cartridges securely in the clip. The clip body can be used a number of times, but the springs only once.

The gallery practice and dummy clip is provided with a strong bronze spring without tongues.

Sixty ball cartridges in 12 clips are packed in a bandoleer.

The bandoleer is made of olive-drab cloth and contains six pockets, each

holding two clips. The clips can be readily taken out by forcing back the fold of the pocket.

The bandoleer is provided with a shoulder strap of olive-drab webbing by which it is carried over the shoulder, and a safety pin is provided to afford an adjustment of its length to suit the convenience of the soldier. When packed, the bandoleer weighs about 3.88 pounds.

Fig. 152.

In each bandoleer is placed an identification card showing the number of cartridges, the caliber and model of ammunition and rifle, place and date of manufacture, kind and lot of powder, and muzzle velocity. The shop symbols of loaders, inspectors, and packers are also given. In case of defective ammunition this card should be returned with report.

Twelve hundred cartridges are packed in a terne-plate-lined packing box, hermetically sealed. Each box contains 20 bandoleers of 60 cartridges each. The packing box measures 34.5 by 9.5 by 8.25 inches and weighs about 100 pounds when filled.

The lid is held to the box by five brass bolts and can be easily removed without the use of tools. Two wire seals connect the cover with the sides of the box.

When the lid is removed, the lining may be torn open by means of a wire handle on the metal cover.

A metallic packing chest is also in use. It is made of tinned sheet iron painted olive drab. This chest holds 1,200 cartridges packed in 20 bandoleers of 60 cartridges each. It has a terneplate cover under the lid and is hermetically sealed.

The chest measures 8 by 16¼ by 14 inches and weighs about 95 pounds when filled.

A tin seal locks the hasp to the lid. By opening and closing the fold of this seal several times it will break, thus permitting it to be easily withdrawn. When the lid is opened the cover can be torn off by means of an iron handle attached thereto.

BLANK CARTRIDGE, MODEL OF 1906.

The Blank Cartridge, model of 1906, Fig. 153, differs from the ball cartridge in the charge of powder and in the bullet and in the fact that the case is tinned. The bullet is of paper, hollow, and contains a charge of 6 grains of "E. C." smokeless powder, which insures the breaking up of the bullet on leaving the bore. This charge is retained in the bullet by a drop of shellac. A coating of paraffin on the outside of the bullet prevents the absorption of moisture by the paper. The propelling charge is 10 grains of "E. C." powder.

Fig. 153.

The cartridge is made 0.1 inch shorter than the ball cartridge. This is a measure of protection against the accidental assembling by the machine of a ball cartridge in a clip of blank ones.

THE BLANK CARTRIDGE, MODEL OF 1909.

In the manufacture of these blank cartridges, Fig. 154, cases are used which have been fired, or which have slight defects, rendering them unsuitable for use in ball cartridges. The charge is 12 grains of "E. C." powder.

The case is closed by means of a paper cup inserted in the mouth of the case and shellacked to render the ammunition waterproof.

Fig. 154.

DUMMY CARTRIDGE.

The case of the Dummy Cartridge, Fig. 155, is tinned and provided with six longitudinal corrugations, also three circular holes in the corrugated portion.

The tinning, corrugations, and holes afford unmistakable means for distinguishing the dummy from the ball cartridge, both by sight and touch. The bullet is the same as in the ball cartridge. The dummy primer has cup and anvil, but no percussion composition.

Fig. 155.

GUARD CARTRIDGE.

This cartridge, Fig. 156, differs from the ball cartridge in the charge of powder and in the fact that second-class bullets having slight imperfections are used. Five cannellures encircle the body of the case at about the middle, affording means for distinguishing it from the ball cartridge by either sight or touch.

Fig. 156.

The charge, about 9.1 grains bull's-eye powder, or 16.7 grains Du Pont Rifle Smokeless No. 1, gives a muzzle velocity of 1,200 feet per second. This cartridge gives good results at 100 yards and has sufficient accuracy for use at 150 and 200 yards. The range of 100 yards requires a sight elevation of

DESCRIPTION OF COLORS AND MARKINGS.

ADOPTED FOR THE PASTEBOARD AND WOODEN BOXES; ALSO THE METALLIC PACKING CHEST IN WHICH THE DIFFERENT KINDS OF CALIBER .30 AMMUNITION FOR THE MODEL OF 1903 RIFLE ARE ISSUED.

| Kind of ammunition. | Label on pasteboard box. | | Wooden packing box. | | Metallic packing chest. | |
|--|--------------------------|-----------|--|---|--|--|
| | Color. | Markings. | Markings. | | Markings. | |
| Ball cartridges, model of 1906. ¹ | | | Red band, 4 inches wide, painted around middle of length and on full handles of box. | On both sides of box, the number, kind, model, caliber, kind of powder, and place of manufacture of cartridges; also the model of the rifle; on both ends, the caliber, model, and date; also the lot number, if manufactured under contract; on top, a hand grenade 5.625 by 2.6875 inches and "Small-arms ammunition," all in black ink in large figures and letters. | Red band 2 inches wide around middle of length and 3.5 inches length across middle of handle brackets. | On closed end of packing chest, the number, caliber, kind, model of cartridge, model of rifle, kind of powder, and place of manufacture; on lid, the caliber, model of cartridge, and a hand grenade, 5.625 by 2.6875 inches, all in black ink in large figures and letters. Lid marked with month, day, and year the cartridges were loaded, loading machine number, number of packer, kind of bullet, kind of bandoleer, primer composition, and "Small-arms ammunition" in 0.5-inch figures. Sealing strip with month, day, and year the cartridges were loaded, loading-machine number, number of packer, kind of bullet, kind of bandoleer, and primer composition, with 0.125-inch figures. If manufactured by a contractor, stamp name of contractor and lot number on closed end of packing chest. |

| | | | |

| | Color. | Markings. | | Markings. | |
| Dummy cartridges, model of 1906. | Green. | Number, kind, caliber, model, place of manufacture, cautions, and information are printed in black ink. | Green band, 4 inches wide, around one end of box and half the length of handles. | If manufactured by a contractor, stamp name of contractor and lot number on both sides of packing box. | |
| Guard cartridges, model of 1906. | Orange | | Orange band, 4 inches wide, painted around one end of length and half the length of handles. | On both sides of box, the number, caliber, kind, and model of cartridge, model of rifle, kind of powder, and place of manufacture; on ends, caliber, kind, and model of cartridge, on cover, a hand grenade 5.62; by 2.687 (2½) inches and "Small-arms ammunition," all in black ink in large letters and figures; both ends of box marked with the month, day, and year the cartridges were loaded with 0.5-inch figures. If manufactured by a contractor, stamp name of contractor and lot number on both sides of box. | |

450 yards, and ranges of 200 and 300 yards require elevations of 650 and 850 yards, respectively.

The guard cartridge, Fig. 157, as now issued, differs from the old issue, Fig. 156, in that six longitudinal corrugations 3-16 inch long start from the shoulder of the case. This affords means of distinguishing this cartridge from the ball cartridge. This cartridge has the same charge of powder, muzzle velocity, etc., as the old issue.

Fig. 157.

VARIATIONS AND CORRECTIONS.

The components of all machine-made ammunition must of necessity vary within certain practicable working limits, and every such variation, especially in the bullet and powder, has a corresponding effect upon the muzzle velocity. The service ammunition is loaded with a charge of powder which gives 2,700 feet per second muzzle velocity when fired from a standard rifle with selected bullets, the powder being at a temperature of 70° F.

The service ammunition will give a muzzle velocity of $2,700 \pm 20$ feet per second when fired on a normal day (70° F.). This velocity will vary directly with the temperature (T) 1.5 feet per second per degree. So that this ammunition fired on any but a normal day will give a muzzle velocity of $2,700 \pm 20 + (T - 70) 1.5$ feet per second. Besides the variations due to the ammunition and temperature there are slight variations caused by the rifle which are of no great importance.

Small variations in velocity have small corresponding vertical deviations on the target. For example, at 1,000 yards an extreme vertical deviation of about 20 inches will be due to variations in muzzle velocity and 20 inches more due to other causes. The mean vertical deviation at this range, however, is less than 10 inches.

Another factor entering the question of range is the density of the air. The density of the air varies with the barometer, thermometer, and hygrometer readings.

The appended tables, I, II, III, and IV, will enable a close approximation to be made to the correct sight elevation for a particular condition.

In Table I will be found the value of $\frac{\delta_1}{\delta}$ for different temperatures and pressures of atmosphere. With $\frac{\delta_1}{\delta}$ found in Table I the corresponding elevation for a given range can be found in Table II, which is calculated for different values of $\frac{\delta_1}{\delta}$. With this elevation the corresponding sight elevation can be obtained from Table IV, which gives the range on the sight corresponding to different angles of departure.

Should the temperatures of the day vary to any great extent from 70° F. the corresponding correction can be obtained from Table III. In using these tables, calculations will be sufficiently accurate if interpolations are made by taking the proportional part of the differences in the tables.

The following problem is given as an illustration of the use of these tables:
 Range 1,000 yards.
 Barometer reading 29 inches.
 Temperature 90° F.
 From Table I,

$$\frac{\delta_1}{\delta} = 1.096.$$

From Table II, by interpolating between $\frac{\delta_1}{\delta} = 1.05$ and $\frac{\delta_1}{\delta} = 1.10$, the elevation for $\frac{\delta_1}{\delta} = 1.096$ is found to be 44.690 minutes.

To correct for the muzzle velocity, we have 2,700 feet per second + (90 — 70) 1.5 = 2,730.

From Table III,

Interpolating between 2,700 and 2,800, the elevation is 48.198 — 1.093 minutes. Since 48.198 minutes is the elevation for 1,000 yards for 2,700 feet per second muzzle velocity, it is seen that the additional 30 feet per second decreases the elevation by 1.093 minutes. It was found above that the elevation for 2,700 feet per second on this day was 44.690 minutes, so that the elevation for the given conditions is 44.690 — 1.093 = 43.597 minutes, which from Table IV will be found to correspond to a sight elevation of 947 yards. This is subject to a further correction for each particular rifle. For example, if the rifle to which this correction is to be applied requires a sight setting of 1,010 yards under normal conditions, it will be necessary to add 10 yards to the result obtained above, so that the correct setting of this rifle would be 957 yards under the conditions given in the problem.

EXTERIOR BALLISTICS.

RAPIDITY OF FIRE.

Twenty-three aimed shots have been fired in one minute with this rifle, used as a single-loader, and 25 shots in the same time, using magazine fire.

Firing from the hip without aim, 30 shots have been fired in one minute, using rifle as a single-loader, and 40 shots in one minute, using magazine fire.

MAXIMUM RANGE.
[Computed.]

| Maximum range. | Elevation. | Time of flight. |
|----------------|-------------|-----------------|
| 4,891.6 yards. | 45 degrees. | 38.058 seconds. |

PRESSURE.

The powder pressure in the chamber of this rifle is about 50,000 pounds per square inch.

RECOIL.

[Computed.]

The maximum energy of free recoil of this rifle is 14.98 foot-pounds.

ACCURACY.

[As determined by firings to date.]

| Range, yards. | Deviation. | | |
|---------------|----------------|------------------|--------------|
| | Mean vertical. | Mean horizontal. | Mean radius. |

DANGEROUS SPACES.

The dangerous spaces were calculated under the assumption that the gun, when fired, is 12 inches above the ground, that the height of a man is 68 inches, that the head of a man on horseback is 8 feet above the ground, and that the gun is aimed at the middle point of the target.]

RIFLE AGAINST INFANTRY AND CAVALRY.

HORIZONTAL DEVIATION.

The rifle has a right-hand twist, and the drift proper is therefore to the right. There is, however, a slight lateral jump to the left, and the total horizontal deviation of the bullet, excluding wind, is the algebraic sum of the drift and the lateral jump. The trajectory is found to be very slightly to the left of the central or uncorrected line of sight up to a range of 500 yards, and beyond that range to the right of this line. In order to minimize the deviations at the most important ranges the drift slot on the sight leaf is so cut as to make the trajectory cross the adjusted line of sight at a range of 500 yards. The deviations under these conditions are shown in column (4) of the table below.

This drift and the deviations due to wind, given below, have been determined by experimental firings, up to 2,000 yards.

| Range (yards). (1) | Drift with targeted rifles, model of 1905 sights graduated for 1906 ammunition. | | | | | Deviation at target produced by a 1-mile wind normal to the plane of fire. (5) |
|-----------------------|---|----------------|---------------------------------------|----------------|-----------------------------------|---|
| | Total drift. (2) | | Drift corrected by sight leaf. (3) | | Drift uncorrected (right). (4) | |

PLATE I.

**PRINCIPAL DIMENSIONS AND WEIGHTS OF UNITED STATES
RIFLE, CAL. .30, MODEL OF 1903.**

| Barrel: | DIMENSIONS. | Inches. |
|---|--------------------|----------------|
| Diameter of bore | | 0.30 |
| Exterior diameter at muzzle | | .619 |
| Exterior diameter at breech | | 1.14 |
| Length of chamber and bore | | 23.79 |
| Length of travel of bullet in bore..... | | 21.697 |
| Diameter of chamber, rear end..... | | .4716 |
| Diameter of chamber, front end | | .442 |
| Diameter of neck of chamber, rear end..... | | .3425 |
| Diameter of neck of chamber, front end..... | | .3405 |
| Length of body of chamber | | 1.793 |
| Length of shoulder of chamber..... | | .16 |
| Length of neck of chamber | | .396 |
| Length of chamber, total | | 2.3716 |
| Rifling: | | |
| Number of grooves, 4. | | |
| Twist, uniform, one turn in | 10.00 | |
| Width of grooves | | .1767 |
| Width of lands | | .0589 |
| Depth of grooves | | .004 |
| Height of front sight above axis of bore | | 1.05 |
| Distance from top of front sight to rear side of leaf, leaf raised..... | | 22.1254 |
| Stock: | | |
| Length, with butt plate | | 40.166 |
| Crook, i.e., distance from axis of bore to heel of butt..... | | 2.089 |
| Distance from trigger to butt plate | | 12.74 |
| Length of gun complete | | 43.212 |
| Sight radius | | 22.1254 |
| Sight radius (battle sight)..... | | 21.5404 |
| Width of single division on windage scale | | .0267 |

| | WEIGHTS. | Pounds |
|--|-----------------|---------------|
| Barrel | | 2.79 |
| Barrel, with rear-sight base and front-sight stud | | 3.00 |
| Butt plate | | .26 |
| Receiver | | .98 |
| Bolt mechanism | | 1.00 |
| Magazine and trigger guard | | .44 |
| Magazine mechanism, including floor plate | | .17 |
| Bayonet | | 1.00 |
| Stock | | 1.58 |
| Hand guard | | .13 |
| Front and rear bands, including swivels | | .25 |
| Rear sight, not including base | | .20 |
| Total weight of metal parts | | 7.30 |
| Oiler and thong case | | .19 |
| Total weight of arm, including oiler and thong case, with bayonet..... | | 9.69 |
| Total weight of arm, including oiler and thong case, without bayonet.. | | 8.69 |
| Weight to compress mainspring | | 16 to 18 |
| Trigger pull (measured at middle point of bow of trigger)..... | | 4 to 5 |

MISCELLANEOUS DATA.

Initial velocity2,700 feet per second.
Powder pressure in chamber.....about 51,000 pounds per square inch.
Weight of ball cartridge.....about 395.5 grains.
Weight of bullet150 grains.
Weight of powder chargeabout 50 grains.

**INSTRUCTIONS FOR
ASSEMBLING THE INFANTRY EQUIPMENT
MODEL OF 1910**

War Department,
Office of the Chief of Staff,
Washington, March 11, 1912.

This Manual is published for the information and government of the Regular Army and Organized Militia of the United States.

By order of the Secretary of War:

WILLIAM CROZIER,
Brigadier General, Chief of Ordnance.

INSTRUCTIONS FOR ASSEMBLING THE INFANTRY EQUIPMENT MODEL OF 1910

1. The Cartridge Belt. (a) To assemble the belt. Place the adjusting strap on the ground, eyeleted edge to the front; place the pocket sections on the ground in prolongation of the adjusting strap, pockets down, tops of pockets to the front; insert end of adjusting strap in outer loop of metal guide, from the upper side, carry it under the middle bar and up through the inner loop; engage the wire hook on the end of adjusting strap in the eyelets provided on the inner surface of the belt.

(b) To adjust the belt. Adjust the belt to fit loosely about the waist—i.e., so that when buckled it may rest well down over the hip bones on the sides of the body and below the pit of the abdomen in front. Care should be taken that the adjustment be made equally from both ends of the adjusting strap so that the center eyelet will be in the middle of the belt.

(c) To fill the belt. Unsnap the flap of the pocket and the interior retaining strap; lay the retaining strap out flat in prolongation of the pocket, insert a clip of cartridges, points of bullets up, in front of the retaining strap; press down until the base of the clip rests on the bottom of the pocket; pass the retaining strap over the bullet points and fasten it to the outside of the pocket by means of the fastener provided; insert a second clip of cartridges, points of bullets down, in rear of the first clip; press down until the points of the bullets rest on the bottom of the pocket; close the flap of the pocket and fasten by means of the fastener provided.

The remaining nine pockets are filled in like manner.

2. To Attach the First-aid Pouch. Attach the pouch under the second pocket of the left section of the belt by inserting one hook of the double-hook attachment in the eyelet from the inside of the belt; pinch the base of the pocket, bringing eyelets close together, and insert the other hook in the same manner in the adjoining eyelet.

Place the first-aid packet in the pouch and secure the cover.

3. To Attach the Canteen Cover. Attach the canteen cover to the belt under the rear pocket of the right section in the same manner as the first-aid pouch. Place the canteen and cup (assembled) in the cover and secure the flaps.

4. To Attach the Pack Carrier to the Haversack. Spread the haversack on the ground, inner side down, outer flap to the front (Fig. 4); place the buttonholed edge of the pack carrier on the buttonholed edge of the haversack, lettered side of carrier up; buttonholes of carrier superimposed upon the corresponding ones of the haversack; lace the carrier to the haversack by passing the ends of the coupling strap down through the corresponding buttonholes of the carrier and haversack nearest the center of the carrier, bringing the ends up through the next buttonholes and continuing to the right and left, respectively, to the sides.

5. To Attach the Cartridge Belt to the Haversack. Place the haversack and pack carrier (assembled) on the ground, inner side down (Fig. 5); place the cartridge belt, pockets down, tops to the front, along the junction of the haversack and carrier; insert hook on rear belt suspender in the center eyelet of the adjusting strap, so that the end of the hook will be on the outside of the belt; insert hooks on ends of front belt suspenders in the eyelets between the second and third pockets from the outer ends of the belt, so that the end of the hooks will be on the outside of the belt.

6. To Attach the Bayonet Scabbard to the Haversack. Attach the scabbard by passing its lower end through the loop provided on the side of the haver-

sack body, then engage the double-hook attachment in the eyelets on the outer flap on the haversack, inserting the hooks from the inside.

Place the bayonet in the scabbard.

7. To Attach the Intrenching Tool Carrier to the Haversack. Fold the outer flap of the haversack over so that the meat-can pouch is uppermost; pass the intrenching tool carrier underneath the meat-can pouch and engage the double-hook attachment in the eyelets in the flap provided, inserting the hooks from the underside.

Place the intrenching tool in the carrier and secure.

Place the meat can, knife, fork, and spoon in the meat-can pouch.

The equipment is now assembled and is never disassembled except to detach the pack carrier and its contents as hereinafter provided for.

TO ASSEMBLE THE FULL EQUIPMENT.**WITH RATIONS.**

Place the assembled equipment on the ground, suspender side of haversack down, pockets of cartridge belt up, haversack spread out, inside flap and pack carrier extended their full length to the rear (Fig. 6).

Place three cartons of hard bread in the center of the haversack body, the lower one on the line of attachment of the inside flap; lay the remaining carton of hard bread, the condiment can and the bacon can on the top of these, the condiment can and the bacon can at the bottom, top of the bacon can to the front; the socks and toilet articles are rolled, towel on the outside, into a bundle of the same approximate dimensions as a carton of hard bread, and are placed in front of the two rows thus formed.

The inside flap of the haversack is folded over these articles, the end of the flap being turned in so that the flap, thus shortened, extends about 2 inches beyond the top of the upper row; the sides of the haversack are folded over the sides of the rows; the upper binding straps are passed through the loops on the outside of the inside flap, each strap through the loop opposite the point of its attachment to the haversack body, and fastened by means of the buckle on the opposite side, the strap being passed through the opening in the buckle next to its attachment, over the center bar, and back through the opening of the buckle away from its attachment; the strap is pulled tight to make the fastening secure; the outer flap of the haversack is folded over and fastened by means of the lower haversack binding strap and the buckle on the inside of the outer flap; the strap is pulled tight, drawing the outer flap snugly over the filled haversack.

The haversack is now packed and the carrier is ready for the reception of the pack (Fig. 7).

If one haversack ration and one emergency ration are carried in lieu of two haversack rations, the haversack is packed in the manner described above, except that two cartons of hard bread and the bacon can form the bottom layer, the bacon can on the bottom; the condiment can, the emergency ration, and the toilet articles form the top layer.

If one emergency ration is carried in addition to the two haversack rations, it is packed on top of the top layer.

To Make the Pack (Fig. 8). Spread the shelter half on the ground and fold in the triangular ends, forming an approximate square from the half, the guy on the inside; fold the poncho once across its shortest dimension, then twice across its longest dimension, and lay it in the center of the shelter half; fold the blanket as described for the poncho and place it on the latter; place the shelter tent pins in the folds of the blanket, in the center and across the shortest dimension; fold the edges of the shelter half snugly over the blanket and poncho and, beginning on either of the short sides, roll tightly and compactly. This forms the pack.

To Assemble the Pack (Fig. 9). Place the pack in the pack carrier and grasp the lower suspension rings, one in each hand; place the right knee against the bottom of the roll; pull the carrier down and force the pack up close against the bottom of the packed haversack; without removing the knee, pass the lower carrier binding strap over the pack and secure it by means of the opposite buckle; in a similar manner secure the lower haversack binding strap and then the upper carrier binding strap.

Engage the snap hook on the pack suspenders in the lower suspension rings.

The equipment is now assembled and packed as prescribed for the full equipment.

TO ASSEMBLE THE FULL EQUIPMENT.**WITHOUT RATIONS.**

Place the assembled equipment on the ground as heretofore described; fold up the inside flap of the haversack so that its end will be on a line with the top of the haversack body; fold up the lower haversack strap in the same manner.

To Make up the Pack. Fold the poncho, blanket and shelter half, and make up the pack as heretofore prescribed, except that the condiment and bacon can (the former inside the latter) and the toilet articles and socks are rolled in the pack. In this case the pack is rolled, beginning on either of the long sides instead of the short sides, as heretofore described.

To Assemble the Pack. Place the pack on the haversack and pack carrier, its upper end on a line with the upper edge of the haversack body; bind it to the haversack and carrier by means of the haversack and pack binding straps; fold down the outer flap on the haversack and secure it by means of the free end of the middle haversack binding strap and the buckle provided on the underside of the flap; engage the snap hooks of the pack suspenders in the lower suspension rings.

The equipment is now packed and assembled (Fig. 10).

Fig. 11

Fig. 10

To Adjust the Equipment to the Soldier. Put on the equipment, slipping the arms one at a time through the pack suspenders as through the sleeves of a coat; by means of the adjusting buckles on the belt suspenders, raise or lower the belt until it rests well down over the hip bones on the sides and below the pit of the abdomen in front; raise or lower it in rear until the adjusting strap lies smoothly across the small of the back; by means of the adjusting buckles on the pack suspenders, raise or lower the load on the back until the top of the haversack is on a level with the top of the shoulders, the pack suspenders, from their point of attachment to the haversack to the line of tangency with the shoulder, being horizontal. The latter is absolutely essential to the proper adjustment of the load.

The position of the belt is the same whether filled or empty.

TO ASSEMBLE THE FULL EQUIPMENT LESS THE PACK.

WITH RATIONS, FIG. 11.

Detach the carrier from the haversack; place the rest of the equipment on the ground as heretofore described; place the four cartons of hard bread, the bacon can, the condiment can, and the toilet articles in one row in the middle of the haversack body, the toilet articles at the top, the bacon can at the bottom, top to the front, the row extending from top to bottom of the haversack; fold the inside flap over the row thus formed; fold the sides of the haversack up and over; pass the three haversack binding straps through the loops on the inside flap and secure by means of the buckles on the opposite side of the haversack; pass the lower haversack binding strap through the small buttonhole in the lower edge of the haversack, fold the outer flap of the haversack over the whole and secure by means of the buckle on its underside and the lower haversack binding strap.

Pass the haversack suspension rings through the contiguous buttonholes in the lower edge of the haversack and engage the snap hooks on the ends of the pack suspenders.

If one haversack ration and one emergency ration are carried in lieu of two haversack rations, the haversack is packed in the manner described above, except that one emergency ration is substituted for two of the cartons of hard bread.

If one emergency ration is carried in addition to the two haversack rations, it is packed on top of the layer.

TO ASSEMBLE THE FULL EQUIPMENT LESS THE PACK.

WITHOUT RATIONS.

Detach the carrier from the haversack; place the rest of the equipment on the ground as heretofore described; fold up the inside flap of the haversack until its upper end is on a line with the top of the haversack body; fold the sides of the haversack over, pass the three haversack binding straps through the loops on the inside flap and secure by means of the buckles on the opposite side of the haversack; pass the lower haversack binding strap through the small buttonhole in the lower edge of the haversack; place the condiment and bacon can (the former inside the latter) and the toilet articles and socks in the bottom of the pouch thus formed; fold the outer flap of the haversack over the whole and secure by means of the buckle on its underside and the lower haversack binding strap.

Pass the haversack suspension rings through the contiguous buttonholes in the lower edge of the haversack and engage the snap hooks on the ends of the pack suspenders.

To Adjust the Equipment to the Soldier. Put on the equipment as prescribed for the full equipment. Adjust the cartridge belt as prescribed for the full equipment. Adjust the pack suspenders so that the top of the haversack is on a level with the top of the shoulders.

**TO DISCARD THE PACK WITHOUT REMOVING THE EQUIPMENT
FROM THE BODY.**

Unsnap the pack suspenders from the suspension rings and snap them into the eyelets on top of the belt and in rear of the rear pockets of the right and left pocket sections; support the bottom of the pack with the left hand and with the right hand grasp the coupling strap at its middle and withdraw first one end, then the other; press down gently on the pack with both hands and remove it. When the pack has been removed, lace the coupling strap into the buttonholes along the upper edge of the carrier. Adjust the pack suspenders.

War Department,

Office of the Chief of Ordnance,

Washington, March 11, 1912.

Form No. 1717.

SMALL ARMS FIRING MANUAL

1913

INCLUDING CHANGES NO. 16, FEBRUARY 21, 1917.

PARAGRAPHS NOS. 143 TO 146, 176 TO 199 INCLUSIVE
ELIMINATED, AS THEY DO NOT APPLY TO INFANTRY

War Department,
Office of the Chief of Staff,
Washington, February 28, 1913.

The following "Small Arms Firing Manual" is approved and published for the information and guidance of the Regular Army and the Organized Militia of the United States. Its provisions will take effect January 1, 1914.

By order of the Secretary of War:

LEONARD WOOD,
Major General, Chief of Staff.

Note: Paragraphs Nos. 176 to 179 inclusive have been eliminated, as they pertain to mounted pistol practice, and such practice is not required of Infantry.

SMALL ARMS FIRING MANUAL

DEFINITIONS.

Aiming Device:

A device to be attached to the rifle by which the instructor, standing on one side and facing the rear sight on the rifle, when the soldier is in the act of aiming, can see the reflection of both sights and the object aimed at, and can therefore judge of the accuracy of the soldier's aim and the steadiness of his trigger squeeze.

Anemometer:

An instrument for measuring the velocity of the wind.

Battle Sight:

The position of the rear sight in which the leaf is laid down.

Beaten Zone:

The intersection of the cone of dispersion with the surface on which the objective of the fire stands, or the space on the ground in which the bullets strike, in a series of shots fired by a body of soldiers with the same aiming point and the same rear sight setting.

Bore:

The cylindrical cavity in the small-arms barrel.

Bull's-eye:

The black circular division in the center of the bull's eye target.

Butt:

The embankment or other means used to stop bullets in rear of the target. The plural "butts" is used to designate collectively the parapet, pit, and back stop of a group of targets.

Caliber:

The interior diameter of the small-arms barrel, measured between the lands.

Cant:

To revolve the barrel of the piece on its axis to the right or left while aiming.

Center:

The annular division of the bull's-eye targets A, B, and C embraced between the bull's-eye and the circumference of the next larger circular division of the target. Shots in this space have a value of 4.

Classification:

The arranging of the individuals of an organization in groups or classes according to the degree of skill displayed in record practice on the range with the rifle or pistol.

Coach:

A special instructor charged with the duty of giving advice and information to the firer.

Combat Practice:

The prescribed firing at targets which simulate the appearance of an enemy under conditions approaching those found in war, and the application of this class of fire to tactical exercises.

Cone of Dispersion:

A term applied to the figure formed in space by the trajectories considered together of a series of shots fired by a body of soldiers at a common objective and with the same rear sight setting.

Danger Space:

The sum of the distances in the path of the bullet in which an object of given height will be struck. At long ranges the danger space at the farther end of the range alone is considered.

Defilade:

An obstacle either natural or artificial of sufficient thickness to intercept projectiles and afford shelter from fire delivered from a given point.

Disappearing Target:

A target which is temporarily exposed to view.

Disk, Marking:

A staff, with a disk at each end, used by the marker in the pit in signaling the results of hits on the target.

Distinguished Marksman:

An officer or enlisted man who has won three of the authorized medals in department, departmental, division, and army rifle or carbine competitions or as a member actually firing on a prize-winning team in the national team match.

Distinguished Pistol Shot:

An officer or enlisted man who has won three of the authorized medals in department, departmental, division, and army pistol competitions.

Drift:

The lateral deviation of the bullet caused by the resistance of the air and the rotation of the bullet on its longer axis.

Echelon, Order in:

In the order in echelon the targets or firing stands are placed one behind another to the right or left and unmasking one another.

Emplacement:

The space on the target range allotted for the position of the target.

Estimating Distance:

Judgment by the eye of the distance of an object from the observer. Distance may also be judged by sound.

Expert Pistol Shot:

The highest grade or classification for skill displayed in record practice with the pistol. (See "Classification," par. 243.)

Expert Rifleman:

The highest grade or classification for skill displayed in record practice on the range with the rifle. (See "Classification," par. 240.)

Fire at Will:

That class of fire in which, within the restrictions of the command for firing, the individuals deliver their fire independently of the commander and of each other.

Fire Control:

Or conduct of fire, is the exercise by a commander, over his unit or units, of that power which enables him to regulate the fire in obedience to his will. It pertains especially to the technicalities immediately involved in delivery of fire.

Fire Direction:

Or employment of fire, is a general term embracing the various steps, including tactical disposition, which enable the commander of one or more fire units to bring an effective fire to bear upon the desired target at the proper time. It pertains especially to preparation of fire

Fire Discipline:

Is that condition of the personnel of a fire unit, resulting from training and practice, which enables the commander to obtain an orderly and efficient delivery of fire.

First-class Man:

A grade of rifleman just below that of marksman. (See "Classification," par. 240.)

First-class Pistol Shot:

A grade of pistol shot just below that of expert pistol shot. (See "Classification," par. 243.)

Gallery Practice:

Firing at reduced targets at short ranges with small-caliber rifles.

Gallery, Shooting:

A room or inclosure in which gallery practice can be conducted.

Grooves:

The spiral channels within the bore of the rifle barrel.

Individual Practice:

The firing on the range by which the individual soldier receives his instruction and by which his classification is determined.

Inner:

The annular division of the bull's-eye targets A, B, and C outside the center. Shots in this space have a value of 3.

Insignia:

Badges or distinguishing marks issued for expertness with the rifle or pistol.

Instruction Practice:

The prescribed firing on the range which precedes record practice and which is devoted to the instruction of the soldier.

Lands:

Spaces in the bore of the rifle barrel between the grooves.

Line of Aim:

The imaginary right line joining the middle point of the horizontal line of the open sight, or the center of the peep sight, and the point of aim.

Long Range:

From 800 to 1,200 yards.

Marksman:

A grade of rifleman just below that of sharpshooter. (See "Classification," par. 240.)

Midrange:

From 500 to 800 yards.

Mirage:

A word used to designate the heat waves observed on the target range on warm days. The waves indicate the direction in which the air is moving.

O'clock:

A term employed to indicate, by means of the divisions on the dial of the clock, the location of a hit on the target or the direction from which the wind may be blowing, as a 7 o'clock, 4 or 5 o'clock, wind. In speaking of the position of a hit, the dial is supposed to occupy the front of the target facing the firer, with 12 at the top of the target. In speaking of wind, the dial is supposed to lie on the ground, with the 12 toward the target and the center at the firing point.

Outer:

The space on the bull's-eye targets A, B, and C outside the inner. Shots in this space have a value of 2.

Parapet:

An elevation of earth or other material thrown up in front of the targets to protect the markers.

Pit:

The space between the parapet and the butt or bullet stop occupied by the markers.

Practice Season:

Those portions of the target year devoted to firing with the service cartridge. They include the regular season and the supplementary season.

Preliminary Drills:

Consist of sighting drills, position and aiming drills, gallery practice, deflection and elevation correction drills.

Preliminary Practice:

The prescribed firing on the range which precedes competitions.

Proficiency Test:

The annual test conducted to determine the proficiency of organizations in collective marksmanship.

Prone:

Lying flat on the belly. The only position with the body extended on the ground authorized in known distance firing.

Protest:

A formal objection against some act or decision.

Qualification:

The grade attained in known distance practice depending upon the scores made by individuals in the qualification course, record practice.

Qualification Course, Record Practice:

The course in slow and rapid fire designed as the test of the soldier's ability as a rifleman and which determines his classification. It immediately follows the soldier's instruction practice in the qualification course.

Quick Fire:

The class of fire employed in instruction and record practice for pistol and revolver when bobbing targets are specified.

Range:

Any tract of land over which firing with small arms is conducted. This term is also used to signify the distance of the objective from the firer.

Range Determination:

Finding the range to an object by the use of instrumental range finders, measurement, calculation, or trial shots or volleys.

Range Officer:

A commissioned officer charged with the care, police, etc., of a target range and its accessories.

Rapid Fire:

The class of fire employed in instruction and qualification practice in which a time limit is set for completing a score or scores.

Regular Season:

Comprises two months, not necessarily consecutive, of the target year, selected by the department commander, in which the prescribed course of known distance and combat firing is pursued.

Ricochet Shots:

Bullets which rebound after striking the ground or any other obstacle and continue their flight are said to ricochet.

Score Book:

A book containing forms for recording scores as well as data concerning conditions affecting firing and instructions for the rifleman.

Score Cards:

Pasteboard cards issued to competitors at competitions, giving the number of the target of each competitor firing, with his order of firing, and containing a blank space for the record of the shots fired and for the signature of the scorer.

Score:

A string of consecutive shots fired in individual practice. The term "score" is also used to express the record or register of number of points made in one or more scores, the value of sighting shots being excluded. In record practice with rifle, scores consist of 5 shots in slow fire and 10 shots in rapid fire; with the automatic pistol, 5 shots. In instruction practice with rifle, 10 shots or 5 shots may constitute a score.

Second-class Man:

The lowest grade of those who are given a classification in rifle practice. (See "Classification," par. 240.)

Second-class Pistol Shot:

The lowest grade of those who are given a classification in pistol practice. (See "Classification," par. 243.)

Sharpshooter:

A grade of rifleman just below that of expert rifleman. (See "Classification," par. 240.)

Short Range:

0 to 500 yards.

Shot Marks:

Disks of thin material, 3 inches, 5 inches, and 10 inches in diameter, respectively, with a wire spring of two branches secured to the disk near its center. They are white on one side and black on the other, and are used to mark on the bull's-eye target the position of the last shot.

Sighting Shots:

The trial shots which precede scores in the qualification test firing to enable the soldier to determine the proper sight setting or point of aim.

Slow Fire:

The class of fire employed in instruction and record practice in which no time limit is imposed for completing a score.

Special Course A:

Special course A is a course of rifle practice provided for the Coast Artillery Corps. It is also the course provided for posts where a complete rifle range is not available, but where a range of 200 and 300 yards can be had. Recruits fire a portion of this course in the practice held during the supplementary season.

Spotter:

One who, in team practice, announces the value of shots and indicates on a wooden target, by means of pins, the position of hits on the range target.

Supplementary Season.

A period of the target year designated by the department commander, in which all recruits who have joined too late to participate in the regular practice season will fire a prescribed course.

Target:

An object presenting a mark to be fired at. (See description of targets. Part IV.)

Telescopic Sight:

A telescope or other magnifying device attached to the barrel of the rifle for getting, while aiming, a better definition of a distant objective, provision being made for adjustments in elevation and for windage.

Trajectory:

The path described by a bullet in the air moving under the combined influences of the force of propulsion, the force of gravity, and the resistance of the air.

Twist:

The spiral formed by the grooves in the barrel of a rifled piece. In the United States magazine rifle, model 1903, this twist is uniform, one turn in 10 inches.

Unqualified:

Those who in the last practice season failed to qualify as a second-class shot or better, and those who for any reason did not fire the course and are not otherwise classified.

Windage:

The influence of the wind in deflecting the bullet from the point at which it is aimed; also applied to the amount of change made on the wind gauge.

Wind Gauge:

A graduated attachment on the rear sight of the rifle by which allowance may be made in aiming for the effect of the wind upon the bullet and for drift.

PART I.

GENERAL SCHEME.

1. Object of Instruction. The sole purpose of rifle training for the soldier is to make of him a good shot under war conditions, and a scheme of instruction will be effective in so far as it tends to produce that result. The soldier should therefore be so trained at known distances in the various kinds of fire employed in actual service as to bring his skill as a rifleman up to the capabilities of his weapon, after which he should be so trained in firing as part of tactical units as to utilize his individual skill to the best advantage in operations simulating those of the battle field. The scheme of instruction is prescribed with a view to attaining these objects. By means of preliminary drills and gallery practice the soldier is trained in the fundamental principles of marksmanship; by means of range practice he is taught to apply these principles in firing, at fixed distances, at clearly defined targets. This training is merely preparatory to combat firing in which individuals learn coöperation and commanders and leaders learn how to obtain the maximum efficiency of fire by a judicious coördination of the skill and the efforts of all the individuals of the group or fire unit.

In all preliminary practice and in range firing the soldier is taught to reduce the size of his shot group as much as possible and to place the center of the shot group at the center of his target. In combat firing this principle should be utilized in securing superiority of fire.

In actual combat, individual targets will not, in general, be visible, but if individual shot groups be so combined as to produce a grazing fire uniformly distributed along the hostile line, a large number of hits will necessarily result and shots which miss will have the approximate value of hits in determining superiority of fire.

"In a decisive battle success depends on gaining and maintaining superiority of fire. Every effort must be made to gain it early and then to keep it." (Par. 400, Infantry Drill Regulations.)

"The purpose of fire superiority is to get hits whenever possible, but at all events to keep down the enemy's fire and render it harmless." (Par. 413, Infantry Drill Regulations.) The ultimate object of all instruction is, therefore, to enable troop commanders to deliver a heavy volume of close, accurate fire upon any designated objective. With a given extent of front, however, there is a limit to the number of men who can use their rifles effectively. When the maximum number of rifles has been brought into action, a further increase in the volume of fire can be obtained only by increasing the rate of fire. The rate of fire to be employed will always be dependent upon the tactical situation; as conditions are never the same no fixed rules concerning rates of fire can be prescribed, but "In unexpected, close encounters a great advantage accrues to the side which first opens rapid and accurate fire with battle sight." (Par. 405, Infantry Drill Regulations.) Within such ranges a high degree of proficiency in rapid fire is deemed necessary. The course of instruction in rapid fire is therefore drawn with a view to enabling troop commanders to deliver the most rapid fire possible, consistent with accuracy, upon targets exposed within the ordinary ranges of the battle sight.

2. Scheme of Instruction. The course herein prescribed has been arranged as follows:

- (a) Nomenclature and care of the rifle.
- (b) Sighting drills.
- (c) Position and aiming drills.
- (d) Deflection and elevation correction drills.
- (e) Gallery practice.
- (f) Estimating distance drill.
- (g) Individual known distance firing, instruction practice.
- (h) Individual known distance firing, record practice.
- (i) Long-distance practice.
- (j) Practice with telescopic sights.
- (k) Instruction combat practice.
- (l) Combat practice.
- (m) Proficiency test.

The course of pistol firing includes the following:

- (a) Nomenclature and care of the pistol, general facts and principles.
- (b) Position and aiming drills and rapid-fire drills; dismounted and mounted.
- (c) Individual firing, instruction practice.
- (d) Individual firing, record practice.

3. Grades of Shots and Basis of Qualification. Soldiers are graded according to proficiency exhibited in the record practice as experts, sharpshooters, marksmen, first-class men, second-class men, and unqualified. The grades of first and second class men, corresponding to certain percentages made in the qualification course, are intended to give encouragement to the poorer grades of shots and to provide the soldier, who has been unable to qualify as marksman or better, with a more definite record of marksmanship. The class unqualified is made to include those men borne on the rolls of an organization who have fired and failed to qualify as second class or better and all others who for any reason have not been classified.

As a test of individual proficiency the single course in slow and rapid fire has been devised, qualifications for the various grades being on a percentage basis, as hereinafter shown. The targets used in this test are such that equal conditions as to visibility are provided for all. The time limits chosen after experience and special trials are such that with care and practice the average soldier will be able to deliver without great difficulty the prescribed number of shots in well aimed fire at targets which are plainly visible.

4. Period of Preliminary Instruction. The portion of the year which immediately precedes the instruction of the soldier upon the target ground will be utilized in laying, by a thorough course of the preliminary drills and gallery practice, a good foundation for future proficiency. This applies especially to recruits and those who in the last season failed to qualify as marksman or better. The instructors will also improve this opportunity for explaining the different theoretical principles, as far as the capacity and interest of the men appear to render it advantageous. Recruits will also receive preliminary instruction during the month after joining their commands.

The purpose in the training of a company should be to produce uniform proficiency rather than expertness on the part of a comparatively few men. A man who has once learned to shoot will seldom lose his ability. The attention of the instructor should therefore be concentrated on the poorer shots. The prescribed course in firing admits a saving of ammunition on the best shots, which saving should be applied to the better instruction of recruits and those who in the last season's practice were unable to attain the grade of marks-

man or better. Particular care should be taken to avoid discouraging the poor shots.

5. Supplementary Practice Season. A supplementary course of instruction is prescribed for the benefit of recruits. This practice is for the purpose of preventing an accumulation of recruits totally uninstructed.

6. Discretion Allowed Instructors. Standards of proficiency being set for the individual by the established grades of riflemen, and the purposes of target instruction being understood, it is expected that as far as practicable instructors will be given some latitude in methods to suit peculiarities of individuals and special conditions. Accordingly, while the methods laid down for the preliminary work and instruction courses are given in some detail, these need not necessarily be followed implicitly when departures therefrom appear to be justifiable or advantageous. Improvements in methods of instruction and in target appliances should constantly be sought for and reported upon.

7. Duties of Company Officers. The training of the men in small arms firing will be under the immediate supervision of the company commander, who will be held responsible that a suitable standard of proficiency is reached. He will be assisted by his lieutenants, noncommissioned officers, and expert shots, and these assistants should be given the theoretical instruction necessary to fit them to be coaches and instructors.

As good teaching requires a practical as well as a theoretical knowledge of the subject taught, all company officers will be required to fire with the men, subject to the exceptions given in paragraph 89.

8. Duties of the Battalion Commander. The battalion commander is the supervisor and inspector of firing instruction for the organizations under his command. He will give such theoretical instruction to the officers as may be necessary, and, through proper supervision of the preliminary drills and exercises and of the range practice, assure himself that the company commanders and their assistants are thoroughly conversant with the details of the course and that suitable methods within the meaning and intent of those herein prescribed are being followed. He should not attempt to fix definite lines of procedure, but should endeavor to leave some room for initiative and ingenuity on the part of his subordinates, subject to such restrictions as circumstances and the necessities of other troops may impose.

He will also supervise the combat-firing exercises of his command, endeavoring by every means to realize to the fullest extent the instructional value of these exercises.

In combat-firing exercises designed for a company, the battalion commander will supervise the firing and judge the results according to the prescribed standard, and he will also supervise and judge the annual proficiency test of the organizations of his command unless some other officer has been specially designated.

Each battalion commander will, at the end of the target-practice season, make a written report to the regimental commander of the state of instruction in target practice in the organizations of his command, basing the opinions expressed both on the individual qualifications attained in record firing and upon the results obtained in the combat firing and in the annual proficiency test.

9. Duties of the Regimental Commander. The regimental commander will exercise general supervision over the organizations of his command and will endeavor to maintain the highest possible standard of efficiency in his regiment. Upon receipt of the company and the battalion commanders' reports, he will submit, with the regimental consolidated report of classification (see par. 255), a brief report, through the brigade commander, to the department commander on the state of instruction of his command.

10. The post commander will exercise a general supervision over the target practice of troops at his post and direct supervision over the target practice of troops pertaining to the tactical unit to which he belongs. When troops of different brigades are serving at the same post he will see that the approved programs with reference to target practice prescribed in accordance with instruction orders of the War Department are faithfully complied with.

The post commander will recommend the months of the year most suitable for target practice, including the supplementary practice season, for his post, and when combat-firing facilities do not exist on the reservation, should use every effort to procure suitable firing grounds in the vicinity so that the advantage of this training may not be lost.

11. **Duties of the Department Commander.** The department commander will supervise instruction in small arms for the troops in his department and will make every effort to have complete facilities for this instruction at every post. He will satisfy himself that the purposes of instruction in firing are fully understood and carried out, and to this end he will make the necessary examination of the firing records and order such test firings at the time of his annual inspection as he may deem advisable and of which the ammunition available will admit.

PART II.

INDIVIDUAL INSTRUCTION.

CHAPTER I.

PRELIMINARY INSTRUCTION AND SIGHTING DRILLS FOR THE RIFLE.

12. Nomenclature and Care of the Rifle. Although each recruit is required to be instructed in the nomenclature, care, use, and preservation of the rifle, this instruction will be repeated as the initial step for each season's known distance practice.

The precautions necessary to avoid accidents will also be thoroughly impressed upon the soldier at this time.

SIGHTING DRILLS.

13. Value. The value of the sighting drills and the position and aiming drills can not be too strongly emphasized. By means of them the fundamental principles of shooting may be inculcated before the soldier fires a shot.

14. To Whom Given. The sighting drills will be given to all soldiers who have not qualified as "marksman" or better in the preceding target year.

15. Purpose:

- (a) To show how to align the sights properly on the mark.
- (b) To discover and demonstrate errors in sighting.
- (c) To teach uniformity in sighting.

16. Apparatus and Its Use—Sighting Bar. (See Pl. I.) To consist of:

(a) A bar of wood about 1 by 2 inches by 4 feet, with a thin slot 1 inch deep cut across the edge about 20 inches from one end.

(b) A front sight of tin or cardboard $\frac{1}{2}$ by 3 inches tacked to the end nearer the slot and projecting 1 inch above bar.

(c) An eyepiece of tin or cardboard 1 by 3 inches tacked to the other end of, and projecting 1 inch above, the bar, with a very small hole (0.03 inch) $\frac{1}{2}$ inch from top of part projecting above the bar.

(d) An open rear sight of tin or cardboard $1\frac{1}{2}$ by 3 inches, with a U-shaped notch $\frac{3}{4}$ inch wide cut in the middle of one of the long edges. This is placed in the slot on the bar. A slight bend of the part of the tin fitting in the slot will give enough friction to hold the sight in any part of slot in which it is placed.

(e) A peep rear sight of tin or cardboard 3 by 3 inches, with a peep hole $\frac{3}{4}$ inch in diameter cut in the center. This replaces the open sight when the peep sight is shown.

Carefully blacken all pieces of tin or cardboard and the top of the bar. Nail the bar to a box about 1 foot high and place on the ground, table, or other suitable place. Then adjust the open or peep rear sight in the slot and direct the bar upon a bull's-eye (preferably a Y target) placed about 5 yards from the

bar. No other than the sight desired can be seen. Errors, etc., are shown by manipulating the open and peep rear sights.

17. **Sighting Rest for Rifle.** (See Pl. II.) Take an empty pistol ammunition box or a similar well-made box, remove the top and cut notches in the ends to fit the rifle closely. Place the rifle in these notches with the trigger guard close to and outside one end. (The stock may be removed from the rifle so as to bring the eye as near the rear sight as in shooting.) Nail a plank (top of a box will do) to a stake or wall about 12 inches from the ground. Fasten a blank sheet of paper to the plank. Place the rest firmly on the ground, 20 or 30 feet from the plank, so that the rifle is canted neither to the right nor left—weight the box with sand if necessary—and without touching the rifle or rest, sight the rifle near the center of the blank sheet of paper. Changes in the line of sight

are made by changing the elevation and windage. Take the prone position with elbows on the ground, hands supporting the head. A soldier acting as marker is provided with a pencil and a small rod bearing a disk of white cardboard about 3 inches in diameter, with a black bull's-eye (a black paster is best) pierced in the center with a hole just large enough to admit the point of a lead pencil. The soldier sighting directs the marker to move the disk to the right, left, higher, or lower, until the line of aim is established, when he commands "Mark" or "Hold." At the command "Mark," being careful not to move the disk, the marker records through the hole in its center the position of the disk and then withdraws it. At the command "Hold," the marker holds the disk carefully in place without marking until the position is verified by the instructor, and the disk is not withdrawn until so directed.

18. **Line of Sight.** With the open sight the line of sight is determined by a

point on the middle line of the notch of the rear sight and the top of the front sight. With the peep sight, the line of sight is determined by the center of the peep and the top of the front sight.

19. Point of Aim. The soldier will be informed that to give the greatest uniformity a point just below the mark, and not the mark, is taken as the point of aim, as it is impossible to always know, if touching the mark with the top of the front sight, how much of the front sight is seen; that the term "on the mark or bull's-eye" will be understood to mean an aim, taken just below the mark, showing a fine line of light between the mark and the top of the front sight.

20. The Normal Sight. Look through the rear-sight notch at the bull's-eye or mark and bring the top of the front sight on a line with the top of and in the center of the rear-sight notch and aligned upon the point of aim. (See Fig. 1, Pl. III.)

21. The Peep Sight. Look through the peep hole at the bull's-eye or mark

PLATE II.

and bring the top of the front sight to the center of the aperture and aligned upon the point of aim. (See Fig. 2, Pl. III.)

The soldier should be informed that regular results in firing can be obtained only when the same amount of front sight is taken each time, and that this can be done only by using the normal sight with the open notch or the peep sight in the manner described above. He should understand that the effect of taking less than the normal amount of sight is to cause a point lower than that aimed at to be struck, and that taking too much of the front sight causes a higher point to be struck.

Although men will be found occasionally who can get excellent results by using the fine sight (Fig. 1, Pl. IV), the average man can not, and this form of sighting is not recommended. The so-called full sight should not be taught under any circumstances. If shown to the men at all, it should be for the purpose of pointing out a fault to be carefully avoided.

Remarks. The eye can be focused accurately upon objects at but one distance at a time; all other objects in the field of view will appear more or less

blurred, depending on their distance from the eye. This can readily be seen if a pencil is placed in the field of view near the eye while looking at some distant object. The pencil will appear blurred. This is the condition met with by the normal eye in sighting a rifle. If the eye is focused on one of the three points—the bull's-eye, the front sight, or the rear sight—the other two will appear blurred. This blurring effect is best overcome by using the "peep sight," as though looking through a window, and focusing the eye on the bull's-eye. The blurring of the peep hole will be concentric, giving a clear and easily defined center. The blurring of the front sight will be less, but symmetrical on

PLATE III.

Fig. 1

Fig. 2

both sides with very little blur on the top. It can be readily and naturally brought to the center of the peep hole. Variations in light have less effect on the peep than on the open sight.

But the limited field of view and lack of readiness in getting a quick aim with the peep sight limit its use to those stages of the combat when comparative deliberation will be possible. In the later stages of battle—especially when a rapid fire is to be delivered—the open sight will, in most cases, be used. In this case the normal sight should be used, as the horizontal line at the top of the notch of the rear sight affords a good guide for regularity.

Whatever sight is used, the eye must be focused on the bull's-eye, or mark, not on the front or rear sight.

FIRST SIGHTING EXERCISE.

22. Using illustrations, describe the normal sight and the peep sight.
23. Using the sighting bar, represent the normal sight and the peep sight and require each man in the squad to look at them.
24. Using the sighting bar, describe and represent the usual errors of sighting and require each man in the squad to look at them.

SECOND SIGHTING EXERCISE.

25. Using the sighting rest for the rifle, require each man to direct the marker to move the disk until the rifle is directed on the bull's-eye with the normal sight and command "Hold." The instructor will verify this line of

PLATE IV.

**Fig. 1****Fig. 2****Fig. 3****Fig. 4**

sight. Errors, if any, will be explained to the soldier and another trial made. If he is still unable to sight correctly, the first exercise will be repeated.

Soldiers will sometimes be found who do not know how to place the eye in the line of sight; they often look over or along one side of the notch of the rear sight and believe that they are aiming through the notch because they see it at the same time that they do the front sight. This error will probably be made evident by the preceding exercise. Some men in sighting will look at

the front sight and not at the object. As this often occasions a blur, which prevents the object from being distinctly seen and increases both the difficulties and inaccuracies of sighting, it should be corrected.

26. Repeat the above, using the peep sight.

THIRD SIGHTING EXERCISE.

27. Using the sighting rest for the rifle, require each man to direct the marker to move the disk until the rifle is directed on the bull's-eye with the normal sight and command "Mark"; then, being careful not to move the rifle or sights, repeat the operation until three marks have been made.

(a) The Triangle of Sighting. Join the three points determined as above by straight lines, mark with the soldier's name, and call his attention to the triangle thus formed. The shape and size of this triangle will indicate the nature of the variations made in aiming.

(b) Abnormal Shape, Causes. If the triangle is obtuse angled, with its sides approaching the vertical (see Fig. 2, Pl. IV), the soldier has not taken a uniform amount of front sight. If the sides of the triangle are more nearly horizontal (see Fig. 3, Pl. IV) the errors were probably caused by not looking through the middle of the notch or not over the top of the front sight. If any one of the sides of the triangle is longer than one-half inch, the instructor directs the exercise to be repeated, verifying each sight and calling the soldier's attention to his errors. The instructor will explain that the sighting gains in regularity as the triangle becomes smaller.

(c) Verifying the Triangle. If the sides of the triangle are so small as to indicate regularity in sighting, the instructor will mark the center of the triangle and then place the center of the bull's-eye on this mark. The instructor will then examine the position of the bull's-eye with reference to the line of sight. If the bull's-eye is properly placed with reference to the line of sight, the soldier aims correctly and with uniformity. If not so placed, he aims in a regular manner but with a constant error.

(d) Causes of Errors. If the bull's-eye is directly above its proper position, the soldier has taken in aiming too little front sight, or if directly below too much front sight. If directly to the right or left, the soldier has not sighted through the center of the rear-sight notch and over the top of the front sight. If to the right, he has probably either sighted along the left of the rear sight notch or the right side of the front sight, or has committed both of these errors. If the bull's-eye is too far to the left, he has probably sighted along the right of the rear sight notch or to the left of the front sight, or has combined both of these errors.

If the bull's-eye is placed with reference to its proper position diagonally above and to the right, the soldier has probably combined the errors which placed it too high and too far to the right. Any other diagonal position would be produced by a similar combination of vertical and horizontal errors.

As the errors thus shown are committed when the rifle is fixed in position, while that of the bull's-eye or target is altered, the effect will be directly opposite to the changes in the location of a hit in actual fire, occasioned by the same errors, when the target will be fixed and the rifle moved in aiming.

After the above instruction has been given to one man, the line of sight will be slightly changed by moving the sighting rest or by changing the elevation and windage, and the exercises similarly repeated with the other men in the squad.

28. Repeat the third sighting exercise, using the peep sight.

PLATE V.

FOURTH SIGHTING EXERCISE.

29. This exercise is a demonstration of the effect of canting the piece. The soldier must be impressed with the necessity of keeping the sights vertical when aiming, and not canting the piece to the right or left. Explain to the soldier that if the piece is canted to the right, the bullet will strike to the right and below the point aimed at, even though the rifle be otherwise correctly aimed and the sights correctly set. Similarly, if the piece is canted to the left, the bullet will strike to the left and low. This can be explained by showing that the elevation fixes the height of the point where the bullet will hit the target, and that the windage fixes the point to the right or left; i.e., the elevation gives vertical effects and the windage horizontal effects. Let a pencil (or rod) held vertical represent the elevation; now if the pencil is turned to the right 90° , or horizontal, all of the elevation has been taken off, causing the shot to strike low and changed into windage, causing the shot to strike to the right.

30. This effect may be demonstrated as follows: Use the sighting rest with the rifle firmly held in the notches, the bolt removed. Paste a black paster near the center of the bottom line of the target. Sight the rifle on this mark, using about 2,000 yards elevation, then, being careful not to move the rifle, look through the bore and direct the marker to move the disk until the bull's-eye is in the center of the field of view and command "Mark." Next turn the rest with the rifle on its side, and with the same elevation sight on the same paster as above, then, being careful not to move the rifle, look through the bore and again direct the marker to move the disk until the bull's-eye is in the center of the field of view and command "Mark." Not considering the fall of the bullet, the first mark represents the point struck, with the sight vertical, the second mark represents the point struck, low and to the right, using the same elevation and the same point of aim, when the piece is canted 90° to the right.

Different degrees of canting the piece can be represented by drawing an arc of a circle through the two marks with the paster as a center. The second mark will be at a point on this arc corresponding to the degree of canting the piece. Emphasis will be laid upon the fact that this effect of canting increases with the distance from the target.

31. **Other Exercises.** If time permits, the instructor may devise other exercises which suggest themselves as useful and beneficial to his men. The following are examples:

(a) In strong sunlight make a triangle of sighting, using a rifle having sights worn bright. Then, being careful not to move the rifle, blacken sights and make another triangle. Use dotted lines for the triangle made with bright sights and full lines for the triangle made with blackened sights. The position and size of the two triangles will plainly show the advantage of the blackened sights.

(b) In strong sunlight make a triangle of sighting; then, being careful not to move the rifle, make another triangle, having first shaded the target and the man sighting. The relative position of the triangles will show the importance of knowing the effects of varying degrees of light.

CHAPTER II.**POSITION AND AIMING DRILLS.**

32. **Purpose.** These drills are intended to so educate the muscles of the arm and body that the piece, during the act of aiming, shall be held without restraint, and during the operation of firing shall not be deflected from the target by any convulsive or improper movement of the trigger or of the body.

arms, or hands. They also establish between the hand and eye such prompt and intimate connection as will insure that the finger shall act upon the trigger, giving the final pressure at the exact moment when the top of the front sight is seen to be directed upon the mark.

The fact, though simple, can not be too strongly impressed upon the recruit that if, at the moment of discharge, the piece is properly supported and correctly aimed, the mark will surely be hit. Since any intelligent man can be taught to aim correctly and to hold the sights aligned upon the mark with a fair amount of steadiness, it follows that bad shooting must necessarily arise from causes other than bad aiming. The chief of these causes is known to be the deflection given to the rifle when it is discharged, due to the fact that the soldier, at the moment of firing, instead of squeezing the trigger, jerks it. This convulsive action is largely due to lack of familiarity with the methods of firing and to a constrained position of the muscles of the body, arm, and hands, which constrained position it is the purpose of the position and aiming drills to correct.

To become a good shot, constant, careful, and patient practice is required. Systematic aiming and squeezing the trigger will do much to make a rifleman. The men will be taught to take advantage of every opportunity for practicing aiming, and squeezing the trigger. For this purpose the barracks and ground in the vicinity of the barracks should be furnished with aiming targets, which the men will be encouraged to use at odd moments, as when waiting for a formation or during a rest. At drill the soldier will be cautioned never to squeeze the trigger without selecting an object and taking careful aim. When on the range waiting for his turn to fire, the soldier should use part of his time in position and aiming exercises, aiming at the target or at objects outside of the range, and he should be made to understand that this practice previous to firing will tend to prevent nervousness and will have a marked effect upon his score.

33. To Whom Given. The position and aiming drills will be given to all soldiers who have not qualified as "marksman" or better in the preceding target year. Some practice in these drills (especially in the trigger-squeeze exercise) is recommended for those who have qualified as "marksman" or better. The amount to be given is left to the discretion of the company commander.

34. Drills; General Instructions. These drills are divided into four progressive exercises. The first exercise teaches the position; the second exercise teaches the position and the aim; the third exercise teaches the aim and the manner of squeezing the trigger; and the fourth exercise teaches the methods of rapid fire. The exercises should be taught by the numbers at first; when fully understood, without numbers.

To correct any tendency to cant the piece, the rear sight will be raised. A black paster at which to aim will be placed on the wall opposite each man. The squad being formed in single rank, with an interval of 1 yard between files, the instructor directs the men to take the position of "Ready," except that the position of the feet will be such as to insure the greatest firmness and steadiness of the body. The instructor then cautions "Position and aiming drill."

The exercise which is being taught should be repeated frequently and made continuous. The instructor prefaces the preparatory command by "Continue the motion," or "At will," and gives the command "Halt" at the conclusion of the exercise, when the soldier will return to the position of "Ready." Or the soldier may be made to repeat the first and second motions by the command "One," "Two," the exercise concluding with the command "Halt."

Care should be taken by the instructor not to make the position and aiming

drills tedious. Thirty minutes daily should be spent in this practice during the period of preliminary instruction. After gallery practice is taken up, however, five or ten minutes daily should be sufficient for these exercises.

In order that the instructor may readily detect and correct errors, the squads for these drills should not consist of more than eight men.

The instructor should avoid holding the squad in tiresome positions while making explanations or correcting errors.

POSITION EXERCISE.

35. The instructor commands: 1. **Position**, 2. **EXERCISE**. At the last command, without moving the body or eyes, raise the rifle smartly to the front of the right shoulder to the full extent of the left arm, elbow inclined downward, the barrel nearly horizontal, muzzle slightly depressed, heel of the butt on a line with the top of the shoulder.

(Two.) Bring the piece smartly against the hollow of the shoulder, without permitting the shoulder to give way, and press the rifle against it, mainly with the right hand, only slightly with the left, the forefinger of the right hand resting lightly against the trigger, the rifle inclined neither to the right nor left.

(Three.) Resume the position of "Ready."

36. **Remarks.** The instructor should especially notice the position of each soldier in this exercise, endeavoring to give to each man an easy and natural position. He should see that the men avoid drawing in the stomach, raising the breast, or bending the small of the back.

The butt of the piece must be pressed firmly, but not too tightly, into the hollow of the shoulder and not against the muscles of the upper arm. If held too tightly, the pulsations of the body will be communicated to the piece; if too loosely, the recoil will bruise the shoulder. If only the heel or toe touches the hollow of the shoulder, the recoil may throw the muzzle down or up, affecting the position of the hit. While both arms are used to press the piece to the shoulder, the left arm should be used to direct the piece and the right forefinger must be left free to squeeze the trigger.

AIMING EXERCISE.

37. The instructor will first direct the sights to be adjusted for the lowest elevation and subsequently for the different longer ranges.

The instructor commands: 1. **Aiming**, 2. **EXERCISE**.

At the last command execute the first and second motion of the position exercise.

(Two.) Bend the head a little to the right, the cheek resting against the stock, the left eye closed, the right eye looking through the notch of the rear sight at a point slightly below the mark.

(Three.) Draw a moderately long breath, let a portion of it escape, then, with the lungs in a state of rest, slowly raise the rifle with the left hand, being careful not to incline the sight to either side, until the line of sight is directly on the mark; hold the rifle steadily directed on the mark for a moment; then, without command and just before the power to hold the rifle steadily is lost, drop the rifle to the position of "Ready" and resume the breathing.

38. **Remarks.** Some riflemen prefer to extend the left arm. Such a position gives greater control over the rifle when firing in a strong wind or at moving objects. It also possesses advantages when a rapid as well as accurate delivery

of fire is desired. Whatever the position, whether standing, kneeling, sitting or prone, the piece should rest on the palm of the left hand, never on the tips of the fingers, and should be firmly grasped by all the fingers and the thumb.

The eye may be brought to the line of sight either by lowering the head or by raising the shoulder; it is best to combine somewhat these methods; the shoulder to be well raised by raising the right elbow and holding it well to the front and at right angles to the body.

If the shoulder is not raised, it will be necessary for the soldier to lower the head to the front in order to bring the eye in to the line of sight. Lowering the head too far to the front brings it near the right hand, which grasps the stock. When the piece is discharged, this hand is carried by the recoil to the rear and, when the head is in this position, may strike against the nose or mouth. This often happens in practice, and as a result of this blow often repeated many men become gun-shy, or flinch, or close their eyes at the moment of firing. Much bad shooting, ascribed to other causes, is really due to this fault. Raising the right elbow at right angles to the body elevates the right shoulder, and lifts the piece so that it is no longer necessary to incline the head materially to the front in order to look along the sights.

As the length of the soldier's neck determines greatly the exact method of taking the proper position, the instructor will be careful to see that the position is taken without restraint.

39. As changes in the elevation of the rear sight will necessitate a corresponding change in the position of the soldier's head when aiming, the exercise should not be held with the sight adjusted for the longer ranges until the men have been practiced with the sights as the latter would generally be employed for offhand firing.

40. The soldier must be cautioned that while raising the line of sight to the mark he must fix his eyes on the mark and not on the front sight; the latter can then be readily brought into the line joining the rear-sight notch and mark. If this plan be not followed when firing is held on the range at long distances the mark will generally appear blurred and indistinct. The front sight will always be plainly seen, even though the eye is not directed particularly upon it.

41. The rifle must be raised slowly, without jerk, and its motion stopped gradually. In retaining it directed at the mark, care must be taken not to continue the aim after steadiness is lost; this period will probably be found to be short at first, but will quickly lengthen with practice. No effort should be made to prolong it beyond the time that breathing can be easily restrained. Each soldier will determine for himself the proper time for discontinuing the aim.

42. The men must be cautioned not to hold the breath too long, as a trembling of the body will result in many cases.

43. Some riflemen prefer, in aiming, to keep both eyes open but, unless the habit is fixed, the soldier should be instructed to close the left eye.

TRIGGER-SQUEEZE EXERCISE.

44. The instructor commands: 1. **Trigger squeeze.** 2. **EXERCISE.** At the command Exercise, the soldier will execute the first motion of the aiming exercise.

(Two.) The second motion of the aiming exercise.

(Three.) Draw a moderately long breath, let a portion of it escape, hold the breath and slowly raise the rifle with the left hand until the line of sight is on the mark, being careful not to incline the sights to either side. Contract the trigger finger gradually, slowly and steadily increasing the pressure on the

trigger, while the aim is being perfected; continue the gradual increase of pressure so that when the aim has become exact the additional pressure required to release the point of the sear can be given almost insensibly and without causing any deflection of the rifle. Continue the aim a moment after the release of the firing pin, observe if any change has been made in the direction of the line of sight, and then resume the position of "Ready," cocking the piece by raising and lowering the bolt handle.

45. Remarks. Poor shooting is often the result of lack of proper coördination of holding the breath, the maximum steadiness of aim, and the squeeze of the trigger. By frequent practice in this exercise, each man may come to know the exact instant his firing pin will be released. He must be taught to hold the breath, bring the sights to bear upon the mark, and squeeze the trigger all at the same time.

46. The Trigger Squeeze. The trigger should be squeezed, not pulled, the hand being closed upon itself as a sponge is squeezed, the forefinger sharing in this movement. The forefinger should be placed as far around the trigger as to press it with the second joint. (See Fig. 4, Pl. IV.) By practice the soldier becomes familiar with the trigger squeeze of his rifle, and knowing this, he is able to judge at any time, within limits, what additional pressure is required for its discharge. By constant repetition of this exercise he should be able finally to squeeze the trigger to a certain point beyond which the slightest movement will release the sear. Having squeezed the trigger to this point, the aim is corrected and, when true, the additional pressure is applied and the discharge follows.

RAPID-FIRE EXERCISE.

47. Object. The object of this exercise is to teach the soldier to aim quickly and at the same time accurately in all the positions he will be called upon to assume in range practice.

48. The instructor commands: 1. Rapid-fire exercise. 2. COMMENCE FIRING. At the first command the first and second motions of the trigger-squeeze exercise are performed. At the second command the soldier performs the third motion of the trigger-squeeze exercise, squeezing the trigger without disturbing the aim or the position of the piece, but at the same time without undue deliberation. He then, without removing the rifle from the shoulder, holding the piece in position with the left hand, grasps the handle of the bolt with the right hand, rapidly draws back the bolt, closes the chamber, aims, and again squeezes the trigger. This movement is repeated until the trigger has been squeezed five times, when, without command, the piece is brought back to the position of "Ready."

When the soldier has acquired some facility in this exercise, he will be required to repeat the movement ten times, and finally, by using dummy cartridges, he may, by degrees, gain the necessary quickness and dexterity for the execution of the rapid fire required in range firing.

49. Methods. The methods of taking position, of aiming, and of squeezing the trigger, taught in the preceding exercises, should be carried out in the rapid-fire exercise, with due attention to all details taught therein; the details being carried out as prescribed except that greater promptness is necessary. In order that any tendency on the part of the recruit to slight the movements of aiming and of trigger squeeze shall be avoided, the rapid-fire exercise will not be taught until the recruit is thoroughly drilled and familiar with the preceding exercises. The recruit will be instructed that with practice in this class of fire the trigger can be squeezed promptly without deranging the piece.

50. Repetition. If the recruit seems to execute the exercise hurriedly or carelessly, the instructor will require him to repeat it at a slower rate.

51. Manipulation of the Breech Mechanism. To hold the piece to the shoulder and, at the same time, manipulate the breech mechanism with the proper facility, are learned only after much practice. Some riflemen, especially men who shoot from the left shoulder, find it easier, in rapid firing, to drop the piece to the position of load after each shot. While at first trial this method may seem easier, it is believed that, with practice, the advantage of the former method will be apparent.

POSITION AND AIMING DRILL, KNEELING.

52. These exercises will be repeated in the kneeling position by causing the squad to kneel by the commands prescribed in the Drill Regulations. The exercises will be executed as prescribed for standing, except that at the command "Two" in the position exercise, the soldier will rest the left elbow on the left knee, the point of the elbow in front of the kneecap. The pasters for the kneeling exercise should be at $2\frac{1}{2}$ feet from the floor or ground.

53. Remarks. Frequent rests will be given during practice in these exercises kneeling, as the position, if long continued, becomes constrained and fatigues the soldier unnecessarily.

In raising the rifle to the mark in the second and third exercises, the position of the left hand should not be changed, but the left forearm should be brought toward the body and at the same time the body bent slightly to the rear.

When aiming kneeling there is, from the nature of the position, a tendency to press the butt of the rifle against the upper arm instead of against the hollow of the shoulder; this will necessitate inclining the head considerably to the right to get the line of sight, and by bringing the rifle so far to the rear will, if the thumb is placed across the stock, cause it to give by the recoil a blow upon the nose or mouth.

These difficulties may be avoided by advancing the right elbow well to the front, at the same time raising it so that the arm is about parallel with the ground. The hollow of the shoulder will then be the natural place for the rifle butt, and the right thumb will be brought too far from the face to strike it in the recoil.

Some riflemen prefer, by bending the ankle, to rest the instep flat on the ground, the weight of the body coming more on the upper part of the heel; this obviates any tendency of the right knee to slip; or, by resting the right side of the foot on the ground, toe pointing to the front, to bring the weight of the body on the left side of the foot. These positions are authorized.

54. Choice of Position. In firing kneeling, the steadiness obtained depends greatly upon the position adopted. The peculiarities of conformation of the individual soldier exert when firing kneeling a greater influence than when firing either standing, sitting, or prone; the instructor should, therefore, carefully endeavor, noticing the build of each soldier, to place him in the position for which he is best adapted and which will exert the least tension or strain upon the muscles and nerves. It should be remembered, however, that without the rest of the left elbow on the knee this position possesses no advantage of steadiness over the standing position.

55. Kneeling Position; When Taken. The kneeling position can be taken more quickly than either the sitting or the prone position. It is, therefore, the position naturally assumed when a soldier, who is standing or advancing, has to make a quick shot at a moving or disappearing object and desires more steadiness than can be obtained standing.

POSITION AND AIMING DRILL, SITTING DOWN.

56. In many cases the men, while able to kneel and hold the piece moderately steady, can obtain in a sitting position much better results. All should, therefore, be instructed in aiming sitting down as well as kneeling.

To practice the soldier in the preceding exercises in a sitting position, the squad being formed in a single rank, with an interval of one pace between files, the rifle should first be brought to "Order arms"; the instructor then commands: **SIT DOWN.**

At this command make a half face to the right and, assisted by the left hand on the ground, sit down, facing slightly to the right, the left leg directed toward the front, right leg inclined toward the right, both heels, but not necessarily the bottoms of the feet, on the ground, the right knee slightly higher than the left; body erect and carried naturally from the hips; at the same time drop the muzzle of the piece to the front, and to the position of the first motion of load, right hand upon the thigh, just in front of the body, the left hand slightly above, but not resting upon, the left leg.

The exercise will be executed as heretofore prescribed, except that at the command "Two" (position exercise) the soldier will rest the left elbow on the left knee, the point of the elbow in front of the kneecap, and the right elbow against the left or inside of the right knee, at the same time inclining the body from the hips slightly forward.

For the aiming and trigger-squeeze exercises the pasters, used as aiming points, will be $2\frac{1}{2}$ feet from the floor or the ground.

To afford the men rest or on the completion of the kneeling or sitting down exercises the instructor will command **RISE**, when the men rise, face to the front, and resume the "Order arms."

57. **Remarks.** If the preceding position is carefully practiced, steadiness is quickly attained. The right leg should not be carried so far to the right as not to afford a good support or brace for the right elbow.

This position may be modified, but, in general, not without impairing the steadiness of the man, by crossing the legs at the ankle, the outside of each foot resting upon the ground, body more erect, and the knees slightly more raised than in the previous position.

POSITION AND AIMING DRILL, PRONE.

58. From the nature of the position it is not practicable to execute these exercises according to the method followed when standing or kneeling. Instruction will, however, always be given with reference to the position, to the manner of assuming it, and to aiming and squeezing the trigger.

For this purpose the squad being formed as specified in paragraph 56 (the black pasters therein mentioned being about 12 inches from the ground), the squad will be brought to "Order arms."

Then (the squad either standing or kneeling), the instructor commands: **LIE DOWN**, which will be executed as prescribed in the Drill Regulations; the legs may be spread apart and the toes turned out if found to give a steadier position.

After the squad has taken the position as prescribed above, the legs should be inclined well to the left, and either crossed or separated as the soldier prefers or as his particular conformation appears to render most desirable, and the body at the same time inclined slightly to the right.

With care and practice the soldier may acquire an easy position which he is able to assume with great facility.

Being at "Ready," the instructor then commands: 1. **Trigger squeeze.** 2. **EXERCISE.**

At the latter command carry the elbow to the front and slightly to the right, the left hand under the barrel at the balance, weight of the body mainly supported by the left elbow, the right resting lightly on the floor or ground.

(Two.) Slide the rifle with the right hand through the left hand to the front until the left hand is a little in front of the trigger guard; at the same time raise the rifle with both hands and press it against the hollow of the shoulder.

(Three.) Direct the rifle upon the mark and carry out the further details of aiming and squeezing the trigger as prescribed in paragraph 44.

Then resume the position, lying down.

As soon as the men have acquired with accuracy the details of the position they will be practiced, without the numbers, in aiming and squeezing the trigger at will; after which the rapid-fire exercise in the prone position will be practiced, the necessary skill and dexterity being acquired by degrees.

To afford the men rest, or on completion of the exercise, the instructor will command: **RISE**, which is executed as prescribed in the Drill Regulations.

59. Remarks. The preceding position for firing lying down possesses in a greater degree than any other position the merit of adaptability to the configuration of the ground; it enables the soldier to deliver fire over low parapets or improvised shelters, thus making the best use of cover. The importance of training the soldier in firing from the other positions should not, however, be lost sight of, since from the prone position it will frequently be impossible to see the objective.

Back positions are not authorized.

In the prone position, when aiming, the left elbow should be well under the barrel, the other elbow somewhat to the right, but not so far as to induce any tendency to slip on the floor or ground.

The greater changes in elevation required in first directing the rifle on the object should be given by altering the position of the left hand under the barrel, the slighter changes only by advancing or withdrawing the shoulder.

As the body does not yield to the recoil, as when firing standing or kneeling, the force of recoil, if the rifle is not properly held, may severely bruise the soldier. It is one of the objects of this exercise to so teach him that this will be prevented by assuming a correct position. Care must be exercised that the butt is not brought against the collar bone. By moving the shoulder slightly to the front or rear, and by moving the right elbow from the body or toward it, each soldier may determine the position in which the shoulder gives to the butt of the rifle the easiest rest. This will probably be the one in which the force of the recoil will be least felt.

The soldier should persist in this exercise until he obtains a position in which he feels no constraint, which will not subject him to bruises from the recoil, and from which the mark appears plainly through the sights. Having secured such a position, he must not change it when firing, as a variation in the points of support of the rifle, the distance of the eye from the rear sight, or the tension of the hold has a decided effect, especially at the longer ranges, upon the location of the point struck.

60. Use of Sling. After the soldier has been drilled in the proper standing, kneeling, sitting, and prone positions in the foregoing exercises, the use of the sling will be taught. Its use is described in paragraph 91. Adjustments and their advantages will be taught with the idea of noninterference with quickness and freedom of action. The trigger-squeeze exercises will then be continued in the different positions, using the sling.

GENERAL REMARKS ON THE PRECEDING DRILLS.

61. The importance of sighting and position and aiming drills can not be too persistently impressed upon the soldier. If these exercises are carefully practiced, the soldier, before firing a shot at a target, will have learned to correctly aim his piece, to hold his rifle steadily, to squeeze the trigger properly, to assume that position best adapted to the particular conformation of his body, and will have acquired the quickness and manual dexterity required for handling the piece in rapid fire. This knowledge can not be successfully acquired upon the target ground. At that place the time that can be given to instruction is limited and should be devoted to the higher branches of the subject. Even if the desired amount of attention could be given to each soldier, nevertheless, from the circumstances of the firing, his errors can not be readily determined. It is more than likely that the soldier would never discover the reasons for his failures and would, therefore, be unable to properly correct them.

Under such conditions the knowledge that he may have of the many other requisites for good marksmanship can not be utilized to full advantage, and, in fact, can but in a limited degree compensate for the neglect of these first principles and for the failure to lay, by assiduously practicing them, the only firm foundation for future proficiency.

If, in the instruction practice on the range, it is found that the soldier makes errors in his position, he should be required to stop firing and to practice the third exercise for 10 or 15 minutes. He should be encouraged to go through these exercises frequently at other than drill hours, care being taken that, in the aiming and trigger-squeeze exercises, he always has some definite object for a mark.

CHAPTER III.**DEFLECTION AND ELEVATION CORRECTION DRILLS.**

62. **Sight Correction.** The soldier may find when firing at a target that the first shot has missed the bull's-eye or figure, and in order to cause the second to hit, two methods may be used: The point of aim may be changed or the sights may be moved and the same point be aimed at. In order to do accurate shooting it is essential to have a well-defined mark at which to aim; consequently, except for very slight corrections, the method of moving the sights, involving changes in elevation and windage, is devised.

63. **Elevation.** The instructor will show the men the graduations on the rear-sight leaf, and will explain to them the value of the different divisions. He will explain how to adjust their sights for different distances. He will make it clear that raising or lowering the slide on the rear-sight leaf has the effect of raising or lowering the point struck. The amount of change which a given amount of elevation will cause in the point struck varies with the range and with the rifle and the ammunition used.

64. **Deflection.** The instructor will explain how to move the movable base by use of the windage screw; that the graduations on the rear end of the movable base are for convenience in setting the sights and applying corrections; that each division is called a point of windage; that turning the movable base of the rear sight to the right or left changes the point struck to the right or left; that to overcome the drifting effect of a wind from the right, the movable base must be moved to the right, and, if the wind be from the left, the movable sight base must be moved to the left.

65. **Adjusting the Sights.** (a) **Elevation.** The graduations on the rear sight will be found correct for but few rifles. This is due to slight variations in the parts of the rifle, especially the barrel, which occur under the most exact

methods of fabrication. Not all rifles are tested at the arsenal, and when the graduations for the rear sight have been experimentally determined, they are correct only for the particular conditions existing when they were so determined. The correction necessary for each particular rifle at any range is found by shooting it at that range, and is constant with the same ammunition and when firing under the same conditions. If no correction is necessary, the rifle is said to "shoot on the mark."

(b) **The Zero of a Rifle.** That reading of the wind gauge necessary to overcome the drift of a rifle at a particular range is called the "zero" of that rifle for that range, and all allowances for wind should be calculated from this reading.

The "zero" of a rifle is found by shooting it on a perfectly calm day.

66. The following table gives the approximate corrections on the rear-sight leaf and the wind gauge necessary to move the point struck 1 foot at ranges from 100 to 1,000 yards:

| Range. | Correction on wind gauge necessary to move the point struck 1 foot. | Correction in elevation necessary to change the point struck 1 foot. |
|---------------|--|---|
| <i>Yards.</i> | <i>Points.</i> | <i>Yards.</i> |
| 100 | 3 | 415 |
| 200 | 1.5 | 185 |
| 300 | 1 | 105 |
| 400 | .75 | 70 |
| 500 | .6 | 48 |
| 600 | .5 | 35 |
| 700 | .43 | 25 |
| 800 | .375 | 20 |
| 900 | .333 | 15 |
| 1,000 | .3 | 12 |

67. **Exercise.** To give the soldier practice in correcting elevation and windage, a target should be placed on the wall facing the squad and a blank paster attached a foot or more from the bull's-eye, at first directly above or below the bull's-eye, then on a horizontal line with it, and finally in an oblique direction.

For this drill the rifle of each soldier who has not determined by actual firing the "zero" and the correct elevations for the different ranges will be assumed to shoot on the mark and to require no windage.

Announce the range and tell the men that the paster represents the position of an assumed hit and require each man to correct his sight so as to bring the next hit into the bull's-eye. This exercise should be repeated daily during gallery practice, using the A, B, C, and D targets, until the men have acquired accuracy in making corrections for all ranges up to 1,000 yards.

When the men have learned how to adjust their sights, this exercise should be carried on in connection with gallery practice. The rear sight on each rifle is given an incorrect setting in elevation and windage by the instructor, and the soldier required to find the correct adjustment by firing.

68. **The Effect of Wind.** It is important that before going on the range the soldier should be taught to estimate the force and direction of the wind and the amount of correction necessary to apply to the movable rear-sight base to overcome the effect of the wind on the bullet in its flight.

The direction of the wind, for convenience, is expressed by a clock-face notation, the clock being supposed to lie on the ground with the hour XII toward

the target or mark and the hour III at the firer's right hand. A wind blowing from the front (that is from the direction of the target) is called a "XII-o'clock wind," one directly from the left and across the field of fire is called a "IX-o'clock wind," and so on. The direction of the wind can be obtained by observing its effect upon the smoke, on trees, or grass, or dust, or by wetting the finger and holding it up.

The force of the wind is designated in miles per hour. An anemometer should be placed near the barracks, where it will not be exposed to cross currents, and so that the dial can be readily seen. The force of the wind can then be read from the dial and at the same time the effect of the wind on the boughs of trees, flags, and streamers, and the smoke from chimneys should be observed. The soldier should be required to estimate the force of the wind and then verify his estimation by anemometer readings. This exercise should be repeated frequently until the soldier has learned to estimate roughly the force of the wind without the aid of an anemometer.

Heat waves, when present, are an important aid in estimating the force of the wind.

69. In the following table are shown the points of windage necessary to correct for a 10-mile-an-hour wind:

| Range. | III or IX. | II, IV, VIII, X. | I, V, VII, XI. |
|---------------|----------------|------------------|----------------|
| <i>Yards.</i> | <i>Points.</i> | <i>Points.</i> | <i>Points.</i> |
| 100 | 0.23 | 0.20 | 0.10 |
| 200 | .34 | .31 | .17 |
| 300 | .61 | .53 | .30 |
| 400 | .86 | .75 | .43 |
| 500 | 1.11 | .96 | .55 |
| 600 | 1.39 | 1.20 | .69 |
| 700 | 1.68 | 1.45 | .84 |
| 800 | 2.00 | 1.73 | 1.00 |
| 900 | 2.34 | 2.03 | 1.17 |
| 1,000 | 2.67 | 2.30 | 1.33 |

Winds blowing from XII and VI o'clock directions have no deviating influence on the flight of the bullet, but these winds have the effect of shortening (in the case of XII-o'clock wind) or lengthening the range (in the case of VI-o'clock wind). The correction necessary to apply in the case of such winds is inappreciable.

70. **Remarks.** If the soldier is well drilled in applying the windage and elevation corrections necessary to bring an assumed hit into the bull's-eye or figure, using in turn each of the targets at which he fires on the range, he will need very little further instruction in applying the necessary corrections. The instructor should assure himself that the men understand the reasons for these corrections, and they should never forget that they must move the rear-sight movable base into the wind and in the same direction they wish to move the point struck.

CHAPTER IV. GALLERY PRACTICE.

71. After the soldier has been thoroughly instructed in sighting, and in the position, aiming, deflection, and elevation-correction drills, he will be exercised in firing at short ranges with reduced charges.

72. **Value of Gallery Practice.** Notwithstanding the value of the position and aiming drills, it is impossible to keep up the soldier's interest if these exercises

are unduly prolonged. By gallery practice, however, the interest is easily maintained and further progress, especially in teaching the trigger squeeze, is made. Many of the external influences, which on the range affect the firing, being absent, the soldier is not puzzled by results for which, at this stage of his education, he could not account were he advanced to firing with full charges. Furthermore, as there is no recoil to induce nervousness or flinching, the soldier soon finds that he can make good scores, and this success is the surest stimulus to interest.

Not only to the beginner is gallery practice of value; to the good shot it is a means of keeping, to a certain extent, in practice, and practice in shooting, as much as in anything else, is essential. Since it can be carried on throughout the year, gallery practice is of much value in fixing in the men the habit of aimed fire, than which nothing in his training is of more importance.

73. Gallery Practice. During the month preceding range practice the minimum number of scores given in the following table must be fired by all who are required to fire under the provisions of paragraph 89:

| Range (feet). | Target. | Position. | Scores. |
|------------------|---|-----------|--|
| 50 | The iron gallery target issued by the Ordnance Department, or one similar thereto, or the paper "X" target. | Kneeling. | { A minimum of four (4) at each range in each of the positions prescribed. |
| 50 | | Standing. | |
| 75 | | Prone. | |
| 75 | | Sitting. | |

74. Scores. Gallery practice will be conducted in scores of five shots. The number of scores to be fired by any man at a single practice is determined by the company commander.

No reports of the results of the firing will be required, although a record of it should be kept in the company for the instruction and guidance of the soldier.

75. Additional Practice. In addition to the minimum number of scores prescribed in paragraph 73, practice in this class of firing should be carried on throughout the year when practicable, the amount and details of the practice being left to the discretion of the company commander. The practice should be varied as much as possible. It should include exercises in slow and rapid fire, in assuming the various firing positions and opening fire quickly, and in finding the correct adjustment of the rear sight without unnecessary loss of time. Moving or disappearing targets can easily be improvised and the instruction made as interesting as possible.

76. Matches. Matches in gallery firing between the men, particularly the recruits, and between teams of the same or different companies, should be promoted and encouraged. While such matches increase the interest of the men in their practice, they at the same time afford experience in the conditions of competitive firing.

CHAPTER V.

ESTIMATING-DISTANCE TEST.

77. Importance. Ability to estimate distances correctly is an important element in the education of the soldier.

While it is true that fire on the battle field will usually be by groups and the ranges given by officers or noncommissioned officers, the battle field is reached only after a long series of experiences in scout, patrol, and outpost duty, in which the soldier is frequently placed in positions where it is essential that he shall determine for himself the range to be used in order that the fire may be

effective. It is, therefore, here made a prerequisite to qualification that the soldier shall be proficient in estimating distances by eye.

During the estimating-distance drills advantage should be taken of every opportunity to train the soldier in observing his surroundings from positions and when on the march. He should be practiced in pointing out and naming different features of the ground; in discovering and describing different objects; in counting different objects or beings. Especially should noncommissioned officers be trained in describing the location, with reference to other objects, of objects difficult to see and in imparting information of this kind quickly and accurately.

78. Distances can be estimated by the eye or by sound; they can be determined by range-finding instruments, by trial shots or volleys, or from maps.

79. **Estimation of Distance by Eye.** To estimate distance by the eye with accuracy, it is necessary to be familiar with the appearance, as to length, of a unit of measure which can be compared mentally with the distance which is to be estimated. The most convenient unit of length is 100 yards. To impress upon the soldier the extent of a stretch of 100 yards two posts 100 yards apart, with short stakes between to mark each 25 yards, should be placed near the barracks, or on the drill ground, and the soldier required to pace off the marked distance several times, counting his steps. He will thus learn how many of his steps make 100 yards and will become familiar with the appearance of the whole distance and of its fractional parts.

Next a distance of more than 100 yards will be shown him and he will be required to compare this distance with the 100-yard unit and to estimate it. Having made this estimate, he will be required to verify its accuracy by pacing the distance.

A few minutes each day should be spent in this practice, the soldier often being required to make his estimate by raising his rear-sight leaf and showing it to the instructor. After the first drills the soldier should be required to pace the distance only when the estimate is unusually inaccurate.

The soldier should be taught that, in judging the distance from the enemy, his estimate may be corrected by a careful observation of the clearness with which details of dress, the movements of limbs or of the files in a line may be seen. In order to derive the benefit of this method, the soldier will be required to observe closely all the details noted above in single men or squads of men posted at varying distances, which will be measured and announced.

Although the standing and kneeling silhouettes used in field practice afford good objects upon which to estimate distances, the instructor should make frequent use of living figures and natural objects, as this is the class of targets from which the soldier will be compelled to estimate his range in active service.

80. **Methods of Estimating Long Distances by the Eye.** The following methods are found useful:

(a) The soldier may decide that the object can not be more than a certain distance away nor less than a certain distance; his estimates must be kept within the closest possible limits and the mean of the two taken as the range.

(b) The soldier selects a point which he considers the middle point of the whole distance, estimates this half distance and doubles it, or he similarly divides the distance into a certain number of lengths which are familiar to him.

(c) The soldier estimates the distance along a parallel line, as a road on one side, having on it well-defined objects.

(d) The soldier takes the mean of several estimates made by different persons. This method is not applicable to instruction.

81. **Appearance of Objects: How Modified by Varying Conditions of Light; Difference of Level, Etc.** During instruction the men should be taught the

effect of varying conditions of light and terrain upon the apparent distance of an object.

Objects seem nearer—

- (a) When the object is in a bright light.
- (b) When the color of the object contrasts sharply with the color of the background.
- (c) When looking over water, snow, or a uniform surface like a wheat field.
- (d) When looking from a height downward.
- (e) In the clear atmosphere of high altitudes.

Objects seem more distant—

- (a) When looking over a depression in the ground.
- (b) When there is a poor light or a fog.
- (c) When only a small part of the object can be seen.
- (d) When looking from low ground upward toward higher ground.

82. Estimating Distance by Sound. Sound travels at the rate of about 1,100 feet, or 366 yards, per second. If a gun is fired at a distance, a certain time elapses before the sound is heard. If the number of seconds or parts of seconds between the flash and the report be carefully taken and multiplied by 366, the product will be approximately the distance in yards to the gun. This method will be of doubtful use on the battle field, owing to the difficulty of distinguishing the sound of the gun whose flash is seen from that of any other. It will probably be useful in determining the range to a hostile battery when it first opens fire.

83. Determining Distance by Range-finding Instruments. Accuracy in determining by range-finding instruments depends upon care and facility in use of the instrument and clearness of definition of the objective. Knowledge of the use of the instrument issued is essential to all company officers and should be imparted to sergeants when time is available.

84. Determination of Distance by Trial Shots or Volleys. If the ground is so dry and dusty that the fall of the bullets is visible through a glass or with the naked eye, a method of determining the distance is afforded by using a number of trial shots or volleys.

The method of using trial volleys is as follows:

The sights are raised for the estimated range and one volley is fired. If this appears to hit but little short of the mark an increase of elevation of 100 yards will be used for the next volley. When the object is inclosed between two volleys, a mean of the elevations will be adopted as the correct range.

The range may be obtained from a near-by battery or machine gun. This is the best method where available.

85. Estimating Distance Test. When instruction shall, in the opinion of the company commander, have progressed to such an extent as to enable the soldier to judge distances with the eye with fair accuracy, he will be tested for proficiency.

As the danger space is continuous for a man kneeling within a range of 547 yards (battle-sight range), and as individual fire and the fire of small squads will ordinarily be limited to 1,200 yards, the soldier will be tested for proficiency at distances between these two ranges.

The rules governing this test are as follows:

- (a) The test will be supervised by an officer.
- (b) Each soldier will be tested separately.
- (c) The ground shall be other than that over which he fired or has previously estimated distances.
- (d) The use of any device to mark the limits within which distances are tested

(550 and 1,200 yards), at the time the test is given, so that this device can be seen from the estimating point, is prohibited.

(e) The objectives will be natural objects, men standing, kneeling, or prone, or silhouettes.

(f) For objectives, five or more natural objects will be selected, or single men or groups of men stationed or silhouettes placed within the ranges indicated above. The distances of the objectives will not be measured until all who are to estimate on them have made their estimates.

The men to be tested are conducted to a point near that from which the estimates are to be made, and remain facing away from the objectives or hidden therefrom by some feature of the ground. They are not permitted to know what objects are to be used in the test until they are called up to the estimating point.

The officer conducting the test calls up one man at a time, points out to him an objective and causes him to estimate the distance thereto. This is continued until the soldier's estimates on five objectives have been obtained. When the test for the day is completed by any man, he will not be allowed to join the squad awaiting test. After all the men have made estimates of distances to a given series of objectives, ranges thereto will be measured.

(g) Proficiency for the expert rifleman and for the sharpshooter shall consist in making in five consecutive estimates an average degree of accuracy of 90 per cent.

Similarly for proficiency, marksmen, first-class men, and second-class men are required to make in five consecutive estimates an average degree of accuracy of 85 per cent.

Not more than three trials will be given, and should the soldier fail three times to make the required percentage, his final qualification will be reduced one grade below that obtained in firing.

86. Range Finders. The estimating test having been completed, five or six enlisted men, selected by the company commander from the most accurate estimators, will be designated as "Range finders." These men will be given practice in estimating distances throughout the year. The practice will be on varied ground and at distances up to 2,000 yards.

CHAPTER VI.

KNOWN-DISTANCE PRACTICE.

87. General Description. When gallery practice has been completed as required, the soldier is advanced to known-distance firing. The general scheme for firing is shown on opposite page.

1. The instruction practice, qualification course, embraces slow fire at targets A, B, and D at 200, 300, 500, and 600 yards, and rapid fire at target D at 200, 300, and 500 yards.

2. Record practice, qualification course, consists of slow fire at targets A and B at 300, 500, and 600 yards, and rapid fire at target D at 200, 300, and 500 yards.

3. Long-distance practice is for experts and sharpshooters only. It is for instruction and is not a factor in qualification.

4. Practice with telescopic sights is for instruction of specially selected men in the use of this device, these to be experts or otherwise, four of the best shots among the enlisted men of the company. It is not a factor in qualification.

5. The supplementary course is designed for recruits and others who have joined after the practice season or so late in the season that it has been impracticable for them to fire.

6. Special course A is designed for the Coast Artillery Corps, for bandmen when required to fire, and for posts where ranges not greater than 300 yards can be obtained.

88. **Target Year and Practice Season.** The target year, being the period for which reports are rendered and which includes the practice season, will commence January 1 and terminate December 31.

The practice season will consist of two months, called the regular season, and a period, not to exceed one month, called the supplementary season. All to be designated by the department commander upon the recommendation of subordinate commanders.

| | | | | |
|--------------------------|--|------------------------------------|--|--|
| KNOWN DISTANCE PRACTICE. | Regular courses. | Qualification course... | Instruction practice... | { Slow fire, targets A and B. Slow fire, target D. Rapid fire, target D. |
| | | | Record practice..... | { Slow fire, targets A and B. Rapid fire, target D. |
| | | Long-distance practice. | Slow fire..... | { 800 yards, target C. 1,000 yards, target C. |
| | | | | |
| | | Practice with telescopic sights. | { Target B. Target C. | |
| | Supplementary Course—Special Course A, Instruction Practice. | | | |
| | Special courses. | Special course A.... | Instruction practice... | { Slow fire, target A. Slow fire, target D. Rapid fire, target D. |
| | | | Record practice..... | { Slow fire, target A. Rapid fire, target D. |
| | | Courses for Organized Militia..... | Qualification course... | { Slow fire, targets A and B. Slow fire, target D. Rapid fire, target D. |
| | | | | { Slow fire, targets A and B. Rapid fire, target D. |
| | | | Long-distance practice, slow fire..... | { 800 yards, target C. 1,000 yards, target C. |
| | | | Practice with telescopic sights..... | { Target B. Target C. |

During the period designated as the practice season, known distance firing will be carried on in such manner that, while record firing should take place on favorable days and under the most favorable circumstances, the men should be required to practice under variable conditions of weather, care being taken that the shooting is not held under such adverse conditions as to make it unprofitable.

As far as practicable, organizations actually firing will be excused from all post duties during this time, the usual duties being performed by the remainder of the garrison.

It shall be the duty of the post commander to see that, as far as the exigencies of the service permit, all men on extra and special duty who are required to

fire be given as much preliminary instruction and range practice as is given to other men.

All range work will be performed by the troops firing, except that during record practice, qualification course, such officers as may be required for range duty will be detailed from troops not firing.

In the regular season, the known distance firing will be carried to completion, all officers and men who are required to fire taking part.

Recruits who join in the last month of the regular season will fire in the supplementary season only.

89. Who Will Fire. Known-distance practice.

REQUIRED TO FIRE.

All officers and enlisted men of regiments of Infantry, Cavalry, and Engineers, and of Mounted Battalions of Engineers, except those authorized but not required to fire, and except bandmen, who will not fire (except in the Philippine Islands, when required to do so by the department commander).

All officers and enlisted men of companies of Coast Artillery will fire special course A.

AUTHORIZED BUT NOT REQUIRED TO FIRE.

Staff departments, except medical and chaplains, all officers and enlisted men. Staff Corps, all officers and enlisted men.

Field and staff officers of regiments of Infantry, Cavalry, and Engineers, of Mounted Battalions of Engineers, and of the Coast Artillery Corps.

Enlisted men of headquarters, supply, and machine-gun troops and companies of Cavalry and Infantry. Enlisted men of regiments and Mounted Battalions of Engineers who do not belong to companies. Noncommissioned staff officers of the Coast Artillery Corps.

All officers enumerated above of over 15 years' commissioned or commissioned and enlisted service, except officers of the Medical Department and chaplains, are authorized but not required to fire.

Cooks may be excused from firing.

Upon the recommendation of the surgeon, the post commander may excuse officers and men from practice.

A soldier who has completed the qualification course, record practice, and who is transferred or who is discharged and reenlists, will not fire the qualification course a second time in the same year.

A soldier will begin his regular practice each target-practice season with the instruction practice, qualification course (Tables 1, 2, and 3). Having completed this, he will fire the record practice, same course (Tables 4 and 5).

Officers and enlisted men authorized but not required to fire, and who are not on duty with a company or troop which takes target practice, will, if they fire, be attached to organizations for practice and will be classified on the report of the organization to which so attached.

90. Restrictions as to the Arm. The rifle or pistol shall be used as issued by the Ordnance Department, except that the wood of the upper band may be worked down. This change to be made under the supervision of the company commander. The use of additional appliances, such as temporary shades for sights, spirit levels, orthoptic eyepieces, etc., is prohibited. The front-sight cover may be left on the rifle during firing and the sights may be blackened if desired. Telescopic sights may be used in combat practice. Troops will use, in small-arms practice, the weapon with which they are armed.

Small arms and appliances issued by the Ordnance Department for test and report will not be used in determining classifications.

91. Use of Gun Sling. The gun sling may be used at all ranges as an auxiliary to steady the piece, in connection with one arm only, provided that for the purposes of adjustment for shooting, neither end shall have been passed through either sling swivel. No knot will be tied in the sling and the sling itself will not be added to nor modified in any manner.

92. Use of Rests—Positions. In known distance practice a rest will not be allowed for the rifle or any part of the body except as prescribed in these regulations.

In combat firing such rests as are available will be permitted.

Within the limits of these regulations, the soldier should be allowed to take the position giving him the greatest ease and steadiness.

93. Use of Devices for Determining Force and Direction of Wind. Anemometers, wind clocks, and other instruments, and flags, vanes or streamers for determining the force or direction of the wind will be allowed on the range during instruction practice but not during record firing for qualification.

94. Dress and Equipment. In all classes of firing the service uniform and service hat will be worn. In all known distance practice the soldier will be equipped with the rifle and cartridge belt; for infantry and troops equipped as infantry, who are provided with the model 1910 equipment, the garrison belt, or the cartridge belt, model 1910, when the garrison belt is not available;¹ for cavalry provided with the new equipment, the field belt; for other troops, the cartridge belt stripped; cartridge belt suspenders will not be worn in known-distance firing; the coat may be omitted when authorized by the post commander.

For combat practice, the service uniform "for field duty" will be worn (see Table of Occasions, Uniform Regulations), together with that field equipment prescribed as one of the conditions of the exercise (see paragraph 223 (d) and paragraph 224), and may be any one of the following:

(a) The full field equipment; with or without rations as may be prescribed for the exercise.

(b) The full field equipment less pack (or blanket roll); with or without rations as may be prescribed for the exercise.

Officers will, when firing, wear the same uniform and equipment as the men. In conducting combat firing exercises officers will be equipped with field glasses and pistols; sabers will not be worn.

95. Instruction Practice. Instruction practice, qualification course, should carry out the purposes which the term implies, and hence the amount of ammunition to be expended in this practice should be in proportion to the instruction needed. For recruits and those who in the last season's practice failed to qualify as marksman or better, not less than that prescribed in Tables 1, 2, and 3 should be fired, and, in special cases, considerably more, so that the inexperienced shot may be given ample opportunity to determine the nature of his errors and the best methods of correcting them.

For those who have qualified as marksman or better and who have learned the principles of shooting, not so much practice is required to keep in condition for retaining the qualification or for improving it; hence, for experts and sharpshooters, the expenditure of ammunition in the instruction practice, qualification course, will not exceed 100 rounds and 130 rounds per man, respectively, in one season's practice. For marksmen, in one season of practice, this expenditure

¹ The last sentence of paragraph 7, page 742, Instructions for Assembling the Infantry Equipment, model of 1910, is not intended to prohibit the detaching of the cartridge belt from the equipment for known-distance practice when the garrison belt is not available.

per man will not exceed the minimum number of rounds prescribed in the tables.

Subject to these restrictions, the expenditure of ammunition and the procedure as to order of practice and details followed in the instruction practice, qualification course, will be at the discretion of the company commander. Scores of 5 shots are permitted in rapid fire, instruction practice, and, in some instances, it may be found advantageous to begin instruction at 100 yards. The firing in this practice by a recruit of more than 50 rounds in one day is prohibited.

96. Record Practice. Record practice is for two purposes: First, to afford the soldier an object lesson of his progress; second, to obtain a record by means of which the soldier may be graded in awarding insignia and increased pay.

The rules for record practice must be fixed and be applicable to all alike. These rules must be strictly observed by all; scores must be recorded accurately; the work in the pit must be conducted with great efficiency.

In this practice "coaching" of any nature is prohibited. Each firer must observe the location of his own hit as indicated by the marking disk or spotter. After a soldier has taken his place at the firing point, no person shall render or attempt to render him any assistance whatever.

This practice will be conducted according to the regulations governing competitions, except that in a continuous pit there will be one officer to every two targets or less, and in each single target pit there will be an officer.

Scores will be kept in the pit and compared with the record made at the firing point.

97. Field Glasses. Officers and enlisted men will be allowed and encouraged to use field glasses, subject to the restrictions concerning coaching contained in paragraph 96.

98. Order of Procedure. The practice season opens with instruction practice, qualification course. This is carried to completion for each soldier before he proceeds to record practice. When the instruction practice, qualification course, is completed, the soldier proceeds to record practice (same course) and follows this to completion.

No individual will fire record practice, qualification course, on the same day as any part of instruction practice. Record practice having begun for any individual will be finished before any other firing is taken up.

While record practice is being conducted at any distance, there will be no other firing on the range at that distance.

A record practice score for any individual once begun at a range will be carried to completion at that range without interruption.

99. Sighting Shots. Sighting shots form no part of the score and are not recorded as such. When sighting shots are prescribed they must be taken. If, through no fault of his own, a soldier's record score is not completed at a range where sighting shots are prescribed and has to be repeated, he must be given sighting shots with the new score.

100. Instruction shots fired by an officer or enlisted man will be permitted only in instruction practice.

101. Scoring. The record of the score, from which classification will be made, will be kept at each firing point by a noncommissioned officer, who will be assigned, unless at a one-company post, to a point where his own company is not firing. The scoring will be closely supervised and the record verified by a company officer. Scores will be recorded on the range with pencil on sheets prepared for that purpose.

A separate sheet will be kept for each man firing, and as soon as the man's score at any range is completed the scorer will sign the sheet and the company

commander will take it up, initial it, and keep it in his personal possession until the soldier is again called upon to fire. The record scores will be transferred from these sheets to the company target record by the company commander. The company target record will be kept in the personal possession of the company commander and not allowed in the hands of an enlisted man from the beginning of record practice until the required reports for range practice have been rendered. All entries in the company target record will be made in ink and no corrections or alterations will be made except by the company commander, who will initial each correction.

102. Scoring Slow Fire. The scorer, as each shot is signaled, will announce in a tone loud enough to be heard by the firer the name of the firer and the value of the hit, and will record it on a sheet assigned to that soldier.

A shot upon the wrong target will be entered upon the score of the man firing as a miss, no matter what the value of the hit upon the wrong target.

If two shots strike a target at the same or nearly the same time, both will be signaled; and if a shot was just fired from the firing point assigned to that target, the hit having the higher value of the two will be entered in the score of the soldier firing from that target point, and no record made of the other hit.

103. Scoring Rapid Fire. In rapid fire as each shot is signaled it is announced as follows: One five, two fives, three fives, one four, two fours, three fours, four fours, one three, one miss, two misses, and jotted down on a pad as called, the scorer watching the target as he calls the shot. After the marking is finished the scorer counts the number of shots marked and, if more or less than 10, calls: "Re-mark No. —." If 10 shots have been marked, he then enters the score on the soldier's score card and totals it as follows: 5 5 5 4 4 4 3 0 0 = 34.

In record practice, in case of two men firing on the same target, the resulting score will be rejected, the soldier at fault being credited with only such hits, if any, as he may have made on his own target, the other soldier repeating his score. In case of more than 10 hits on a target the score will not be recorded and the soldier assigned to that target will repeat the score.

104. Officer in Charge of Firing. At stations where the range is provided with several targets and practice is usually held simultaneously by two or more companies and successively by others, an officer in charge of the firing will be appointed.

The officer in charge of the firing, who should be, when practicable, a field officer, will have general supervision of the firing and of the target range during the practice season. He will not supervise the details of the instruction of the companies practicing on the range, but will maintain order, regulate the distribution of ranges and targets to organizations, prevent infractions of regulations, and in general assist by every proper means to secure efficient and accurate service from the working force of the range.

He will see that all necessary precautions are taken for the safety of the markers and such spectators as may be present.

When ranges are not provided with butts and the surroundings are such that persons or animals might attempt to cross the range, the officer in charge of firing, before firing is begun, will post lookouts, in positions to be seen from the pit, whose duty it will be to prevent any attempt to cross the line of fire. Whenever the lookouts can not prevent the line of fire being crossed they should display a danger signal, when the markers will withdraw the targets.

105. Range Officer. At all ranges a range officer will be appointed who will be charged with the care and police of the range and with the necessary repairs to targets, shelters, butts, and firing points. He will be assisted by a noncommissioned officer and such fatigue parties as may be required. He will make timely estimates for material and labor to place the range in proper

condition for the practice season, and all necessary repairs will be made under his direction and the supervision of the post commander. He will be responsible for the accurate measuring of the range and the correct location of the different firing points, for the condition of the telephone system, and for the arrangement and efficiency of the personnel at the butts. During the practice season he will act as assistant to the officer in charge of the firing.

106. Noncommissioned Officer in Charge of Pit. A competent noncommissioned officer, with such assistants as the post commander deems necessary, will be detailed permanently during the target season in charge of arrangements at the butts. He will be under the direction of the range officer and will be responsible for the efficiency and discipline of the target details. It will be his duty to see that targets are ready for the firing desired and that all targets are serviceable; also to see that as the target details report they are provided with the proper flags, marking disks, paste, pasters, etc.

107. Target Details. The detail for marking each target will consist of two privates belonging to the company firing at that target, and one noncommissioned officer, always selected, except at a one-company post, from some other company. The noncommissioned officer will be held responsible that order is kept at his target and should be familiar with the regulations governing the markers and with the method of marking. Upon arriving at the pit the noncommissioned officer in charge of the target will see that his detail procures from the noncommissioned officer in charge of the pit the necessary ricochet and danger flags, spotters, marking disks, pasters, and paste. He will display the danger flag in front of his target, examine the target carefully to see that it is in good working order and that all old shot holes are pasted up. In case any target is, or becomes, so badly mutilated as to be unserviceable, he will procure a new one from the noncommissioned officer in charge of the pit. Upon completion of the firing he will take down the target and return it, with the disks, flags, etc., to the pit house. He will also report to the noncommissioned officer in charge of the pit such repairs as that target and its accessories may require for a subsequent practice.

If it should become necessary before the completion of the firing for the markers to leave or for other persons to enter a target pit not provided with a continuous shelter or covered approach, the target should first be turned or withdrawn from the firing position and the danger signal displayed. After the signal "Cease firing" has been sounded, or if there is no musician present at the firing point after a few seconds' delay, the target pit may be entered or left, the target turned back to the firing position, the danger signal removed, and the firing resumed.

In case of a disabled target the danger signal should be displayed and not withdrawn until the target is in working order.

108. Marking. When a post is garrisoned by a single company and it is impossible to detail noncommissioned officers of other companies to supervise the marking and scoring, those duties will be performed by the noncommissioned officers of the firing company. In record firing, qualification course, when only one company is firing, new paper targets will be used for each day's firing, and upon its completion the company commander or one of his lieutenants will count the number of hits made in each division of the target and compare the totals with the recorded scores.

As in some cases the markers may inadvertently make errors in signaling hits, whenever an examination of the target gives results very closely agreeing with the recorded scores, the record should be permitted to stand, but the markers cautioned to exercise greater care in the future.

Any shot cutting the edge of the figure or bull's-eye will be signaled and

recorded as a hit in the figure or bull's-eye, and as the limiting line of each division of the target is the outer edge of the line separating it from the exterior division, whenever this line is touched by a shot, it will be signaled and recorded as a hit in the higher division.

In record firing the officers in the pit will verify every miss before it is signaled, and will closely observe the marking on the targets to which they are assigned to prevent fraud or errors on the part of the markers.

109. Marking, Slow Fire. In slow fire with the rifle, as each shot is fired the noncommissioned officer indicates to one of the markers the value and position of the hit, if any is made, and supervises this marker while he signals the result of the shot to the firing point. The center of the disk should be placed over the shot hole. When double sliding targets are used the target hit will be withdrawn and the location of the hit indicated with the proper disk on the other target. After the result of the shot has been signaled, if a direct or ricochet hit has been made, the other marker will cover the shot hole with the proper paster. When spotters are used the shot hole will not be pasted up, but the spotter hung in the hole. When the exposed target is hit it is withdrawn and the other target run up, the spotter showing the exact location of the preceding hit on that target. When another hit is made on that target it is withdrawn, the spotter changed from the first shot hole to the second, and the first shot hole pasted up. When spotters are used care must be taken to paste up a shot hole as soon as the spotter is removed and also to paste up any shot hole in the spotter itself.

The value of a shot will be indicated to the firing point as follows:

If a bull's-eye, with a white disk.

If a center (four), with a red disk.

If an inner (three), with a black and white disk.

If an outer (two), with a black disk.

With spotters, two disks may be used, fixed in sockets on the top of the parapet so that they may be seen from the firing point. One disk is white on one side and red on the other; the other disk a black cross on a white field on one side and all black on the other. When a hit is made its value is indicated by turning the proper face toward the firer, exposing it a few seconds, and then turning its edge toward the firer. When not indicating the value of hits, disks should be kept edge toward the firing point.

In marking targets the following will govern:

If a ricochet, by displaying the ricochet flag; and if the target is hit, by placing over the shot hole at the same time the appropriate disk. The ricochet flag has a white field with a red center, similar to the flag used in signaling, the size depending on the distance.

If a miss, by waving the danger flag across the front of the target. If the markers know on which side of the target the miss is made, the flag will also be held on that side, but this should not be done unless the marker is absolutely certain on which side the miss is made, as false information regarding misses will so mislead the firer that he is likely to continue to miss the target.

If a hit is in the parapet the flag will be so held as to give the necessary indication.

If two shots strike a target at about the same time both will be signaled.

In slow fire with the pistol two disks are used, one a white disk to indicate a bull's-eye, the other a black disk to indicate all other hits. On one side of the target is printed a column of figures from 2 to 5, inclusive, and on the other side a column of figures from 6 to 9, inclusive. These numbers are large enough to be seen at 75 yards. When a bull's-eye is made the white disk is placed with the center of the disk over the hit. When a hit is made on any other part of

the target than the bull's-eye, the black disk is placed on the number indicating the value of the hit, and after a slight pause is placed so that the center of the disk is over the shot hole.

Instead of two disks, a staff with a spearhead, white on one side and black on the other, may be used, the white side being shown the firer when indicating the location of a hit in the bull's-eye and the black side when indicating a hit on any other part of the target.

110. Marking Rapid Fire. In this class of fire the time is regulated in the pit. The targets being ready, they are pulled fully down and a red flag is displayed at the center target. On signal from the firing line, the flag is waved and lowered and five seconds thereafter the targets are run up, being fully exposed for the time required for that range.

At the expiration of the time limit the targets are run down and the hits are marked, beginning with the highest in value, the disk being placed over the shot hole, then swung off the target and back to the next shot hole, care being taken to mark slowly enough to avoid confusing the scorer. The misses will be indicated by slowly waving the red flag once across the face of the target for each miss. The shot holes are then pasted and the target made ready for further firing.

During record practice the officer in charge of each pair of targets will keep a record showing the actual hits made on each of his targets in each score. At the end of the day's firing, or oftener if required by the officer in charge of the firing, this record will be turned over to the company firing at that target and compared with the record kept at the firing point, in order to determine if the hits recorded at the firing point agree with the hits recorded in the pit. In case the records differ greatly, they may be fired over, at the discretion of the officer in charge of the firing.

The following is suggested as a form for the pit record, rapid fire:

PIT RECORD.

TARGET —.

| Order. | 5's. | 4's. | 3's. | 2's. | Misses. |
|---------|------|------|------|------|---------|
| 1..... | | | | | |
| 2..... | | | | | |

Sig. of officer in charge.

QUALIFICATION COURSE—LONG-DISTANCE PRACTICE—PRACTICE WITH TELESCOPIC SIGHTS.

111. Tabulation. For convenience of reference a part of the general scheme outlined in paragraph 87 is here tabulated. The tables relate to the following subjects and have the force of written regulations: Qualification course; long-distance firing; practice with telescopic sights. Each table is followed by its regulations.

112. Qualification Course—Instruction Practice. The range practice begins with the instruction practice, qualification course. The order of firing is as laid down in Tables 1, 2, and 3.

TABLE 1.—SLOW FIRE.

| Range. | Time. | Shots. | Targets. | Position. |
|--------|-----------|--------|----------|--|
| 200 | No limit. | 15 | A | 5 shots prone. 5 shots kneeling. 5 shots standing. |
| 300 | No limit. | 10 | A | 5 shots prone. 5 shots sitting. |
| 500 | No limit. | 10 | B | Prone. |
| 600 | No limit. | 10 | B | Prone, sand-bag rest. |

In firing with the sand-bag rest either the back of the hand or the rifle must be on the sand bag.

TABLE 2.—TARGET D, SLOW FIRE.

[THE BATTLE SIGHT ONLY WILL BE USED.]

| Range. | Time. | Shots. | Position. |
|--------|-----------|--------------------------------------|-----------|
| 200 | No limit. | A minimum of 10 shots at each range. | Kneeling. |
| 300 | No limit. | A minimum of 10 shots at each range. | Prone. |
| 500 | No limit. | A minimum of 10 shots at each range. | Prone. |

TABLE 3.—TARGET D, RAPID FIRE.

[THE BATTLE SIGHT ONLY WILL BE USED.]

| Range. | Time. | Shots. | Position. |
|--------|----------------------|--------|-------------------------|
| 200 | 1 minute. | 10 | Kneeling from standing. |
| 300 | 1 minute 10 seconds. | 10 | Prone from standing. |
| 500 | 1 minute 20 seconds. | 10 | Prone. |

[Note: If the model 1898 rifle (Krag-Jorgensen) is used, the time allowance is as follows:

200 yards, 1 minute 5 seconds.

300 yards, 1 minute 20 seconds.

500 yards, 1 minute 35 seconds.]

The course in rapid fire (Table 3) will be fired twice, but on different days, for instruction.

Procedure, Rapid Fire. At 200 yards there will be but one man firing at each target. The officer in charge of the line will command "Load." The magazine will be filled, the piece loaded with one cartridge therefrom, and the safety lock turned to "Safe." When all is ready in the pit the targets to be fired upon will be drawn fully down (the rear targets being blank or targets of another class than those being fired upon), and a red flag hoisted at the center target. When the red flag is displayed, the officer in charge of the firing line will command "Ready," when the safety lock will be turned to the ready and the position of "Ready" standing assumed, with the sling, if used, on the arm. The officer in charge of the firing line will then call so that all may hear. "Ready on the right; ready on the left." When the officer in charge calls out "Ready on the right," etc., anyone who is not ready must call out, "Not ready on target —." If any soldier fails to so call, it will be assumed that he is ready, and if he fails to fire when the target appears he will be given a total miss for that score.

The firing line being ready, the pit is signaled or telephoned, "Ready on the firing line." When this signal is received in the pit, the red flag is waved and lowered and five seconds thereafter the targets appear, remaining in sight one minute and then disappear. The soldier, without coming to the "Order," takes the kneeling or sitting position as soon as any part of the target appears, begins to fire and attempts to fire 10 shots, reloading with a full clip which is taken from the belt, and continues to fire until 10 shots are fired or until the target disappears.

Each unfired cartridge counts a miss.

In case of a defective cartridge or a disabled piece, or when more than 10 hits are made on a target, the practice is repeated.

At 300 yards the procedure is the same, except that the soldier assumes the prone position as soon as any part of the target appears, the time limit being 1 minute and 10 seconds.

At 500 yards the procedure is the same, except that the soldier is in the prone position, with the piece at the shoulder, before the target appears, the time limit being 1 minute and 20 seconds.

At all ranges, in rapid fire, firing is from a full clip, and the second clip must be loaded from the belt. In case a clip jams or breaks, cartridges may be loaded singly.

At the expiration of the time limit, the target is pulled down and marked, all hits being given their proper value. In case of more than 10 hits on a target, the target will not be marked but the firing line will be notified and the firing on that target repeated. In case a soldier fires on the wrong target, only such shots as he may have fired on his own target will be counted on his score. He will be given misses for the remainder of his score.

In firing rapid fire, if more than one target is used, the first order of men at the firing point will fire together, one man at each target, all targets being fired upon at one time.

113. Qualification Course—Record Practice. This is conducted as prescribed for instruction practice, the greatest care being taken to insure proper marking and scoring. The battle sight will be used at all ranges in rapid fire.

TABLE 4.—SLOW FIRE.

| Range. | Time. | Shots. | Targets. | Position. |
|--------|-----------|--------------|----------|------------------------|
| 300 | No limit. | 10 | A | 5 sitting, 5 kneeling. |
| 500 | No limit. | 10 | B | Prone. |
| 600 | No limit. | 10 (2 S. S.) | B | Prone, sand-bag rest. |

TABLE 5.—TARGET D, RAPID FIRE.

| Range. | Time. | Shots. | Position. |
|--------|-----------------------|--------|------------------------------------|
| 200 | 1 minute. | 10 | Kneeling or sitting from standing. |
| 300 | 1 minute, 10 seconds. | 10 | Prone from standing. |
| 500 | 1 minute, 20 seconds. | 10 | Prone. |

114. Rifle practice for Engineer troops will be limited to known distance firing only. There will be neither combat practice nor proficiency test for Engineer troops.

115. Long-distance Practice. For sharpshooters and experts only.

TABLE 6.—TARGET C, SLOW FIRE.

[TO BE FIRED TWICE, BUT ON DIFFERENT DAYS.]

| Range. | Shots. | Position. |
|--------|--------|-----------|
| 800 | 10 | Prone. |
| 1,000 | 10 | Prone. |

After an organization has completed record firing, qualification course, those men in the grades of expert and sharpshooter will take the long-distance practice.

Although the long-distance practice will be shot twice but on different days, after an officer or enlisted man has once fired the complete long-distance course, practice at 800 yards may be omitted at the discretion of the company commander. The practice will be conducted as laid down for slow fire, qualification course. Every effort will be made to teach men the effect of wind, light, and temperature, and the value of small changes in elevation and windage at long ranges.

No report of this firing will be required, although a record of it will be kept in each company.

For the Engineers and Cavalry this practice will be held at the discretion of the battalion and regimental commanders, respectively.

Long-distance practice will not be held by Philippine Scouts.

116. Practice With Telescopic Sights (Targets B and C, slow fire). Distances: Up to and including 1,000 yards. No time limit.

117. Who Will Fire. After long-distance practice has been completed, the four best enlisted shots of the company will fire, using telescopic sights. The ammunition used will not exceed 40 rounds per man firing.

This practice is intended for long ranges only, but it may be found necessary, until the rifles are accurately sighted and the elevations known, to start at shorter ranges and work back, no range being left until the target can be hit at that range. This part of the practice will be at the discretion of the officer conducting the firing. Target B may be used if found necessary to fire at ranges shorter than 1,000 yards.

At 1,000 yards each man will fire 20 shots for record. No report of the firing will be required, although a record of it will be kept in the company. This record will show the number of the rifle with which the score was made, the elevation and the windage used at the various ranges, and the force and direction of the wind at the time of firing. The data will then be available when further practice is held with this particular rifle and sight. Practice may be held at 1,200 yards where a suitable range is available.

This practice will not be held by Philippine Scouts.

118. Summary of Practice Required for Different Grades of Shots in Known-Distance Firing.

(a) Recruits and those who in the last season of practice failed to qualify as marksmen or better will fire Tables 1 and 2 once through each, as prescribed, and Table 3 through twice, as prescribed, before firing record. Additional instruction practice will be given all the men in this category, or to as many as may need it, in the discretion of the company commander, to the extent of the amount of ammunition that may be made available for this purpose.

(b) Men in the grade of marksman will fire through Tables 1 and 2 once each and Table 3 twice and no more before firing record practice.

(c) Sharpshooters will fire in one season in instruction practice, qualification course, not exceeding 130 rounds of ammunition, at the discretion of the company commander, before firing record practice. Experts will fire for instruction not exceeding 100 rounds of ammunition, at the discretion of the company commander, and will not fire record practice.

(d) Soldiers of the grade of marksman or better who have been discharged and re-enlisted will begin the new enlistment period with the course of firing prescribed for marksman, the restrictions for this grade as to the expenditure of ammunition holding good.

(e) All qualified experts and sharpshooters will fire twice through the course laid down in Table 6. But after an officer or enlisted man has once fired the complete long-distance course, practice at 800 yards may be omitted at the discretion of the company commander.

(f) The four (4) best enlisted shots of a company, selected by the company commander, will be given practice with telescopic sights, as prescribed in paragraph 117.

CHAPTER VII.

SPECIAL COURSES.

119. Preliminary Drills. Special courses will be preceded by the required preliminary instruction and sighting drills.

SPECIAL COURSE A.

120. When Used. When a complete range is not provided and a range of 200 and 300 yards is available, practice may be conducted, if authorized by the department commander, as prescribed in the following special course A. This practice is also prescribed for the Coast Artillery Corps and for bands in the Philippine Islands when required to fire. The instruction practice, special course A, will be followed for the supplementary firing for recruits and others who join too late to fire in the regular season.

121. Special course A shall consist of instruction and record practice as follows:

Instruction Practice. Slow fire, target A; slow fire, target D; rapid fire, target D.

Record Practice. Slow fire, target A; rapid fire, target D.

The details of this practice are as prescribed in the tables given below, which have the force of written regulations.

INSTRUCTION PRACTICE.

TABLE 1.—SLOW FIRE, TARGET A.

| Range. | Time. | Shots. | Position. |
|--------|-----------|--------|--|
| 200 | No limit. | 15 | 5 prone. 5 kneeling. 5 standing. |
| 300 | No limit. | 10 | 5 prone. 5 sitting. |

TABLE 2.—SLOW FIRE, TARGET D.
[BATTLE SIGHT ONLY WILL BE USED.]

| Range. | Time. | Shots. | Position. |
|--------|-----------|--------|------------------------------|
| 200 | No limit. | 10 | { 5 kneeling. 5 standing. |
| 300 | No limit. | 10 | { 5 prone. 5 sitting. |

TABLE 3.—RAPID FIRE, TARGET D.
[BATTLE SIGHT ONLY WILL BE USED.]

| Range. | Time. | Shots. | Position. |
|--------|-----------------------|--------|------------------------------------|
| 200 | 1 minute. | 10 | Kneeling or sitting from standing. |
| 300 | 1 minute, 10 seconds. | 10 | Prone from standing. |

RECORD PRACTICE.

TABLE 4.—SLOW FIRE, TARGET A.

| Range. | Time. | Shots. | Position. |
|--------|-----------|--------|------------------------------|
| 200 | No limit. | 10 | { 5 kneeling. 5 standing. |
| 300 | No limit. | 10 | { 5 prone. 5 sitting. |

Rapid fire as given in Table 3.

All practice in special course A will be conducted according to the rules prescribed for the firing at the same ranges in the instruction and record firing in the qualification course.

For qualification see paragraph 242.

122. The courses for Organized Militia are prescribed in Part V.

123. Except as indicated in paragraphs 115 and 117 the Philippine Scouts will fire the course prescribed for the Regular Army, and will be subject to the same rules in regard to qualification and classification.

CHAPTER VIII.

ADVICE TO RIFLEMEN.

124. For purposes of instruction, all firing may be divided into three classes, viz.:

1. Slow fire at 600 yards and under.
2. Slow fire at ranges over 600 yards.
3. Rapid fire.

125. **Short-range Practice.** In the first class of fire, slight changes of wind, light, and temperature may be almost disregarded. The principal things to be learned are: Setting the sight properly at the beginning of a score; aiming properly; squeezing the trigger properly; holding the rifle. These constitute probably 90 per cent. of the work at ranges under 600 yards, and if the soldier performs these actions correctly with each shot, he will make a good score

regardless of small changes in the atmospheric conditions. It is very important that the piece be held firmly and sighted uniformly.

126. Long-range Practice. In the second class of firing (at distances greater than 600 yards) a large part of the work is in the holding, but changes of wind, temperature, and light must be studied in order to make good scores.

127. Wind. Wind is the most important factor to be considered in long-range known-distance practice. It is unnecessary to teach recruits and others who never shoot beyond 600 yards more than the adjustment of the wind gauge for a right or left wind and how to change the wind gauge when a hit is made.

The direction of the wind is shown by considering the range as a clock face, the firer being in the center and the target at 12 o'clock. The direction is then indicated as a 10 o'clock wind, 2 o'clock wind, etc.

The force of the wind is indicated in miles per hour and is shown accurately by the anemometer, and is estimated by observation of flags, by throwing up leaves, grass, or bits of paper, and by the "feel" of the wind on the hands or face.

At long-distance ranges, after firing a shot and before firing again, the firer should look carefully for any change in direction and force of the wind. A change of 4 miles in force or of one hour in direction will make a decided difference in the location of a hit.

Any wind deflects the bullet from its course in the direction the wind is blowing. The amount of deflection varies with the direction and force of the wind.

The wind gauge is graduated in points, and 1 point will move the bullet approximately 4 inches for each 100 yards of distance the firer is from the target and in the direction the movable base of the wind gauge is moved:

At 200 yards 1 point equals 8 inches.

At 600 yards 1 point equals 24 inches.

At 800 yards 1 point equals 32 inches.

At 1,000 yards 1 point equals 40 inches.

The amount of windage to be taken is determined by estimating the force and direction of the wind.

A simple rule for determining the approximate windage at any range is as follows:

$$\frac{\text{Range} \times \text{Velocity}}{10} \text{ equals quarter points required for 3 or 9 o'clock winds.}$$

Winds one hour away from 3 and 9 o'clock require only slightly less windage. Winds one hour away from 12 or 6 o'clock require half as much windage as 3 or 9 o'clock winds.

Example: Range 800 yards: 5-mile wind blowing from 9 o'clock. $\frac{8 \times 5}{10}$ equals 4 quarter points, or 1 point of windage.

128. Temperature. After the proper adjustment of the sight has been determined, it will rarely happen while firing a single, or even several consecutive scores, that such changes can occur in the temperature as to make further corrections necessary. If the first shot has been fired from a clean, cool gun, the subsequent fouling and heating of the barrel and the different vibrations of the latter, which are caused by the heating, will generally make necessary a slight increase in elevation for the second shot, and often an additional increase for the third shot. This should be followed, in some cases, where a number of shots are fired without cleaning or without any considerable interval, by a slight lowering of the elevation after additional shots.

A decided increase in the temperature will cause the bullet to strike high; a decided drop in temperature will cause the bullet to strike low.

129. Light. Changes of light do not affect the flight of the bullet; they do affect the manner in which the aim is taken. As all men are not affected alike by changes of light, each man must determine for himself how changes of light affect him.

Using the peep sight, the bull's-eye of a bright target is more clearly defined than the bull's-eye of a dark one, and the firer will usually hold closer to the bright bull's-eye than to a dark one. If the target changes from bright to dark, the next shot will usually go low.

With the open sight, as the light changes from bright to dark and the rear notch fills with shadow, more front sight is seen, and the shot goes high.

If occasional shadows drift across the face of the target, do not fire until the target is bright.

In a permanent change of light, let the eye accustom itself to the change before firing. Then the aim will be the same as before and there will be no change in the position of the hit.

In rapid firing with open sights, on very dark days shots seem to go high, due entirely to the firer taking more front sight than on bright days.

130. Mirage. This is the term applied in target practice to heated air in motion, as seen through telescopes or field glasses on clear days with winds of from 2 to 14 miles per hour. Through the telescope waves appear to be moving across the face of the target in the direction the wind is blowing.

These waves indicate the general direction and speed of the wind. As to direction, they indicate a right or left wind only, and not one from 11, 1, 5, or 7 o'clock.

In a light 6 o'clock wind or with no wind at all, the waves will go straight up or "boil."

With a light wind the mirage moves slowly across the face with a decided vertical motion, giving a saw-tooth appearance. As the wind increases, the vertical motion of the mirage decreases until, with a 12 to 14 mile wind, the waves seem nearly flat and run across the target with very little vertical motion.

On hot days, with no wind, or a very light wind from 6 o'clock, the mirage will rise straight from the bottom to the top of the target. This condition seldom lasts long, and in a very short time the mirage will run from one side to the other.

Never fire while the mirage is "boiling," for there is usually a slight drift toward one side or the other, invisible to the firer, and if a shot is fired with no windage in a "boil," it will usually be out of the bull's-eye. Wait for the mirage to move from one side.

131. Rapid Firing. Success in rapid firing depends upon catching a quick and accurate aim, holding the piece firmly and evenly and in squeezing the trigger without a jerk.

In order to give as much time as possible for aiming accurately, the soldier must practice taking position, loading with the clip, and working the bolt so that no time will be lost in these operations. With constant practice all these movements may be made quickly and without false motions.

When the bolt handle is raised it must be done with enough force to start the shell from the chamber; and when the bolt is pulled back it must be with sufficient force to throw the empty shell well away from the chamber, and far enough to engage the next cartridge.

In loading, use force enough to load each cartridge with one motion.

The aim must be caught quickly, and once caught must be held, and the trigger squeezed steadily. Rapid firing, as far as holding the aim and squeezing the trigger are concerned, should be done with all the precision of slow fire.

The gain in time should be in getting ready to fire, loading, and working the bolt.

Constant practice will increase the accuracy of aim, and any exercise that will strengthen arms and hands will enable one to hold better through a long string of shots.

132. Firing at Moving Targets. In firing at moving targets, the rifle must move with the target. If the target moves across the front, the aim must be a certain distance in front of it, depending on the distance of the target and its speed. If it moves toward the firer he must hold below it; if away from him, he must hold over it.

The following table shows the approximate distance necessary to aim ahead of the body of a man or horse moving across the range at various distances and various rates of speed:

| Distance (yards). | Man walking. | | Man double timing. | | Horse walking. | | Horse trotting. | | Horse running. | |
|----------------------|----------------|------------------|-----------------------|--------------|---------------------------------|-----------------------------------|-------------------------|---------------------------|---------------------------------|-----------------------------------|
| | Feet. Front | Inches. edge. | Feet. | Inches. 6 | Feet. Front edge of body. | Inches. Front edge of body. | Feet. Front of body. | Inches. Front of body. | Feet. Front edge of body. | Inches. Front edge of body. |
| 100 | | | | | | | | | | |
| 200 | | 8 | 1 | 8 | Front edge of body. | | Front of body. | | 1 | 4 |
| 300 | 1 | 5 | 3 | | Front of body. | | 1 | 6 | 3 | 10 |
| 400 | 2 | 2 | 4 | 5 | Front of body. | | 3 | 4 | 6 | 6 |
| 500 | 3 | 1 | 5 | 11 | 1 | | 5 | 4 | 9 | 6 |
| 600 | 4 | | 7 | 7 | 2 | | 7 | 7 | 12 | 10 |

133. Firing with Rests. In the ordinary positions for firing with piece supported by hands, arms, and shoulder, the explosion of the powder charge sets up in the barrel of the rifle certain vibrations which become disturbed and altered somewhat when the rifle is fired with the additional support of a solid rest applied at some point of the barrel.

Using the same elevations and aiming point the effect of a rest is exhibited in a changed point of strike of the bullet.

The vertical vibrations of the barrel are the more pronounced, and as these are interfered with by a point of rest under the barrel this species of support will usually change the point of strike more than in the case of a side rest against a vertical surface. In the latter case the piece is steadied rather than rested.

With a rest beneath the balance, or near the point, the tendency is to shoot above and to the right of the point of strike that would be attained without a rest, using the same elevation and point of aim.

The tendency is the same and more pronounced when the rest is under a point near the muzzle. The change in the point of strike in any case is slight and insufficient to carry the shot off the target from the center of target D at 600 yards.

In order that the shooting may be uniform, the piece should always be rested at the same point.

A side rest will cause no appreciable change in the point of strike.

In firing with the bayonet fixed, usually a lower point on the target will be struck corresponding to a reduction in the range of about 50 yards.

134. Cleaning the Rifle. See paragraphs 37-52, p. 645, Instruction for the Care of Small Arms and Ordnance Equipment.

CHAPTER IX.

PISTOL AND REVOLVER PRACTICE; PRELIMINARY DRILLS; POSITION AND AIMING DRILLS.¹

135. Nomenclature and Care of the Weapon; Handling and Precautions against Accidents. The soldier will first be taught the nomenclature of those parts of the weapon necessary to an understanding of its action and use and the proper measures for its care and preservation. Ordnance pamphlets Nos. 1866 (description of the Colt's Automatic Pistol), 1919, and 1927 (descriptions of the Colt's revolver, calibers .38 and .45, respectively), contain full information on this subject and are furnished to organizations armed with these weapons.

Careless handling of the pistol or revolver is the cause of many accidents and results in broken parts of the mechanism. The following rules will, if followed, prevent much trouble of this character:

(a) On taking the pistol from the armrack or holster, take out the magazine and see that it is empty before replacing it; then draw back the slide and make sure that the piece is unloaded. Observe the same precaution after practice on the target range, and again before replacing the pistol in the holster or in the armrack. When taking the revolver from the armrack or holster and before returning it to the same, open the cylinder and eject empty shells and cartridges. Before beginning a drill and upon arriving on the range observe the same precaution.

(b) Neither load nor cock the weapon until the moment of firing, nor until a run in the mounted course is started.

(c) Always keep the pistol or revolver in the position of "Raise pistol" (par. 156, Cavalry Drill Regulations), except when it is pointed at the target. (The position of "Lower pistol" is authorized for mounted firing only.)

(d) Do not place the weapon on the ground where sand or earth can enter the bore or mechanism.

(e) Before loading the pistol, draw back the slide and look through the bore to see that it is free from obstruction. Before loading the revolver, open the cylinder and look through the bore to see that it is free from obstruction. When loading² the pistol for target practice place 5 cartridges in the magazine

¹ Whenever in these regulations the word "pistol" appears, the regulation applies with equal force to the revolver, if applicable to that weapon.

² To Load Pistol: Being at Raise Pistol (Right hand grasping stock at the height of and 6 inches in front of the point of the right shoulder, forefinger alongside barrel, barrel to the rear and inclined forward about 30°).

Without deranging position of the hand, rotate the pistol so the sights move to the left, the barrel pointing to the right front and up.

With the thumb and forefinger of the Left hand (thumb to the right), grasp the slide and pull it towards the body until it stops and then release it. The pistol is thus loaded, and the hammer at full cock.

If the pistol is to be kept in the hand and not to be fired at once, engage the safety lock with the thumb of the Right hand.

If the pistol is to be carried in the holster, remove safety lock, if on, and lower the hammer fully down.

and insert the magazine in the handle; draw back the slide and insert the first cartridge in the chamber and carefully lower² the hammer fully down.

In loading the revolver place 5 cartridges in the cylinder and let the hammer down on the empty chamber.

(f) Whenever the pistol is being loaded or unloaded, the muzzle must be kept up.

(g) Do not point the weapon in any direction where an accidental discharge might do harm.

(h) After loading do not cock the pistol or the revolver until ready to fire.

(i) Keep the working parts properly lubricated.

136. Position, Dismounted. Stand firmly on both feet, body perfectly balanced and erect and turned at such an angle as is most comfortable when the arm is extended toward the target; the feet far enough apart to insure firmness and steadiness of position (about 8 to 10 inches); weight of body borne equally upon both feet; right arm fully extended, left arm hanging naturally.

Remarks. The right arm may be slightly bent, although the difficulty of holding the pistol uniformly and of keeping it as well as the forearm in the same vertical plane makes this objectionable.

137. The Grip. Grasp the stock as high as possible with the thumb and last three fingers, the forefinger alongside the trigger guard, the thumb extended along the stock. The barrel, hand, and forearm should be as nearly in one line as possible when the weapon is pointed toward the target. The grasp should not be so tight as to cause tremors of the hand or arm to be communicated to the weapon, but should be firm enough to avoid losing the grip when the recoil takes place.

Remarks. The force of recoil of the pistol or revolver is exerted in a line above the hand which grasps the stock. The lower the stock is grasped the greater will be the movement or "jump" of the muzzle caused by the recoil. This not only results in a severe strain upon the wrist, but in loss of accuracy.

If the hand be placed so that the grasp is on one side of the stock, the recoil will cause a rotary movement of the weapon toward the opposite side.

The releasing of the sear causes a slight movement of the muzzle, generally to the left. The position of the thumb along the stock overcomes much of this movement. The soldier should be encouraged to practice this method of holding until it becomes natural.

To do uniform shooting the weapon must be held with exactly the same grip for each shot. Not only must the hand grasp the stock at the same point for each shot, but the tension of the grip must be uniform.

138. (a) The Trigger Squeeze. The trigger must be squeezed in the same manner as in rifle firing. (See pars. 44 and 46.) The pressure of the forefinger

²To Lower the Hammer: Being at the loading position at full cock.

I. Firmly seat thumb of Right hand on the hammer; insert forefinger inside trigger guard.

II. With thumb of Left hand exert a momentary pressure on the grip-safety to release hammer from sear.

III. At the same instant exert pressure on the trigger and carefully and slowly lower the hammer fully down.

IV. Remove finger from trigger.

V. Insert pistol in holster.

(Caution) The pistol must never be placed in the holster until hammer is fully down.

on the trigger should be steadily increased and should be straight back, not sideways. The pressure should continue to that point beyond which the slightest movement will release the sear. Then, when the aim is true, the additional pressure is applied and the pistol fired.

Only by much practice can the soldier become familiar with the trigger squeeze. This is essential to accurate shooting. It is the most important detail to master in pistol or revolver shooting.

(b) Self-cocking Action. The force required to squeeze the trigger of the revolver when the self-cocking device is used is considerably greater than with the single action. To accustom a soldier to the use of the self-cocking mechanism, and also to strengthen and develop the muscles of the hand, a few minutes' practice daily in holding the unloaded revolver on a mark and snapping it, using the self-cocking mechanism, is recommended. The use of the self-cocking device in firing is not recommended except in emergency. By practice in cocking the revolver the soldier can become sufficiently expert to fire very rapidly, using single action, while his accuracy will be greater than when using double action.

139. Aiming. Except when delivering rapid or quick fire, the rear and front sights of the pistol are used in the same manner as the rifle sights. The normal sight is habitually used (see Pl. VI), and the line of sight is directed upon a point just under the bull's-eye at "6 o'clock." The front sight must be seen through the middle of the rear-sight notch, the top being on a line with the top of the notch. Care must be taken not to cant the pistol to either side.*

If the principles of aiming have not been taught, the soldier's instruction will begin with sighting drills as prescribed for the rifle so far as they may be applicable. The sighting bar with open sight will be used to teach the normal sight and to demonstrate errors likely to be committed.

To construct a sighting rest for the pistol (see Pl. VI) take a piece of wood about 10 inches long, $1\frac{1}{4}$ inches wide, and $\frac{1}{16}$ inch thick. Shape one end so that it will fit snugly in the handle of the pistol when the magazine has been removed. Screw or nail this stick to the top of a post or other object at such an angle that the pistol when placed on the stick will be approximately horizontal. A suitable sighting rest for the revolver may be easily improvised.

140. (a) How to Cock the Pistol. The pistol should be cocked by the thumb of the right hand and with the least possible derangement of the grip. The forefinger should be clear of the trigger when cocking the pistol. Some men have difficulty at first in cocking the pistol with the right thumb. This can be overcome by a little practice. Jerking the pistol forward while holding the thumb on the hammer will not be permitted.

(b) How to Cock the Revolver. The revolver should be cocked by putting the thumb on the hammer at as nearly a right angle to the hammer as possible, and by the action of the thumb muscles alone bringing the hammer back to the position of full cock. Some men with large hands are able to cock the revolver with the thumb while holding it in the position of aim or raise pistol. Where the soldier's hand is small this can not be done, and in this case it assists the operation to give the revolver a slight tilt to the right and upward (to the right). Particular care should be taken that the fore-

*The instructor should take cognizance of the fact that the proper aiming point is often affected by the personal and fixed peculiarities of the firer, and if unable to correct such abnormalities, permit firer to direct sight at such point as promises effective results.

finger is clear of the trigger or the cylinder will not revolve. Jerking the revolver forward while holding the thumb on the hammer will not be permitted.

141. Position and Aiming Drills, Dismounted. For this instruction the squad will be formed with an interval of 1 pace between files. Black pasters to simulate bull's-eyes will be pasted opposite each man on the barrack or other wall, from which the squad is 10 paces distant.

The squad being formed as described above, the instructor gives the command, 1. **Raise.** 2. **PISTOL** (par. 156, Cavalry Drill Regulations) and cautions,

PLATE VI.

"Position and Aiming Drill, Dismounted." The men take the positions described in paragraph 136, except that the pistol is held at "Raise pistol."

The instructor cautions, "Trigger squeeze exercise." At the command "Ready," cock the weapon as described in paragraph 140. At the command, 1. **Squad**, 2. **FIRE**, slowly extend the arm till it is nearly horizontal, the pistol directed at a point about 6 inches below the bull's-eye. At the same time put the forefinger inside the trigger guard and gradually "feel" the trigger. Inhale enough air to comfortably fill the lungs and gradually raise the piece until the line of sight is directed at the point of aim, i.e., just below the bull's-eye at 6 o'clock. While the sights are directed upon the mark,

gradually increase the pressure on the trigger until it reaches that point where the slightest additional pressure will release the sear. Then, when the aim is true, the additional pressure necessary to fire the piece is given so smoothly as not to derange the alignment of the sights. The weapon will be held on the mark for an instant after the hammer falls and the soldier will observe what effect, if any, the squeezing of the trigger has had on his aim.

It is impossible to hold the arm perfectly still, but each time the line of sight is directed on the point of aim a slight additional pressure is applied to the trigger until the piece is finally discharged at one of the moments when the sights are correctly aligned upon the mark.

When the soldier has become proficient in taking the proper position, the trigger squeeze should be executed at will. The instructor prefaces the preparatory command by "At will" and gives the command "Halt" at the conclusion of the exercise, when the soldier will return to the position of "Raise pistol."

At first this exercise should be executed with deliberation, but gradually the soldier will be taught to catch the aim quickly and to lose no time in beginning the trigger squeeze and bringing it to the point where the slightest additional pressure will release the sear.

Remarks. In service few opportunities will be offered for slow aimed fire with the pistol or revolver, although use will be made of the weapon under circumstances when accurate pointing and rapid manipulation are of vital importance.

In delivering a rapid fire, the soldier must keep his eyes fixed upon the mark and, after each shot, begin a steadily increasing pressure on the trigger, trying at the same time to get the sights as nearly on the mark as possible before the hammer again falls. The great difficulty in quick firing with the pistol lies in the fact that when the front sight is brought upon the mark, the rear sight is often found to be outside the line joining the eye with the mark. This tendency to hold the pistol obliquely can be overcome only by a uniform manner of holding and pointing. This uniformity is to be attained only by acquiring a grip which can be taken with certainty each time the weapon is fired. It is this circumstance which makes the position and aiming drills so important. The soldier should constantly practice pointing the pistol until he acquires the ability to direct it on the mark in the briefest interval of time and practically without the aid of sights.

The soldier then repeats the exercises with the pistol in the left hand, the left side being turned toward the target.

142. To Draw and Fire Quickly—Snap Shooting. With the squad formed as described in paragraph 141 except that the pistol is in the holster and the flap, if any, buttoned, the instructor cautions "Quick fire exercise." And gives the command: **1. Squad, 2. FIRE.** At this command, each soldier, keeping his eye on the target, quickly draws his pistol, thrusts it toward the target, squeezes the trigger and at the instant the weapon is brought in line with the eye and the objective, increases the pressure, releasing the sear. To enable the soldier to note errors in pointing, the weapon will be momentarily held in position after the fall of the hammer. Efforts at deliberate aiming in this exercise must be discouraged.

Remarks under paragraph 141 are specially applicable also to this type of fire. When the soldier has become proficient in the details of this exercise, it should be repeated at will; the instructor cautions "At will; quick fire exercise." The exercise should be practiced until the mind, the eye, and trigger finger act in unison.

To simulate this type of fire mounted, the instructor places the squad so

that the simulated bull's-eyes are in turn, to the Right, to the Left, to the Right Front, to the Left Front, to the Right Rear. With the squad in one of these positions, the instructor cautions "Position and aiming drill, mounted." At this caution the right foot is carried 20 inches to the right and the left hand to the position of the bridle hand (par. 246, Cavalry Drill Regulations). The exercise is carried out as described for the exercise dismounted, using the commands and means laid down in paragraphs 161 to 168, inclusive, Cavalry Drill Regulations, for firing in the several directions. The exercise is to be executed at will when the squad has been sufficiently well instructed in detail.

When firing to the left the pistol hand will be about opposite the left shoulder and the shoulders turned about 45° to the left; when firing to the right rear the shoulders are turned about 45° to the right.

When the soldier is proficient in these exercises with the pistol in the right hand, they are repeated with the pistol in the left hand.

Paragraphs 143-146 have been omitted because they have no application to Infantry and pertain to the mounted course.

CHAPTER X.

REVOLVER OR PISTOL RANGE PRACTICE.

147. General Description. This practice includes the instruction of the soldier in firing with the service revolver or pistol, and is divided into two distinct courses, the dismounted course and the mounted course. The general scheme is as follows:

| | | | Num-ber of shots. | | | |
|------------------------------------|--|-----------------------|--|--------------|---|----|
| Revolver or pistol range practice. | Dismounted course. | Instruction practice. | Slow fire, at 15 and 25 yards, minimum of 2 scores (1 at each range)..... | 10 | | |
| | | | Rapid fire, at 15 and 25 yards, minimum of 4 scores (2 at each range)..... | 20 | | |
| | | Record practice. | Quick fire, at 15 and 25 yards, minimum of 4 scores (2 at each range)..... | 20 | | |
| | | | Rapid fire, at 25 yards, 2 scores..... | 10 | | |
| | | Expert test..... | Quick fire, at 15 and 25 yards, 2 scores at each range..... | 20 | | |
| | | | Rapid fire, at 50 yards, 1 score..... | 5 | | |
| | | | Quick fire, at 15 and 25 yards, 1 score at each range..... | 10 | | |
| | | Total..... | | | 95 | |
| | | Mounted course. | Instruction practice. | Dismounted.. | Slow fire, 15 yards, minimum of 2 scores.. | 10 |
| | | | | | Quick fire, 15 yards, minimum of 2 scores.. | 10 |
| Mounted..... | Halt, minimum of 2 scores..... | | | 10 | | |
| | Walk, minimum of 2 scores..... | | | 10 | | |
| | Gallop, minimum of 8 scores..... | | | 40 | | |
| Record practice. | Halt, 2 scores..... | | 10 | | | |
| | Gallop, 4 scores..... | | 20 | | | |
| | Halt, 1 score (targets at varying ranges)..... | | 5 | | | |
| Expert test | Gallop, 1 score (group targets)..... | | 5 | | | |
| | Gallop, extended, 2 scores (approaching targets firing to right and left)..... | | 10 | | | |
| Total..... | | | 130 | | | |

A score consists of five consecutive shots.

148. Practice Season. Revolver range practice will take place during the season for rifle firing (par. 88). During the supplementary season such practice, as time and amount of ammunition will allow, will be given to recruits who have not fired the record course, mounted, and to others requiring

it. Recruits joining within thirty days of the close of the supplementary season will be excused from the mounted firing therein.

149. Who Will Fire. The following table designates those who are required or authorized to fire at revolver-range practice and the courses to be followed:

| Arm or corps. | To fire. | Course. |
|--|--|-------------|
| 1. Cavalry..... | Squadron staff officers, troop officers, and all enlisted men except as noted below. ¹ | Mounted. |
| 2. Field Artillery..... | Battalion staff officers, battery officers, and all enlisted men. | Dismounted. |
| 3. Infantry and Battalions of Engineers, and Field and Telegraph Companies and Aero Squadrons of the Signal Corps. | Battalion staff officers, company officers, and all enlisted men armed with the revolver or pistol. | |
| 4. Coast Artillery..... | Company officers and all enlisted men armed with revolver or pistol. | |
| 5. Field and regimental staff officers of Cavalry. | Authorized but not required..... | Mounted. |
| 6. Staff departments or corps, except medical and chaplains. | All officers, except such Engineer officers as are noted above, and enlisted men authorized, but not required. | Dismounted. |
| 7. Regimental, field, and staff officers of Field Artillery and Infantry and field and staff officers of Coast Artillery.... | | |
| 8. Veterinarians..... | | |
| 9. Post noncommissioned staff.... | | |

All officers enumerated in the above table of over fifteen years' commissioned or commissioned and enlisted service, except officers of the Medical Corps and chaplains, are authorized but not required to fire, but, if firing, will follow the course prescribed for their department, corps, or arm of the service.

150. Allowance of Ammunition. As published annually.

151. Instruction Practice. In order to insure uniformity of instruction the order of procedure and a minimum number of shots are prescribed, but a certain percentage for proficiency at each stage is a requisite for advancement to the next succeeding stage. If this percentage is not attained, the judgment of the organization commander dictates the type of instruction which he deems best suited to the individual case. In order that the expenditure of ammunition may be fully under the control of the organization commander he may advance men who have fired during a preceding season without requiring them to fire the full number of shots prescribed as a minimum for any type of fire in instruction practice, provided that they fire at least one-half the minimum, and in so doing make a percentage at least as high as that required for advancement to the next succeeding stage. In the exercise of this privilege, however, the organization commander should guard against depriving the soldier of needed practice.

152. Record Practice. In all record practice, both for dismounted and mounted courses, scores will be kept and the record of firing prepared as prescribed for the rifle. The number of shots to be fired in record practice has been made no greater than barely sufficient to demonstrate the soldier's average shooting ability.

¹ Cavalry recruits, having no previous mounted service, who join within 30 days preceding the mounted course, will, in the regular practice season, fire dismounted only.

153. (a) Scoring in Rapid and Quick Fire. In timed, rapid, or quick fire, the scorer does not announce the name of the firer after the result of each shot has been signaled. As soon as the value of each hit on the target is signaled, it is announced; the number of misses, if any, is announced; the score is then entered; and finally the name of the firer with his total score is announced and the latter recorded.

(b) Firing on Wrong Target. In the case of two men firing in timed, rapid, or quick fire on the same target the resulting score will be rejected, the soldier at fault being credited only with such hits as he may have made on his own target, the other soldier repeating his score.

(c) Other Mishaps. Unfired shots due to fault of soldier count as misses. In case of defective cartridges or disabled weapon the entire score is not repeated, but the soldier fires only the necessary number of shots to complete the then unfinished score, and where the time element enters, the ratio between the full time per score and the time to be allowed will equal the ratio existing between a full score and the number of shots to be fired. For each shot fired before the commencement or after the close of the time limit the maximum possible per shot at the particular type of target being fired at will be deducted from the score. Prior to commencing range practice the instructor should thoroughly drill his command in the manipulation of the revolver or pistol.

In the mounted practice no trooper will leave the track except at the ends. If a cartridge misses fire or the weapon fails to work, he should continue to the end of the track, replace the defective cartridge or correct the trouble with the weapon, and take his place for another run.

If by reason of a defective cartridge one or more targets are not fired upon in any run, the trooper, in repeating the run, will fire only at those targets on which he did not fire.

154. Expert Test. All who in record practice have made the required percentage of the aggregate score possible in either course will fire the expert test prescribed for that course. If at any stage of the test the soldier's score is such that qualification is no longer possible, the test will be discontinued. Should the soldier make the required number of points before firing the full number of shots, he will not be required to continue firing.

155. Order of Procedure. Revolver and pistol firing commence with instruction practice in each course, and this practice is carried to completion for each soldier before proceeding to the next succeeding stage of record practice in the course being pursued. When instruction practice is completed, the soldier proceeds to record practice in the course he is required to fire, and follows this course to completion in accordance with the tables and regulations hereinafter laid down. The soldier may be thus advanced to record practice immediately after he has completed instruction practice without waiting for others less advanced. While engaged in record practice the soldier will do no other firing. In record practice the trooper will, so far as practicable, use the horse regularly assigned to him. In general, the regulations for known distance practice (pars. 87-110, body of text) will regulate where applicable revolver and pistol as well as rifle firing.

156. General Remarks. With the idea of inculcating in the soldier from the beginning the habit of firing by pointing, as distinguished from deliberate aiming, firing at the longer ranges has been removed from both courses and quick firing at bobbing targets has been added. Slow fire has been held at the lowest possible number of shots consistent with insuring safe handling of the weapon and a knowledge of its shooting qualities.

157. Preliminary Instruction. The importance of preliminary exercises can

not be overestimated, and a reasonable amount of pointing and snapping indulged in prior to range practice will be amply repaid by the results obtained when firing with ball cartridges.

158. The Gait. In all cases where the gait is a gallop the prescribed regulation maneuvering gallop is meant (par. 372, Cavalry Drill Regulations) unless otherwise stated. The canter will not be permitted.

159. Blank Cartridges (Revolver). Exercises with blank cartridges, circling to the right, left, etc., and firing at the silhouettes on the track, should be carried on previous to firing with ball cartridges.

160. Barriers. Barriers will be placed along the edge of and parallel to the track in front of the targets in order to preserve the prescribed distance from track to targets.

161. Systematic Instruction. All cavalry troops and all officers and enlisted men armed with the pistol or revolver will be instructed in its use. This instruction will be systematic and progressive, the controlling idea being accurate, rapid work.

162. Field Firing. Within the limits of the ammunition allowance remaining available after firing the prescribed courses, field practice of such nature as the skill and ingenuity of the organization commander may suggest and the availability of material and terrain render practicable will be held from time to time. Such field firing should be rendered as realistic as proper safeguarding from accident will permit. It should be borne in mind, however, that interest can be maintained only so long as results are evident, and exercises should therefore be devised with this end in view.

Since active service conditions can only be approximated and not actually arrived at in instruction, any type of firing which presents a feature of a fire problem that might exist has its value. Such targets as pendulum targets, glass balls, approaching or receding figures, while lacking any tactical significance, still test the skill of the firer in manipulation of the weapon and present to him an individual problem of value. In general, any means which may tend to develop the powers of quick drawing and accurate shooting, attributed to the early frontiersman, is of the utmost value in preserving the importance which national tradition attaches to the pistol.

163. Competitions. When organizations, armed with the revolver, participate in pistol competitions, the regulation automatic pistol, caliber .45, is prescribed. For purposes of competition and of practice in preparation therefor, the issue is authorized of six automatic pistols in addition to the revolvers on hand in such organization.

164. Ammunition. For each designated competitor, selected from an organization firing the revolver course, the organization commander is authorized to expend annually in addition to the ammunition fired in the regular revolver course, 300 rounds of ball cartridges, caliber .45 automatic pistol, in acquainting the selected competitor with this weapon and in preparation for the competition.

165. Modification of Course. Whenever the exigencies of the service do not permit of the firing of the prescribed course in full, the commanding general of a territorial department or a tactical division in the field is authorized to modify the course with a view to securing the maximum of training under such conditions, within the limits of the ammunition allowance; but neither officers nor enlisted personnel, who do not fire the course regularly prescribed in these regulations, shall be classified.

166. Tabulation. The details of practice in mounted and dismounted courses are given in tables (pars. 168, 173, 174, 179, 193, and 196), which have the force of written regulations.

CHAPTER XI.

DISMOUNTED COURSE.

167. Tabulation. The tables relate to the three divisions of the Dismounted Course and in the order to be followed in range practice, viz.: Instruction Practice, Record Practice, and Expert Test. Each table is followed by regulations applicable.

168. Instruction Practice.

| Slow fire. | | Rapid fire. | |
|--|--|--|--|
| Target L. | | Target L. | |
| 15 yards. | 25 yards. | 15 yards. | 25 yards. |
| Scores, minimum of 1. Time limit, none. | Scores, minimum of 1. Time limit, none. | Scores, minimum of 2. Time, 20 seconds per score. | Scores, minimum of 2. Time, 20 seconds per score. |

| Quick fire. | |
|--|--|
| Target E—Bobbing. | |
| 15 yards. | 25 yards. |
| Scores, minimum of 2. Time, 3 seconds per shot. | Scores, minimum of 2. Time, 4 seconds per shot. |

Time. Intervals of time are measured from the last note of the signal or the last word of the command "Commence firing" to the last note or word of "Cease firing." Commands will not be unduly prolonged.

169. Procedure. The course will be fired in the order set forth in the table, beginning at the shorter range and completing each type of fire before proceeding to the next, in the following order: Slow fire, rapid fire, and quick fire, with the proviso that 50 per cent of a possible score for any type of fire at any range is a necessary requisite for advancement to the next succeeding step in the course.

Should the soldier fail to make the 50 per cent necessary for advancement he will be required to repeat the type of firing at the range at which he failed.

If upon the second trial the soldier fails to make 50 per cent of a possible score, he will not be advanced to the next stage, but he may be required to continue such instruction practice as the judgment of the organization commander dictates and the state of the ammunition allowance permits.

No soldier will be advanced to record practice, dismounted course, who, in instruction practice, has failed to make 60 per cent of the aggregate possible score.

170. Slow Fire. The target is the target "L" bull's-eye and is used so that the kind and magnitude of the errors committed by the firer become at once evident to him. Abundant time is permitted in the firing to enable proper explanation of the causes and the remedies for such errors to be pointed out. It is designed as the elementary phase of instruction in the proper manipulation of the weapon and in determining and correcting the personal errors of the firer.

171. Rapid and Quick Fire. Targets: Target L for rapid; bobbing target E for quick fire.

172. Procedure. (a) **In Rapid Fire.** Time is taken at the firing stand by sand glass or watch. The target being up, the soldier stands with weapon at "Raise pistol." The revolver or pistol is loaded with five cartridges, as

prescribed in paragraph 135 (e). The command "Commence firing" is given and the soldier fires five shots within the prescribed limits of time, at the end of which the command "Cease firing" will have been given.

(b) **In Quick Fire.** The target is operated as a bobbing target. Three to five seconds after notice is received at the pit that all is ready at the firing point the target is alternately exposed to and turned from view of the firing point, exposures being of three to four seconds duration, depending upon the range, with an interval three to five seconds between exposures. The soldier stands at the firing point, and his revolver or pistol, loaded with five cartridges, is at "raise pistol" or "safe." Upon the first exposure of the target, the soldier fires one shot at the target before it disappears. The weapon is held between shots at "raise pistol." The soldier fires one shot at each reappearance of his target until five shots have been fired.

173. Record Practice.

| Rapid fire. | Quick fire. | |
|--|---|---|
| Target L. | Target E—Bobbing. | |
| 25 yards. | 15 yards. | 25 yards. |
| Scores, 2. Time limit, 20 seconds for each score. | Scores, 2. Time, 3 seconds per shot. | Scores, 2. Time, 4 seconds per shot. |

All who make 80 per cent of the aggregate possible score will fire the expert test. (Par. 174.)

174. Expert Test.

| Rapid fire. | Quick fire. | |
|---|---|---|
| Target L. | Target E—Bobbing. | |
| 50 yards. | 15 yards. | 25 yards. |
| Scores, 1. Time limit, 30 seconds per score. | Scores, 1. Time, 3 seconds per shot. | Scores, 1. Time, 4 seconds per shot. |

Aggregate possible, 60; necessary to qualify, 50.

175. Classification. All who are required or authorized to fire and who are on the rolls of the organization during any part of the practice season, or who are attached for practice by proper authority, will be classified, or rated as unclassified, according as they have met or failed to meet the requirements of classification.

Classification, in the absence of requalification, will terminate one year from the date upon which the individual qualified.

Requirements. (a) All who in record practice, dismounted course, make at least 80 per cent of the aggregate possible score will be classified as first-class men; (b) those who fail to qualify as first-class men, but who make not less than 60 per cent of the aggregate possible score, will be classified as second-class men; (c) all who fail as second-class men and those who for any reason did not fire the course and are not otherwise classified, will be rated as unqualified. (d) All first-class men who, in firing the expert course, make over 83 per cent of the aggregate possible score in that course, will be classified as expert pistol shots.

Paragraphs 176-199 have been omitted because they have no application to Infantry and pertain to the mounted course.

PART III.

COMBAT PRACTICE.

GENERAL SCHEME.

200. "The individual instruction is not everything. The maximum effect of a fire is obtained only by instructed and disciplined troops under a commander capable of directing their fire properly. * * * Only instructed and disciplined troops can deliver a fire that can be made use of intelligently * * * its effects become formidable when it is properly directed. When instruction has made of the troops a pliable and manageable instrument capable of understanding orders and executing them, they are in a position to develop all their power in hands that understand how to make a judicious use thereof. It remains to educate those that have to command them."

"In combat the platoon is the fire unit. From 20 to 35 rifles are as many as one leader can control effectively." (Par. 250, Infantry Drill Regulations.)

"When the company is large enough to be divided into platoons, it is impracticable for the captain to command it directly in combat. His efficiency in managing the firing line is measured by his ability to enforce his will through the platoon leaders." (Par. 248, Infantry Drill Regulations.)

The fire of the company, the battalion, the regiment, and larger units is nothing more than the combined fire of all the fire units. It is necessary, therefore, that the leaders of the fire units learn how to utilize the power of all the rifles under their command and to control the fire to suit the varied and numerous situations in which the tactical direction of their superiors may place them.

In action the situations vary greatly. They are frequently unforeseen, calling for quick decisions, and the prompt solution of such questions will arise in the mind only after long practice with numerous exercises in time of peace.

In the training of subordinate officers and leaders, to enable them to play their part intelligently, it is necessary to confront them with definite situations in such a manner as to appeal to their professional knowledge. By such means a judgment may be cultivated which will be equal to any emergency that may arise.

In the combat exercises prescribed in paragraph 357, Infantry Drill Regulations, all the tactical operations associated with the conduct of fire—initiative in opening fire, utilization of the ground, choice of targets, strength of the firing line, and kinds of fire to be employed—may be performed in an instructive manner, using simulated fire. It is important, however, in such exercises that a strict fire discipline be maintained and that the operations involved in the simulated adjustment of the fire be performed with the greatest care and exactness.

It remains to complete the instruction of the unit leaders by exercises with ball cartridges, the results obtained in hits on the targets providing a confirmation or proof of instruction which no other means can afford. Combat exercises, with real fire of the platoon and of the smaller units, the enemy being represented by figure targets and the firing coming as a culmination, provide the best means for this final instruction.

As required by paragraph 356, Infantry Drill Regulations, every combat exercise should be under an assumed tactical situation. In exercises with ball

cartridges, however, only portions of an episode or episodes of a combat should be represented. It is difficult to arrange the targets and apparatus so as to reproduce correctly all the phases of an offensive or defensive action. In such a case the results can not well be separated for analysis and proper criticism, so that much of the instructional value of the exercises will be lost.

A combat firing exercise will be conducted for the company. Such exercises may be conducted for the battalion or higher tactical units if the ammunition is available.

201. The Drill Regulations, Infantry, under the headings Fire and Combat give the rules for the conduct of fire which are applicable to all combat firing exercises. These rules are tactical. The technical phases of the question are included in the subjects, The Effect of Fire, The Influence of the Ground, The Adjustment of Fire, given herewith.

Following these subjects, rules are given for the conduct of the class of firing designated as instruction combat practice, held on the class "A" range immediately after the completion of the long range practice. This practice constitutes an intermediate step between range practice at rectangular targets and combat firing on the class "B" range. It marks the transition from individual marksmanship to collective marksmanship. Hence the exercises are purposely made formal and simple.

In addition to the rules for the preparation and conduct of combat firing exercises and rules for the proficiency test, statements are given of several typical firing exercises, including examples of demonstration firings, the subject being concluded by a critique of a hypothetical firing exercise.

CHAPTER I.

THE EFFECT OF FIRE.

202. **Ballistic Qualities of the Rifle.** The ballistic qualities of an arm are indicated by its accuracy, flatness of trajectory, and disabling power.

The accuracy of the United States rifle, caliber .30, model of 1903, is shown in the table of deviations in "Description and Rules for the Management of the United States Rifle, Caliber .30," which exhibits the mean vertical and mean horizontal deviations expressed in inches for the various ranges from 100 yards to 2,000 yards, inclusive. The same publication exhibits in the Table of Ordinates and Table of Fire, the form of the single trajectory. The striking energy or disabling power of the arm is indicated in the table showing the penetration of the bullet at various distances in different materials and substances.

The quality of flatness of trajectory is directly dependent upon the initial velocity and to some extent upon the form of the bullet, a given weight being assumed.

Two rifles of different type may possess the same accuracy, that is to say, the same dispersion, at any given range; but if one of the rifles gives a trajectory more curved than the other, an error in the setting of the sight due to an erroneous estimate of the range will cause a greater displacement from the aiming point of the center of impact of the diagram of hits than will be the case with the rifle with a flatter trajectory. A flat trajectory can not do away with the influence of errors in aiming, but this quality bestows an advantage in that with one sight a greater extent of ground may be held under fire and the target still be hit when it is not at the exact distance for which the sight is set.

The trajectory cuts the line of sight in two places, the first near the muzzle,

the second at the point aimed at (supposing the point to be struck); between these two points all portions of the trajectory are above the line of sight. If aim be taken at the lowest point or element of an object, it follows that if the highest ordinate of the trajectory corresponding to the range is equal to or less than the height of the object aimed at, the danger space for that object will be continuous. For example, the highest point of the trajectory corresponding to a range of 500 yards is 2 feet above the line of sight, so that for an object of that height, or greater, the danger space will be continuous provided aim is taken at the foot of the object. It is this circumstance which permits the adoption of a universal sight—the battle sight—adaptable to all the shorter ranges.

Owing to the fact that curvature of the trajectory increases with the range, the angle of fall for the longer ranges will be greater and the danger space for an object of a given height will be less, the falling branch only of the trajectory being considered. The increase in the distance also makes it more difficult to obtain a close estimate of the range.

203. The Cone of Dispersion and the Probabilities of Hitting. The causes which make for dispersion of shots as given in the table of deviations of the United States rifle are dependent upon variations in different parts of the rifle and imperfections in the ammunition alone.

In consequence of differences in sights, the variations in different parts of the rifle, and in the ammunition, and, to a much greater extent, individual errors made in aiming and firing, a series of shots fired by a body of soldiers with a common aiming point and the same sight setting, under uniform meteorological conditions, will not all follow the same path, but will be more or less separated.

The trajectories considered together make a horn-shaped figure called the cone of fire or cone of dispersion, owing to the resemblance to the geometrical figure of that name. The term "sheaf of bullets" is also used to express the same meaning, and all these are applied to a particular series of collective shots fired in practice, or in service.

If the shots so fired be intercepted by a vertical target in a position normal to the direction of the fire, a diagram of hits will be formed called the shot group. In the diagram of hits the shots appear as most thickly disposed about a point situated approximately in the center of the group, called the center of impact. From this point in all directions the density of the grouping decreases progressively—at first gradually, then more rapidly out to the limits of the group.

The arrangement of shots in the diagram of hits, apparently regardless of any rule, is in fact in conformity to a law which does not exhibit itself until after the delivery of a large number of shots. If measurements be made of a given shot group, the wild shots being disregarded, and the mean vertical and mean horizontal dispersion from the center of impact be found, these measurements will be in effect statements or indexes of the law of distribution of the hits for that particular group. A horizontal strip of the width of the mean vertical dispersion and symmetrically placed as to the center of impact will contain 50 per cent of the hits in the group.

It is well known that the dimensions of the cone of dispersion and of the shot group vary with the skill of those firing; good shots will make a small group and poor shots a large group. If the mean vertical and mean horizontal dispersions for riflemen of a certain grade of skill be determined for various ranges, a large number of shots being considered, means are provided by which, in connection with a table of probability factors, there may be computed the probable number of hits to be expected in collective firing by shots of the

same degree of skill at any range, at targets of any size. By this means a suitable standard may be constructed by which the results obtained in combat firing may be judged. A comparison of the efficiency shown in any firing exercise with that to be expected from average instructed shots with properly adjusted sights under favorable conditions will disclose if the results have fallen somewhat below the probable results; in which case a proper consideration of all the influences which adversely affect shooting under service conditions will enable a judgment to be formed as to why the results have fallen below the requirements. With a known standard of comparison and with a correct appreciation of adverse conditions, effective criticism, which is the basis of good instruction, may be realized.

The intersection of the cone of dispersion with the surface on which the object of the fire stands is called the beaten zone. On a horizontal surface the form of the beaten zone is somewhat that of an ellipse with its major axis in the direction of the line of fire. At short ranges the elliptical figure is very much elongated, and, as the range is increased, the greater axis becomes shorter. When the surface of impact is on ground rising with respect to the line of sight the longer axis is very much shortened, or, in other words, the depth of the beaten zone is very much diminished, as may be seen from the diagram below.

PLATE XII.

The grouping obtained on the surface of the ground by shots fired as a volley, or in a particular series of shots fired collectively, is sometimes referred to as the shot group.

The arrangement of hits in the beaten zone follows a law similar to that in the diagram of hits on a vertical target. The mean longitudinal dispersion on a horizontal surface in the direction of the fire bears a direct relation to the mean vertical dispersion, being the product of the latter by the cotangent of the angle of fall.

In addition to the 50 per cent zone corresponding to the lateral strip containing the best 50 per cent of the hits on the vertical target the area covered by the best 75 per cent of all the shots in the beaten zone, called herein the zone of effective fire, is considered, and the depth of this zone, as determined experimentally for average shots, forms the basis for certain rules laid down under the heading "Adjustment of Fire."

204. The table of dispersion below gives the measures of the mean vertical and mean lateral dispersions in feet and of the longitudinal dispersions in yards for various ranges, as determined by experimental trials at the Musketry School with average instructed shots, the surface of reception being assumed as horizontal.

TABLE OF DISPERSION—AVERAGE SHOTS.

| Range. | Mean vertical. | Mean lateral. | Mean longitudinal. | Longitudinal 75 per cent zone. |
|--------------------|----------------|---------------|---------------------|--------------------------------|
| <i>Yards.</i> | <i>Feet.</i> | <i>Feet.</i> | <i>Yards.</i> | <i>Yards.</i> |
| 100 | 1.07 | 0.97 | 308.04 ¹ | 423.00 ¹ |
| 200 | 2.03 | 1.77 | 398.21 | 308.00 ¹ |
| 300 | 2.87 | 2.41 | 348.79 | 592.00 |
| 400 | 3.59 | 2.90 | 282.04 | 479.00 |
| 500 | 4.21 | 3.26 | 219.91 | 373.00 |
| 600 | 4.88 | 3.75 | 185.37 | 315.00 |
| 700 | 5.62 | 4.40 | 156.66 | 266.00 |
| 800 | 6.44 | 5.23 | 135.28 | 229.00 |
| 900 | 7.33 | 6.21 | 118.57 | 201.00 |
| 1,000 | 8.29 | 7.37 | 105.89 | 180.00 |
| 1,000 ² | 9.33 | 7.71 | 96.35 | 163.80 |
| 1,200 | 10.52 | 8.69 | 89.71 | 152.51 |
| 1,300 | 11.79 | 9.74 | 84.50 | 143.66 |
| 1,400 | 13.12 | 10.84 | 80.14 | 136.23 |
| 1,500 | 14.50 | 11.98 | 76.00 | 129.00 |
| 2,000 | 22.71 | 18.76 | 64.00 | 109.00 |

From the table a conception may be gained of the form and dimensions of the cone of dispersion for average instructed shots.

It is seen from the table that as the range increases a less depth of ground is held under fire with a single sight setting, and if an error in sight setting be made, due to an incorrect estimate of the range, the center of impact will be misplaced and there will be a loss in effect in proportion to the amount of displacement, the loss in effect being greater as the beaten zone is less. Furthermore, the difficulty of exact range determination increases with the distance, the two influences combining to make long-range fire uncertain and usually ineffective.

A somewhat opposite condition prevails at the shorter ranges, where, owing to a very much flattened trajectory, a great depth of beaten zone may be held under fire with a single sight setting.

205. The scope of a single sight setting at the shorter ranges may be illustrated by taking the range of 500 yards and the dispersion for that range, from which may be computed the percentage of hits to be expected on strip targets of different vertical dimensions corresponding to the heights of various service targets, these being set up at ranges from 200 yards to 900 yards. The results of such a computation are shown in the table below.

PERCENTAGE OF HITS TO BE EXPECTED WITH AVERAGE SHOTS AT VARIOUS RANGES ON STRIP TARGETS OF DIFFERENT HEIGHTS WITH SIGHT SET AT 500 YARDS, AIM BEING TAKEN AT THE LOWEST LINE OR ELEMENT OF THE TARGET.

| | Height 1.33 feet, prone figure. | Height 1.83 feet, prone figure. | Height 3.5 feet, kneeling figure. | Height 5.67 feet, standing figure. | Height 8 feet, horse figure. |
|-----|---------------------------------|---------------------------------|-----------------------------------|------------------------------------|------------------------------|
| 200 | 25.2 | 38.3 | 59.0 | 88.7 | 89.37 |
| 300 | 20.3 | 29.3 | 68.4 | 78.3 | 82.57 |
| 400 | 18.9 | 26.2 | 48.4 | 64.7 | 69.39 |
| 500 | 16.4 | 21.9 | 36.8 | 46.5 | 49.45 |
| 600 | 10.0 | 13.0 | 19.8 | 23.7 | 24.77 |
| 700 | 3.2 | 4.1 | 5.8 | 6.7 | 6.80 |
| 800 | 0.43 | 0.78 | 0.78 | 0.78 | 0.78 |
| 900 | 0.00 | 0.00 | 0.00 | 0.00 | 0.00 |

¹ Measured from the muzzle in the direction of the line of fire.

² Dispersions beyond 1,000 yards have been calculated from those at the lesser ranges and were determined by experiment.

Low aiming, or the choice of the lowest point or element as an aiming point, which is required, as a rule, in all firing instruction, may be looked upon as the normal practice in service. With the average soldier the best performance to be expected in the heat of action is that he will aim at the foot or lowest element of the objective. While some may in the moments of excitement possess the coolness to estimate the range exactly and choose a higher or lower point according to their judgment, such exceptions can hardly influence to any great degree the general results which are dependent on the performance of the mass or great majority.

206. The Effectiveness of Fire. The effectiveness of fire under battle conditions and in combat firing exercises is dependent upon the three factors: The percentage of hits made, the number of targets hit, and the time of execution. The ultimate effect may be expressed synthetically by the number of enemies disabled or targets hit in a unit of time.

207. The percentage of hits is dependent upon the dispersion, and this is influenced by the precision of the arm, the distance from the target, the visibility of the target, the prevailing atmospheric conditions, the training and instruction of the troops, and upon their physical and normal state at the time.

The percentage of hits is also dependent upon the visibility of the objective, upon the character of the ground as favoring ricochet hits, upon the correct estimation of the distance or choice of sight, and designation of the target, these latter pertaining to fire control.

208. With a given accuracy, the number of targets hit or the distribution of fire may be affected by varying degrees of visibility, as men instinctively choose the more conspicuous marks as aiming points. Under any circumstances, an imperfect distribution of the hits made will be due to an absence of proper instructions from the leaders, or, in other words, to poor control, or else to a want of understanding or lack of obedience on the part of the men.

209. The time of execution is important in that the gaining of fire superiority is dependent less upon obtaining high percentages of hits than upon making an absolutely large number of hits in a unit of time. There is necessarily a limit to the rapidity of fire which, if exceeded, will result in some loss of accuracy. With targets of a fair degree of visibility, the following may be taken as standard rates of fire for troops who have been given suitable training in target practice.

| | | |
|-------------|---|-----------------------|
| 200 yards | } | 10 shots per minute. |
| 300 yards | | |
| 400 yards | | |
| 500 yards | } | 7.5 shots per minute. |
| 600 yards | | |
| 700 yards | | |
| 800 yards | } | 5 shots per minute. |
| 900 yards | | |
| 1,000 yards | | |

Greater ranges, 3 shots per minute.

The rates given should not exclude higher rates of fire in the case of large and conspicuous targets. On the other hand, when objectives, or marks used as aiming points, are very indistinct, the requirement of correct aiming imposes rates of fire somewhat lower than the standard rates given even for well-

instructed men. With imperfectly trained men who have not fully acquired the habit of using aimed fire only, and who are lacking in the manual dexterity required for executing the standard rates of fire, the maximum rate can not well exceed six shots per minute without incurring the danger of lapsing into unaimed fire. Fatigue and exhaustion, the results of marches or prolonged firing, have a detrimental influence and tend to lower the rates of effective fire.

210. The results obtained in collective firing exercises in time of peace give but a slight basis for estimating the results to be expected in time of war. The somewhat inferior training of units mobilized to war strength, the emotions to which even disciplined men are subject in action, and the physical impairment incident to service conditions are influences which combine to greatly lessen the effects which peace-time experiments give, this lowering in effects being due to increased dispersions, the latter, under the doctrine of chances, giving lesser probabilities of hitting in proportion to the increase in dispersion.

It has been estimated that war-time dispersions will vary according to the training, morale, and physical condition of the troops from twice to four times, or more, the peace dispersions. This is not a condition to be desired or sought, but one to be understood and reckoned with.

CHAPTER II.

THE INFLUENCE OF GROUND.

211. **Defilade.** An obstacle of sufficient thickness to prevent the penetration of the bullet will protect from fire the space extending from its foot to the point where the bullet, which grazes its crest, meets the ground. The space which is thus protected from fire is called the "defiladed space." Its extent will depend on the height of the shelter, the curvature of the trajectory and the slope of the ground behind the shelter.

In the illustration the distance A-T will represent the defiladed space for the

PLATE XIII.

trajectory B-T and an obstacle the height of A-B. A soldier beyond T would be struck with bullets passing a slight distance over the crest B; he would be partially sheltered between T and C (the danger space for this trajectory); and would be completely protected throughout the distance A-C.

If the height of the shelter be less than that of a man standing, only a partial protection will be afforded, and to obtain complete shelter it will be necessary for the soldier to assume the kneeling or prone positions. By cover is meant effective defilade from the enemy's fire. Concealment means a screening from view but not necessarily protection from fire.

212. **Rising and Falling Ground.** The influence of the ground upon the effect of fire manifests itself in the depth of the beaten zone. This depth is decreased if the surface of reception rises with respect to the line of sight; it increases, on the other hand, if the surface of reception falls with respect to the line of sight.

The effect of different slopes on the depth of beaten zones for various ranges, based upon the dispersion of average shots, is shown in the table below.

MEAN (50 PER CENT) BEATEN ZONE ON SLOPES—AVERAGE SHOTS.
[ZONE GIVEN IN YARDS.]

| Range. | Rising. | | | | | | | | | | Level. | Falling. | | | | | |
|--------|---------|-----|-----|-----|----|----|----|----|----|-----|--------|----------|-----|-----|-----|-----|---------------------------------|
| | 25° | 20° | 15° | 10° | 5° | 4° | 3° | 2° | 1° | 0° | | -1° | -2° | -3° | -4° | -5° | |
| 600 | 3 | 4 | | 9 | 17 | 20 | 26 | 37 | 61 | 185 | | | | | | | Defiladed angle of fall 0° 30'. |
| 700 | 4 | 5 | 7 | 10 | 19 | 23 | 29 | 40 | 63 | 156 | | | | | | | Defiladed angle of fall 0° 41'. |
| 800 | 5 | 6 | 8 | 11 | 21 | 25 | 31 | 41 | 64 | 135 | | | | | | | Defiladed angle of fall 0° 54'. |
| 900 | 6 | 7 | 9 | 13 | 23 | 27 | 34 | 44 | 64 | 118 | 708 | | | | | | Defiladed angle of fall 1° 10'. |
| 1,000 | 6 | 7 | 9 | 14 | 24 | 29 | 35 | 45 | 63 | 105 | 315 | | | | | | Defiladed angle of fall 1° 29'. |
| 1,500 | 9 | 11 | 14 | 20 | 32 | 36 | 41 | 49 | 59 | 76 | 105 | 171 | 456 | | | | Defiladed angle of fall 3° 37'. |
| 2,000 | 13 | 16 | 19 | 26 | 37 | 40 | 44 | 49 | 54 | 64 | 75 | 91 | 116 | 159 | 252 | | Defiladed angle of fall 6° 46'. |

Note: a = Angle of fall. b = Beaten zone on level ground. s = Angle of slope; then $\frac{ab}{a-s}$ = beaten zone on falling ground and $\frac{ab}{a+s}$ = beaten zone on rising ground. These are von Rohne's formulæ, from which the attached tables are computed. These are found in Balck's "Tactics," vol. i (Krueger translation). See footnotes, page 180.

It should be remembered that, assuming a proper adjustment of the fire, depth of beaten zone can affect only targets which have depth. On a lineal target the depth of the beaten zone has no effect one way or the other. If this target is backed up by supports and reserves, the effect upon them will depend upon their position with respect to the firing line which forms the

Fig. 1

Fig. 2

PLATE XIV.

objective or aiming point and upon the depth of the beaten zone. The beaten zone, as has been shown, is influenced by the lay of the ground, whether rising or falling, with respect to the line of sight.

An example of the shortening of the beaten zone is seen in the case of fire delivered from a height at a target situated on a horizontal plane beneath. (See Fig. 2, Pl. XIV.)

An example of increasing the depth of beaten zone is seen in the case of

fire delivered from low ground at a visible target situated at the edge of a plateau or crest of a ridge from which the ground slopes to the rear. (See Fig. 1, Pl. XIV.)

Shots which pass over a crest with an angle of fall conforming to the inclination of the surface of the ground beyond the edge of crest, or nearly so, are called grazing shots and fire so delivered is called grazing fire. (See Fig. 1, Pl. XIV.)

The diminution or increase in fire effect for average shots due to rising and falling ground is shown in the diagram below, following an idea borrowed from the works of Gen. von Rohne.

A 2° rising slope and a 1° falling slope are assumed. The targets which form the objective are assumed to be at "A." With average shots firing, the figure shows relatively the influence of the ground on the efficacy of the fire on targets similar to those at "A" and placed at different distances in rear thereof.

PLATE XV.

For better illustration the angles are exaggerated in the drawing. The range is taken as 1,000 yards and the figures expressing effect at different distances in rear of "A" on rising ground, level ground, and falling ground, are ratios, the effect of "A" being unity.

It is seen from Plate XV how rapidly the effect disappears on rising ground and how the effect is better maintained on falling ground.

When the ground slopes upward to the rear from a firing line, the supports may be placed closer without increasing the danger from fire aimed at the firing line. On the same sort of ground it is shown that a column target, or one which has depth, is more vulnerable than a lineal target.

When the ground slopes down and to the rear from the firing line, the supports must be posted at a greater distance in rear, unless the slope is so much greater than the angle of fall of the hostile bullets that a deflated space is created in which no bullets strike. On falling ground, however, opposite conditions prevail as to vulnerability from those stated above. Making the allowable assumption that the fire is equally distributed along the crest, the column target behind the crest and invisible from the firing point will receive hits only in proportion to its width.

It may be said, therefore, that on ground rising with respect to the line of sight, column targets, as those having depth, will suffer the greater losses; on ground falling in respect to the line of sight, the reverse slope of hills or the level grounds of plateaus, line targets will suffer the greater losses.

When the ground falls away to the rear at a greater angle than the angle of fall of the projectile, deflated spaces are created, which enable bringing the supports close to the crest. With the service rifle and ammunition it is well to remember that an angle of fall of 1° corresponds to a range of about 900 yards, an angle of fall of 5° to a range of about 1,800 yards.

Through a judicious choice of ground, the measurement of slopes, the placement of targets, and the selection of firing points, the possibilities of the species of indirect fire known as grazing fire may be demonstrated; but the mere possibility of inflicting damage on invisible enemies must not create a false impression as to the use of this class of fire.

213. Ricochet Shots. Bullets which ricochet usually tumble after striking, and jacketed bullets, on striking a hard, rough surface become altered in form more or less, the jackets sometimes becoming separated from the lead core. Wounds inflicted by ricochet hits are, therefore, as a rule, severe.

The most favorable ground for ricochets is a smooth, hard, horizontal surface. Bullets also ricochet on water and, to a lesser extent on plowed ground, wet clay, wet turf, or swampy ground. The chance of ricochet in sand is very slight. Bullets which ricochet are often deflected laterally and the amount of deflection influences the range of the rebound. The maximum angle of deflection is about 30° and it is usually to the right. The range will be greater as the point of strike is nearer the point from which the piece is fired. A smooth, hard surface so inclined as to give an acute angle of fall to the bullet produces the maximum range of rebound, which is about 2,500 yards or a little more.

While various results may be quoted, it is probably correct to say that the maximum number of ricochet hits to be expected is about 20 per cent of the hits scored.

214. The Occupation of Ground. The question presents two aspects, as follows:

First. What firing positions may be chosen which will tend to increase the losses of the enemy?

Second. What positions may be chosen and formations adopted to minimize our own losses?

Where other conditions admit, it is obvious that a defensive position well down a slope is preferable to a position higher up, on or near the crest, as by this arrangement the depth of the beaten zone for fire delivered therefrom is increased and the upper portion of the cone of shots will include the supports and reserves advancing to reinforce the firing line of the attacking force. This course also tends to eliminate dead spaces, which might otherwise exist at the foot of the slope.

On the other hand, a defensive position near the crest, besides favoring observation of the enemy, lends itself to a ready withdrawal of the firing line should a falling back be necessary, or else to its prompt reinforcement by the supports advancing from behind the crest. The decision as to choice of ground to be occupied in any particular case must therefore be dependent upon judgment as to the relative value of the ballistic and tactical considerations involved.

Consideration must also be given to the conditions of the action so far as neighboring troops are concerned.

For troops on the defensive there will frequently be no choice of a position. In such cases it will be necessary for them to accept that which circumstances offer. The defense itself will usually be restricted in its choice by the necessities of neighboring troops.

From the point of view of avoiding losses, all gentle reverse slopes are dangerous and are to be avoided when possible. When necessary to traverse or to occupy such ground, precautions must be taken to protect the reserves or other bodies of troops by placing them on the flanks; by disposing them in formations with a narrow front; by causing them to lie down; by the construction of suitable shelter; and by avoiding useless movements. Finally by placing the firing line, which will be the visible target and at which the enemy's fire will be directed, as well down the slope from the crest as tactical considera-

tions will admit, the high ground will interpose as a defilade and intercept the upper portion of the collective cone which might otherwise take effect on objects behind the crest.

It is thus seen that the principal lessons to be learned concerning the influence of the ground consists in finding out the things which are to be avoided.

CHAPTER III.

THE ADJUSTMENT OF FIRE.

215. Fire at Stationary Targets. The correct adjustment of infantry fire is attained by causing the center of impact of the collective group to fall on the center of the target, this placement of the group under the law of probabilities insuring the greatest number of hits. This is the problem constantly presented in combat firing and in service.

Two distinct and independent elements enter, which may supplement or counteract each other—the influence of the troops and that of the commander. When a body of troops has aimed correctly at the indicated objective with the elevation ordered and has fired with steadiness, it has done all that can be expected of it; but this is not sufficient. It is the duty of the commander to bring the shot group into proper relationship with the target. If the correct elevation be given, a maximum result will be obtained; if a mistake is made, the result may be nothing.

It is known that good shots make a small group and poor shots a large group, average shots making a group of intermediate size. The maximum effect is obtained if the shots are of the highest grade and if the center of impact is correctly placed. But if the center of impact of the group made by good shots is displaced, the effect falls off very rapidly compared to the other grades of shots, and if the displacement is very great, it may be sufficient to insure that the good shots will make no hits at all, while, with the same displacement of the center of impact, the fire of the poorer grades of shots will continue to have some effect. In other words, the fire of a thoroughly trained body of troops may be less effective than that of much poorer shots if, through a lack of appreciation of the range, the center of impact of its shot group be displaced. These statements are illustrated by the diagram.

Normally, battle-field targets are lineal targets, and hence a lateral displacement is of slight consequence, as shots aimed at one element or section of the hostile line may take effect in some other element or section of the same front. Owing to the slight depth of service targets and to the form of the trajectory, the longitudinal placement of the center of impact is more difficult.

The point of strike of the bullet is determined by the angle of elevation given the axis of the bore when the piece is fired, and the adjustable slide of the rear sight, with the scale of the leaf graduated to yards, is a device for giving the elevation necessary to reach any point within the range of the arm. If the range to a target is known exactly, under average conditions a perfect adjustment of the fire will be obtained by having each man of the firing detachment set his sight for the indicated range, the mean trajectory of the cone of dispersion approximating closely to the normal trajectory for the range indicated.

The question resolves itself therefore into the question of finding the range, which, as a rule, in combat firing and in service, will be known only approximately. The result obtained will be in proportion to the accuracy of the means and appliances available for determining the range.

With soldiers who have had some instruction the average error in the estimation of ranges by the eye, for distance between 600 and 1,200 yards, is approximately 15 per cent. The average error of a well-instructed class is about 12½ per cent. The best instrumental range finders will give results with an error not exceeding 5 per cent of the range. The mean estimate of a given range by several trained estimators may be expected under peace conditions to approximate closely the results obtained with a good instrumental range finder. Owing to the fact that, as a rule, the overestimates and underestimates counterbalance each other to some extent, the means of several estimates will give

PLATE XVI.

a better result than the average estimate of the same men expressed in percentage. By the use of such means it may be expected that the error made will be between 5 per cent and 10 per cent, the latter being more probable in time of war. Some error must always be expected, and the question is one of lessening it or minimizing its effects.

216. Rear-Sight Corrections Through Observations of Signs of Impact. When the surface on which the objective stands is such as to give visible signs of the impact of bullets, a supplementary means is provided by which rear-sight settings may be corrected. When the ground is favorable, the simultaneous strike of a number of shots fired with the same rear-sight setting gives a better indication of the location of the shot group than the same number of shots would provide if fired at the will of the individuals of the platoon or detachment.

In order to be able to recognize the center of impact on the various surfaces ordinarily met with in service, it is necessary to be acquainted with the form and dimensions of the beaten zone as it will be exhibited thereon. A rising surface of reception produces a shortening effect on the beaten zone. This

is shown graphically in Plate XII and more specifically in figures in the table given with paragraph 212. As a rule, surfaces which afford good signs of impact visible at the firing point will have a rise of 1 degree or more.

When the existence of favorable ground allows the strike of the shots of a trial volley to be plainly seen, the correct placement of the center of impact may be made by a series of approximations. Not more than three trial volleys should be required for a good fire adjustment, and this once attained, a change should be made at once to "Fire at will," at a rate suited to the range and the visibility of the objective. In making rear-sight corrections it is necessary to make positive changes, rarely less than 50 yards at a time. It is an insufficient and faulty procedure to endeavor to correct a wrong adjustment through vague instructions, such as enjoining the men to aim a "little higher" or a "little lower." Where indications of impact are sufficient to form a basis of judgment, it may be stated as a rough rule that the fire will be properly adjusted when about one-third of the shots of a trial volley appear to strike in front and two-thirds in rear, it being remembered that the direct hits will pass through and strike in rear of the target.

As a rule, a perfect condition will not be realized. The ground may be wet or covered with turf, sod, tall grass, or brush, in which cases the indications may be entirely lacking or else so slight as to form no basis of judgment. Indications will be only partial when the objective is along the crest of a ridge, the upper portion of the cone of dispersion going over the crest and giving no indications. The same will be true when the objective occupies the near edge of a body of woods or is along a hedge which completely screens from view the ground in rear of it.

However partial or imperfect the signs of impact, close observation should be resorted to in every case, as slight indications may sometimes furnish a basis for rear-sight corrections. For observing the effect of fire good field glasses are indispensable, and the necessary skill in their use, through which correct conclusions may be drawn, is to be acquired only through practice. An objective is difficult to adjust upon when it occupies one of a succession of parallel ridges alternating with depressions, the ground appearing from the firing point as a continuous surface. In such cases the only indications will come from shots which strike the ridges, those falling in the depressions being lost. From such indications wrong conclusions may be drawn unless the lay of the ground is discovered through close observation with field glasses.

In noting the strike of shots it should be remembered that the dust will be seen somewhat above the actual point of impact and to the right or left, depending upon the direction of the wind. The best position from which to observe the effects of fire is behind and, if possible, above the party firing, but in this position it must be remembered that bullets which fall short will be most easily seen and consequently will appear to strike farther from the objective than bullets which strike an equal distance beyond. To an observer on or beyond a flank of a party firing, shots which pass over the objective will appear to fall toward the side on which he is posted, and those which fall short toward the opposite side.

When the surface of the ground is such as not to furnish any indication to an observer at the firing point of the effects of fire, the correctness of the rear-sight elevation may sometimes be inferred by careful observation of the actions or movements of the enemy.

Habitual practice on favorable ground may tend to cultivate too great a dependence on signs of impact in making rear-sight corrections, and this is to be guarded against. It should be remembered that even on favorable ground,

if a large number of troops be engaged, it will usually be difficult, if not impossible, for commanders and leaders to distinguish indications of their own fire from that of other troops.

217. Combined Sights. When means of exact determination are not available and indications of impact are lacking or insufficient and the range can not be learned from the artillery or neighboring troops, some error in the range must be expected. In such a case, through the expedient of combined sights, a greater depth of beaten zone may be created, giving an assurance of effect which might not otherwise be obtained. Such a fire loses in concentration, and this must be compensated for by the employment of a larger number of rifles. The most common application of combined sights will be in executing fire of position. The expedient will not usually be employed by bodies of less strength than a battalion.

The approximate ranges for combined sights and the number of sights to be employed in any case are questions which depend upon the depth of the beaten zone and the probable error in the estimation of the range. Both these factors vary between certain limits. The depth of the beaten zone varies inversely with the range. It will also be greater in time of war than in time of peace, but in view of the circumstances under which the fire of position will usually be executed, a very great dispersion need not be looked for. The greatest probable error will be about 15 per cent of the range. When a good instrumental range finder is available the error should not exceed 5 per cent of the range. In the majority of cases the error to be expected will lie between these two extremes.

Taking the 75 per cent zone as being sufficient, if the probable error is such that it does not exceed one-half the zone considered, then it is certain that the objective will lie somewhere within the beaten zone created with a single sight setting. The normal depth of beaten zone for a single sight setting will be sufficient up to the point where the expected error is about equal to 75 per cent zone. Beyond this point it will be necessary to use two sight settings, one above and the other below the estimated range and differing from each other by the depth of the beaten zone at that range. As the normal beaten zone decreases in depth with the range, and as the expected error measured in yards increases with the range, a point will be reached where two sight settings will be insufficient and it will be necessary to resort to three settings of the rear sight, one being set at the estimated range, one over, and the third under, the difference being equal to the normal depth of zone at that range.

The table below exhibits the ranges where it is necessary to resort to combined sights with various assumed errors. The table is given, not as establishing any rigid rule to be followed implicitly, but as a guide in determining in the first place when combined sights should be used and in the next place how they should be used.

218. Auxiliary Aiming Points and Target Designation. Through invisibility and the practice of concealment it will frequently occur in service that individual enemies or deployed bodies of the enemy will be too inconspicuous to provide in themselves a good aiming point. In such case it is necessary to select well-defined marks or objects in the immediate vicinity upon which to direct the fire, these being so chosen and the rear sight so adjusted that the objective will lie at the center of the resulting beaten zone.

When natural and artificial features are numerous enough to make a confusion of forms or when the surface is of a monotonous character, unbroken by marks which might serve as aiming points or points of reference, target designation is difficult. It is necessary that indications be given in clear and

precise terms, and that the men in ranks have the capacity to understand what is said. A lack of understanding may cause the fire to be delivered in quite another direction from that intended.

It is frequently advantageous to make use of the clock notation in indicating the direction of a target. For this purpose a well-defined object in front is announced and considered as being at 12 o'clock, the objective being indicated by the usual clock designations according to the difference from the point of reference. Angular differences between the target and reference points may be indicated by finger breadths. The field glass is an important accessory, and the passing of field glasses to the men in ranks will often facilitate target designations, besides tending to allay nervousness or excitement.

219. Fire at Moving Targets. The adjustment of fire on moving objectives is subject to certain special considerations in that, due to changes of position

TABLE OF COMBINED SIGHTS BASED ON PEACE DISPERSION OF AVERAGE SHOTS, THE 75 PER CENT BEATEN ZONE, AND VARIOUS ERRORS IN THE ESTIMATION OF RANGES.

| Range. | 75 per cent zone. | 5 per cent error. | | | 10 per cent error. | | | 12½ per cent error. | | | 15 per cent error. | | |

| 1,500 | 129 | 150 | 2 | 125 | 300 | 3 | 125 | 375 | 3 | 125 | 450 | 4 | 125 |
| 1,600 | 124 | 160 | 2 | 125 | 320 | 3 | 125 | 400 | 4 | 125 | 480 | 4 | 125 |
| 1,700 | 120 | 170 | 2 | 125 | 340 | 3 | 125 | 425 | 4 | 125 | 510 | 4 | 125 |
| 1,800 | 116 | 180 | 2 | 100 | 360 | 4 | 100 | 450 | 4 | 125 | 540 | 5 | 125 |
| 1,900 | 112 | 190 | 2 | 100 | 380 | 4 | 100 | 475 | 5 | 100 | 570 | 5 | 100 |
| 2,000 | 109 | 200 | 2 | 100 | 400 | 4 | 100 | 500 | 5 | 100 | 600 | 6 | 100 |

of the target, it is not possible with a certain sight setting to maintain a perfect adjustment of the fire. Changes in sight setting are necessary to conform to the changes in the position of the target, and the two questions naturally arise, what original sight setting should be adopted upon first opening fire and what changes in it should be made as the action progresses.

It is obvious that if a beaten zone be established immediately in front of an enemy, his forward movement into the beaten zone will complete the adjustment of the fire. Due to the chance of overestimating the range, it is necessary to adopt a rear sight setting well under the estimated range, in order to insure that the beaten zone will be in advance of the enemy. When the fire becomes effective, as may be judged by the actions and movements of the enemy, the rate of fire should be quickened in order to increase the effect of the fire. When the target continues to advance till it has passed entirely through the zone of effective fire (75 per cent zone), a lower sight setting will be required so as to again bring the center of the beaten zone in front of the target. Frequent changes of sight cause a loss of time, besides multiplying chances of error in sight setting.

In accordance with these ideas, against infantry advancing, a sight setting 200 yards less than the estimated range should first be used. When the enemy has passed through the zone of effective fire, the sight should be lowered 200 yards and the operation repeated till the battle-sight zone is reached, in which no sight manipulation is required other than throwing down the leaf. Against skirmish lines which advance by rushes the sight setting should not be changed during a rush. This should be done at the halts so that the greater vulnerability of the targets presented during the rush may be taken advantage of.

Against attacking cavalry, due to the rapidity of the advance, there will not usually be time for sight manipulation other than throwing down the leaf of the rear sight, so that the battle sight should be resorted to at all ranges.

Against retreating targets fire should be opened with the sight corresponding to the estimated range, and when the target appears to have passed beyond the zone of effective fire 200 yards should be added to the sight.

In firing at a target moving across the line of fire it is desirable, on account of the confusion caused thereby, to hit the head of the column. It is necessary therefore to hold to the front a distance sufficient to allow for the time of flight and the rate of march. This will be accomplished by the observance of the following rough rules:

Against infantry it is sufficient to hold against the head of the marching column.

In the case of mounted troops at a trot, hold to the front 1 yard for every 100 yards of range; and at a gallop, 2 yards to every 100 yards of range.

220. Indirect Fire. The proper adjustment of fire on an objective which is screened from the view of the observer at the firing point by an intervening obstacle is dependent upon the conjunction of favorable circumstances not usually met with in service. The height of the obstacle and the range must be such that the objective is not defiladed from fire, and besides determining the range, the position of the objective must be known so that the proper lateral direction to the pieces may be given. For this purpose intermediate auxiliary aiming points will be necessary to mark the direction of the fire. In siege operations opportunities may arise for the employment of this kind of fire, in which case material may usually be found for constructing rests for rifles so that fire delivered therefrom will reach important stationary objectives.

221. Night Firing. The invisibility afforded by darkness neutralizes the power of the rifle to a great extent by making it impossible to employ the ordinary means of fire adjustment.

In night attacks the purpose of the offensive is to gain rapidly and quietly a position where the issue may be decided in a hand to hand encounter or a position from which the superiority of fire may be gained at daylight. For the offensive, therefore, fire action is a subordinate consideration.

On the defensive, when a night attack is apprehended, preparations should be made to sweep with fire the ground immediately in front over which the assailant must advance. Special arrangements may sometimes be made for resting rifles on the parapet, so that the ground in front will be suitably covered. A solid support is necessary for maintaining the proper direction of the pieces during firing. For this purpose notched boards or timbers are convenient. The arrangements should be such that the operations of loading and firing may be performed without removing the rifles from the support. Searchlight illumination may reveal the position and movements of the enemy sufficiently well to permit the use of the sights. In night operations of small parties fire may be well directed when a bright, well-defined light, such as a camp fire, is presented as an aiming point. In such a case a slight illumination of the front sight is required.

CHAPTER IV.

INSTRUCTION COMBAT PRACTICE.

222. This course of firing, which will be held on a class "A" range, follows the long distance practice prescribed for men in the grades of expert and sharpshooter, and is intended as a preliminary to the combat firing held on the class "B" range.

There will be one firing exercise for each sergeant and the first sergeant of a company and one for each lieutenant not in command of a company. In the firing exercises designated for sergeants the firing will be executed by a platoon consisting of two full squads. In the exercises for lieutenants the platoons will consist of three full squads.

The targets will consist of a row of kneeling figures at intervals of one yard from edge to edge, the number of figures being equal to the number of men firing. The targets will be set up in the open without any special attempt at concealment.

In the exercise for sergeants the firing will take place at a convenient range between 600 and 800 yards; in the exercise for lieutenants the firing will be at a range between 800 and 1,000 yards.

There will be but one firing point for any one series, for which 10 rounds per man will be issued and fired. The firing will be executed by the commands and means prescribed in the Drill Regulations. This firing will be under the immediate supervision of the captain, who will use every effort, through criticism and the correction of faults, to make these exercises instructive for his subordinates.

The best possible use should be made of field glasses in observing the effect of the fire, with the view of getting better results and of giving additional instruction in the use of glasses. Accordingly, in this practice noncommissioned officers, musicians, and others whom it may be desirable to instruct, should be required in turn to act as observers to assist the platoon leader.

A record will be made in each case of the number of hits made, the number of figures hit, and the time of execution, these results being compared with the established standard.

These records form a part of the company record for the season.

COMBAT PRACTICE.

223. Rules. (a) Combat practice will follow the instruction combat practice and will be held on a class "B" range during the period announced for the field training of the troops.

(b) All who are required to fire in range practice will take part in the combat exercises. Sergeants, musicians, and trumpeters will not fire, and corporals will fire only when their squads form a part of the firing line of a larger unit.

(c) Each lieutenant not commanding a company (except battalion staff officers) will exercise command in at least one exercise, the number of men firing being equivalent to a platoon at war strength.

Each sergeant of a company will exercise command in at least one firing exercise, the number of men firing being appropriate to the grade of sergeant.

So far as the ammunition allowance will permit, each corporal will be required to exercise command in combat exercises involving one or more squads.

Following the exercises prescribed for lieutenants, sergeants, and corporals, there will be one firing exercise for the company, the company commander exercising command.

(d) Each man will be required to participate in one combat firing exercise

wearing the full field equipment. On other occasions the complete equipment except the pack will be carried.

(e) Should it be impracticable to obtain a class "B" range, the exercises prescribed will be carried out on a class "A" range. While distances will be well known on class "A" ranges and an important element will thus be absent, firing exercises containing some unexpected feature may be devised which will be instructive for those taking part. So far as practicable, their preparation and conduct should be governed by the rules given for other combat exercises.

(f) When different exercises are prepared for the several fire units, each exercise will, when practicable, be carried out in the presence of the other units in order that the maximum amount of instruction may be derived therefrom.

224. Preparation of Exercises and Their Conduct—Rules. In the preparation and conduct of combat exercises, the following rules should govern:

(a) Every exercise should involve a tactical idea, although only portions of an episode or episodes of a combat should be represented.

(b) The position of the targets and the interval between targets should conform to service conditions. The number of targets exposed should, as a rule, be equal to the number of men in the firing line.

(c) The position of the targets and the ranges thereto should be unknown to those participating. If practicable, the exercise should be on unknown ground.

(d) Exercises should be simple in their arrangement, but each should involve some feature which is unexpected to those taking part. Gradually those who have shown themselves proficient may be confronted with more difficult exercises.

(e) The number of cartridges issued to each man should admit of a full illustration of the idea involved in the exercise, and no more. In the simpler exercises, with one group of targets exposed and a single firing point, not less than five rounds per man should be issued. Where changes of the objective are called for or where there is more than one firing point, five rounds per man for each objective and each firing point should be issued.

(f) At the beginning of each exercise the commander of the unit taking part will be informed as to the tactical idea involved and as to the general procedure to be followed. Once begun, the exercise should be allowed to take its course free from interruption unless it becomes necessary to interfere to prevent accidents; and as every combat exercise is designed to represent a tactical idea, it will be conducted by means of the prescribed commands and signals and in accordance with the rules laid down in the Drill Regulations under the headings "Fire" and "Combat," these being supplemented by the principles and rules given herein under the heading "Adjustment of Fire."

225. Supervision. Every combat firing exercise will be supervised by an officer whose duty will be to note the conduct of the exercise, to compare the results obtained with the standard of judgment, and to point out the faults committed. He should have two assistants to record the time, compute the number of hits to be expected under the conditions of the exercise, make notes, etc.

As a rule the captain will supervise the exercises for fractions of his own company. The major will retain the general supervision of the firing exercises of his battalion and will be the supervisor in all cases involving a company. He may, in his discretion, retain supervision in the case of smaller units.

226. Records. A record of each exercise will be made which will contain the following data:

- (1) Place, date, designation of organization.

(2) Nature of exercise, number of men firing, number and kind of targets with arrangement and intervals.

(3) Number of rounds fired.

(4) Number of hits expected and number made, number of targets hit.

(5) Time of execution.

(6) Atmospheric conditions.

(7) Remarks as to the preparation, fire discipline, and fire control.

These records will be filed until the close of the next target season, when they may be destroyed.

227. The Critique. Intelligent criticism is the basis of good instruction and insures progress. Hence, to realize the full benefits of the exercises in combat firing a careful analysis will be made by the supervisor as soon as the results of each firing are known, and on the ground on which the exercise was held. A discriminating judgment is required on the part of the officer charged with this duty, and it is important that not only the errors committed but the means of correcting or avoiding them should be carefully explained.

The rules for judgment are those prescribed in the War Department publication "Regulations Prescribing Standard for Field Firing," prepared at the Musketry School.

228. Range Regulations. A suitable range party will be detailed by the officer supervising the firing consisting of an officer as range officer and a sufficient number of men to act as target and signal men and range guards.

The duties of the range officer are to prepare the targets, to superintend their placing and manipulation, to see that the range is safe, and where necessary to post range guards to prevent persons from entering the area of fire; to record and report the results of the firing.

Every precaution will be taken to provide for the safety of markers, target men, and others whose duties require them to be anywhere within or near the area of fire. When it appears to be necessary, a point which will be continually in view of the officer or noncommissioned officer in charge of the firing line throughout the exercise will be selected from which to display the danger signal. This point will be known to all engaged in the firing. No firing of any kind will be done while the danger signal is displayed. Should the danger signal appear while an exercise is in progress, the command will be halted and all firing and movement will cease. When the danger signal is removed the exercise will be resumed.

Reports. Reports of the results of combat exercises will be submitted as prescribed in paragraph 255.

228½. Except during the regular practice season, there will be held monthly, if practicable, such combat practice as the regimental commander may prescribe.

Where local or other conditions prevent the use of ball ammunition, such exercises will be conducted with blank ammunition.

This instruction will include company, battalion, and regimental combat firing exercises. A record of such combat practice will be kept and a report showing the nature of the exercises, with copies of the problems, if any, will be submitted monthly to the department commander.

CHAPTER V.

PROFICIENCY TEST.

229. To determine the proficiency attained in collective marksmanship, courses in firing suitable as tests and adapted to the firing grounds available will be prepared by the regimental commander for the companies or troops of his

regiment. These tests will follow the combat practice and will be held near the end of the practice season or later—they must be held during the period announced for the field training of the troops. They are designated as a further and more formal proof or test of instruction than is furnished by the results obtained in the known-distance practice and the combat exercises.

230. Range Used. Whenever practicable, the proficiency test will be held on a class "B" range. Courses in firing may consist of a single firing exercise for the company, or one exercise for the company and one for each of the platoons thereof, or an exercise for each of the platoons only. In any case not more than 40 rounds per man will be expended in the entire test.

231. Rules. The arrangement of these exercises and their conduct will be governed by the rules prescribed for combat firing so far as they may be applicable, and they will be judged in the same manner. In addition, special rules to suit local conditions may be issued by the commanding officer. The firing will be with the full field equipment as prescribed for the arm of the service.

232. Who Will Fire. All enlisted men who are required to fire through the known-distance course, except sergeants and musicians and trumpeters, and who are borne on the rolls of an organization at the time of taking the test, will fire throughout the test unless excused by the regimental commander; but no one will be excused until the company commander shall have shown in each case that it will be impracticable for the soldier to be present. A soldier absent through his own fault, or who is not excused by the proper authority, will be considered as present and firing throughout the test.

If the company is not stationed with regimental headquarters and there is not sufficient time to obtain the regimental commander's authority to excuse a soldier, the post commander is authorized to do so, provided so much of the first sentence of the preceding paragraph as refers to the company commander is complied with.

In courses where the test consists of an exercise for the company and an exercise for each of the platoons thereof, a soldier will be allowed to fire in but one platoon in the platoon exercises.

A soldier who has fired in the test for the target season with one organization and becomes, through transfer or reenlistment, a member of an organization which has not yet fired the test, will take part in this firing with his new organization.

233. Procedure. The test will be fired under the direction and personal supervision of the regimental commander. If the company is not stationed with regimental headquarters the test will be fired under the supervision of the post commander or an experienced officer of suitable rank specially selected by the post commander. No information in regard to the course which any organization will be required to fire will be given out before the date set for the test.

234. Results. The results obtained will be recorded as prescribed for combat firing exercises and a judgment rendered as to whether the entire performance was satisfactory or unsatisfactory, as the results may warrant these characterizations.

It may be said, however, that a collective firing exercise is too complex an operation to have its results expressed by a number, a single word or even by a phrase. In the best performance some mistakes will probably have been made to which, in the interests of good instruction, attention should be called. With those who have not done so well and whose merit may be doubtful, it is all the more necessary to analyze all the operations involved in the test so

that the faults committed may be discovered and the responsibility for any deficiency fixed.

In any case, therefore, this test will be followed by a critique by the officer supervising the test, to be delivered as soon as the results of the firing are known. Mere comparisons between organizations may mean nothing. On the other hand, careful supervision and effective criticism insure progress in any branch of instruction.

235. Officers Responsible for Deficiency of Organization to be Reported. Should the results obtained in the annual proficiency test for any organization be such as to warrant a judgment of unsatisfactory, a presumption of deficiency for the entire organization will have been established. This, however, is not entirely sufficient. In case the apparent deficiency is manifestly not due to defective leadership, further inquiry should be made into the state of individual marksmanship and fire discipline of the organization as exhibited in the range and combat practice.

Should the presumption of deficient instruction be sustained and the examination establish a proof of the incapacity of the company or troop commander as an instructor, or should the deficiency be owing to the defective leadership, or should both these conditions exist, the name of the officer responsible will be reported to the department commander at the time reports of target practice are rendered.

236. Reporting Results. The rating (satisfactory or unsatisfactory) obtained by organizations required to fire the annual proficiency test will be entered on the Report of Combat Practice.

CHAPTER VI.

EXAMPLES OF EXERCISES, WITH SUGGESTIONS CONCERNING THE ARRANGEMENT OF TARGETS.

237. Targets, Buzzers, etc. With the field targets and apparatus furnished by the Ordnance Department, a stationary target may be represented by lines or groups of silhouette figures on staves, targets "E" and "F." With target "G"—falling target—enemies which fall when struck may be represented. When there are pits of suitable depth, target "H," in the hands of pitmen, may be used to represent enemies which appear and quickly disappear, and are called bobbing targets. The same effect may be obtained with lines of figures, either kneeling or prone, placed on the beam apparatus, the latter being operated by men in an adjacent pit. Moving effects with field targets are obtained with target "K."

When a line or group of stationary figures is used as an objective it should be so placed as to be out of sight in the beginning, the targets to come into view as the firing party advances. Targets may be so placed as to be entirely invisible to the naked eye, but visible with field glasses in the hands of the leader, necessitating good judgment in the choice of an aiming point. Pistol shots fired from the position of the targets or from a point in rear of the firing party provide an effectual means of indicating that the simulated enemy has opened fire.

When field buzzers form part of the signal equipment of a post, their use greatly facilitates a communication between the firing point and the different target pits. When these have not been supplied, communication must be by means of a code of signals.

238. Examples of Exercises. The specific statement of a tactical situation is dependent upon the lay of the ground involved. Hence, owing to the variety in ground to be met with, complete models of firing exercises suitable to different localities can not be stated. No more can be done than to give suggestions which may serve as guides. With those here given and the rules for arrangement that have been stated, it may be expected that firing exercises may be drawn up which will carry out in a good measure the purposes of this class of instruction.

In the case of a company a useful exercise may be framed by having the objective for the company composed of two or three distinct groups of targets, one for each of the platoons of the company, so placed or operated as to call for somewhat different conduct on the part of the platoon leaders. By placing the objectives for the platoons on separate disappearing apparatus, the groups may be made to appear and disappear at different times.

EXERCISE NO. 1.

Object. To teach men the value of concealment and the use of cover, to pick up obscure targets, and to estimate the range thereto.

Situation. A single man, a member of an outpost, is informed that a small party of the enemy is in observation in the vicinity of a certain point which is pointed out from a concealed position.

Action. The soldier is directed to advance, without exposing himself to the enemy, to a point from which fire may be opened with better effect, and to then fire on the enemy.

Targets. Three figures—one kneeling and two prone, the latter falling targets—so placed among trees or shrubs as to require some search to be found. The range at which the firing takes place should be from about 350 to 600 yards, the initial point of the movement being such that a good line of advance under cover to the best firing point is open to the soldier—but this should not be indicated to him.

Remarks. This exercise may also be used for two men acting together.

EXERCISE NO. 2.

Object. To illustrate the location of obscure objectives, quick estimation of distances, the use of natural features of the terrain for concealment, and the exercise of fire control over a dispersed squad.

Situation. A small patrol under a noncommissioned officer is sent out under the following orders:

“A small party of hostile infantry has been reported in the vicinity of—. Locate and drive them back.”

Action. The patrol will advance in the indicated direction. The formation will be in conformity with the requirements of the terrain.

When the targets representing the enemy have been located by the patrol, fire will be opened promptly but only as directed by the patrol commander. In case any member of the patrol exposes himself so that he would be in plain sight from the targets, blank cartridges will be fired from the pit to indicate that the patrol is under fire. This will be done only on notification by phone from the range officer.

The time for the preparation will be taken from the moment the patrol locates the targets, or the first blank cartridge is fired from the pit—whichever occurs first—to the time the first shot is fired.

Upon completion of the action the patrol commander will send a written report thereof to his company commander.

Targets. An irregular group consisting of one standing, two prone falling targets, and three prone bobbing targets. (This to be modified so that the total number of figures in the target will equal the number of individuals of the patrol.)

Bobbing targets will appear for periods of 10 seconds, with an interval of 10 seconds between appearances, the first appearance to be immediately after the first shot is fired at the falling targets.

Equipment. In addition to the authorized equipment, the patrol commander is supplied with a pad of the regulation message blanks. His report will be submitted on this form.

Time. As provided under "Action" and "Targets" above.

EXERCISE NO. 3.

Object. Collective exercise in which fire discipline and fire control are illustrated. No shots will be fired except by direction of the outguard commander.

Situation. An outguard consisting of a noncommissioned officer and six or seven men is given a specific sector of observation. It establishes a double sentry post. The location of the sentries and the remainder of the outguard will be in conformity with the requirements of the terrain.

Action. Upon the first appearance of the enemy, as represented by the targets, the sentries will endeavor to locate them and will notify the outguard commander at once as to the nature of the targets, etc. The outguard commander then makes the proper disposition of the outguard to open and maintain a vigorous fire upon the enemy.

Targets. Six or eight kneeling silhouettes on disappearing apparatus (target "I"). These will be made to appear for periods of 30 seconds each with intervals of 30 seconds between appearances. The first appearance will be indicated by the firing of blank cartridges from the pit. Range 400 to 700 yards.

Time. As provided under "Targets" above.

EXERCISE NO. 4.

Object. To illustrate the location of obscure objectives, quick estimation of distances, use of natural features of the terrain for concealment, and the exercise of fire control.

Situation. A strong patrol is sent out under the following orders:

"1. Small parties of the enemy are reported about half a mile from our present position, and in the direction of ———.

"2. You will locate the enemy and, by attacking, determine his dispositions."

Action. The patrol will advance in an indicated direction, the formation being in conformity with requirements of the terrain.

When the targets representing the enemy have been located by the patrol fire will be promptly opened, but only as directed by the patrol commander.

In case any member of the patrol exposes himself so that he would be in plain sight from the targets, blank cartridges will be fired from the pit to indicate that the patrol is under fire. This is done only upon notification by phone from the range officer.

Upon the completion of the action the patrol commander will send a written report of same to the commanding officer Company "A," from whom he is assumed to have received his orders.

Target. Eight kneeling silhouettes on a beam, 1 yard edge to edge, and two prone falling targets. The beam target will appear for 30 seconds and at 30-second intervals.

Time. The time for the preparation will be taken from the moment the patrol locates the target, or the first blank cartridge is fired from the pit—whichever occurs first—to the time the first shot is fired.

EXERCISE NO. 5.

Object. To illustrate fire control and the use of the battle sight.

Situation. A platoon of two squads is ordered to attack the enemy in a certain position. The general location of the main objective is indicated to the platoon commander. While advancing, the platoon encounters an outpost of the enemy.

Action. The platoon is assigned certain lateral limits within which the advance is to be confined.

At the first firing point, which will be designated, five rounds per man will be fired and the advance will be resumed under the assumption that fire superiority has been gained. While the platoon is advancing a second target appears. The platoon is halted and fire opened on the nearer group, the battle sight being used.

The main objective is outside of battle sight range; the second target is within battle sight range.

Targets. The distinct target, or main objective, will consist of eight kneeling silhouettes with intervals of 1 yard from edge to edge. The second target will consist of eight prone silhouettes on disappearing apparatus. The second target will appear for periods of 30 seconds each with intervals of 30 seconds between appearances. The first appearance will be controlled by phone.

Time. As provided under "Targets" above.

Remarks. This exercise may be used for a larger platoon.

EXERCISE NO. 6.

Object. To illustrate the locating and firing upon distant targets and the utility of the battle sight when it is a question of opening promptly a rapid fire on a fleeting objective.

Situation. A platoon of two squads is ordered to attack the enemy. The general location of the targets is indicated to the platoon commander. While advancing, the platoon is assailed by another party of the enemy which moves rapidly as though endeavoring to make a flank attack.

Action. The platoon is advancing in skirmish order when the firing of blank cartridges from the pit will indicate that the enemy has opened fire. The platoon is halted and opens fire, the disappearance of the targets indicating that fire superiority has been gained and that the advance may be resumed. When the second objective is discovered the platoon is again halted and fire opened on the moving target with the greatest possible effect.

Targets. The distant target, or main objective, will consist of eight kneeling silhouettes, 1 yard edge to edge, on beam disappearing apparatus. This target will be raised at the time blank cartridges are fired from the pit and will remain in sight such length of time—not exceeding one minute—as will insure that not more than five rounds per man are expended on it. This time will be regulated from the firing point by phone.

Second objectives, eight kneeling silhouettes on sled (target "K").

Remarks. This exercise may be used for a larger platoon.

EXERCISE NO. 7.

Object. To illustrate the use of the intrenching tool and range finder, firing from shelter with a rest for the rifle, fire discipline, fire control, and a maximum rapidity of effective fire under the most favorable conditions.

Situation. A platoon of two squads is assigned a portion of a defensive position. They are ordered to intrench and drive back an enemy who is expected to advance and come into view 10 minutes after the position is first occupied.

Action. One end of the trench location is pointed out to the officer, and the direction from which the attack may be expected is indicated. The platoon commander then lays out his trench and proceeds to construction without delay. While the work of construction is going on, the officer will make use of his range finder in determining the range to prominent points in his front.

At the expiration of 10 minutes he will be prepared to immediately fire upon any targets that come into view.

Targets. No. 1. Kneeling silhouettes 1 yard apart on beam disappearing apparatus; range, yards.

No. 2. Kneeling silhouettes 1 yard apart on disappearing apparatus; range, yards.

No. 3. Kneeling silhouettes 1 yard apart on disappearing apparatus; range, yards.

No. 4. Prone silhouettes 1 yard apart on disappearing apparatus; range, yards.

The longest range should not be much in excess of 900 yards, the shortest about 250 yards.

The targets appear in succession, representing an advancing enemy. Each target will be exposed one minute. One minute will elapse between the disappearance of one group and the appearance of the next.

The number of rounds fired at each group will be ascertained between appearances of the target by the officer supervising the exercise.

The construction called for should be with the prescribed field intrenching tools.

Time. As provided under "Action" and "Targets" above.

The shelter here referred to is the hasty cover defined in the Infantry Drill Regulations. The same exercise may be carried out with the fire trench, sufficient time for construction being allowed. Three or two groups of figures may be operated instead of four.

EXERCISE NO. 8.

Object. To illustrate the direction and control of fire, fire discipline, range finding, observation of fire, adjustment of fire, and the use of combined sights on a distant objective.

Situation. A company is ordered to occupy a certain position and fire on a distant objective which is indicated to the company commander.

Action. There will be two or more firing points at each of which two series of firings of ten rounds per man will be made.

In the first series the company commander will attempt to adjust the fire by means of one or two ranging volleys, and will then fire the balance of his ten rounds "At will."

Another officer who has not been present during the first firing, will be designated to command the company during the second series.

In the second series adjustment of fire will not be attempted, but recourse will be had to combined sights, two or more readings of the rear sights being used, depending on the range.

Targets. The target will consist of four rows of kneeling silhouettes arranged in column, 16 targets in each row placed with intervals of 1 yard from edge to edge. The distance between rows will be 10 yards.

EXERCISE NO. 9.

Object. Dismounted action for cavalry against superior hostile cavalry.

Situation. A platoon, while reconnoitering, is driven back by two troops, gallops to suitable cover, dismounts, and holds the enemy by fire action.

Action. Scouts report a considerable body of the enemy's cavalry approaching. At revolver fire the platoon retires at the gallop to ground suitable for fire action, and the scouts, clearing the front, take up a position to watch the flanks. The platoon dismounts, the led horses are placed under cover, and three minutes after the revolver shot the target appears in front at a distance of about 800 yards and moves rapidly by the flank for 200 yards. The leader opens fire and continues firing until the target stops or disappears.

Target. Target "K."

EXERCISE NO. 10.

Object. Dismounted action for troop of cavalry illustrating mutual support of platoons in retirement.

Action. A troop of cavalry is forced back by superior infantry. The platoons in alternation take up successive firing positions to cover the retirement of the other platoons, which fall back at the gallop.

Target. For each firing position there will be a corresponding target, target "K" with 16 kneeling figures, the arrangement being such that each platoon will fire once.

EXERCISE NO. 11 (DEMONSTRATION).

Object. To illustrate the effect of incorrect estimates of the range.

Action. Place row of kneeling figures, from 20 to 40, according to number of men firing, at range of 1,000 yards. With a detachment the strength of a platoon, fire a series of shots in succession at 800, 900, 1,000, 1,100, and 1,200 yards, and compare the results made at different ranges. Not less than 5 rounds per man should be fired in each series, and 10 rounds per man will illustrate the point better.

EXERCISE NO. 12 (DEMONSTRATION).

Object. To illustrate the relative efficiency of different rates of fire.

Action. Place a row of prone figures, from 20 to 40 in number, according to number of men firing, at a range of 500 yards. Require a detachment the strength of a platoon to fire a series of 10 shots in about 1 minute. When results have been scored, require the same detachment to fire the same number of rounds at the same targets in 2 minutes' time or longer, the additional time being taken up in a more prolonged aim.

Reduce results in the two cases to hits made per minute and compare them.

EXERCISE NO. 13 (DEMONSTRATION).

Object. To illustrate the influence of rising ground on the depth of beaten zone and to demonstrate also the scope of a single sight setting at short range when the ground is favorable.

Action. Select as a firing station a point with an elevation of 50 or 100 feet overlooking a level stretch below on which are placed as targets in a column formation equal rows of kneeling silhouette figures at ranges of 500, 600, and

700 yards from the firing point, giving a surface of reception which is rising with respect to the line of sight.

With a detachment the strength of a platoon, fire is executed in a series of 10 shots per man, aim being taken only at the first row of figures. The results being scored, with the same arrangement of targets and the same distances, a lower firing point is chosen so that the line of sight is nearly parallel with the surface on which the row of targets stand. The firing is executed as before, aim being taken only at the first row of figures.

The illustration is afforded by the excess in the number of hits made on the second and third rows of figures in the second series over the number made on the same targets in the first instance.

EXERCISE NO. 14 (DEMONSTRATION).

Object. To illustrate the influence on the beaten zone of ground which is falling with reference to the line of sight.

Action. In this case a line of figures is placed along a crest or edge of a plateau, from which the ground falls away from the line of sight. The line of figures so placed is the visible target at which the fire is directed. The point to illustrate is the effect on different targets placed in rear of the edge or crest by fire aimed at the visible objective. Two distinct conditions may here arise:

1. If the inclination of the reverse slope is less than the angle of fall, the dispersion in depth will be increased and the number of hits on the rear rows of figures will decrease more slowly than would be the case if the firing took place on a plain.

2. If the reverse slope is steeper than the angle of fall, targets placed on this slope will be partially or fully defiladed from the shots which clear the crest.

It is therefore necessary to determine beforehand the angle of the reverse slope and choose the firing point accordingly. If it is desired to demonstrate that the ground in rear may be effectually swept by bullets, it is necessary to choose a firing point such that the angle of fall will be greater than the inclination of the slope.

To demonstrate how dead spaces may be created on the reverse slope the firing detachment may be moved forward two or three hundred yards and the firing repeated.

Hits made on line targets and column targets placed on a reverse slope and subjected to indirect fire may be compared to show the greater vulnerability of the former.

239. In addition to the above, the following is given as a typical example of analyzing and criticizing a firing exercise:

Situation. A platoon has been designated as the support of a company acting alone and which is engaged in an attack on a position. The balance of the company is imaginary.

It is assumed that the firing line has reached a certain point and that it has met with such stubborn resistance from the enemy that reinforcement is required in order to gain superiority of fire. The support is in such position and formation as the terrain demands and its commander is cognizant of the general location of the enemy's position. He received from the company commander the following order:

"Advance with your platoon to the firing line, take position on the left of the line, and open a vigorous fire." (The left flank of the imaginary firing line should be indicated by silhouettes or suitable marker.)

Targets. A line normal to the plane of fire and consisting of 25 prone silhouettes with intervals of 1 yard from edge to edge. Range 700 yards.

Ammunition. Fifteen rounds per man.

Action. When the commander of the platoon receives his orders to advance, he makes a reconnaissance to determine the best route to take in order to arrive on the firing line with the fewest losses consistent with celerity, and then proceeds to advance his platoon by the route selected.

When he arrives on the firing line, the platoon commander estimates the range to be 900 yards. He indicates the objective to his platoon and gives the commands for opening fire at will at 900 yards and seeks a position whence he can best observe the effect of the fire. He soon notices a number of shots striking low and causes the elevation to be raised to 1,000 yards, and the firing is thus completed.

Critique. The results of the firing in hits, distribution of hits, and time of execution are announced to be 2 hits on 2 figures in 5 minutes' time. Referring to the standard of judgment as given in "Regulations Prescribing Standard for Field Firing," it is seen that 12 hits should have been made on 8 figures in 2 minutes' time. This comparison warrants a judgment "Unsatisfactory" for this exercise.

In order to make plain the errors committed and to show why the results have fallen below what they should have been, the platoon is assembled at a point overlooking the ground on which the exercise was held and the officer charged with the supervision delivers the following critique:

"Your disposition of the support, before the advance, was very good. The reconnaissance was altogether too deliberate and much valuable time was thus wasted. The route that you finally selected for your advance afforded you plenty of concealment, but would probably have been swept by the fire of the enemy directed on the firing line in your front. This shows you that concealment does not necessarily mean defilade.

"The use of cover by your platoon was good, with the exception of yourself when you were seeking an observation point.

"Your fire was too deliberate. In this exercise average shots should have obtained 12 hits on 8 figures and should have finished their firing within two minutes. You obtained 2 hits on 2 targets in five minutes. Your few hits may be ascribed to the error of 200 and later 300 yards in the estimation of the range, which was, in fact, 700 yards.

"Your designation of the objective and its location was not definite and some of your men fired all their ammunition without knowing just where the target was. It was probably the low shots of these men that caused you to raise the elevation from 900 to 1,000 yards."

PART IV.

MISCELLANEOUS.

CHAPTER I.

CLASSIFICATION, EXTRA COMPENSATION, INSIGNIA, AND TELESCOPIC SIGHTS.

CLASSIFICATION RIFLE FIRING.

240. Requirements. The requirements for the qualification in the several grades of marksmanship are given in the following table:

TABLE OF CLASSIFICATION.

| Grade. | Rifle firing. Points. |
|--------------------------------|--------------------------|
| Expert rifleman..... | 253 |
| Sharpshooter..... | 238 |
| Marksmanship..... | 202 |
| First-class man..... | 177 |
| Second-class man..... | 152 |
| Unqualified ¹ | |

The soldier having attained the grade of marksman or better will retain that classification during his current enlistment unless in subsequent firing he attains a higher grade. The officer having attained the grade of marksman or better will retain that classification and be authorized to wear the badge for three years from date of qualification unless in subsequent firing he attains a higher grade. Requalification by officers with a view to obtaining authorized bars can be made only after three years from date of first qualification or from date of last requalification for a bar.

The soldier who has completed the course of known distance practice and is transferred thereafter, or who is discharged and reenlists, will not be given a second opportunity in the same target year to qualify.

A soldier who is discharged and reenlists within three months will retain his last qualification for one year from date of reenlistment unless in the meantime he shall have fired the record-practice qualification course. As soon as he fires the record-practice qualification course his previous classification ceases and he is classified according to the scores he may make in that course.

In case the soldier has not, at the time of transfer, completed his known distance practice for that year, his company commander will complete his individual record sheet to date and attach it to the descriptive list which accompanies him, and the soldier will complete his known distance firing with the organization to which transferred, unless in that organization known distance practice for that year has been completed.

For regulations concerning additional pay for enlisted men qualifying as marksmen or better, see paragraph 1345, Army Regulations.

¹ All who fail to qualify as second-class men or better and those who for any reason did not fire the course and are not otherwise classified.

241. Who Will Be Classified. All who fire and who are borne on the rolls of the organization during any part of the practice season, or who are attached for practice by proper authority, will be classified.

Bandsmen who fire in the Philippines will not be classified.

For Coast Artillery, see special course "A."

242. Special Classification. A special classification is provided for all those who fire special course "A," as follows:

TABLE OF CLASSIFICATION, SPECIAL COURSE "A."

| Grade. | Points. |
|--------------------------------|---------|
| Marksman..... | 150 |
| First-class man..... | 120 |
| Second-class man..... | 100 |
| Unqualified ³ | |

243. TABLE OF CLASSIFICATION, PISTOL AND REVOLVER.

| All who are authorized or required to fire the dismounted course. | | All who are authorized or required to fire the mounted course. | |
|---|--|--|--|
| Grade. | Percentages at least. | Grade. | Percentages at least. |
| Expert pistol shot... | { 80 in record course. 83 in expert course. | Expert pistol shot... | { 70 in record course. 65 in expert course. |
| First-class man..... | 80 in record course. | First-class man..... | 70 in record course. |
| Second-class man..... | 60 in record course. | Second-class man... | 50 in record course. |
| Unqualified. ³ | | Unqualified. ⁴ | |

244. Extra Compensation. The soldier will receive such extra compensation for qualification in rifle firing as may be authorized by law and regulations; provided, however, that the qualification of marksman in special course "A" will not entitle the soldier to increased pay.

Immediately after the close of the record practice, qualification course, the names of men who qualify in the various grades for which extra compensation is awarded will be published in orders.

These orders will be issued by commanders empowered by regulations to issue orders for the appointment and promotion of noncommissioned officers, or in exceptional cases by higher commanders, upon receipt of properly authenticated evidence as to qualification, and will show the date of actual qualification from which the soldier is entitled to additional pay.

INSIGNIA.

245. Classes. To each officer and soldier qualifying for the first time as expert riflemen, sharpshooter, marksman, expert pistol shot, and first-class pistol shot certain insignia, indicating their skill in marksmanship, will be issued. In case of loss or damage new issue may be made as provided for in paragraph 250.

246. Rifleman's Insignia. (a) Marksman's Pin. To marksmen, when first qualifying as such, will be issued a marksman's pin. A soldier, having quali-

³ All who fail to qualify as second-class men or better, and those who for any reason did not fire the course and are not otherwise classified.

⁴ See par. 175.

⁵ See par. 199.

fied as a marksman, may wear this pin as long as he continues to draw the increased pay for that qualification.

(b) **Sharpshooter's Badge.** To the sharpshooter a silver badge will be issued. For the first qualification in this grade the badge will consist of a pin and cross; the soldier having once qualified as a sharpshooter may wear the badge while he is entitled to draw the increased pay for that qualification. To those who have qualified as sharpshooters for three years, not necessarily consecutive years, nor, in the case of enlisted men, in the same enlistment, a silver bar will be issued, on which the three years of their qualifications will be indicated, and this will be attached to the badge, between the pin and the cross. For each additional three years of qualification an additional bar will be issued, and each in succession attached below the one previously supplied and above the cross.

(c) **Expert Rifleman's Badge.** To the expert rifleman will be issued a silver badge. The soldier having qualified as an expert rifleman may wear the badge while he is entitled to draw the increased pay for that qualification. To those who have qualified as expert riflemen for three years, not necessarily consecutive years, nor, in the case of enlisted men, in the same enlistment, a silver bar will be issued, on which the three years of their qualifications will be indicated, and this will be attached to the badge below the pin. For each additional three years of qualification an additional bar will be issued, and each in succession attached below the one previously supplied.

247. Marksman's Pin, Special Course "A." To marksmen, when first qualifying as such in special course "A," will be issued a special marksman's pin. If qualification is renewed in the succeeding season the pin may be worn another year, and so on for further seasons, but if the grade of marksman is not reached the pin will not be worn.

This pin will be issued upon the certificate of the company commander that the soldier has qualified under the regulations as a marksman in special course "A."

248. Expert Pistol Shot's Badge. To the expert pistol shot, officer or enlisted man, a silver badge will be issued, which may be worn for three years from the date of qualification or requalification. Requalification by officers and enlisted men can be made only after three years from date of first qualification or from date of last requalification. For each requalification, a silver bar will be issued, which will specify the year of requalification and will be attached to the badge immediately below the pin.

249. First-Class Pistol Shot's Pin. To the first-class pistol shot will be issued a pin, which may be worn for one year from the date of qualification and thereafter for one year from the date of each subsequent qualification.

250. Duplicates. These insignia will become the property of the persons to whom issued. If they are lost by the owner or in transmission to him, or if they become unsightly from long wear, they may be replaced without cost to the owner. But in all cases the official certificate of the company commander to the effect that he has investigated the circumstances of the loss or damage and finds that no negligence can be imputed to the soldier will be required as evidence upon which to make the new issues. In case of loss, claim must be made within 60 days from date of loss. Duplicates, if desired for use on separate coats, will be sold to those entitled to wear the insignia.

251. How Obtained. Immediately after the close of the practice season the company commander will report by letter to the commanding officer the names of men in his organization who have made a new or renewed qualification. With this letter the company commander will submit a requisition for the required number of badges and bars. This requisition will be disposed of as any other special ordnance requisition.

252. The insignia earned by members of the Organized Militia for qualification under the rules in the grades which in the Regular Army are entitled to insignia are procured by the State authorities as provided in the last paragraph of paragraph 288, Regulations Organized Militia.

253. Telescopic Sights. To properly equip a special class of shots who, in action, may be employed as sharpshooters the telescopic sight is adopted. These sights are supplied by the Ordnance Department at the rate of two to each company. They will be assigned to the enlisted men found best qualified to use them, and may, in the discretion of the company commander, be carried by them at inspection under arms.

Not less than four men of each company will be given a suitable amount of practice with these sights.

CHAPTER II.

RECORDS AND REPORTS.

254. Records. The company target record consists of three parts:

- (a) The individual record of known-distance rifle firing.
- (b) The individual record of pistol firing.
- (c) The record of the company combat firing and proficiency test.

The sheets forming these records will be bound by the loose-leaf system. By this means the books will be at all times live records. All entries in these records will be made in ink.

During the regular practice season and until paragraph 255 has been complied with the company target record will be kept in the possession of the company commander.

For companies of Coast Artillery the record will contain the record of firing special course "A," the same individual sheets being used.

The record of an officer attached to a company for practice will be duly attested and transmitted to the officer.

The records of an enlisted man attached to a company for practice will be similarly attested and transmitted to the officer charged with the custody of the soldier's descriptive list and account of pay and clothing.

255. Reports. All reports of rifle and pistol firing will be submitted to the proper headquarters as soon as possible after the completion of the firing. The reports to be rendered are as follows:

1. Report of individual classification in rifle practice (annual, company, excepting companies of Coast Artillery).¹
2. Report of individual classification of firing under special course "A" (annual for companies of Coast Artillery).
3. Battalion commander's report of combat firing (annual).
4. Report of individual classification in pistol practice (annual, company, for all armed with the pistol).
5. Consolidated regimental report of classification, rifle practice.
6. Consolidated regimental report of classification, pistol practice.
7. Regimental commander's report of combat firing and the results of the proficiency tests.

With the exception of the battalion commander's report of combat firing and the regimental commander's report on combat firing and the results of the proficiency test, these reports will be rendered on prescribed forms furnished by the Adjutant General of the Army.

¹ Casuals attached to a company for practice will be noted in red ink on the company report of individual classification.

Commissioned officers will be reported on the annual company reports.

Organizations of Engineers, Field Artillery, Coast Artillery Corps, and Infantry will render the report of individual classification, pistol practice, so far as such firing is required.

How Transmitted. As soon as possible after the close of the practice season the battalion commander will forward to the regimental commander the reports of individual classification in rifle and pistol practice of the companies of his battalion. With these he will submit a report of the combat exercises and of the results of the proficiency test when these tests were not supervised by the regimental commander. This report will be in letter form and will set forth briefly when and where the exercises were held, the suitability of the ground for the purpose, the number and general character of the exercises and whether or not proficiency was attained therein according to the established standard of judgment, the number of men in each company participating, and the average number of rounds per man expended in this practice. He will certify that he has personally supervised the known-distance firing of the organizations and that the reports of individual classification agree with the company records. Also that the number of combat exercises prescribed by these regulations were duly held, and that the rules for their conduct were complied with.

If the battalion is serving away from regimental headquarters but in the same territorial department, these reports will be forwarded through the post commander; if serving in a different territorial department, duplicates of all these reports will be forwarded to department headquarters through the post commander.

The regimental commander will transmit to the department commander, with the regimental consolidated reports of classification in rifle and pistol firing, a brief narrative report of the combat firing and results of the proficiency tests of the companies of his regiment. (No data concerning companies serving away from headquarters of the regiment and in a different department therefrom will be included in this report.) This report will be based on the battalion commanders' reports, but should contain any additional information bearing on instruction in rifle and pistol practice necessary or desirable to the department commander.

An annual report of the small-arms firing by the Organized Militia of each State will be rendered as soon as practicable after the close of firing to the Chief of the Division of Militia Affairs.

256. In addition to the reports required by paragraph 255, department commanders will include in their annual reports a statement of the progress made in small-arms practice within their respective commands. This will include a tabulated statement of the number of men of each regiment qualifying in the various grades in rifle and pistol firing, and a report of the combat firing held, with the proficiency attained therein.

CHAPTER III.

TARGETS AND RANGES.

TARGETS.

257. Targets are divided into four classes:

- (a) Known-distance targets (for rifle).
- (b) Field targets (for rifle).
- (c) Pistol targets.
- (d) Miniature targets (for gallery practice).

258. Known-distance Targets. Target A. The short-range target, used for 200 and 300 yards, is a rectangle 6 feet high 4 feet wide. Black circular bull's-eye 8 inches in diameter, value of hit, 5; center ring, 26 inches in diameter, value of hit, 4; inner ring, 46 inches in diameter, value of hit, 3; outer, remainder of target, value of hit, 2.

Target B. The mid-range target, used for 500 and 600 yards, is a square 6 feet on a side, black circular bull's-eye 20 inches in diameter; center ring, 37 inches in diameter; inner ring, 53 inches in diameter; outer, remainder of target. Value of hits, same as on target "A."

Target C. The long-range target, used for 800 and 1,000 yards. It is a rectangle 6 feet high and 10 feet wide. Black circular bull's-eye 36 inches in diameter; center ring, 54 inches in diameter; inner space outside of center ring bounded by vertical lines 2 feet from each end of target; outer, remainder of target. Value of hits, same as on target "A."

Target D. The rapid-fire target. A black silhouette representing a soldier in the prone position placed in the middle of a rectangular target 6 by 6 feet. Value of hits in the figure 5; in the space (within parallels to figure, 4 inches in width above and at sides of figure, 14 inches below figure) immediately outside the figure, 4; in the space immediately outside the 4 space, 3; remainder of the target, 2.

FIELD TARGETS.

259. Target E. A drab silhouette about the height of a soldier in the kneeling position, made of bookbinders' board or other similar material. Hits on all field targets count 1, and any shot cutting the edge of a silhouette is a hit.

Target F. A drab silhouette about the height of a soldier in the prone position made of bookbinder's board or other similar material. The life of targets E and F can be materially prolonged by pasting on fresh paper silhouettes when the figure becomes too much damaged by shots. These targets are used as stationary targets as well as on the moving and disappearing appliances. When necessary these targets are fastened to wooden staves with tacks and tin washers.

Target G. Falling target. The target is made of soft wood about the shape, size, and color of the prone silhouette F. These targets should be placed in small pits (1 by 2 feet), so that about 9 or 10 inches of vertical protection is given the base and mechanism; only the face of the target should show to the front. If the wooden figure becomes unserviceable it may be repaired at the post.

Target H. Targets E or F inserted in a slit at the end of a marking disk staff or pole and fastened with wooden pegs. The staffs are held in the hands of markers or in brackets on the inside of the crest of the pit. The targets are held faced to the front. When struck they are turned rapidly so as to show the white side, and then back to the original position.

Target I. Beam disappearing target. The visible target represents a line of prone or kneeling figures at suitable intervals. In close order 8 figures are mounted on each beam. The figures are targets E and F, mounted on the regulation staves, which are modified by having the points cut off, so that but 6 inches project below the bottom of the figures.

The beam itself is made up of one piece of 2 by 6 inches by 20 feet long, one piece 1 by 6 inches by 20 feet long, and 1 by 6 by 20 inch sections fitted between them, as shown in plate. In the sockets left the staves are fitted.

The beam is laid in a shallow trench, targets horizontal, and a stake is driven in front of the beam at each end. The ropes from the operating standard

lead to the pit (direct and via the rear ring stake) and the beam is turned through 90°, exposing and lowering the targets by pulling on the appropriate ropes. The rope system is in duplicate, so that if one rope is cut by a bullet the target can still be worked. Two or more beams can be coupled together and the whole operated from the center. There should be two end stakes for each beam. The operating standard should be painted a neutral color, have earth rubbed on it or have bundles of vegetation tied to it. The ropes should also be of a neutral color.

This apparatus requires but one man for its operation, even if two beams are coupled together. The pit should be deep enough to give protection, and the earth therefrom should be spread out into a low embankment and concealed by grass or brush.

Target K. Sled target. The disappearing target beam (target I), is lashed lengthwise to two sleds. A rope from 200 to 300 yards long is used to pull this target and an escort wagon and team has been found to be the best motive power. The rope can be run through a snatch block and the team concealed by inequalities of the ground. If no cover can be found for hiding the sled before it starts, it can be easily masked with brush, grass, etc., which will fall when the targets start.

PISTOL TARGETS.

260. Target L. A rectangle 6 feet high and 4 feet wide, with black circular bull's-eye 5 inches in diameter. Value of hit therein, 10. Seven rings with diameters as follows:

| | Value of hits. |
|--------------------------------------|----------------|
| (1) 8½ inches | 9 |
| (2) 12 inches | 8 |
| (3) 15½ inches | 7 |
| (4) 19 inches | 6 |
| (5) 22½ inches | 5 |
| (6) 26 inches | 4 |
| (7) 46 inches | 3 |
| (8) Outer, remainder of target | 2 |

Target M. Silhouette, representing standing figure, of which upper part is Target E and lower part a trapezoidal piece whose upper edge is placed closely against lower edge target E. Hits count 1.

Bobbing Targets. Targets E and M, arranged to be fully exposed to firer for limited time. Edge of target toward firer when target is not exposed.

261. Miniature Targets. For use in Special Course for Volunteer Recruits, Appendix II, and in gallery practice.

Target X. Used in gallery practice. Is a rectangular paper target 8 by 12 inches. Black circular bull's-eye, 1½ inches diameter; center ring, 4½ inches diameter; inner ring, 7½ inches diameter; outer, remainder of target. Value of hits same as on target A.

Target Y. A rectangular paper target, 4 by 6 inches. Black circular bull's-eye ¾ inch diameter; center ring, 2⅞ inches diameter; inner ring, 3⅞ inches diameter; outer, remainder of target. Value of hits same as on target A.

Target Z. A rectangular paper target, 2⅓ by 4 inches. Black circular bull's-eye ¼ inch diameter; center ring, 1¼ inches diameter; inner ring 2¼ inches diameter; outer, remainder of target. Value of hits same as on target A.

The Iron Gallery Target. As issued by the Ordnance Department.

RANGES.

262. Classes. There are two classes of ranges: Class "A" ranges, which are more or less limited in extent and which are equipped for known distance practice; class "B" ranges, which are of extended area and diversified terrain, and which are used for combat firing.

CLASS "A" RANGES.

263. Rules for Selection. As the nature and extent of the ground available for target practice and also the general climatic conditions are often widely dissimilar for different military posts, it will not be possible to prescribe any particular rules governing the selection of ranges, but only to express certain general conditions to which ranges should be made to conform as far as may be practicable. In view of the extreme range and penetration of the bullet of the United States rifle, model 1903, it will be found necessary in the case of many posts to have target practice conducted at a distance of several miles from the post, necessitating the establishment of a camp on or near the range. The target practice can then be conducted uninterrupted by the routine of post duties.

Security Necessary. For posts situated in thickly settled localities, where the extent of the military reservation is limited, the first condition to be fulfilled is that of security for those living or laboring near or passing by the range. This requirement can be secured for class "A" range by selecting ground where a natural butt is available or by making an artificial butt sufficiently extensive to stop wild shots. For complete security there should be no road, building, or cultivated ground on either flank of the range nearer than 300 yards nor in the rear of it within the extreme range of the rifle. This condition can rarely be secured unless a natural butt of large extent exists.

264. Direction of the Range. If possible, a range should be so located that the firing is toward or slightly to the east of north. This gives a good light on the face of the targets during the greater part of the day. However, security and suitable ground are more important than direction.

265. Best Ground for Class A Range. Smooth, level ground, or ground with only a very moderate slope, is best adapted for a range. If possible, the targets should be on the same level with the firer, or only slightly above him. Firing downhill should, if practicable, be avoided.

266. Size of Range. The size of the range is determined by its plan and by the number of troops that will fire over it at a time. There are two general plans used in range construction—one with a single target pit and firing points for each range, the other with its firing points on one continuous line, the target pits for the various ranges being in echelon. The latter type requires more ground but admits of firing at different ranges at the same time.

267. Intervals Between Targets. To reduce to a minimum the amount of labor required in preparing the range, the targets should be no farther apart than is necessary to obviate the probability of a shot being fired on the wrong target. At all ranges the width between the targets need not exceed the width of the targets themselves—that is, at short and mid range, 6 feet; at long range, 12 feet.

268. Protection for Markers. On all ranges protection must be provided for the pit details. This is done by excavating a pit for the targets or by constructing a parapet in front of them, or by a combination of these methods.

Where there are several targets in a row, the shelter should be continuous. It must be high enough to protect the markers and the target not being fired upon. The parapet may be of earth, with a timber or concrete revetment, of

sufficient thickness to stop bullets, and from 7½ to 8 feet high above the ground or platform on which the markers stand.

269. Artificial Butts. If an artificial butt is constructed as a bullet stop, it should be of earth not less than 30 feet high and with a slope of not less than 45°. It should be extended about 5 yards beyond the outside targets and should be placed as close behind the targets as possible. The slopes should be sodded.

270. Hills as Butts. A natural hill to form an effective butt should have a slope of not less than 45°; if originally more gradual it should be cut into steps, the face of each step having that slope. As a temporary expedient the face of the hill may be plowed perpendicularly to the range, but as the bullets soon cut down the furrows this measure must be frequently repeated to prevent the danger of ricochets.

271. Numbering of Targets. Each target should be designated by a number. The numbers for ranges up to 600 yards should be at least 6 feet in height and should be painted black on a white background. The Arabic is preferable to the Roman notation, being more readily comprehended by the soldiers; if made of the size suggested, they will always be quickly recognized. They should be placed on the butt behind each target, but not so far above as to prevent the soldier seeing the number when aiming at the target.

272. Measuring the Range. The range should be carefully measured and marked with stakes at each 100 yards in front of each target. The stakes should be about 12 inches above the ground, painted white, and lettered in black, with the number of the corresponding target and its distance. These stakes will then designate the firing points for each target at the different distances. Particular care should be taken that each range thus marked out is perpendicular to the face of its own target.

273. Ranges Parallel. The different ranges for the same distance should all be parallel, so that similar conditions with respect to wind and light may exist.

It is not essential, however, that the ranges employed for long-distance shooting should be parallel to those used for the ordinary company practice.

274. Firing Mounds. If it becomes necessary to raise a firing point on account of low ground, a low mound of earth no higher than absolutely required should be made. The mound should be not less than 8 feet square, level, and sodded. If the entire firing line is raised, the firing mound must be not less than 8 feet wide on top, level, and sodded if possible.

275. Pit Shed. A small house or shed should be built in or near the target pit, in which the marking disks and signal flags and spare parts of the target frames for making immediate repairs should be stored. It should be sufficiently large to afford a shelter for the markers in case of a sudden storm.

276. Danger Signals. A socket for the staff of the danger signals should be placed on the marker's shelter in front of each target and so inclined that the flag will always fall clear of the staff and be readily seen. This flag will always be displayed when the target is in place and not in use. In addition to the danger signals at the targets one or more danger signals will be displayed near the range to warn passers-by when firing is in progress. These signals will not be placed in such a position as to serve as streamers for judging wind on the range. They should be placed on the roads or on the crest of the hill where they can be plainly seen by those passing.

277. Range House. On large ranges where competitive firing is held a house containing a storeroom and several office rooms should be erected in some central place, off the range, but in its immediate vicinity. Such facilities as will enable visitors to satisfactorily witness the firing should also be provided.

278. Telephone Service. When practicable, ranges should be equipped with a telephone system, connecting the target pit with each firing point, the range

house, and the post. When a large number of targets are installed, the range should be equipped with the annunciator buzzer system.

279. Covered Ways Between Pits. Where the pits are in echelon, covered ways or tunnels should be provided between the various pits. This will allow the pit details to be shifted with safety without interrupting the firing.

280. Scorers' Tables. The range should be provided with scorers' tables and benches.

CLASS "B" RANGES.

281. Class B Range. Certain extensive reservations in the United States and the Philippine Islands will furnish ample and suitable ground for combat firing. At times extensive tracts of unoccupied land or land from which the crops have been harvested may be rented near the post. At other points where leased tracts are at the disposal of the garrison for purposes of target practice or maneuvers facilities for combat firing can probably be found. Any ground suitable for maneuvers will also be suitable for combat firing, if the safety of the neighboring inhabitants be taken into consideration and provided for.

Tracts that have been set aside as permanent Class "B" ranges may be improved by the construction of permanent shelters for the markers and pitmen, which should be made inconspicuous. Otherwise, these ranges should be kept in the natural state, but changes made to facilitate the practice or to save labor from year to year should be such as not to provide assistance to those under instruction.

CHAPTER IV.

COMPETITIONS.

282. Competitions exist for the purposes of fostering interest in target practice, of furnishing the means for the exchange of ideas among those who excel in small-arms firing, and of classifying the best shots according to merit shown under similar conditions.

In every alternate year, or when directed by the Secretary of War, the following competitions will be held:

1. Department rifle competitions.
2. Department pistol competitions.

These competitions will be held at such places and times as may be designated by the respective department commanders.

A department rifle competition for Philippine Scouts will be held in every alternate year, commencing with the year 1916.

DEPARTMENT RIFLE COMPETITIONS.

283. Selection of Competitors. (a) Officers. Each regimental commander will report to the department commander the names of any commissioned officers of his regiment who may desire to enter the competition and whom he can recommend for that purpose, further stating, where more than one officer is recommended, the comparative proficiency as rifle shots of those reported. From these reports, or from such additional reports as he may require, the department commander will select one officer as competitor from each regiment of Cavalry, Infantry and Engineers and one from each battalion of mounted Engineers and Philippine Scouts in his command, and in addition such officers

of the General Staff and the different staff departments or corps, except the medical department and chaplains, in his department, as he may deem proper.

In case a regiment is divided between two or more departments, the final selection of officers from such a regiment will lie with the Secretary of War.

The Coast Artillery Corps may be represented, at the discretion of the department commander, in the ratio of 1 officer to 12 companies.

(b) **Enlisted Men.** The commanding officer of each company of Infantry and Engineers and each troop of Cavalry will select from the enlisted men of his organization the most suitable soldier, due regard being paid to excellence of shooting with the rifle, as well as to steadiness and good soldierly habits and conduct, and report the name of the man so chosen to the regimental commander or, in case of mounted Engineers, to the battalion commander.

The post, regimental, and battalion noncommissioned staff will not be represented.

Enlisted men of the Coast Artillery may be permitted but not required to compete, and will be selected by company commanders as in the case of Infantry organizations.

The names of the men selected will be reported to the department commander, who will order them sent to the competition at the proper time.

283½. For the department rifle competition for Philippine Scouts, officers and enlisted men will be reported and selected as prescribed for officers and enlisted men of Engineer battalions in sections (a) and (b), paragraph 283.

284. Assembly. The officers and enlisted men thus selected will be assembled at some convenient place, and, after the completion of the prescribed preliminary practice, the enlisted men will compete for places on the team.

The officers will also compete at the same time with each other, not for places on the team but for medals.

285. Preliminary Practice. First: Ten shots, slow fire, at 300, 500, and 600 yards each, conducted as in record practice, qualification course, except that at 300 yards the firing will be either from the sitting or kneeling position at the option of the competitor, and no sighting shots will be allowed at 600 yards. At 300 yards target "A" will be used; at 500 and 600 yards target "B" will be used.

Second: Ten shots, slow fire, at 1,000 yards, at target "C," conducted according to paragraph 115, except that no coaching will be allowed. The firing will not be preceded by sighting shots.

Third: Ten shots, rapid fire, at 200, 300, and 500 yards each, at target "D," conducted according to paragraph 112.

In all firing—preliminary practice and the competition proper—either the open or peep sight may be used.

286. Competition Proper. The competition proper will consist for each competitor of the practice prescribed for preliminary practice, except that each firing at 600 and 1,000 yards will be preceded by 2 sighting shots, and the course will be fired through twice, making a total of 140 shots for record; the order of sequence in firing being determined by the officer in charge of the competition.

287. Department Team. The strength of the department team will be in direct proportion to the number of enlisted competitors engaged in the competition, the ratio being fixed at 1 member of the team to 5 competitors, fractions not considered. The team will be composed of those enlisted competitors making the highest aggregate scores for the entire competition proper.

288. Prizes. To the members of the team thus selected the following gold,

silver, and bronze medals will be awarded according to order of merit and in the ratios indicated:

| Competitors. | Team. | Gold. | Silver. | Bronze. |
|-----------------|-------|-------|---------|---------|
| 30 or more..... | 6 | 1 | 2 | 3 |
| 35..... | 7 | 1 | 2 | 4 |
| 40..... | 8 | 1 | 2 | 5 |
| 45..... | 9 | 1 | 3 | 5 |
| 50..... | 10 | 2 | 3 | 5 |
| 55..... | 11 | 2 | 3 | 6 |
| 60..... | 12 | 2 | 4 | 6 |
| 65..... | 13 | 2 | 4 | 7 |
| 70..... | 14 | 2 | 4 | 8 |
| 75..... | 15 | 2 | 5 | 8 |
| 80..... | 16 | 2 | 5 | 9 |
| 85..... | 17 | 2 | 5 | 10 |
| 90..... | 18 | 2 | 6 | 10 |
| 95..... | 19 | 3 | 6 | 10 |
| 100..... | 20 | 3 | 6 | 11 |
| 105..... | 21 | 3 | 7 | 11 |
| 110..... | 22 | 3 | 7 | 12 |
| 115..... | 23 | 3 | 7 | 13 |
| 120..... | 24 | 3 | 8 | 13 |
| 125..... | 25 | 3 | 8 | 14 |
| 130..... | 26 | 3 | 8 | 15 |
| 135..... | 27 | 3 | 9 | 15 |
| 140..... | 28 | 4 | 9 | 15 |
| 145..... | 29 | 4 | 9 | 16 |
| 150..... | 30 | 4 | 10 | 16 |
| 155..... | 31 | 4 | 10 | 17 |
| 160..... | 32 | 4 | 10 | 18 |
| 165..... | 33 | 4 | 11 | 18 |
| 170..... | 34 | 4 | 11 | 19 |
| 175..... | 35 | 4 | 11 | 20 |
| 180..... | 36 | 4 | 12 | 20 |

and so on according to the principle illustrated in the above table; that is, for each 45 men or fraction, one gold medal; for each 15 men, disregarding fraction, one silver medal; the remainder bronze medals.

Any commissioned competitor (except distinguished marksmen) making a score equal to that of any member of the team will receive a medal like that awarded to such member of the team.

289. Presentation of Prizes. The presentation of competition prizes will be made, when practicable, at the conclusion of the contest, and will be conducted with the ceremony and formality warranted by the importance of the occasion.

Timely requisition should be made for the prizes required.

Winners of medals in rifle or pistol competitions will not part with them without authority from the Secretary of War, but will hold them subject to inspection at any time.

DEPARTMENT PISTOL COMPETITIONS.

290. When Held. These competitions will be held at the same place as the department rifle competitions and will either precede or follow those competitions as the department commander may prescribe.

291. Selection of Competitors. (a) Officers. Each regimental commander will report to department headquarters the names of any commissioned officers of his regiment who may desire to enter the competition and whom he can recommend for that purpose, further stating, whenever more than one officer

is recommended, the comparative proficiency as pistol shots of those reported. From these reports, and such additional reports as he may require, the department commander will select one officer, as competitor, from each regiment of Cavalry, Infantry, Engineer, and Field Artillery in his command, one from each battalion of mounted Engineers and Philippine Scouts, and, in addition, such officers, except medical officers, from the department staff as he may deem proper. Not to exceed one officer of the Signal Corps may be selected in each department by the department commander.

In case a regiment is divided between two or more departments, the final selection of the officer therefrom will lie with the Secretary of War.

The Coast Artillery Corps may be represented, at the discretion of the department commander, in the ratio of one officer to twelve companies.

(b) Enlisted Men. The commanding officer of each troop of Cavalry and each battery of Field Artillery will select from the enlisted men of his organization the most suitable soldier, due regard being paid to excellence of shooting with the pistol, as well as to steadiness and good soldierly habits and conduct, and report the name of the man thus chosen to the post commander.

The post noncommissioned staff will not be represented.

Enlisted men of Engineers, Infantry, Coast Artillery Corps, and Signal Corps armed with the pistol may be represented as follows, viz.:

Engineers. Two competitors from each regiment to be selected by the regimental commander and one competitor from each battalion of mounted Engineers, to be selected by the battalion commander.

Infantry. Two competitors from each regiment, to be selected by the regimental commander.

Coast Artillery Corps. In the ratio of one competitor to six companies, to be selected by the department commander.

Signal Corps. One competitor from each company or aero squadron, to be selected by the organization commander.

The names so selected will be reported through military channels to the department commander, who will send the competitors so selected to the place of competition at the proper time.

292. Assembly. The officers and enlisted men thus selected will be assembled at times and places designated and, after the completion of the preliminary practice, will compete for places on the team.

293. Preliminary Practice. The preliminary practice will consist, for each competitor, of the following practice dismounted, in the following order:

SLOW FIRE (30 SECONDS PER SHOT).

| | Yards. |
|-------------------------------|--------|
| 2 scores (7 shots each) | 50 |
| 2 scores (7 shots each) | 75 |

RAPID FIRE (30 SECONDS PER SCORE).

| | |
|-------------------------------|----|
| 2 scores (7 shots each) | 25 |
| 2 scores (7 shots each) | 50 |

RAPID FIRE (15 SECONDS PER SCORE).

| | |
|-------------------------------|----|
| 2 scores (7 shots each) | 15 |
| 2 scores (7 shots each) | 25 |

Target "L" will be used for all firing.

294. Procedure. The procedure in all classes of firing will be as prescribed in the dismounted course in this manual and subject to regulations governing competitions.

295. Competition Proper. The competition proper will consist, for each competitor, of the firing prescribed for preliminary practice, except that the course will be fired through twice.

296. Department Pistol Team. The strength of the team will be in direct proportion to the number of enlisted competitors engaged in the competition, the ratio being fixed at one member of the team to five competitors, fractions not considered.

The team will be composed of those enlisted competitors making the highest aggregate scores for the entire competition proper.

297. To the members of the team thus selected, gold, silver, and bronze medals will be awarded, according to merit and in the same ratio as indicated in paragraph 288.

Any commissioned competitor making a score equal to or greater than that of any enlisted member of the team will receive a medal like that awarded to such member.

REGULATIONS FOR COMPETITIONS.

298. (a) Officer in Charge. The officer in charge will be an officer of experience, preferably a field officer.

He will have control of the range for the conduct of the competition and for the police and government of the range during the competition. He will prescribe the hours for preliminary practice, and for the competitions proper. His decision on such matters will be final.

(b) Assistant to Officer in Charge. An assistant to the officer in charge will report to and receive instructions from the officer in charge and will assist him in the management of the competition. He will also act as chief range officer. He will have immediate charge of the range and pit and all details pertaining thereto.

(c) The adjutant will discharge the duties of adjutant to the officer in charge, issue by direction of the officer in charge the necessary orders, and perform such other duties as may be assigned to him.

He will be in direct charge of the competitors, whether they are encamped or assigned to companies in barracks.

He will detail daily such range officers, scorers, markers, etc., as may be considered necessary to carry on the competition.

(d) Quartermaster. The quartermaster will have charge of quartering all competitors and arranging for the transportation of their baggage and property upon their arrival at the competition. If they encamp, he will lay out and put up the camp. He will provide all the property, including stationery and office supplies, other than ordnance and signal property, required for the competition and for the preparation and care of the range, and perform such other duties as may be assigned to him by the officer in charge.

(e) Statistical Officer. The statistical officer will assign the competitors to targets and order of firing by lot or by a scheme worked out prior to the competition. He will verify the additions of the scores as reported by the scorers, grade them in order of excellence, and prepare the result for official announcement. He will issue such bulletins from time to time as may be ordered by the officer in charge.

(f) Ordnance Officer. The ordnance officer will make timely requisition for all ammunition and ordnance stores needed in the matches, and during the matches supply these stores as required.

(g) Signal Officer. The signal officer will have charge of the electrical equipment of the range and procure on requisition such telephones, signal

stores, and field glasses as may be needed for the proper conduct of the competition.

(h) **Range Officers.** Under direction of, and as assistants to, the chief range officer are a number of range officers, not fewer than one to two targets in the pit and one to two firing points on the range. Their duties are to supervise the marking and scoring, to see that the firing is conducted according to the regulations, and to perform such other duties as required.

So far as practicable, officers experienced in range work will be selected for duty as range officers.

During the firing at all competitions a range officer will be detailed in charge of the pit at each distance. The officer in charge and chief range officer will formally assemble and instruct the range officers in their duties before the opening of the competition and place them on duty during the preliminary practice for their practical instruction.

299. Details of Enlisted Men. The officer in charge will apply for such details of enlisted men as he may consider necessary. These details will be permanent for the competition.

300. General Regulations. The rules governing every feature connected with range practice as prescribed in this manual will, as far as applicable, regulate the procedure in competitions.

301. Uniforms. Competitors will wear the service uniform and cartridge belt with cartridge belt suspenders. In firing, one suspender may be slipped from the shoulder. The shoulder and elbows of the coat or shirt may be padded. A pad may also be used on the knee upon which the firer kneels in firing kneeling.

302. Arms. In authorized competitions officers and men will use the rifle or pistol as issued or sold by the Ordnance Department. Rifles for telescopic sights will be used in competition for telescopic sights only. The fact that a rifle has been star gauged will not debar it from use in competitions.

Should a rifle be issued with a trigger pull under 3 pounds, the bolt may be changed in order to bring the piece up to the required standard.

303. Sights. No alteration of the service sights will be permitted except that the sight may be blackened and any authorized size of peep slide or slide cap used.

304. Trigger Pull. The trigger pull will always be at least 3 pounds for the rifle and 4 pounds for the pistol, and will be tested (holding the barrel vertically) by a range officer, before firing, each day and at each range. Competitors will submit their arms for further inspection whenever required.

305. Ammunition. The ammunition used will be the service cartridge for the arm as issued by the Ordnance Department, unless the use of other ammunition is authorized.

306. Changing Arms. No two competitors shall fire in any competition with the same rifle. No competitor shall change his rifle during any competition, unless his first piece has become unserviceable through accident, which must be verified by a range officer. This rule also applies to the pistol. Violation of this rule will be a just cause for exclusion from the competition, according to the discretion of the officer in charge.

307. Cleaning. Cleaning will be permitted between ranges only.

308. Shelter for Firer. Sheds or shelter for the firer will not be permitted at any range.

309. Punctuality. Competitors must be present at the firing point at the proper time and in the order stated on their score cards. No application on the part of a competitor for any alteration in his assignment will be entertained.

310. Order of Firing. In slow fire the competitors will place themselves at the firing point by twos, and will fire alternately, the odd number of each pair being on the right and firing first.

In rapid fire but one man at a time will be at the firing point of a target.

311. Loading Pieces. Pieces will not be loaded except by command or until position for firing has been taken.

312. Position in Pistol Competition. At the firing point, when not firing, the pistol will be held at "Raise pistol." While firing, the pistol will be held and supported by one hand only, the arm extended at will but free from the body and unsupported in any way.

313. Withdrawing Target Prematurely. In slow fire, if the target is withdrawn from the firing position just as the shot is fired, the scorer at that firing point will at once report the fact to the range officer in charge of the scoring on that target, who will investigate and, if satisfied that the case is as represented, will direct that the shot be not considered and that the competitor fire another shot.

314. Delay in Firing. In slow fire, competitors will not be hurried in firing but such slight delay permitted after each shot as they may desire, provided the time of firing the score does not exceed one minute per shot at 600 yards or less, one and one-half minutes per shot at ranges over 600 yards, and 30 seconds per shot in pistol firing.

If an accident to a target, or any other cause over which a soldier has no control, prevents him from completing his score within the time limit, he will be permitted such additional time as a range officer may decide.

315. Coaching. No coaching or unnecessary communication of any kind with those actually firing will be permitted.

316. Warming or Fouling Shots. No warming nor fouling shots will be allowed at any competition.

317. Order of Fire. The order of fire will be as prescribed in paragraph 285 and paragraph 293 and will not be changed.

318. Spectators. During the progress of a match or competition, no one except the officers on duty on the range, the competitors, and scorekeepers will be permitted within the ropes without special permission of the officer in charge.

319. Stations of Competitors Awaiting Turn to Fire. Competitors will be stationed 5 yards in rear of the firing point and will remain there until called to the firing point by the scorekeeper.

320. Expressions of Approbation, Etc. Expressions of approbation or disappointment on the part of the spectators or competitors must not be uttered loud enough to be heard at the firing point.

321. Protests. Protests and objections must be submitted to the range officer in charge of the target and not directly to the officer in charge. In case a competitor is not satisfied with the decision of the range officer, he may appeal to the officer in charge. Final appeals from decisions of the officer in charge must be made in writing and forwarded through that officer to the authority ordering the competition.

322. Signaling and Recording Hits. Hits in the different divisions of the targets, misses, and ricochets, slow and rapid fire, will be signaled and recorded as prescribed in this manual.

323. Misses. In all firing, before any miss is signaled, the target must be withdrawn from the firing position and carefully examined by a range officer. Whenever the target is reversed and a miss is signaled, it will be presumed

that this examination has been thoroughly made and no challenge of the value signaled will be entertained or resigning of the shot allowed.

324. Accidental Discharges. All shots fired by the soldier after he has taken his place at the firing point and it is his turn to fire—the target being ready—will be considered in his score even if his piece was not directed toward the target or is accidentally discharged.

325. Firing on Wrong Targets. Shots fired upon the wrong target will be entered upon the score of the man firing as a miss, no matter what the value of the hit upon the wrong target. In rapid fire the soldier at fault is credited with only such hits (if any) as he may have made on his own target. The other soldier repeats his score.

326. Two Shots on the Same Target. In slow fire, if two shots strike a target at the same time or nearly the same time both will be signaled; if a shot was just fired from the firing point assigned to that target, the hit having the highest of the two values signaled will be entered in the soldier's score and no record made of the other hit.

327. Numbering Competitors. At all competitions where a number of men engage in the same match or competition firing, the labor of the statistical officer will be greatly lightened and the prompt announcement of the scores facilitated by giving each competitor a number by which he is known throughout the firing.

328. Score Cards. Each competitor should be given a score card stating his target and orders of firing at each range and containing space for the record of shots fired and for the signature of the scorer and range officers. As scores are completed an officer detailed for the purpose should, without waiting for all firing to cease, collect the records of the score and transmit them to the statistical officer for entry upon the permanent records and bulletins.

329. Stations of Scorers. The scorers will be seated close to and in rear of the firing-point stakes and will record scores and announce results as required in paragraphs 102 and 103.

330. Competitors must pay attention to the score as announced and recorded so that any error may be promptly investigated. The recorded value of any shot will not be changed after the following shot has been fired unless some special message with reference to it is received from one of the range officers in the target pit. Any alteration of a score must be witnessed by the officer in charge of the firing point and indorsed with his initials.

331. Special Rules. Such special rules or directions as the officer in charge may give must be rigidly observed by competitors and all other persons upon the range.

PENALTIES.

332. Evading Rules. Any competitor who may be detected in an evasion of the conditions prescribed for any competition will be debarred from further competition.

333. Falsifying Scores. Any competitor who may be guilty of falsifying his score or being accessory thereto will be debarred from the competition.

334. Offering Bribes. Any competitor who offers a bribe of any kind to a scorer or marker will be debarred from the competition.

335. Disorderly Conduct, Intoxication, etc. Any competitor who refuses to obey the instructions of the officer in charge or his assistants, or who violates any of these regulations, or is guilty of disorderly conduct or intoxication, shall be debarred from the competition.

336. Report of Competitors Debarred. The officer in charge of the competition will, upon the completion of the competition, report to the department commander for the information of the War Department the names of any competitors debarred from the competition, stating the circumstances in each case, in order that the War Department may debar such competitors from all future competitions if such action is deemed advisable.

337. Interference. Any person, whether a competitor or not, interfering with any of the firing squads or annoying them in any way will be warned to desist, and if the offense is repeated he will be ordered off the range at once.

338. Acquaintance with Regulations. Competitors and all others connected with competitions must make themselves acquainted with the foregoing regulations as well as with the conditions of the competitive firing in which they may be participating, as the plea of ignorance of either of them will not be entertained.

TIES IN RIFLE COMPETITION.

339. Ties. Ties will be decided as follows:

1. By the highest aggregate score made in rapid fire. If still a tie, by the higher total score in rapid fire at 500 yards. If still a tie, by the highest total score in rapid fire at 300 yards. If still a tie, by the highest total score in rapid fire at 200 yards.

If still a tie:

2. By the fewest misses in rapid fire.
3. By the greatest number of hits in the figure in rapid fire.
4. By the fewest misses in slow fire.
5. By the fewest outers (twos) in slow fire.
6. By the fewest inners (threes) in slow fire.
7. By the shots in slow fire in inverse order.
8. If still a tie, by firing single shots, slow fire, at the longest range.

TIES IN PISTOL COMPETITION.

340. In Aggregate Scores. Upon completion of a pistol competition, ties found in aggregate scores will be decided as follows:

1. By the highest aggregate score made in rapid fire.

If still a tie, by the highest total score at 25 yards, rapid fire, 15 seconds per score.

If still a tie, by the highest total score at 15 yards, rapid fire, 15 seconds per score.

If still a tie, by the highest total score at 50 yards, rapid fire, 30 seconds per score.

If still a tie, by the highest total score at 25 yards, rapid fire, 30 seconds per score.

If still a tie, by the value of each shot at 75 yards, slow fire, in the inverse order.

If still a tie, by firing single shots at 75 yards, slow fire.

341. Post Competitions. To further the interest in target practice, post contests in small-arms practice are suggested. When practicable, post competitions should form a part of the exercises for field days. The program for these competitions is left to the discretion of the post commander. The firing should, as a rule, be team firing. The rules governing the division competition will, as far as applicable, regulate the procedure in post competitions.

DISTINGUISHED CLASSES OF MARKSMEN.

342. Requirements. Whenever a marksman has won three authorized medals in department rifle competitions, or in department pistol competitions, or as a member actually firing on a prize-winning team in the national team match, he will be announced by the War Department as belonging to a distinguished class, no longer eligible to enter department competitions with the arm in the use of which he is distinguished.

343. Designations. If the three medals were won in rifle competitions, the marksman will be designated a "distinguished marksman," and if in pistol competitions, a "distinguished pistol shot."

344. Badges. To distinguished marksmen and distinguished pistol shots appropriate badges will be issued, which after being received by the soldier, if lost, can be replaced by purchase only, for which authority must be obtained from the War Department.

PART V.

COURSES FOR ORGANIZED MILITIA.

The following courses in small-arms firing are prescribed for the Organized Militia:

GENERAL SCHEME.

345. The general scheme of instruction for the Organized Militia embraces: First, a certain amount of instruction in the preliminary drills and exercises, followed by gallery practice, with a prescribed test before the soldier can be advanced to practice on the target range; second, a definite course of instruction practice, under which, by selected scores of five shots each, a soldier must attain a certain proficiency before he can be advanced to fire the record practice, Organized Militia, or the qualification course, Regular Army; third, a definite test, either the qualification course, Organized Militia, or the qualification course, Regular Army, at the discretion of the State authorities, under which the soldier attains a certain grade in marksmanship; fourth, long-range practice.

CHAPTER I.

PRELIMINARY DRILLS AND INSTRUCTION.

346. (a) The period for indoor instruction will be determined by the State authorities and may extend into or include the entire range practice season: .

(b) The essentials of indoor instruction will include—

Nomenclature, covering the most important parts and elements.

Manipulation and use of the various working parts.

Care of the arm.

Sighting, aiming, positions, and trigger squeeze.

Gallery practice.

The course to be followed in indoor instruction is laid down in Part II, Chapters I, II, III, IV; but in the discretion of the State authorities, any course embracing the elements given above may be adopted and followed. The recording rifle rod outfit or any other suitable device may be used in such a course.

GALLERY PRACTICE.

347. The principal objects of gallery practice are to continue in a different manner the instruction in aiming, positions, and trigger squeeze, and to determine, in certain cases, whether or not the individual shall be advanced to range practice.

(a) The following course in gallery practice is prescribed:

TABLE 1.

| Range. | Targets. | Position. | Minimum number of shots. |
|--------------------|---|------------------------------|----------------------------------|
| <i>Feet.</i> 50 | The iron gallery target issued by the Ordnance Department or one similar thereto, or paper targets. | Prone..... | 10 |
| 50 | The iron gallery target issued by the Ordnance Department or one similar thereto, or paper targets. | (Sitting.... Kneeling...) | } 10 { 5 sitting. 5 kneeling. |
| 50 | The iron gallery target issued by the Ordnance Department or one similar thereto, or paper targets. | Standing... | |

Where it is impracticable to use ranges of 50 feet, gallery practice may be conducted at a greater distance at a target whose dimensions and divisions have been proportionately increased. Firing will be by scores of five consecutive shots. Except in case of accident, a score once begun will be completed.

QUALIFICATION IN GALLERY PRACTICE.

(b) No officer or enlisted man who has failed to qualify as first class or better in a previous season shall be advanced to range practice until he has attained at least 90 points out of a possible 150 in the gallery practice course, by selecting his two best scores of five shots at each range. If a gallery range be not available, the recording rifle rod outfit or subtarget gun machine may be used to determine eligibility for range practice, under similar conditions, when specially authorized by the State authorities.

CHAPTER II.

KNOWN DISTANCE FIRING.

348. The qualification course is divided into Instruction Practice and Record Practice.

(a) Instruction practice embraces:

1. A prescribed course in which a certain proficiency must be attained in certain cases, before qualification practice is undertaken; this course may be shot through as many times as is necessary to insure proper instruction.

2. Such further preliminary practice at any range as is considered necessary to prepare the individual for the Record Practice.

3. Firing for recruits may be held at 100 yards in any position except standing, but does not count in determining proficiency in the instruction practice.

(b) The instruction practice and the number of shots at each range, upon which eligibility to advance to record practice is determined, are given in the following tables:

INSTRUCTION PRACTICE.

TABLE 2.

| Range. | Kind of fire. | Time. | Shots. | Targets. | Position. | Possible. |
|--------|---------------|-----------|--------|----------|-------------|-----------|
| 200 | Slow fire. | No limit. | 10 | A | 5 sitting. | } 50 |
| 300 | Slow fire. | No limit. | 5 | A | 5 kneeling. | |
| 500 | Slow fire. | No limit. | 10 | B | Prone. | |
| | | | | | Prone. | 50 |

TABLE 3.—TARGET D.

(BATTLE SIGHT ONLY WILL BE USED WITH THIS TARGET.)

| Range. | Kind of fire. | Time. | Shots. | Targets. | Position. | Possible. |
|--------|---------------|-----------|--------|----------|------------------------------------|-----------|
| 200 | Slow. | No limit. | 5 | D | Kneeling. | 25 |
| 200 | Rapid. | 1 minute. | 5 | D | Kneeling or sitting from standing. | 25 |
| 300 | Slow. | No limit. | 5 | D | Prone. | 25 |
| 300 | Rapid. | 1 minute. | 5 | D | Prone from standing. | 25 |

Total, 255.

1. Each shot is marked in slow fire on target D. Rapid fire is conducted as prescribed in paragraph 110 except as to scores. At each range a total of 60 per cent of the possible must be attained before advancement to the next range.

2. After eligibility to fire-record practice has been determined according to the provisions of paragraphs (d) and (e), the record practice may be preceded by further preliminary practice in the discretion of the State authorities.

3. Firing in instruction practice will be by scores of five consecutive shots. A score once begun will be completed, unless accident or conditions of range weather interfere.

(c) The following grades of classification are obtained in instruction practice by selective scores of five consecutive shots each.

First-classman, 150; possible, 225.

Second-classman, 130; possible, 225.

Unqualified, below 130.

(d) No individual shall be advanced to record practice until he has attained the grade of first-classman, except as provided in paragraph (e).

(e) Instruction practice will be optional with the State authorities for all who have qualified as marksmen or better in the season immediately preceding.

RECORD PRACTICE.

349. After completing the instruction practice, those who qualify as first-classmen are eligible to fire record practice, Organized Militia, or the qualification course, Regular Army.

The choice of courses shall be determined by the State authorities. Both courses may be pursued in the same state in the same season, but the course in regiments or in separate smaller tactical units shall be uniform; provided that an individual, who qualifies in record practice, Organized Militia course, as sharpshooter or expert rifleman, may be permitted to fire the Regular Army qualification course and qualify therein at the discretion of the State authorities.

350. Qualification Course.

(a) TABLE 4.—SLOW FIRE.

| Range. | Time. | Shots. | Targets. | Position. |
|--------|-----------|-----------------|----------|-----------------------------------|
| 300 | No limit. | 10 | A | Prone. |
| 500 | No limit. | 10 | B | Prone. |
| 600 | No limit. | 10 (2 s. s.) | B | Prone, sandbag rest. ¹ |

TABLE 5.—TARGET D, RAPID FIRE, BATTLE SIGHT.

| Range. | Time. | Shots. | Targets. | Position. |
|--------|--------------|--------|----------|------------------------------------|
| 200 | 1 ½ minutes. | 10 | D | Kneeling or sitting from standing. |
| 300 | 2 minutes. | 10 | D | Prone from standing. |

This course may be fired three times in any target season, the individual's classification being determined by the best of his three trials, but this provision shall not be construed to permit the formation of a record based on scores

¹ In firing with sandbag rest, either rifle or back of hand must rest on sandbag.

selected from two or more trials—the basis of classification must be the result of one complete course in each case.

(b) Coaching is prohibited in record practice after the individual has taken his position at the firing point.

(c) Instruction and record practice may be fired on the same day, but record practice once begun must be completed without further instruction firing.

351. Qualification Course, Regular Army. The qualification course of the Regular Army shall be carried out by the Organized Militia with a strict adherence to all conditions and provisions required for the Regular Army, except that instruction and record practice may be fired on the same day, but record practice once begun must be completed without further instruction firing.

352. Practice for Coast Artillery Reserves. Special course "A," as described in paragraph 121, will be fired by coast artillery reserves of the Organized Militia, unless other courses be prescribed by the State authorities.

353. Long-Distance Practice. After the qualification course has been completed, those men who have qualified as experts and sharpshooters may be given long-distance practice, at the discretion of the State authorities.

Practice for record may be preceded by instruction practice. Record practice will consist of any selective score of 10 consecutive shots each. The practice will be conducted as set forth for slow fire known distance.

TABLE 6.—TARGET C.

| Range. | Shots. | Position. |
|--------|--------|-----------|
| 800 | 10 | Prone. |
| 1,000 | 10 | Prone. |

No one will be advanced to practice at 1,000 yards until he has attained a minimum total of 40 points at 800 yards in any score of 10 consecutive shots.

When an individual has attained a total of 85 points at 800 and 1,000 yards, including a minimum of 40 at 800 yards, by selective scores of 10 consecutive shots, he shall be considered to be qualified in long-distance practice but is not included in the table of classification nor in the computation of the figure of merit. He may be rewarded by suitable medals or other devices at the discretion of the State authorities.

354. Practice with Telescopic Sights. Practice with telescopic sights may be held at the discretion of the State authorities and, when held, will be conducted in accordance with paragraph 117.

355. Miscellaneous. (a) The conditions and requirements governing the conduct of target practice, except as modified in Part V, shall be the same for the Organized Militia as for the Regular Army.

(b) Dress and Equipment. The dress and equipment of officers and men participating in target practice shall be prescribed by the State authorities. The cartridge belt will be worn at all times.

(c) Marking. The provisions of these regulations governing marking which are impracticable for the Organized Militia may be modified by the State authorities except for the qualification course, Regular Army.

(d) Scoring. Such provisions of these regulations as are impracticable for the Organized Militia may be modified by the State authorities except for the qualification course, Regular Army.

(e) Estimating Distance. Estimating distance will not be required for the Organized Militia except when firing the Regular Army course, in which case

paragraph 85 will be complied with. State authorities may require commissioned officers to qualify in estimating distance in the qualification course, Organized Militia.

(f) Practice Season. The practice season will be determined by the State authorities.

(g) Who Will Fire.

REQUIRED TO FIRE.

1. Infantry, cavalry, and engineers:
Battalion and squadron staff officers, company and troop officers, inspectors small-arms practice, all enlisted men of companies and troops except cooks.
2. Coast artillery reserves:
Special course "A"—Company officers, all enlisted men of companies except cooks.

AUTHORIZED BUT NOT REQUIRED TO FIRE.

1. All other officers and enlisted men except those of the Medical Department and Chaplains.
2. All officers enumerated in the above table with more than 10 years' commissioned or commissioned and enlisted service.

(h) Amount of Fire. The amount of firing in one day for any individual is not restricted for the Organized Militia in any course.

(i) Qualification. Qualification will be based on the results obtained in either one of the qualification courses or in the instruction practice, as set forth in the following table:

TABLE 7.—POINTS REQUIRED IN QUALIFICATION.

| Courses. | Expert. | Sharpshooter. | Marksmen. | 1st class. | 2d class. | Unqualified. ¹ | Possible. | Insignia. |
|---|---------|---------------|-----------|------------|-----------|---------------------------|-----------|---------------|
| 1. Qualification course; instruction practice, Organized Militia. | | | | 150 | 130 | { Below 130 } | 225 | None. |
| 2. Qualification course; record practice, Organized Militia. | 210 | 190 | 160 | | | | 250 | Bronze. |
| 3. Qualification course; Regular Army. | 253 | 238 | 202 | 177 | 152 | | 300 | Regular Army. |
| 4. Special course "A," coast artillery reserves. | | | 150 | 120 | 100 | | 200 | Bronze. |

1. If in case authority is given to fire the qualification course, Regular Army, after a grade of qualification has been attained in the qualification course, Organized Militia, the higher qualification shall be used as the basis of record, and medals will be issued in each case.

2. If an individual fails to qualify as marksman or higher in firing the record practice, Organized Militia, his grading shall be first-class. In the Regular

¹ All who fire the qualification course, instruction practice, Organized Militia; the qualification course Regular Army; the special course "A," and who in any course fail to qualify as second class or better; and all who fail to complete a course, or fail to fire.

Army course and special course "A" the qualification shall be determined by the result of the firing in that course alone.

(j) **Holdover Qualifications.** Holdover qualifications for the Organized Militia in the qualification courses (Organized Militia and Regular Army) will be limited to expert riflemen. An individual having attained this grade will retain that qualification for three consecutive target years, including the target season in which qualification was made. An individual entitled to a holdover qualification as an expert rifleman may be authorized by the State authorities to fire the qualification courses, in which case he forfeits no rights to such holdover qualification. If during such subsequent firing he again qualifies as an expert rifleman, his holdover privileges will begin from his latest qualification.

(k) **Insignia.** For the qualification course, Organized Militia, bronze badges and pins.

For the qualification course, Regular Army, insignia similar to those issued to the Regular Army.

For special course "A," coast artillery reserves, bronze pins, marksmen only, when firing this course.

An individual qualifying as marksman, sharpshooter, or expert rifleman, will wear his badge or pin so long as he retains such a qualification.

(l) **Requalification Bars.** No requalification bars are issued for marksmen.

Sharpshooters. Requalification bars shall be issued at the rate of one bar for each three qualifications (not necessarily consecutive) as sharpshooter. The bar bears the last year of qualification.

Expert Riflemen. Requalification bars are issued at the rate of one bar for each three qualifications as expert rifleman, holdover qualifications included, provided that when an individual requalifies as expert rifleman during a holdover period he is entitled to a bar for each three years of actual requalification. The bar bears the last year of qualification.

(m) **Combat Practice.** Combat practice may be held by the Organized Militia whenever so directed by the State authorities. When held, it will be conducted in accordance with Part III, Small Arms Firing Manual.

(n) **Reports.** A report of target firing shall be forwarded to the chief, Division of Militia Affairs, as soon after the close of the practice season as practicable, but not later than March 31 of the following year.

(o) **Figure of Merit.** In each State there will be a company and regimental figure of merit to be calculated by the methods laid down by the Division of Militia Affairs. A proficiency test similar to that prescribed for the Regular Army is authorized at the discretion of the State authorities.

CHAPTER III. PISTOL PRACTICE.

356. Preliminary Drills. (a) All officers and enlisted men belonging to organizations armed with the revolver or pistol shall be instructed in the care, preservation, and use of these arms, following the provisions of paragraphs 135-146, modified only as existing circumstances demand, in any case, in the discretion of the State authorities.

(b) The following course in pistol range practice is prescribed for officers and men armed with the Colt's revolver cal. .38, or the Smith & Wesson, cal. .38, as issued by the Ordnance Department:

TABLE 8.

| Range (yards). | Instruction practice. | | | | | | Record practice. | | | |
|-------------------|-----------------------|-----------------------------|----------------------------------|-----------------------------|----------------------------------|-----------------------------|----------------------------------|---------|----------------------------------|---------|
| | Target L. | | | | Target L, rapid fire. | | Target L, rapid fire. | | Target L, rapid fire. | |
| | Slow fire. | | Rapid fire. | | | | | | | |
| | Time limit. | Scores. | Time limit per score in seconds. | Scores. | Time limit per score in seconds. | Scores. | Time limit per score in seconds. | Scores. | Time limit per score in seconds. | Scores. |
| 15 | No limit. | Minimum of 1 at each range. | 30 | Minimum of 2 at each range. | 15 | Minimum of 2 at each range. | | | | |
| 25 | | | 30 | | 15 | | 30 | 2 | | |
| 50 | | | 30 | | | | 30 | 2 | | |

A score consists of five consecutive shots.

(c) Rapid fire shall be conducted as prescribed in paragraph 172.

(d) The dismounted course prescribed in paragraphs 167-175 will be substituted for that prescribed above for any organization or individual of the Organized Militia armed with the Colt automatic pistol, cal. .45. The course prescribed in paragraphs 176-199 is authorized but not required.

(f) Who Will Fire.

| Arm or corps. | To fire. | |
|--|--|------------|
| Cavalry..... | All officers and enlisted men armed with the pistol, except field officers for whom the course is authorized but not required. Authorized but not required..... | Dismounted |
| Field artillery..... | | |
| Infantry..... | | |
| Engineers..... | | |
| Coast artillery..... | | |
| Staff departments except medical and chaplain. | | |

(g) Qualification and Insignia. Qualification and insignia for firing the revolver course shall be as given in the following table:

TABLE 9.

| Grade. | Points. | Possible. | Insignia. |
|-------------------------|---------|-----------|-----------|
| Expert pistol shot..... | 320 | 400 | Bronze |
| First classman..... | 300 | 400 | Bronze |
| Second classman..... | 250 | 400 | Bronze |

The qualifications and insignia for firing the courses prescribed in paragraphs 167-175 or paragraphs 176-199 shall be as provided for in paragraphs 248 and 249.

(h) Reports. The number of officers and enlisted men taking pistol course will be reported on the report of small-arms firing.

¹ The record course will be fired but once.

APPENDIX I.

(See paragraph 162.)

The following illustrations are in the nature of suggestions for field firing with the pistol. Firing as actually carried out will be left to the discretion of the organization commander, under proper supervision by his superiors, who will report any specially noteworthy developments, with a view to publication to the service in War Department bulletins.

SUGGESTIONS FOR IMPROVISED TARGETS.

FIG. 1.—Figures on poles being worked in pit.

FIG. 2.—Figures as seen from firing point.

FIG. 3.—Plan of working disappearing figures in pit, around houses, windows, doors, hedges, stumps, trees, etc.

FIG. 4.—Plan of pendulum target.

FIG. 5.—Track for moving figures, reversible, advance, or retire.

FIG. 6.—Combined series of tracks and pits. Tracks for movable figures with series of pits where figures can be marked, reversed, removed in part or whole, or others substituted.

APPENDIX II.

A. SPECIAL COURSE FOR ORGANIZED MILITIA AND VOLUNTEERS.

1. This course may be prescribed at the discretion of the State authority any organization which has not available for its use within 10 miles armory a range suitable for the Organized Militia Course.

2. The course will be preceded by the same preliminary practice, in gallery practice, and gallery practice qualification, for all who in a previous season have not qualified as first class or better, in the Organized Course.

3. The firing will be conducted with service charges. Each shot is made in slow fire. Rapid fire is conducted as prescribed in paragraph 110, except to scores. The order of firing positions will be adhered to.

TABLE 1.—TARGET A, SLOW FIRE.

| Range. | Time. | Shots. | Targets. | Position. |
|--------|-----------|--------|----------|---------------------------------------|
| 200 | No limit. | 10 | A | Prone with sandbag rest. ¹ |
| 200 | No limit. | 10 | A | Prone. |
| 200 | No limit. | 10 | A | 5 kneeling, 5 sitting. |
| 200 | No limit. | 10 | A | Standing. |

TABLE 2.—TARGET D, RAPID FIRE, BATTLE SIGHT.

| Range. | Time. | Shots. | Targets. | Position. |
|--------|-----------|--------|----------|---|
| 200 | 1 minute. | 10 | D | Prone. |
| 200 | 1 minute. | 10 | D | Sitting or kneeling. |
| 200 | 1 minute. | 10 | D | Any position with rest, butt to the shoulder, rest for muzzle in front of forward grasp compulsory. |

4. In rapid fire the position may be assumed and cut-off turned to ready to the appearance of the target, provided that the butt of the rifle is not to the shoulder until the target appears.

¹ In firing with sandbag rest, either rifle or back of hand must rest on bag.

5. The course will be fired one or more times for instruction before proceeding to fire it for record. It may be fired for record three times in any target season, the individual classification being determined by the best three trials, but this provision shall not be construed to permit the formation of a record based on scores selected from two or more trials—the basis of classification must be the result of one complete course in each case.

6. In instruction practice, at each kind of fire in each position, a total of at least 30 points (60%) must be attained before advancing to the next kind of fire or position.

7. Instruction practice may be omitted for those who, in the last range practice season, qualified as marksman or better.

8. The following grades of classification are obtained in instruction practice:

First Classman: 210 points, possible 350.

Second Classman: 190 points, possible 350.

Unqualified: Below 190 points.

9. The following grades of qualification are obtained in record practice:

Marksman: 225 points, possible 350.

Sharpshooter: 250 points, possible 350.

Expert Rifleman: 300 points, possible 350.

10. Special insignia, containing the words "Short Range" stamped on bronze badges and pins for the qualification course, Organized Militia, paragraph 355 (k), will be issued for qualification in this course.

11. In all matters not prescribed above the regulations for the Organized Militia Course will govern.

B. SPECIAL COURSE FOR VOLUNTEER RECRUITS.

1. In time of war or when war is imminent and the course of target practice laid down in this manual is not practicable for the instruction of recruits, for the reason that ranges with proper facilities are lacking and time is short, this course may be used.

2. Preparatory to taking up this course, as much preliminary instruction as is practicable should be given in (a) Nomenclature and care of the rifle, (b) Sighting drills, (c) Position and aiming drills, (d) Deflection and elevation correction drills, (e) Gallery practice, and (f) Estimating distance drills. The estimating distance test for these recruits will cover distances from 550 to 800 yards. Proficiency will consist in making in five consecutive estimates an average degree of accuracy of 80 per cent.

3. Firing at miniature targets—service charges.

INSTRUCTION PRACTICE.

TABLE 1.—SLOW FIRE.

| Ranges (real) feet. | Ranges (simulated) yards. | Targets. | Time. | Shots. | Position. |
|---------------------------|---------------------------------|----------|---------------|--------|--|
| 50 | 200 | Y | No limit..... | 15 | { 5 prone. 5 kneeling. 5 standing. |
| 50 | 300 | Z | No limit..... | 20 | { 10 prone. 10 sitting. |

TABLE 2.—RAPID FIRE.
(BATTLE SIGHT ONLY WILL BE USED.)

| Ranges (real) feet. | Ranges (simulated) yards. | Targets. | Time. | Shots. | Position. |
|---------------------------|---------------------------------|----------|-----------------------------|--------|---------------------|
| 50 | 200 | Y | 1 minute..... | 10 | Kneeling from stand |
| 50 | 300 | Z | 1 minute and 10 seconds. | 10 | Prone from standing |

RECORD PRACTICE.

TABLE 3.—SLOW FIRE.

| Ranges (real) feet. | Ranges (simulated) yards. | Targets. | Time. | Shots. | Position. |
|---------------------------|---------------------------------|----------|---------------|--------|----------------------------|
| 50 | 200 | Y | No limit..... | 10 | 5 kneeling. 5 standing. |
| 50 | 300 | Z | No limit..... | 10 | 5 prone. 5 sitting. |

Rapid fire as given in Table 2.

DESCRIPTION OF SYSTEM.

4. Range. The range is 50 feet, which enables the firer to see the hit by the shot, and saves the time ordinarily taken in indicating the position of the hit.

5. Targets. The division of miniature targets X, Y, and Z (see "Targets," Chap. III, Part IV) are, respectively, one-sixth, one-twelfth, and one-eighth of the size of the divisions on the A target, and subtend the same visual angle as do those of the A target when at 100, 200, and 300 yards.

6. Course. The course is similar to Special Course A, using miniature target Y for 200 yards, and target Z for 300 yards firing. It is preceded by a gallery range, by such firing at target X as may be necessary.

7. Rescinded.

8. Back Stop. A back stop 10 feet high is, in point of safety, when at a distance of 50 feet, equivalent to a back stop of 60 feet at a distance of 100 yards, and of 120 feet at a distance of 200 yards. It is generally possible to find in the rear of the station or camp a perpendicular cut bank having a height of 10 feet or more. In case such a bank can not be found a suitable back stop will have to be constructed. Nine inches of sand or 18 inches of loam will be sufficient to stop the bullet.

9. Method of Firing. An instructed man is detailed to coach each recruit. The squad of recruits is drawn up facing the targets. At the command "Commence firing" the recruits, under the supervision of the experienced man detailed as coaches, fire slowly until 5 cartridges have been fired. The coach, standing by the recruit, corrects his fault of position or trigger squeezing, and points out the position of each shot, and in each case explains the cause of error. When 10 shots are fired the miniature targets are removed to serve as guides, and replaced by new targets, when the firing, if necessary, recommences. The disappearing target is not used in rapid fire in this course. In rapid fire the man takes position standing in front of the target assigned to him. The command "Load" is in charge of the line will command "Load." The magazine will be filled with one piece loaded with one cartridge therefrom, and the safety lock turned.

"Safe." When all are ready the officer in charge of the firing line will command "Ready," when the safety lock will be turned to the ready and the position of "Ready" standing assumed, with the sling, if used, on the arm. At the command or signal "commence firing," he takes the prescribed position, opens fire and endeavors to fire 5 shots. The command or signal "cease firing" is given at the expiration of the time limit, when all firing ceases.

10. Number of Men Shooting. From 1 to 100 men may fire at the same time, this depending on the number of coaches and the extent of the back stop. With 30 men shooting at the same time, 1,000 men may finish the course of firing in eighty hours.

By Order of the Secretary of War:

H. L. SCOTT,
Brigadier General, Chief of Staff.

Official:

H. P. McCAIN,
The Adjutant General.

EXTRACTS FROM GENERAL ORDERS, CIRCULARS AND BULLETINS OF THE WAR DEPARTMENT

**THE FOLLOWING EXTRACTS ARE FROM THE WAR
DEPARTMENT BULLETIN 3, 1914, G.O. 39, 1915, COM-
PILATION OF GENERAL ORDERS, 1881-1915, GENERAL
ORDERS, CIRCULARS AND BULLETINS, 1916, AND TO
INCLUDE GENERAL ORDERS 60 AND BULLETIN 28, 1917.**

THE HISTORY OF THE
CITY OF BOSTON
FROM 1630 TO 1880

By
JOHN H. COVINGTON
Author of "The History of the City of Boston"
and "The History of the City of New York"

EXTRACTS FROM GENERAL ORDERS, CIRCULARS AND BULLETINS OF THE WAR DEPARTMENT

General Orders
No. 39.

War Department,
Washington, June 24, 1915.

As amended by General Orders
Nos. 53 and 65, 1915, General Orders
Nos. 13, 58 and 72, 1916.

Note: Only the part pertaining to an infantry regiment at war strength is published.

The original order was based upon a regiment of 1890 men. At present, a regiment at war strength has 2002 men. Therefore it has been necessary to increase the supplies enumerated, proportionately.

The compilation, as given, was done by Regimental Supply Sergeant Joseph Furtherer, retired, 21st U. S. Infantry.

For definitions of equipment A, B, and C, see "Instruction Pertaining to Field Equipment," par. 319, p. 932.

(For Winter use when especially authorized, 1 blanket, lined, for each mule.)

The foregoing list of articles is prescribed for each escort wagon and team wherever used. The oscillating tool box may be fitted on the escort wagon of any model.

Wheels extra. One wagon of each regimental field train, preferably the most lightly laden grain wagon, will be equipped with one extra hind wheel in addition to the usual wagon equipment.

Note 11: A horseshoer's emergency equipment consists of the following articles: 1 shoeing hammer, 1 pincers, 1 hoof knife, 1 jointed horseshoe No. 2, 1 rasp, horseshoe nails assorted, $\frac{1}{4}$ lb. of oakum, 1 four-ounce bottle of chlorolin or kresol.

Note 12: Sweaters will only be issued until the present supply is exhausted.

NOTES TO EQUIPMENT "B."

Note 1: Contents of commissary chest. The butcher kit is taken from this chest. 2 blades meat saw, 22 inch; 1 bolt, stove; 1 brace, carpenter's; 2 candlesticks G. I. iron spiked bottom and sides; 1 cleaver, 8 inch cut; 2 drills, twist; 2 faucets wood, 8 inch; 1 funnel, quart; 1 hammer, claw and helve; 6 hooks, meat, for racks; 1 iron, soldering; 1 knife, butcher, 8 inch; 1 knife, butcher, 10 inch; 1 measure, liquid, quart; 6 needles, packing; 1 opener, box; 3 openers, cans.

Note 2: Contents, of field range No. 1: Field range No. 1, complete, consists of the following articles: 1 field range (1 body No. 41 and 1 boiling plate No. 42); 1 Alamo attachment (2 pieces 42a and 42b); 6 boilers, Nos. 48, 49, 50, 51, 53, and 54; 1 cleaver, 6 inch; 1 dipper, $\frac{1}{2}$ gallon No. 55; 1 dipper, quart, No. 56; 2 forks, small; 1 grinder, meat; 1 guard, tent, 6 $\frac{1}{2}$ inches; 3 knives, butcher, 8 inch; 2 lanterns, folding; 2 pans, bake No. 52; 1 pipe, smoke, elbow, No. 47; 4 pipe, smoke, joints Nos. 43, 44, 45, and 46; 4 rests, pan, No. 57; 1 saw, meat, 15 inch blade; 1 skimmer, large; 2 spoons, large; 1 steel, butcher, 10 inch.

Contents of field range No. 2: Field range No. 2 complete, consists of the following articles: 1 field range (1 body No. 61, and 1 boiling plate No. 62); 2 boilers, No. 50 and 51; 1 dipper, $\frac{1}{2}$ gallon, No. 55; 2 forks, meat, small; 1 guard, tent; 2 knives, butcher, 8 inch; 1 lantern, folding; 2 pans, bake, No. 52; 1 pipe, smoke, elbow, No. 67; 4 pipe, smoke, joints, Nos. 63, 64, 65 and 66; 2 rests, pan, No. 57; 1 saw, meat, 15 inch blade; 1 skimmer, small; 2 spoons, small; 1 steel, butcher, 10 inch.

Note 3: Tools, farrier and blacksmith set. Tools for kit taken from this chest. 1 anvil, small; 1 apron, leather; 1 chest, tool; 2 chisels, cold handled; 1 chisel, hot handled; 1 chisel, cold, hand; 1 clinch cutter (buffer); 1 clinch, iron; 1 dividers, wing; 1 file, flat, bastard, 12 inch; 1 hammer, ball peen; 1 hammer, riveting; 1 hammer, shoeing; 1 hammer, sledge; 1 hardie; 1 knife, farrier; 1 nippers, cutting; 1 nippers, hoof, paring; 1 pincers; 1 pritchel; 3 punches, hand round; 6 rasps, 6 inch; 2 screws, lag, 3 x $\frac{1}{4}$ inch; 1 set stock and dies $\frac{1}{4}$ to $1\frac{1}{4}$ inch; 1 tongs, shoeing; 1 tongs, large, 20 inch; 1 tongs, small, 14 inch; 1 vise, small; 2 wrenches, monkey, 18 and 12 inch; 1 wrench S, adjustable.

Note 4: Tools, saddler, set. Tools saddler kit taken from this chest. 1 awl, collar; 1 awl, round; 18 blades, awl, 3 each 6 sizes; 1 brush, glue, small; 1 can, oil; 1 chest, tool, saddlers, combination; 1 chisel, cold; 1 clamp, stitching; 1 creaser, iron; 1 cup, tin, pint; 1 dividers, wing; 1 file, round (taper 6 inch); 1 hammer, riveting; 1 hammer, shoe; 1 hammer, tack; 1 knife, gauge; 1 knife, head; 1 knife, round; 1 knife, shoe; 1 nippers, cutting, 8 inch; 1 pliers, 8 inch flat nose; 1 punch, revolving, 6 tube; 2 punches, round, Nos. 2 and 9; 1 rule, 36 inch, 1 screw-driver, small; 2 screws, lag, 2 $\frac{1}{2}$ by $\frac{1}{4}$ inch; 1 set, rivet; 1 shears, pairs; 1 slicker, glass; 1 stone, oil; 2 thimbles; 1 tickler; 1 tool, claw; 1 tool, edge, common; 1 vise, small.

Note 5: Tools, wheelwright and carpenter's set. Wheelwright and carpenter's kit taken from this chest. 1 axe, hand; 1 auger, hollow; 8 bits auger, $\frac{1}{2}$, $\frac{3}{4}$, $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$, $\frac{1}{16}$ and 1 inch; 1 bit, screw-driver; 1 brace, ratchet, 12 inch; 1 calipers, pairs; 1 chest, tool; 8 chisels, socket, firmer, $\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$, $\frac{3}{4}$, $\frac{1}{2}$, $\frac{1}{4}$, 1, $1\frac{1}{2}$ and 2 inch; 6 files, saw, taper, 5 inch; 1 gauge, thumb, mortise; 1 hammer, claw; 1 knife, drawing; 1 nest of saws (1 handle, 3 blades); 1 oiler; 1 plane, smooth; 1 plane, jack; 1 plane, jointer; 1 rasp, wood, 12 inch; 1 rule, 2 foot; 1 saw, hand, crosscut; 1 saw, hand, rip; 2 screws, lag, 3 by $\frac{1}{2}$ inch; 1 screw-driver, hand; 1 set, saw; 1 spoke, pointer; 1 square, try; 1 square, steel, 24 by 16 inch; 1 stone, oil; 1 vise; 1 wrench, monkey, 10 inch.

Note 6: Irons, branding, hoof set consists of the following articles: One series of letters from A to M, and one series of numbers from 0 to 9.

EXTRACTS FROM COMPILATION OF GENERAL ORDERS, CIRCULARS, AND BULLETINS OF THE WAR DEPARTMENT, 1881-1915, AS PERTAIN TO INFANTRY.

(Including Changes No. 1, March 12, 1917.)

1. Officers to Refrain from Publication of Views on Military Situation. Officers of the army will refrain, until further orders, from giving out for publication any interview, statement, discussion, or article on the military situation in the United States or abroad, as any expression of their views on this subject at present is prejudicial to the best interests of the service. (G. O. 10, 1915.)

Paragraph 2 eliminated, as it has no application to Infantry.

3. Contributions for and Acceptance of Gifts or Presents. The attention of officers and enlisted men is drawn to the following provision of the Revised Statutes:

1784. No officer, clerk, or employee in the United States Government employ shall at any time solicit contributions from other officers, clerks, or employees in the government service for a gift or present to those in a superior official position; nor shall any such officials or clerical superiors receive any gift or present offered or presented to them as a contribution from persons in government employ receiving a less salary than themselves; nor shall any officer or clerk make any donation as a gift or present to any official superior. Every person who violates this section shall be summarily discharged from the government employ.

The foregoing enactment includes within the statutory prohibition the soliciting of contributions by one officer or employee from other officers or employees of the United States when such contributions are to constitute gifts or presents or are to be used for the purchase of gifts or presents to those in superior official position. The receiving of presents by officers as contributions from those under their command or control, in either the military or civil service, also falls within the prohibition of the section, which imposes the penalty of summary dismissal upon all official superiors and those under their command or control who, by soliciting or receiving contributions, or by giving presents, become subject to its penal operation.

The practice of receiving presents from persons not in the military establishment or in the employ of the government in recognition of services rendered, though not expressly forbidden, is opposed to the spirit of the statute and for that reason is not approved by the department.

The requirements of the statute above cited will hereafter be strictly observed in all branches of the military establishment. (Cir. 46, 1904, as amended by Cir. 77, 1909.)

Paragraphs 4 to 10 eliminated, as they have no application to Infantry.

11. Employment of Outside Influence to Obtain Assignments, Etc. Attention is hereby specifically called to the Executive order published in General Orders, No. 112, of July 13, 1905, which is as follows:

EXECUTIVE ORDER.

The Congress of the United States, by appropriate legislative enactments, has made the matter of assignments, transfers, and details in the army the subject of formal statutory regulations; Executive regulations in furtherance of these statutes have been adopted, the operation of which has been to place upon record in the War Department full and detailed information in respect

to the character, capacity, military services, and general attainments of all officers composing the military establishment. The records so obtained fully set forth the relative merits of officers of all grades of rank in the several branches of the line and staff, and enable all vacancies which occur in the military service to be filled after a careful comparison of the records of those officers who are eligible under the law for particular assignments or details.

A similar legislative policy exists in respect to the Navy, and the records of the Navy Department furnish evidence of the character, service, and ability of all officers of the Navy, founded upon the official reports of those officers whose duty it is to make them. These reports are sufficiently specific to enable the department to determine the particular duty which each officer is fitted to perform without the intervention of requests, claims, or influence from sources outside the Navy.

It is therefore announced that in future appointments, details, transfers, and assignments in the Army and Navy, the Executive will be guided by the official records of the War and Navy Departments, respectively, to the exclusion of other sources of influence or information; but in case an officer has performed any special act of bravery or courage or rendered specially efficient service of which there is no record or only a partial record in the War or Navy Department, the testimony of any person who was an eyewitness of the same may be submitted for consideration.

Should it be discovered that since the publication of this order an officer of the Army or Navy has sought recommendation or support from sources outside of those named above, this fact will debar him from obtaining the particular advancement, assignment, or detail which he has by such means attempted to secure, and the fact that he has sought such influence will be noted on his official record.

THEODORE ROOSEVELT.

The White House, July 7, 1905.

and to the order of the President published in General Orders, No. 38, of March 3, 1909, which is as follows:

The White House,
Washington, March 3, 1909.

To the Secretary of War:

Supplementing orders heretofore issued, it is directed that hereafter all requests and recommendations, either written or verbal, received at the War Department from or on behalf of Army officers, of whatever nature—other than those received through regular military channels—shall be filed with or noted on their records. Officers who do not desire such notations on their records should take such action as may be necessary to prevent such requests or recommendations being made.

THEODORE ROOSEVELT.

Notwithstanding these orders, this department is constantly in receipt of numerous requests, written and oral, concerning the promotion, assignment, transfer, detail, and other special treatment of officers in the service. In some instances of recent occurrence it has been found that the officer in question did not desire the thing requested in his behalf, and in many others it is difficult to believe that the officer was not directly or indirectly responsible for the request, although it came through a third person and bore no direct evidence of his participation therein. If the department heeds the importunities of those who, by disobeying these orders in letter or spirit, are enabled to reach it, the result is simply to put a premium upon disobedience and to punish those who strictly observe the orders.

Hereafter any communication made to this department, written or oral, re-

questing any promotion, assignment, transfer, detail, or other special consideration for any officer (excepting when made by the officer himself in the proper way), will at once be referred to the officer in question, who will be required to state whether the communication was made directly or indirectly by his procurement, and whether he avows or disavows the request as one on his behalf. (G. O. 31, 1913.)

12. Official Records Constitute Basis of Assignments, Etc. 1. The strict enforcement of the provisions of paragraph 5, Army Regulations, and of General Orders, No. 31, War Department, 1913, Par. 11, this compilation, which forbid the employment of outside influence by officers to obtain details, assignments, and other favors, makes it desirable to put into effect the best methods of ascertaining the wants of officers and of placing before the Secretary of War this information together with the compiled efficiency records which will enable him to make details and assignments in the interests of the service as well as of individuals.

2. The following sources of information are authorized:

(a) Personal Report and Statement of Preferences.

(b) Special letters of recommendation for particular duties by military superiors.

(c) Official applications from governors of states and presidents of military schools and colleges for the detail of officers under the provisions of law governing such matters.

3. The foregoing sources of information will be considered together with the compiled efficiency records in making details and assignments.

4. Preferences for particular assignments will be considered with special reference to the interests of the service, interests of other officers, and economy, as well as with reference to the personal benefit of the officer.

5. The purpose of the foregoing is to make known the policy of the department that the official records only constitute the basis of all assignments and details. (Bul. 6, 1915.)

Paragraphs 13 to 36 eliminated as they have no application to Infantry.

37. Transfers of Enlisted Men, Cost of. When an enlisted man is transferred from one arm of the service to another for the convenience of the government, all expenses of the transfer, including the cost of the necessary changes in the uniform, will be borne by the government. (Par. I, Cir. 45, 1906.)

Whenever a soldier is transferred at his own request, he should bear the cost of such transfer, for his subsistence as well as for his transportation. (Par. III, Cir. 11, 1887.)

Paragraph 38 eliminated as it has no application to Infantry.

39. Company Noncommissioned Officers, Restrictions on Employment. Paragraph 270, Army Regulations, is construed as prohibiting the employment of noncommissioned officers as company barbers, or as agents for laundries, or in any position of a similar character. (Par. II, Cir. 61, 1906, as amended by Par. III, Cir. 34, 1907.)

40. Debts of Enlisted Men for Merchandise. In view of the fact that the practice by dealers of selling articles of merchandise to enlisted men on credit burdens the War Department with unnecessary correspondence in the cases of nonpayment of the indebtedness, and that such transactions, which are rapidly increasing in number, often involve enlisted men in debts which they can not pay, and frequently lead up to desertion, the following statement of the policy of the department with respect to this matter is published for the information and guidance of all concerned:

The department will no longer concern itself with the business of persons, firms, or corporations selling merchandise to enlisted men on credit, and all

communications with respect to such sales, and all arrangements looking to the establishment of such business relations, must be had with the commanding officers of the organizations to which the enlisted men belong. The War Department will decline to assist by answering inquiries or otherwise, in settling the payment of obligations of this character that are incurred without previous knowledge and consent of the commanding officers of the organizations to which the debtors belong. (Cir. 47, 1910.)

Paragraphs 41 and 42 eliminated, as they have no application to Infantry.

43. Removal of Charge, by Regimental Commander. The commanding officer of a regiment in a tactical brigade or division is regarded under the provisions of paragraph 126, Army Regulations, to be in the position of a commanding officer competent to determine the disposition of an apprehended or surrendered deserter, and accordingly has authority to remove a charge of desertion against such enlisted man under the provisions of paragraph 131, Army Regulations (Par. II, Bul. 24, 1915.)

Paragraphs 44 to 48 eliminated as they have no application to Infantry.

49. Character Given on Discharge Certificate. The "character" given on a discharge certificate is discretionary with the company or other immediate commander of the soldier, except where otherwise directed by sentence of a general court-martial, by the approved finding of a board of officers under paragraph 148, Army Regulations, or by orders from the War Department. The defacing of a discharge certificate by writing thereon anything to the discredit of the soldier's character, after the same has been given by his commander or other immediate commander, is prohibited. (G. O. 74, 1881.)

50. Unsuitable or Undesirable Soldiers. 1. The provisions of paragraph 148½, Army Regulations, published in C. A. R., No. 14, War Department, are intended to apply only to the following classes of enlisted men:

(a) Those who, after a thorough trial extending (except in the case of recruits at recruit depots) over a considerable period, have clearly shown that they can not be trained and instructed to perform the duties of a private soldier in the arm to which they belong. Men who are only slow to learn or difficult to instruct but otherwise adapted for military service do not belong to this class.

(b) Those who exhibit traits of character or are confirmed in habits which render their retention in the service objectionable because of the effect on the morals or discipline. The provisions of the paragraph can not be invoked, however, to rid the service of soldiers who by the commission of specific offenses have rendered themselves liable to trial by courts-martial or of soldiers who have already been tried and adequately punished, except when it becomes evident that the soldier concerned can not be made amenable to discipline. No board should be ordered pursuant to this paragraph for a soldier awaiting trial or result of trial by general court-martial or for one serving sentence pursuant to such trial.

(c) Those who, because of excesses or other misconduct, have become so impaired in character or physically disqualified to such a degree as to justify immediate separation from the service.

2. Boards are convened pursuant to this paragraph in the mobile arm by post or regimental commanders and in the Coast Artillery by coast defense or fort commanders. In exceptional cases where the post, regimental, coast defense or fort commander is also the company or detachment commander, the board will be convened by the next higher authority.

3. Boards convened pursuant to the paragraph will be governed, as far as practicable, by the rules of procedure and evidence applicable to special courts-martial, except that the members will not be sworn. All witnesses will

required to take the oath or affirmation prescribed for witnesses before courts-martial. The recorder of the board or, if there be none, the president of the board, will administer the oath or affirmation.

4. Separate proceedings will be submitted to the convening authority in the case of each soldier recommended by a board for discharge.

5. Such proceedings will include—

(a) The order convening the board, or, if convened by a verbal order, a statement to that effect.

(b) The organization of the board, including the place and date and the names of members present and absent.

(c) The full name, rank, and organization of the soldier whose case is before the board for investigation and recommendation, and a statement to the effect that such soldier appeared before the board; was permitted to challenge for cause; was present during the hearing of all evidence, and was afforded opportunity to question adverse witnesses, to submit evidence, and to make a statement.

(d) The full name, rank, and organization of each witness, a statement that each was duly sworn, and a synopsis of the testimony given by each.

(e) True copies of all written evidence considered by the board.

(f) A synopsis of any evidence given or statement made by the soldier undergoing investigation.

(g) A certificate of physical disability, where applicable.

(h) The findings of the board, which must be based upon the evidence as summarized in or appended to the proceedings and must be in consonance with the provisions of the paragraph.

(i) The recommendation of the board that the soldier be or be not discharged. It is not contemplated that such boards recommend a transfer or other disposition of the soldier in the service.

6. The convening authority, or his successor, will forward all approved proceedings, when discharge is recommended, to the department or mobilized division commander for final action. The proceedings will then be forwarded to the Adjutant General of the Army for file. (Par. I, Bul. 16, 1915, as amended by Par. III, Bul. 24, 1915, and Par. II, Bul. 37, 1915.)

51. Notation on Descriptive List, Etc., of Character Given on Discharge. When an enlisted man is discharged from service the character given him on his discharge certificate and a statement showing whether or not his service during the enlistment from which he is discharged has been honest and faithful will be noted on his descriptive list and on all rolls and returns on which the fact of his discharge is recorded. These notations will correspond to those made on the discharge certificate. (Par. II, G. O. 206, 1905.)

52. Dishonorable Discharge for Desertion and Fraudulent Enlistment. An enlisted man convicted of desertion and fraudulent enlistment and sentenced to be dishonorably discharged will be discharged from the organization from which he deserted and as of the name under which he enlisted in that organization. His name will be dropped from the records of the organization in which he fraudulently enlisted, and a statement of the facts of the case will be noted on those records. (Par. II, Cir. 76, 1908.)

53. Procedure in Case of Enlisted Man Refusing to Submit to Surgical Operation. An enlisted man who refuses to submit to a surgical operation that the attending surgeon certifies is without risk to the life of the soldier and is necessary for the removal of a disability that prevents the full performance of any and all military duties that properly can be required of the soldier will, for such refusal, be brought to trial by general court-martial under charges preferred under the 62d Article of War; but if in any such case the attending

surgeon is in doubt as to whether the proposed operation involves risk to life the soldier will not be brought to trial, but will be discharged on surgeon's certificate of disability. (Par. II, G. O. 43, 1906.)

Paragraphs 54 to 60 eliminated, as they have no application to Infantry.

DESERTERS AND GENERAL PRISONERS.

61. **Reports of Desertion, Escape, and Apprehension.** 1. In order that effective measures may be taken by the War Department for the apprehension of deserters and escaped general prisoners, it is important that in every case the department shall be notified of the desertion or escape at the earliest possible moment. It is directed, therefore, that the commanding officers of all military posts and stations and of troops in the field, except in Alaska and the insular possessions, telegraph directly to the Adjutant General of the Army prompt notification of every desertion and of every escape of a general prisoner occurring within the respective commands of such commanding officers. This telegraphic notification having been sent in any case, further notification will not be required in that case under paragraph 119, Army Regulations.

2. The telegraphic reports required by this order will be as concise as possible and for purposes of identification will give, in the case of a deserter, the name of the man, his rank, the organization from which he deserted, the date of his enlistment, and the date and place of his desertion; and in the case of an escaped general prisoner the name of the man, the designation of the organization of which he was a member at the date of his conviction, and the date and place of his escape from confinement. The forms of these telegraphic reports will be substantially as follows: "The Adjutant General, Washington, D. C. Robert Roe, private, Troop A, First Cavalry, enlisted July first, nineteen eight, deserted January twenty-second, nineteen nine, Fort Assiniboine, Montana. Smith, Commanding." "The Adjutant General, Washington, D. C. Prisoner Joe Doe, formerly Company B, Second Infantry, escaped January fifteenth, nineteen nine, Fort Sheridan, Illinois. Jones, Commanding." Should there be reason to believe in any case that the deserter or the escaped general prisoner will be found at any particular place, the words "probably at ———," or "probably going to ———," should be added to the telegram.

3. Paragraph 132, Army Regulations, will not be construed as requiring a delay of 10 days before reporting as a deserter any man in whose case there is satisfactory ground for believing that he is a deserter. Troop, battery, company, and detachment commanders are enjoined, therefore, to make immediate and thorough inquiry in the case of every man reported absent without leave and to report the absentee as a deserter immediately upon obtaining evidence that appears to be conclusive of his intention not to return. Commanders of military posts and stations and of troops in the field are enjoined to give especial attention to these cases and to adopt such proper corrective measures as may be necessary whenever it is found that there has been unnecessary delay on the part of subordinate commanders in making reports required by this order.

4. Whenever an enlisted man has been officially reported as a deserter, a charge of desertion has been effectively recorded against him, and he stands charged with desertion within the meaning of paragraph 1372, Army Regulations, regardless of whether the charge has or has not been entered on muster rolls and pay rolls, and the charge will stand against him until it is disposed of in one of the various ways prescribed by Army Regulations.

5. The report required by paragraph 126½, Army Regulations, must, there-

fore, be made in the case of every enlisted man who has been reported officially as a deserter, and who has subsequently returned to military control, regardless of whether the charge of desertion has or has not been entered on muster rolls and pay rolls in his case, and a similar report must be made in the case of every escaped general prisoner returned to military control. Commanders of military posts and stations and of troops in the field are enjoined to give especial attention to this matter in order that there may be no unnecessary delay in reporting to the Adjutant General of the Army the return to military control of every person who has been officially reported as a deserter or an escaped general prisoner. (G. O. 208, 1908; G. O. 140, 1909.)

Paragraphs 62 to 71 eliminated, as they have no application to Infantry.

72. Naming of Camps, Vessels, Etc. Following the established practice with regard to naming military posts, no camp or vessel, and no building, hall, street, driveway, etc., on a military reservation will be named in honor of a living officer. Any name not conforming to this rule will be changed.

Paragraphs 73 and 74 eliminated, as they have no application to Infantry.

75. Competition of Army Bands With Civilian Musicians. The attention of all officers of the Army is directed to the legal prohibition against the competition of Army bands or the individual members thereof with civilian musicians, contained in the act of Congress approved May 11, 1908, and embodied in paragraph 261, Army Regulations.

It is the duty of commanding officers of military posts at which Army bands are stationed to make this prohibition effective. The question of fact as to whether or not the playing outside of the post limits will be competitive is one to be determined in each case by the commanding officer, and his determination will be final unless an appeal is taken to higher military authority by the parties concerned or alleging themselves to be concerned in the matter. (Par. II, Cir. 97, 1908.)

76. Soliciting of Claims Against United States on Military Reservations. The soliciting of pension or other claims against the United States on military reservations or at military posts, camps, or stations, including general hospitals, is hereby prohibited, and commanding officers will take measures effectually to prevent such soliciting within the limits of military reservations, posts, camps, stations, or hospitals under their commands. Officers or enlisted men who give information with a view to aiding persons in soliciting such claims will be brought to trial for violation of paragraph 824, Army Regulations, and civilian employees who so offend will be discharged.

In connection with the subject of this order and of paragraph 824, Army Regulations, the attention of all concerned is invited to the provisions of section 5498, Revised Statutes of the United States, which are as follows:

Sec. 5498. Every officer of the United States, or person holding any place of trust or profit, or discharging any official function under, or in connection with, any Executive department of the Government of the United States, or under the Senate or House of Representatives of the United States, who acts as an agent or attorney for prosecuting any claim against the United States, or in any manner, or by any means, otherwise than in discharge of his proper official duties, aids or assists in the prosecution or support of any such claim, or receives any gratuity or any share of or interest in any claim from any claimant against the United States, with intent to aid or assist, or in consideration of having aided or assisted, in the prosecution of such claim, shall pay a fine of not more than \$5000 or suffer imprisonment not more than one year.

Paragraph 77 eliminated, as it has no application to Infantry.

78. Reports of Deaths. Whenever the death of an officer, enlisted man, or civilian employee occurs at a military post or station, or with a command in the field, the senior medical officer present will immediately report in writing to the commanding officer of such military post or station or command in the field the name of the deceased, with rank and organization if he was an officer, or the department and capacity in which he was employed if he was a civilian employee, the date, time, place, and cause of death, and the present location of the body.

The commanding officer will cause necessary measures to be taken for interment or other disposal of the body and will make an immediate report to the facts in the case to the Adjutant General of the Army on the blank form provided for the purpose (Form No. 415, A. G. O., "Report of Death and Disposal of Remains"). (G. O. 67, 1910.)

Paragraph 79 eliminated, as it has no application to Infantry.

80. Young Men's Christian Association, Privileges for. Permission is granted to the Army Young Men's Christian Association to establish its work at various posts of the Army, and commanding officers are enjoined to facilitate the efforts of this association to provide helpful, physical, intellectual, and unsectarian religious influences by providing therefor suitable quarters which may be in the post exchange buildings if room is there available and its use for such purposes deemed wise by the commanding officer. The privileges granted hereunder are subject to the control of commanding officers and should be defined as not to interfere with military operations and discipline. (Cir. 15, 1914. W. D.)

All proper facilities for the work of the association will also be afforded commanding officers of troops serving in camp and in the field.

Whenever practicable, and when it does not interfere with drill and instruction or the purposes for which the troops are assembled, suitable sites will be selected and assigned in camps for the tents of the association. In the case of change of camp sites the tentage and equipment of the association will be transported when means are available. The care and police of the tents of the association, and the grounds surrounding them, will also be provided for in the general scheme of police of the camp.

Permission will be given by commanding officers for the duly accredited secretaries of the association to purchase necessary supplies from the Quartermaster Corps in case the supplies are available and can be spared; and when in the opinion of the commanding officer, the supply of tentage warrants and shelter of this character will be afforded to the association. (Par. I. G. O. 1914.)

Paragraphs 81 to 84 eliminated, as they have no application to Infantry.

85. Training of Mobile Army. 1. **Object of Training.** Readiness for active service, and especially for the particular kinds of active service in which the troops are most likely to be engaged, is the objective to be kept in view in all peace-time training and preparation. The activities of all concerned will consequently be directed to the attainment of that end.

To be prepared for such service the troops must not only be thoroughly instructed, but also must have a high morale, based on consciousness of ability to meet successfully all the demands of war. The value of an organization is to be judged by its all-around ability to take the field and to meet successfully every phase of war service.

2. **Bases of Training.** Study, drill, and practical application form the bases of training. By study, knowledge of principles and methods is acquired; by drill, skill in the mechanism of methods and in the performance of habits.

duties is gained. It is by practical application that officers and men learn to adapt to actual cases the knowledge and skill they have acquired. Facility in so doing is of the utmost importance, since on service a great variety of practical problems present themselves, each of which must be solved on the basis of its own particular requirements. Hence, as soon as proficiency in elementary methods is attained, the applicatory system will be employed, commencing with simple problems and gradually widening the scope so as to introduce the greatest possible variety of conditions. To this end all tactical exercises, whether theoretical or practical, whether with or without troops, will be based upon an assumed situation. In all exercises in the field a concrete case will be stated, calling for the actual employment of the organization concerned, and the organization is then employed to meet the requirements of this case. The strength and character of the opposition to be expected, the nature of the terrain, the obstacles to be overcome being known or developed as the solution proceeds, the opportunity is afforded not only of applying appropriate general principles and tactical methods, but also of putting to practical use many minor phases of instruction which had previously been the subject of drill-ground training. Thus, the service of security and information, signaling, field fortifications, pioneer work, the passage of obstacles may all be incidents of the operation involved, and, being natural incidents, the purpose of the previous drill and instruction becomes apparent, as well as the difficulties liable to arise under the varied conditions of service. The more nearly the conditions of service are simulated and the greater the variety of the incidents introduced, the more instructive will these exercises be.

Such exercises may be conducted at first as map problems or terrain exercises for the training of officers and selected enlisted men.

Study, drill, and practical illustration follow a generally progressive order as indicated below; but instruction of the three kinds should be in a measure concurrent, to the end that the reasons for instruction, the purposes to be attained, and the conditions under which the duties will have to be performed may be continually kept in mind.

The prime immediate need of the Army is correct tactical training of officers and noncommissioned officers in handling commands appropriate to their rank. In this training the study of strategic combinations on a large scale should be avoided, except in so far as such study may bear upon the solution of the problems under consideration, and all such study should be incident to, and form the basis for, the tactical training of officers and their commands.

In order that study and training may be properly directed and that a unified doctrine of tactics may be taught the entire service, all tactical instruction of the mobile army will be conducted in accordance with the principles taught at the service schools and the Army War College, as set forth in the books employed and as illustrated in the approved solutions at those institutions. Graduates of the service schools and the Army War College will be utilized, as far as practicable, to assist in the work contemplated in this order.

3. Annual Course of Training. A progressive scheme is to be followed for each year's instruction. The annual course comprises garrison training and field training, though no sharp line of distinction is to be drawn between the two. For the purpose of illustrating practically the principles taught, or emphasizing the importance of phases of detailed training, instruction appropriate to one period may frequently be held within the period assigned to the other.

4. Garrison Training. The period of garrison training will be devoted especially: (a) To theoretical and practical instruction in the various garrison schools, and (b) to drill and practical instruction preparatory to field training.

(a) War Department orders prescribing regulations to govern post and garrison schools lay down specifically the course to be followed in the more elementary schools for officers and enlisted men. Brigade commanders will devote special attention to the postgraduate scheme of instruction, which will run through the entire period of garrison training. A principal feature of postgraduate instruction will be studies, map problems, and war games based on strategical and tactical situations to be stated for the brigade by the War Department and by the brigade commander for the tactical components of his brigade. The postgraduate course of instruction will also include such map problems, terrain exercises, tactical or staff walks or rides, or other work pertaining to the local terrain as brigade commanders may prescribe; this portion of the course may be made to amplify the work of the elementary schools for officers and enlisted men, as well as the drill and practical instruction preparatory to field training.

(b) Drill and practical instruction preparatory to field training embraces specially: Drill of the company, battery, and troop and all of the units thereof, mounted and dismounted; the preliminary training for fire action and firing exercises on a represented or actual terrain with targets represented to scale or actually designated, thus giving opportunity to train the personnel both in the mechanisms of fire and in appropriate methods of directing, controlling, and adjusting fire; the rudiments of the service of security and information, including the preparation and transmission of orders and messages; map making and map reading for officers, noncommissioned officers, and selected privates; exercises in leaving the post with a part or all of the command equipped for prolonged service in the field; bayonet combat; swordsmanship, mounted and dismounted; visual signaling; gymnastics, athletics, and swimming, including swimming with arms and equipment under proper precautions as to safety; equitation, horse training, and packing; tent pitching; guard duty and ceremonies; first aid and the hygienic care of the person; care of equipment of all descriptions.

5. Field training embraces especially: Range practice; field firing exercises with service ammunition; field fortifications, including the reconnaissance and selection of positions, and the actual construction of appropriate intrenchments; the service of security and information (Field Service Regulations); marches and convoys; maintenance of communication between the elements of a command by signals and by messenger; the care of men and animals, including the preparation and service of food, shelter, and the service of sanitation and supply; the passage of obstacles; night operations; map making in accordance with the needs of the arm of service concerned; swimming of horses and men, to include swimming with arms and equipment under proper precautions as to safety; packing and exercises in the solution of transportation problems; the drafting of orders and messages as incidents of the above exercises; combat and field exercises, first of a simple nature but gradually becoming more and more comprehensive, passing to the larger units and involving combined operations and operations with the Organized Militia.

6. Until our regiments, brigades, and divisions are all located so that it will be possible for their elements to assemble by marching for annual training, there will be difficulty in carrying out a consistent course of progressive training for the whole Army. In the meantime, the policy will be to go as far as is possible with funds available to effect such annual concentrations, and where complete concentration is impracticable, to still do what is possible in the way of regimental, brigade, and division instruction with the troops available. To this end the missing tactical and supply elements will be repre-

sented and maneuvers carried out over a tract of country sufficiently extensive to gain practice not only in the tactical handling of the command to meet a variety of concrete situations, but also in the working of its supply, ammunition, and sanitary services. Similarly, in maneuvers with organizations of the Organized Militia, composite brigades and divisions may be formed and experience gained in the exercise of the functions of the higher command.

7. During the periods allotted to instruction of subordinate units, terrain exercises, tactical or staff walks or rides, war games and map problems furnish the special means whereby all higher commanders may be preparing themselves and their staffs for their appropriate duties.

8. Marching. Ability to march long distances is one of the most important requisites of mobile troops. Training in marching will be secured in connection with the concentration of brigades and in operations in connection with the annual maneuvers; but it is necessary that troops be prepared for such marches by appropriate preparatory work, and that all marches be conducted with a view to accomplishing some well-defined object. To this end, during the period of field training, each organization, except when participating in target practice, will each week engage in field exercises based upon stated tactical situations requiring marches under war conditions and involving training in the various phases of field service. Marches will be arranged and tactical problems drawn so that contact of the larger bodies of troops concerned will occur upon military reservations or upon ground which the troops are authorized to use.

The distances covered in the first marches will be short, but should be gradually increased. Special attention will be given to the fit of shoes and the care of the feet as prescribed in General Orders, No. 26, War Department, 1912, paragraph 91, of this compilation.

In the early stages of field training the articles of equipment carried should be few and the load on the soldier light. As the men become hardened, the load should be increased gradually, so that before the end of the period of company field training troops will be able to make hard marches under service conditions, carrying the full field equipment.

9. Programs of Training. Training must conform to the principles laid down in existing regulations and to the doctrine disseminated through the service by means of the service schools; but unit commanders will be given great latitude in the choice of ways and means for training their units and will be held to corresponding responsibility for results attained. Higher commanders interpose to change the ways and means employed by their subordinate commanders only when convinced, after careful observation, that the necessity for interposition is such as to justify impairment of the initiative ordinarily left to subordinates.

Department commanders will fix the periods of garrison and field training and of target practice for the brigades. They will also fix the period to be devoted to training of the combined arms and to field training in conjunction with the Organized Militia. Brigade commanders will then make an allotment of time between companies, battalions, and regiments. For elements not brigaded, department commanders will fix the periods of garrison and field training and target practice, as well as the allotment of time between companies, battalions, and regiments.

Keeping in mind the foregoing allotments of time and the requirements of this order as to objects to be attained and ground to be covered, each commander, commencing with the company commander, will prepare a program showing in general terms the contemplated scheme of work for the periods allotted for the garrison and field training of his command. The purpose is to

require the commander to formulate and to keep in mind a program of instruction, adapted to the particular conditions under which he is operating, and framed so as (1) to include all the phases of training, (2) to emphasize the importance of each phase, and (3) to combine them all in a well-considered scheme tending always toward real preparedness for field service.

The program of each unit commander is submitted to the next higher commander for approval. Companies, battalions, or regiments not attached to the same territorial department or district as their respective battalions, regimental, or brigade headquarters will forward their programs directly to the next higher tactical commander in the department or district. Battalions, regiments not attached or belonging to a brigade will forward their programs directly to department headquarters.

Company commanders will prepare at the end of each week of training the detailed schedule for the next week's work, submitting the same to the battalion commander for approval. The latter will keep in close touch with the progress of the work.

Regimental commanders supervise the training of the battalions under their immediate control. They will make detailed tests of the work of companies from time to time with a view to determining the progress and to causing the correction of deficiencies noted.

The duties of brigade and department commanders in connection with training are defined in paragraphs 193 and 194, Army Regulations.

10. Responsibility for the Training of Detached Units. If a portion of a tactical unit is detached from its proper command, the responsibility for the training of the detached portion will be placed on the commander of the detachment by the extent to which he has had opportunity to control its training. The elements of a tactical unit are separated from the others but not detached. The commander will be given facilities, when practicable, for visiting such units and supervising their training; otherwise his responsibility is qualified by the preceding case.

Troops detached from one division or brigade will be attached to the division or brigade, and the commander of the latter division or brigade will then have the same responsibility for these attached units as for the units of his tactical organization.

11. Administration. Routine administration throughout the Army is regulated on the basis that training and preparation for active service are of first importance. Administrative duties are an essential feature of military life and are not to be neglected; but in every legitimate way they are to be simplified, reduced in amount, and adjusted as to time of performance so that they will not obscure the real purpose for which the Army is maintained, nor obstruct the attainment of this purpose. Commanders of all grades must order and arrange the affairs of their organizations so that the foregoing principles are given full force and effect. The number of officers regularly present at instruction must be the maximum consistent with the performance of administrative or other duties unavoidably arising from the times allotted to instruction. (G. O. 17, 1913.)

Paragraphs 86 to 90 eliminated, as they have no application to Infantry.

91. Fit of Shoes and Care of Feet of Enlisted Men. With a view to increasing the marching capacity of troops, company commanders will measure the feet and fit the shoes of men of their commands and will be responsible that the instructions herein contained are strictly followed.

All measurements prescribed herein will be taken with the soldier in bare feet and with a 40-pound burden on his back, bearing the entire

upon the foot to be measured. Balance may be preserved by resting the hand on a fixed object. The measurements of the foot, which must be taken to make suitable preliminary selection of the shoe to try on, are (a) the length; (b), the circumference around the ball.

To measure the length the soldier will stand with foot upon the foot measure, furnished by the Quartermaster's Department, fitted in a slot in a board, the heel of the soldier fitting snugly against the heel block. The movable block will then be pushed up until it touches the end of the great toe. The scale on the top of the measure, which is graduated in sizes, will then be read, and the proper length of the shoe will be determined, approximately, by adding 2 to the reading of the scale; thus, if the soldier's foot scales $6\frac{1}{2}$, a shoe not smaller than $8\frac{1}{2}$ should be tried on first.

To take the ball measure, pass the foot tape, supplied by the Quartermaster's Department, around the foot at the prominent tubercle at the base of the great toe and the prominent tubercle at the base of the little toe. The position of the tape is shown by the line A—B in the diagram below:

press it. Having taken the foregoing measurements, the shoe best suited to the foot will be determined by reference to G. O. 17, 1916. For example, assume that the circumference of the ball is found to be $9\frac{1}{4}$ inches. In the table of the aforesaid order, page 942, under the heading "Marching shoes," it will be seen that for a foot requiring an $8\frac{1}{2}$ shoe a ball measurement of $9\frac{1}{4}$ inches corresponds to a D width. The size of shoe to try on for actual fitting is, then, in this case, $8\frac{1}{2}$ D.

If the ball measurement found as above does not correspond exactly with any ball measurement given in the table, then the narrower of the two widths between which the measurement lies should be selected.

Beginning with the size and width thus tentatively selected, shoes will be tried on until a satisfactory fit is secured. Correct fit in waist and instep will be determined experimentally. To determine the fact of fit the shoe will be laced snugly and the soldier with a 40-pound burden upon his back will again throw his entire weight on one foot. The officer will then press in the leather of the shoe in front of the toes to determine the existence of sufficient vacant space in that region to prevent toe injury. Under no circumstances should this vacant space in front of the great toe be less than two-thirds inch; nor should

there be pressure on the top of the toes. The officer will then grasp with his hand the leather of the shoe over the ball. As his fingers and thumb are brought slowly together over the leather, the shoe should feel snugly filled without apparent tension, while the leather should lie smoothly under the hand. If the leather wrinkles under the grasp of the hand, the shoe is too wide and a narrower width is needed; if the leather seems tense and bulging and the hand tends to slip over easily, the shoe is too narrow and a greater width is necessary.

It may be necessary to try on several pairs of shoes in this manner before an entirely satisfactory shoe is secured. A record of the proper size and width of shoes as determined above will be kept as provided by paragraph 37, Uniform Regulations.

Measurements will be taken and shoes will be fitted as prescribed at least once in each enlistment and the record will be changed from time to time if subsequent fittings render a change necessary.

Sizes called for in requisitions will conform to the record, and the fact of fit of shoes issued on such requisitions will be personally verified in every instance by company commanders in the manner above prescribed.

No shoes will be issued to or worn by enlisted men while on duty which are not fitted in accordance with this order.

New shoes should be adapted to the contours of the feet as soon as possible. Shoe stretchers, with adjustable knobs, to take pressure off painful corns and bunions, are issued by the Quartermaster's Department.

All shoes should be properly broken in before beginning a march, but if this is impracticable then the following is suggested but not required:

The soldier stands in his new shoes in about $2\frac{1}{4}$ inches of water for about five minutes until the leather is thoroughly pliable and moist; he should then walk for about an hour on a level surface, letting the shoes dry on his feet, to the irregularities of which the leather is thus molded in the same way as it was previously molded over the shoe last. On taking the shoes off a very little neat's-foot oil should be rubbed into the leather to prevent its hardening and cracking.

If it is desired to waterproof the shoes at any time, a considerable amount of neat's-foot oil should be rubbed into the leather.

Light woolen or heavy woolen stockings will habitually be worn for marching, but commanding officers of organizations may authorize the wearing of cotton stockings in individual cases where the surgeon certifies to the fact that the wearing of such stockings subserves the best interests of the service. The stockings will be large enough to permit free movement of the toes, but not so loose as to permit of wrinkling. Darned stockings or stockings with holes will not be worn in marching.

Company commanders, by frequent inspections throughout the year, will maintain the feet of their men in condition for proper marching. They will cause the proper trimming of nails, removal or paring of corns and calluses, relief of painful bunions, treatment of ingrowing nails, and other defects, sending serious cases to the surgeon.

Before a march is undertaken by foot troops, company commanders will personally inspect the bare feet of their men. While on the march, they will personally see each day that their men wash their feet as soon as possible after reaching camp, prick and evacuate blisters, and cover such blisters or excoriations with zinc oxide plaster, supplied by the Medical Department, applied hot, dust the feet with the foot powder supplied by the Medical Department, and put on clean socks. Hereafter an undue amount of foot injury and disability from shoes will be regarded as evidence of inefficiency on the part of the officers concerned and as causes for investigation.

Post quartermasters will provide a place in the quartermaster's storehouse where shoes may be fitted for the purpose of determining or verifying the record required by paragraph 37, Uniform Regulations. For the purpose of fitting they will keep on hand at all times a complete series of each size and width of shoes furnished for issue. Shoes of this series will be put in stock and issued before they become unserviceable, and will be replaced by new shoes, keeping the series always complete. Company commanders will report in writing to the post commander every instance of failure to secure proper shoes for their commands or to obtain proper facilities for fitting the shoes as herein directed. Post commanders will investigate the reasons for and be held responsible as far as lies in their power for the rectification of such deficiencies.

A brief record of the number of such reports from company commanders and the reason for such deficiencies will be furnished to inspectors at each inspection of the post.

Inspections conducted under the provisions of paragraph 889, Army Regulations, will embrace an inquiry into the manner in which this order has been complied with, and the report of inspections will include a statement of all instances of failure on the part of company commanders to secure proper shoes for their commands and the cause of such failure. (Par. I, G. O. 26, 1912; Par. IV, G. O. 30, 1913.)

92. Venereal Diseases, Prevention and Detection Among Enlisted Men. 1. It is enjoined upon all officers serving with troops to do their utmost to encourage healthful exercises and physical recreation and to supply opportunities for cleanly social and interesting mental occupations for the men under their command; to take advantage of favorable opportunities to point out, particularly to the younger men, the inevitable misery and disaster which follow upon intemperance and moral uncleanness, and that venereal disease, which is almost sure to follow licentious living, is never a trivial affair. Although the chief obligation and responsibility for the instruction of soldiers in these matters rests upon company officers, the medical officers should coöperate by occasional lectures or other instruction upon the subject of sexual physiology and hygiene and the dangers of venereal infection.

2. Commanding officers will require that men who expose themselves to the danger of contracting venereal disease shall at once upon their return to camp or garrison report to the hospital or dispensary for the application of such cleansing and prophylaxis as may be prescribed by the Surgeon General. Any soldier who fails to comply with such instructions shall be brought to trial by court-martial for neglect of duty.

3. Commanding officers will require a medical officer, accompanied by the company or detachment commander, to make a thorough physical inspection twice in each month of all the enlisted men (except married men of good character) of each organization belonging to or attached to the command. These inspections will be made at times not known beforehand to the men and preferably immediately after a formation. The dates on which the physical inspections of the various organizations are made will be noted on the monthly sanitary reports.

At these inspections a careful examination of the feet and footwear and of the condition of personal cleanliness of the men will be made, as well as careful observation for the detection of venereal diseases.

Cases of the latter will be promptly subjected to treatment, but not necessarily excused from duty unless, in the opinion of the surgeon, deemed desirable. They will be made of record in the medical reports in any case. A list of those diseased but doing duty will be kept both by the company or detachment commander and the surgeon, and the infected men will be required to

report to a medical officer for systematic treatment until cured. While in the infectious stages the men should be confined strictly to the limits of the post. When a venereal case, whether or not on sick report, is transferred to another command, the surgeon will send a transfer slip giving a brief history of the case.

4. All instructions from the War Department prohibiting the publication in printed or other orders or instructions prescribing examinations having in view the detection of venereal diseases among enlisted men, heretofore issued, are recalled. (G. O. 17, 1912, as amended by Par. III, G. O. 71, 1913.)

Paragraphs 93 to 105 eliminated, as they have no application to Infantry.

106. Purposes for Which Company Fund May Be Expended. The company fund is not intended for expenditure in the purchase of articles to facilitate the transaction of business in a company. On the contrary, the legitimate and proper application of this fund is in supplementing the articles already furnished by the supply departments for the purpose of increasing the comfort, pleasure, contentment, mental and physical improvement of the organization. To accomplish this purpose, disbursements of company fund are authorized; disbursements for all other purposes are unauthorized. (Cir. 6, 1904.)

The foregoing is construed as not prohibiting the purchase or repair of typewriting machines from the company fund, provided the officer responsible for expenditures from that fund decides that the same are made solely for the benefit of the company and for the purpose of increasing the comfort, pleasure, and contentment of the enlisted men. (Cir. 56, 1906.)

107. Purchase of Additional Articles of Food Supply from Company Funds. Under paragraphs 293 and 296, Field Service Regulations, 1914, the purchase of additional articles of food supply from company funds by troops in campaign is prohibited, in order to prevent the overloading of the ration sections of the field trains and to insure that all organizations of the same command are rationed for the same period. In the case of troops on practice marches and maneuver campaigns in time of peace, however, there is no objection to the purchase of such articles from company funds, provided that no such articles are carried in the ration sections of the field trains. (Par. III, Bul. 26, 1914.)

Paragraphs 108 and 109 eliminated, as they have no application to Infantry.

110. Debts Due Company Fund by Deserter. After deducting for stoppages and forfeitures due to the United States at the date of a desertion, any balance of pay or allowances that might otherwise be due the deserter are forfeited to the United States, and consequently there are no funds which could be used to satisfy debts due by a deserter to the funds of his company, troop, or battery. (Par. II, Cir. 5, W. D., 1903.)

Paragraphs 111 to 115 eliminated, as they have no application to Infantry.

116. Indebtedness to Post Laundries and Post Exchanges. Indebtedness to post laundries established out of funds carried by the acts of appropriation for the support of the Army is an indebtedness to the United States. The post exchange is entitled to be paid its indebtedness against a soldier because it is an individual within the meaning of the exemption contained in section 4818, Revised Statutes.

Paragraphs 117 to 135 eliminated as they have no application to Infantry.

136. Unit Accountability Equipment. Accountability, maintenance, etc.:

Note: This order rescinded by G. O. 58, W. D., 1917.

1. Classification of Property. Hereafter for the purpose of accounting for government property (engineer, ordnance, and signal property) in the hands of organizations for which unit accountability equipment is prescribed, it will be divided into classes, as follows:

Equipment "A" is the equipment prescribed for use in campaign, in simulated

campaign, or on the march. It is limited to the animals and vehicles prescribed in the Tables of Organization, the equipment and clothing worn on the person, and the articles carried on mount, and transported in field, combat, and divisional trains.

Equipment "B" is the equipment which, in addition to equipment "A," is prescribed for the use of troops in mobilization, concentration, instruction, or maneuver camps; and during such pauses in operations against an enemy as permit the better care of troops.

Equipment "C" is the sum of equipments "A" and "B."

Garrison equipment is the equipment prescribed for use in garrison only.

2. Unit Accountability Equipment and Accountability Therefor. The unit accountability equipments comprising the engineer, ordnance, and signal property of the various organizations will consist of articles of "A" and "B" equipment prescribed in the unit accountability equipment manuals for the authorized strength, and will be accounted for by organization commanders on returns (Form No. 451, A. G. O.) to be rendered to the chiefs of the staff departments concerned on December 31 and June 30 of each year. In case of complete transfer of the unit accountability equipment, the transferring officer will render a final return on which he will certify that he has turned over the equipment to his successor, and the receiving officer will, on the same return, acknowledge receipt of the equipment.

The returns of unit accountability equipment ("A" and "B") will be submitted to the commanding officer for direct transmission to the chiefs of bureaus concerned.

3. Accountability and Responsibility for Other Government Property. All garrison equipment and other government property in the hands of organization commanders, except that held under unit accountability, will be held on memorandum receipt from the various post or other designated supply officers, who will render to the chiefs of the staff departments concerned returns as at present for all property for which they are accountable.

4. Maintenance of the Unit Accountability Equipment. (a) Organization commanders will be held responsible that the unit accountability equipment of their respective organizations is at all times complete and serviceable. When any articles of the unit accountability equipment, except those under charge of armament officers and not specifically listed in War Department publications or orders as subject to the action of a surveying officer (certain articles under charge of armament officers are listed in War Department publications as subject also to the action of a surveying officer) are lost, destroyed, or become unserviceable through fair wear and tear, and are no longer repairable with the facilities available in the organization, post, or district, the organization commander will secure the necessary approved expenditure list survey reports, or inventory and inspection reports to cover the same. These vouchers, in duplicate, will be turned over to the post supply officer or other designated issuing officer, who will issue the articles necessary to replace those lost, destroyed, found unserviceable and destroyed, or turned in to him for shipment to an arsenal or depot, in accordance with the regulations governing such shipments. For the excepted articles of artillery and machine-gun matériel under charge of armament officers and not specifically listed in War Department publications or orders as subject to the action of a surveying officer, organization commanders will communicate directly with the armament officer in all cases requiring replacement or repair by means not provided within the organization.

(b) In case any articles of this equipment become unserviceable from any cause and are no longer repairable with the facilities available, or are lost or

destroyed, and are needed for immediate use, they will be replaced by the supply officer upon a certificate signed in duplicate by the organization commander setting forth the facts, the articles required, and that he will furnish a proper voucher to cover same. The supply officer will drop from his certificate under these certificates the articles so issued. The organization commander receiving such articles will file with his next return, forwarded to the supply department concerned, a regular voucher as required by the orders and regulations to cover the articles enumerated on his certificate furnished the supply officer. When issues are so made the total money value of the articles issued will constitute a money charge against the organization commander until he shall have been relieved of such charge by the supply officer of the vouchers referred to in his certificate.

(c) In all cases where old serviceable or cleaned and repaired articles are in the hands of the issuing officer, they will be issued instead of new articles. Organization commanders to whom articles are issued will acknowledge receipt of such articles either (a) upon the approved expenditure list or inventory and inspection reports, statement of charges on pay or other evidence of final disposition now required by regulations, or (b) in the absence of the ability to supply such evidence immediately the receipt will appear upon the organization commander's certificate referred to above.

(d) In case all the articles covered by such vouchers are not replaced at one time, the acknowledgment of such as are actually replaced at the time the vouchers are turned over to the supply officer will be made by Form No. 544, A. G. O. (credit voucher). Replacement of articles of unit value, ability equipment, and the articles remaining due when replaced, will be receipted for on this form.

(e) If on the administrative examination of the property return submitted by the issuing officer any voucher submitted by an organization commander violates the provisions of this paragraph, is disallowed, the organization commander that submitted the voucher will be charged with the accountability and be required to furnish satisfactory vouchers, or to replace the property to pay the money value thereof.

5. Supply Officers. In garrison designated supply officers represent various supply departments, or line officers, are appointed by the organization commander for each post under the provisions of paragraphs 206, 254, and 255, Army Regulations, unless for purposes of supply two or more are appointed together by War Department orders.

In the field issues will be made by designated supply officers who are appointed by the commanding officer of the instruction, maneuver, operation, or concentration camp, or of a tactical unit serving separately. Reference to supply.

Such accountable supply officers shall make issues to organizations and shall keep the records and render the returns and reports of cost of maintenance required by paragraph 9 of this order.

6. Ammunition for Target Practice and for Other Authorized Firing. Ammunition required by organization commanders for authorized target practice, instruction firing, etc., will be furnished on memorandum receipt by post ordnance officers or other issuing officers, and at the end of the accounting period the organization commander will furnish the accounting officer with a voucher properly executed on Form No. 19, Office of Ordnance, to cover all ammunition that has been actually expended for authorized purposes during the period. At the end of the calendar year any ammunition not actually expended will be returned to the accounting officer and the memorandum receipts withdrawn by the responsible officer.

organization holding ammunition on memorandum receipt will, upon departing for duty at another post, furnish the accountable officer a voucher on Form No. 19, Office Chief of Ordnance, to cover all ammunition actually expended and turn in to the accountable officer all ammunition remaining on hand not pertaining to the unit accountability equipment.

7. Expendable Articles. (a) Organization commander having unit accountability equipment may obtain from the post, or other authorized supply officers, on requisition receipt blanks (Form No. 543, A. G. O.), executed in duplicate, such quantities of expendable parts, materials, and supplies as are listed in the supply tables and are within the authorized money allowance, when such money allowance is prescribed. In any case the value of the material so issued under requisition and receipt voucher (Form No. 543, A. G. O.) will be charged against the cost of maintenance of the organization, and the property will be dropped by the supply officer under that voucher as expended. When practicable, issues of expendable material will be made to each organization quarterly.

If conditions arise which, in order to maintain equipment in a serviceable condition, require the issue of expendable materials in excess of the authorized money allowance, the requisition therefor with an explanation of the necessity for the issue will be forwarded to the chief of the supply department concerned, except in the Philippines and Hawaii, where the action of the department commander will be final.

Expendable articles issued to organizations without unit accountability equipment will be covered by exchange of regular property invoices and receipts and the property regularly accounted for, by both the issuing and receiving officers, as at present.

(b) Articles which may be especially so published by any supply department as expendable under the following conditions will be replaced by supply officers upon the certificate of the organization commander that the articles are unserviceable from fair wear and tear in the service and the certificate of the post or regimental commander that they are not economically repairable and have no salable value. Lists of such expendable articles followed by the above certificates properly signed, and including the certificate of an officer that all material not useful for repair has been destroyed, will be filed as vouchers to the supply officer's returns.

8. Surplus at Posts. Supply officers will, so far as practicable, anticipate the needs of the organizations with whose supply they are charged. To this end they will carry on hand within the limits prescribed by the various supply departments such quantities of equipment and supplies in addition to current requirements as the conditions under which they are serving would warrant. Should it become desirable to increase or decrease the limits prescribed either for maintenance of the unit accountability equipment of organizations, or, in the case of engineer equipment and supplies, to meet special needs, authority will first be obtained from the chief of the supply department concerned. Requests for such authority will state reasons therefor.

Requisitions will normally be submitted prior to January 1 and June 30 of each year for the following six months if storage facilities permit; otherwise they will be submitted quarterly. When submitting these requisitions, the supply officer will furnish a statement showing the quantities of the articles requested, which were issued, or called for but not issued though authorized, during the preceding six months' period or quarter; the quantities on hand; and the maximum authorized reserve, for the organizations with whose supply he is charged, together with appropriate brief explanation of any unusual request.

9. Cost of Maintenance. (a) The methods should be such that the cost obtained is the actual cost to the United States of supplying the organization with the particular equipment in question. On account of the difficulty of fixing a just credit to be given an organization for property that has been used by it, and turned in unserviceable but still repairable, it is desired, whenever practicable, that such property be retained in the organization until no longer repairable.

(b) Each post supply officer, or other designated issuing officer, will keep on the prescribed form (Form No. 450, A. G. O.), Record of Cost of Maintenance, an account of the money value of all "A" and "B" equipment, certain designated articles of garrison equipment, and supplies, expendable and nonexpendable (including quartermaster property), issued to or received from organizations provided with the unit accountability equipment, except of articles issued to replace those charged to officers or enlisted men, and to replace those lost and charged to transportation companies, etc. The cost of maintenance will also include the charge for cleaning materials, spare parts, etc., required to maintain in serviceable condition property issued on memorandum receipt. All entries on a record of cost of maintenance pertaining to unit accountability material must be covered by a voucher to the return of the supply officer on which is shown the total value of such entry. Entries on this record on account of charges for garrison equipment will have entered in the record the number of the memorandum receipt, thus: 7 (mem.). Organization commanders will, upon request, be informed of the status of their cost of maintenance account.

(c) For each organization of mobile Artillery separate records of cost of maintenance will be kept, as follows: One for arms, personal, organization, and horse equipment, harness, and parts pertaining thereto; the other for Artillery matériel under charge of an armament officer.

(d) When a transfer of property, with corresponding entries on the record of cost of maintenance, results from an authorized increase or decrease in the strength of an organization or from the change from an old to a new model of equipment, such entries will be identified by appropriate notes as "change in authorized strength" or "new model to replace serviceable old model" and will not be included in the total actual cost of maintenance for the period, but will be totaled separately.

(e) In computing the value of these and other issues or receipts, the prices given in the unit accountability equipment manuals and tables of credits will be used regardless of the models in question. When prices are not otherwise furnished the price list will govern. When serviceable property (except Field Artillery matériel, etc., which is under the supervision of armament officers) which has been used is to be turned in or issued, the value thereof will be determined by a surveying officer and entered by him on the voucher of transfer. These values so determined will hold for future issues in so far as it is practicable and equitable. Similar action will be taken in the case of cleaned and repaired stores whose price is not published.

(f) The cost of all repairs directed by or made under the supervision of an armament officer will be reported by him to the local supply officer for charge, as directed herein, on the proper record of the cost of maintenance. When an armament officer directs that Artillery or machine-gun matériel or parts be turned in for repairs or replacement, the receiving arsenal will report the cost of repairs to the armament officer for transmission to the local supply officer.

(g) When an organization changes station during the accounting period a copy of its records of cost of maintenance (Form No. 450, A. G. O.), to-

gether with a statement of its remaining credits under the various money allowances, will be forwarded by the old supply officer through the commanding officers of the old and new stations to the new supply officer.

(h) Each post supply officer or other designated supply officer will render, through the commanding officer, to the chief of his department or corps, a report (Form No. 449, A. G. O.), showing the cost of maintenance of each organization having a unit accountability equipment, and to whom issues have been made in the preceding six months, but no record of cost of maintenance will be kept in the case of organizations engaged in operations in the field in time of war.

10. Economy of Maintenance and Condition of Equipment to be Considered by Officers Rendering Prescribed Efficiency Reports of Organization Commanders. Officers making the prescribed efficiency reports will consider the condition of equipment and the economy with which an organization has been maintained. In determining this, due consideration will be given to the length of time the particular officer has commanded the organization, the nature of its service, and all other circumstances which would affect the deterioration of the equipment.

11. Increase or Decrease in Authorized Strength. Should the authorized strength of an organization be increased, the post supply officer or other issuing officer will, upon application of the organization commander, issue the necessary additional equipment, the organization commander citing on his receipt therefor the number, date, and source of the order authorizing the increase. Should the authorized strength of an organization be decreased, or should it be necessary for any reason to turn in surplus equipment, the surplus will be invoiced to the proper supply officer, whose receipt therefor, with notations thereon of the authority for the transfer, will be filed by the organization commander with his next return. Surplus equipment to be turned in should be new and unused, if such is on hand; otherwise, the most serviceable that is on hand, and supply officers or other issuing officers will receive and receipt for such serviceable surplus equipment which has been passed upon by a survey officer who will also determine its value as prescribed in section (e), paragraph 9, of this order.

12. Completion of Equipment. One of the reasons for changing to the unit accountability method of accounting for property was to lessen the paper work of organization commanders in connection with rendering property returns. To this end it is desired that every such commander endeavor at all times, but especially as the accounting time approaches, or when a transfer is to be made to another officer, to see that the full authorized equipment is on hand, and no more.

Paragraphs 137 to 152 eliminated, as they have no application to Infantry.

153. Claims for Damages. 1. There are received in the War Department many claims for damages to private property resulting from military operations, including heavy gun practice at the seacoast defense forts. When it is clearly established that the damages claimed in any case have been caused by such operations, and the circumstances are such as to make it equitable for the United States to assume responsibility therefor, the amount of the damages having been determined and the claimant having filed a statement that he will accept the amount so determined in full of his claim, the amount of the damages so determined will be included in an estimate submitted to Congress for an appropriation to cover such claims. In the absence of such appropriation, the department is without authority to pay or settle such claims.

2. The action of the department upon such claims is based upon the evi-

dence submitted by the claimant as to the nature of the damages; how they were incurred, and the cost of restoring the damaged property to its previous condition, supported by the findings of a board of officers that has investigated the claim, or by a surveying officer when the appointment of a board of officers is not practicable.

3. To enable intelligent action to be taken upon claims of this nature it is requisite that the claimant submit a statement over his own signature setting forth all the facts and circumstances under which the damages charged for accrued; the nature and extent of the damages; the date they were incurred, and the cost for repairs of the same, to be accompanied by such evidence as is available, and by a receipt for the payment of the repairs, if they have been made, or an estimate of the cost thereof. The post-office address of the claimant will also be stated.

4. The report of the board of officers or surveying officer investigating the claim should recite the circumstances under which the claim accrued; the date thereof; the nature and extent of the damages, and whether or not they were due to pure accident, or to the fault of any officer or agent of the United States or any other person, or were the necessary result of military operations. The report should also cover the cost of restoring the property to the condition in which it was before it was damaged, deduction being made for any improvement in such restoration, and should conclude with a recommendation as to the amount which should be allowed and paid to the claimant for the restoration.

5. Should the investigating board or the surveying officer require expert assistance to determine the nature of the damages and the cost for repairs, application will be made to the Adjutant General of the Army for the services of an expert competent to advise the board or the surveying officer as to the matters under consideration.

6. Officers to whom claims for damages to private property are submitted will explain to claimants the method of determining the award to be recommended, and that there is no appropriation or authority of law for the payment of such claims by the War Department, but that they can be paid only after appropriations have been made by Congress for that purpose. All action taken toward determining the amount of damage to any property is for the purpose of obtaining information to enable the Secretary of War to make proper recommendation to Congress, by which body only can be taken final action authorizing payment.

7. No charges or estimates for improvements, changes, or additions to property should be included in any claim for damages, and if included will not be allowed in the award recommended, but will be deducted from the amount claimed.

8. The claimant will be advised in writing of any deductions made from his claim, and the reasons therefor, and of the award to be recommended, and will be requested to state in writing whether or not he will accept the award, and if he will not accept the award to submit his reasons. His answer will be forwarded with the recommendations as to the award. (Cir. 22, 1910.)

Paragraphs 154 to 173 eliminated, as they have no application to Infantry.

CORRESPONDENCE.

174. Method of Writing Letters and Indorsements. The method of writing letters and indorsements prescribed herein will be used in all official correspondence in the service of the War Department and the Army and with bureaus of executive departments:

1. Heading, Subject, and Number of Letter. The letter will begin with the place and date, written as at present; below this, beginning at the left margin, will come the word "From," followed by the official designation of the writer or, in the absence of any official designation, the name of the writer with his rank and regiment, corps, or department; below this, also beginning at the left margin, will come the word "To," followed by the official designation or name of the person addressed. Next will come the subject of the communication, indicated as briefly as possible and in not to exceed 10 words. The words "From," "To," and "Subject" will begin on the same vertical line. The sending office number of the communication will appear in the upper left-hand corner.

EXAMPLE.

176.

Hq. Eastern Division,
Governors Island, N. Y., May 25, 1911.

From: The Adjutant General.

To: Captain John A. Smith, 1st Inf.

(Through C. O. Madison Barracks, N. Y.)

Subject: Delay in submitting reports.

The division commander directs that you submit without further delay the reports of your recent inspection of the Organized Militia of the State of New York, and that you submit an explanation of your failure to comply with Par. 6, S. O. 25, c. s., these headquarters.

J. R. HENRY.

In case of letter paper, the upper third, and in the case of foolscap, the upper fourth of the sheet, will be devoted solely to the matter described in this paragraph. (See Par. 7.)

2. Body. Then will come the body of the letter, which, when typewritten, will be written single spaced, with a double space between paragraphs, which will be numbered consecutively.

3. Signature. The body of the letter will be followed by the signature. If the rank and the regiment, corps, or department of the writer appear at the beginning of the letter they will not appear after his name; but if they do not appear at the beginning of the letter they will follow under his name as at present. For example:

200.

Company A, 24th Infantry.
Madison Barracks, N. Y., Jan. 3, 1911.

From: Commanding Officer, Co. A, 24th Inf.

To: The Commanding Officer.

Subject: Pvt. Smith's case.

The case of Pvt. Smith has been investigated and charges have been preferred under the 62 A. W.

ROBERT JONES,
1st Lt., 24th. Inf.

Madison Barracks, N. Y.,
Jan. 10, 1911.

From: Capt. John A. Smith, 24th Inf.

To: The Adjutant General, U. S. A.

Subject: Leave of absence.

I have this day taken advantage of the leave granted me by Par. 1, S. O. 1, Hq. D. E., 1911. My address will be c/o Army and Navy Club, 107 West 43d St., N. Y.

JOHN A. SMITH.

4. Omission of Ceremonial Forms. All ceremonial forms at the beginning and end of letters, such as "Sir," "I have the honor," "I would respectfully," "Very respectfully," etc., will be omitted.

5. Use of Only One Side of Sheet. Only one side of the paper will be used, the writing beginning about 1 inch from the top.

6. Office Marks. The stamps bearing office numbers will be placed on the back of the lower fold of the first sheet. The received and received-back stamps will be placed immediately below the body of the letter, and, in the case of indorsements, immediately after the proper indorsement. When a communication of two or more sheets is filed, the back of the lower fold of the first sheet will be on the outside, thus exposing to view the office numbers.

7. Brief. The matter described in paragraph 1 of this order will constitute the brief of the letter.

8. Folding. Letter paper will be folded in three and foolscap in four equal folds, parallel with the writing; the top fold will be folded toward the back of the letter and the lower fold over the face of the letter. In three-fold letters both the brief and the office mark will be on the outside. In three-fold letters of more than one sheet the two lower folds of the sheets other than the first will be placed between the first and second folds of the first sheet, thus exposing to view both the brief and the office mark. In four-fold letters, whether of one or more sheets, the brief will be exposed to view by covering the office-mark fold or the office-mark be exposed to view by covering the brief, according as it is desired to keep either the one or the other exposed to view for the purpose in hand.

9. Inclosures. All inclosures will be numbered and will be given the proper office marks. Inclosures to the original communication will be noted on the face of the letter to the left of the signature. If others are added when an indorsement is made, their number will be noted at the foot of the indorsement to which they pertain and also on the back of the lower fold of the first sheet of the original communication. To the latter notation will be added the number of the indorsement to which they belong, thus: "One inclosure—fifth indorsement." Inclosures to indorsements are numbered in the same series as those to the original paper and the number of the indorsement to which they belong is added below. If few in number and not bulky, inclosures may be kept inside the original paper; otherwise they will be folded together in a wrapper marked "Inclosures." Officers through whose hands official papers pass will make the inclosures secure when they are not so. The entry of serial numbers on inclosures and of notations on papers to show the presence of inclosures to an original communication or to show inclosures added to or withdrawn from a case when indorsements are written, as illustrated by the Correspondence Model distributed by the Adjutant General of the Army, will be made in the office in which the inclosures concerned originate or are added or withdrawn. The total number of inclosures accompanying a paper will be noted at the foot of each indorsement thereon.

INDORSEMENTS.

10. Form. The writing width of indorsements will be the same as that of letters. The first indorsement will begin about one-half inch below the rank after the signature of the writer of the letter, and succeeding indorsements will follow one another serially, with a space of about one-half inch between indorsements.

The serial number of the indorsement, the place, the date, and to whom written, will be written as shown in the example (Par. 21).

When typewritten, indorsements will be written single-spaced with a double space between paragraphs. The paragraphs will be numbered consecutively.

11. Additional Sheets. Should one or more additional sheets be necessary for indorsements, sheets of the same size as the letter will be used.

12. "Respectfully referred," etc., to be omitted. In referring, transmitting, forwarding, and returning papers, the expressions "Respectfully referred," "Respectfully transmitted," "Respectfully forwarded," and "Respectfully returned," will be omitted.

13. Routine Indorsements to be Signed With Initials. Indorsements of a routine nature, referring, transmitting, forwarding, and returning papers, will not be signed with the full name, but with the initials. For example:

1st Ind.

Hq. 24 Inf., Madison Bks., N. Y., Jan. 1, 1911—To C. O., Co. C, 24 Inf.

To note and return. M. A. R.

2d Ind.

Co. C, 24 Inf., Madison Bks., N. Y., Jan. 2, 1911—To the Commanding Officer.

Returned. Contents noted. I. K. S.

Nothing in this order shall be construed as prohibiting the practice that obtains at present at department and other headquarters of referring, transmitting, forwarding, and returning papers to the various staff officers thereat without signature or initials.

LETTERS AND INDORSEMENTS.

14. Numbering of Pages. The pages, beginning with the first, will be numbered midway about one-half inch from the bottom. In referring to an indorsement by number, the number of the page will also be given. Thus: "5th Ind., page 3."

15. Carbon Copies. All letters and indorsements that are typewritten, excepting letters of transmittal, reports of taking leave of absence, periodical reports, and other communications of a similar nature, will be made with two carbon copies. One copy will be retained for the records of the office in which the letter was written, and the other will be forwarded with the communication for the files of the first office in which a complete copy of the communication is required for the records, but such forwarded copy will not be regarded as an inclosure within the meaning of Paragraph 9 of this order. The carbon copy retained for the office record will be initialed by the person responsible for the letter, and such person is charged with the duty of seeing that the name of the official who signs the letter and any changes made before signature are inserted in the carbon. When a complete copy of a communication is not required for the records of an intermediate office the carbon copy will be forwarded to the next office. In offices authorized to use the record card system the carbon copies will be made on sheets of perforated paper, furnished by the Quartermaster's Department, with perforated sections the same width as the standard record file cards. The sheets will be torn along the perforations and the sections attached to the record file cards. In other offices the carbon copies will be made on ordinary paper and the retained copy filed in the document file. The pro-

visions of this paragraph apply only to communications addressed to individuals and offices within the military service.

16. Press Copies. Press copies will not be used except by written authority of the Secretary of War.

17. Communications written prior to the receipt of this order are not subject to its provisions when in the future they are received or transmitted by any office or individual.

18. Printed and Multigraph Forms. Nothing in this order is intended to prohibit the use of printed or multigraph forms of letters and indorsements in offices now using such forms, provided the forms conform to the general principles of this order. The back of the first sheet of such forms, except the fold containing office marks, may be used for indorsements.

19. Channels of Communication. All classes of official communications heretofore addressed to adjutants or to adjutants general other than the Adjutant General of the Army will in the future be addressed to the commanding officer concerned.

20. Points not touched upon in this order will be governed by the present regulations on the subject of correspondence.

21. Example. The following example will be used as a guide in carrying out the instructions contained in this order:

20.

Fort Riley, Kans.

October 27, 1910.

From: The Ordnance Officer.

To: The Commanding Officer, 7th Cav.

Subject: New system of issuing ordnance stores.

1. In compliance with instructions contained in a letter from the Adjutant General's Office, dated November 27, 1909, regarding the testing of a new system of issuing ordnance stores, the following report concerning the working of this system is submitted.

2. As far as I have been able to observe, the new system has no disadvantages. Its advantages are:

* * * * *

Brig. Gen., Comdg.

10th Ind.

(Stamped indorsement.)

A. G. O. D. D.

Nov. 25, 1910.

To the Chief Ordnance Officer.

(G. O. 23, 1912—1930959, A. G. O., as amended by Par. I, Bul. 24, 1912—1930959, and Par. III, G. O. 53, 1913.)

Paragraphs 175 to 177 eliminated, as they have no application to Infantry.

178. **Correspondence in Battalions or Squadrons.** Correspondence relating to the personnel, instruction, discipline, or equipment of a company, battery, or troop in battalion or squadron will pass through the battalion or squadron commander. No official record, however, will be kept by the battalion or squadron commander of such correspondence. (Par. IV, G. O. 8, 1914.)

Paragraph 179 eliminated, as it has no application to Infantry.

180. **Data for Changes on Enlistment Papers or Muster Rolls.** When an officer of the Army finds it necessary, on account of errors or omissions, to

have changes or corrections made on enlistment papers or muster rolls that have been furnished to the Adjutant General's Office, he will forward the data pertaining to such changes or corrections directly to the Adjutant General of the Army. (Par. IV, G. O. 24, 1912.)

181. Prompt Reply to be Made to Official Communications. Officers who fail to make prompt reply to official communications without satisfactory excuse for the delay will be subjected to disciplinary measures.

When, in order to make proper reply, it is necessary to examine papers not at hand or to consult with other persons at a distance, or when for other sufficient reason full and prompt reply is impossible, acknowledgment of the receipt of the communication will be made at once with a statement giving the cause of the anticipated delay.

The commanding officer of every Army post and station will take such steps as he may deem expedient to insure prompt reply by officers of his command to official communications sent them which require reply. (Par. I, Cir. 25, 1906.)

Paragraphs 182 to 192 eliminated, as they have no application to Infantry.

193. Charges on Pay Rolls for Ordnance Property. When charges are made on pay rolls against an enlisted man on account of the loss or damage to property pertaining to the Ordnance Department, the officer who makes the charges will forward a report thereof on Form No. 94, Ordnance Department, to the quartermaster who is to pay the organization to which the soldier belongs. When charges of this character are made on final statements, the officer who makes the charges will forward a report thereof on the same blank form to the department quartermaster of the department in which payment is to be made. After verification of the charges the quartermaster or department quartermaster, as the case may be, will forward the reports directly to the Chief of Ordnance, except in the Philippine Department, where they will be forwarded through the chief ordnance officer of the department.

When charges are made on pay rolls against an enlisted man and not collected, reports will be made until the amount shall have been collected. If an enlisted man is separated from the service and the charges standing against him have not been collected on the pay rolls, a notation showing that the charges have been transferred to his final statements will be made on the report for the month in which the soldier was dropped. If for any reason final statements are not furnished to a discharged soldier, the notation will be modified so as to show that fact. If an enlisted man is detailed or transferred to another organization and the charges standing against him have not been collected on the pay rolls, a notation will be made on the report for the month in which the detail or transfer was effected showing that the receipt of the soldier was obtained for the missing property, as prescribed in Paragraph 1535, Army Regulations.

If an enlisted man should desert and the charges standing against him have not been collected, a notation will be made on the report for the month in which he is dropped for desertion showing that collection could not be made on that account; if the soldier should subsequently reënlist or be apprehended, any charges standing against him on the prior pay rolls will be transferred to the new rolls and reports thereof made on Form No. 94, Ordnance Department, until the charges shall have been collected.

If an enlisted man should desert and it should subsequently appear that the last roll upon which his name is borne did not cover all the charges that should have been made against him, the commanding officer of the organization to which the soldier belongs will take steps to have the necessary corrections made on the roll. The report required on Form No. 94, Ordnance Department,

will be made as in other cases to cover the additional ordnance charges and notation made on the report showing why the charges have not been collected.

When the charges are made for the first time, the accountable officer is authorized to enter on the semiannual statement of charges (Form No. 86, Ordnance Department) a list of the missing articles and to take credit for the same on his next semiannual return, without being required to show that collection has been made of the charges. He is, however, not authorized to make entry on the statement of charges or to take credit for these articles on account of the same charges appearing on a subsequent pay roll by reason of failure to collect on a prior roll.

When an enlisted man is detailed or transferred to another organization, any articles of ordnance property for which he may be indebted to the United States at the time of the detail or transfer, and any other article of ordnance property which he may carry with him, will be dropped from the return of the accountable officer on the duplicate invoice and receipt transfer voucher (Form No. 152, Ordnance Department) as prescribed in paragraph 1535, Army Regulations. If any of the articles appearing on this invoice have been dropped on the statement of charges, they will not be again dropped by virtue of this voucher. Such articles as the soldier may be indebted for will not be entered on the statement of charges or on Form No. 94, Ordnance Department, as charged on the Descriptive List, or on the descriptive and assignment card. (G. O. 59, 1907.)

194. Preparation of Pay Rolls, Muster Rolls, etc., on Typewriting Machine. The preparation of muster rolls, pay rolls, inventories of effects, and certificates of disability for discharge, on a typewriting machine, is authorized, provided a black-record ribbon of standard quality is used, but carbon copies of such papers will not be forwarded to the War Department.

Under no circumstances will discharge certificates and final statements be prepared on a typewriting machine. (Par. 4, Cir. 5, 1909, as amended by Par. I, Cir. 41, 1910.)

Paragraphs 195 to 198 eliminated, as they have no application to Infantry.

199. Mailing of Letters of Soldiers in the Field. Letters sent by soldiers, sailors, and marines in the United States service, located in the United States or any of its possessions, or other places where the United States domestic mail service is in operation, addressed to places in the United States or any of its possessions, when indorsed "Soldier's letter," "Sailor's letter," or "Marine's letter," and signed thereunder, either with facsimile hand stamp or in writing, with his official designation, by a field or staff officer, post or detachment commander, to whose command the soldier belongs, or by a surgeon or chaplain at a hospital where he may be; and in the Navy and Marine service by any commissioned officer attached to the vessel, or officer commanding a hospital or detachment ashore, may be dispatched to destination without prepayment of postage, and only the single rate of postage shall be collected on delivery. (Par. II, Bul. 19, 1914.)

Paragraphs 200 to 228 and 230 to 250 eliminated, as they have no application to Infantry.

Note: See par. 229, p. 976.

251. Stovepipe Openings Not to be Cut in Roofs or Flies of Tents. All regulation hospital and regulation wall tents will be provided with asbestos rings for the openings for stovepipe, to take the place of the rectangular ventilators, the rings and the necessary elbows for the stoves to be supplied by the Quartermaster Corps.

The cutting of stovepipe openings in the roofs or flies of tents is forbidden. (Par. II, Cir. 63, 1906.)

Paragraphs 252 to 276 eliminated, as they have no application to Infantry.

277. Material for Treatment of Dental Injury. When a dental injury, incurred in line of duty, is reported for treatment conformably to the provisions of paragraphs 1402 and 1403, Army Regulations, and the dental surgeon or acting dental surgeon has not on hand the material or equipment necessary to perform the work required, he will bring the case to the attention of higher authority for decision as to what further procedure shall be had. (Par. V, G. O. 67, 1914.)

Paragraphs 278 to 294 eliminated, as they have no application to Infantry.

RIFLES.

295. Submission of United States Rifles, Caliber .30, Model of 1903, for the Action of Inspectors and Surveying Officers. 1. Experiments at the arsenals indicate that the rifle, with ammunition as now issued, should be serviceable for from 8,000 to 13,000 rounds. The earlier ammunition of 1906 model, however, was loaded with a nitroglycerin powder, and doubtless there are rifles in service which were fired one or two seasons with this powder. With this powder the life of the rifle would be about 4,500 to 5,000 rounds. The foregoing results obtain at the arsenals where the work of cleaning and caring for the rifles is done by experienced and careful employees. The unserviceable rifles turned in to the arsenals appear to have become so more through want of careful cleaning and through the use of abrasives than by reason of the actual number of rounds fired. This appears from the fact that the rifles turned in are worn at the muzzles and the barrels are rusted or pitted, whereas with proper care the rifles should become inaccurate only by reason of erosion at the bullet seat. It may be considered that a rifle will be fired 400 rounds in one season. A rifle with reasonable care should be good for at least 10 years with the present powder, or for about 4,000 rounds.

2. Experience has shown that in general the accuracy of rifles is not affected sufficiently to make them unserviceable until the diameter across the lands at the muzzle exceeds 0.304 inch, and that rifles measuring 0.308 inch across the lands at the muzzle are generally unserviceable. Hereafter all rifles, before being submitted for the action of an inspector or a surveying officer on the ground of lack of accuracy, will first be inspected under the supervision of a commissioned officer, using cylindrical plug gauges 0.304 and 0.308 inch in diameter, issued by the Ordnance Department for the purpose and to be obtained from the post or regimental ordnance officer. Those rifles in which the 0.304-inch plug gauge does not enter or enters snugly will be retained in service without further accuracy tests. Those rifles in which the 0.308-inch plug gauge enters freely will be reported as unserviceable and will not be tested by targeting. Rifles considered unserviceable in which the 0.304-inch plug gauge enters freely and which will not admit a 0.308-inch plug gauge or admit it only snugly will be tested by targeting as hereinafter explained before being submitted for the action of an inspector. After these tests with plug gauges have been made, they will be certified to by the officer supervising the tests. Plug gauges will be issued to post or regimental ordnance officers without requisition.

3. The test will be made under favorable weather conditions by an expert shot with the rifle at known distance slow fire, under the personal supervision of a disinterested officer, and will consist of one target of 10 shots at each of the ranges, 300 and 500 yards, the targets to be preceded by sighting shots at each range and muzzle rest to be permitted. When practicable the expert making the test will be of another organization than the one to which the rifles belong. Before being tested at each range the rifles will be thoroughly cleaned and all metal fouling removed from the bore. The best ammunition

available will be issued for testing the rifles, and ammunition of different dates of manufacture should not be used in making targets for a single rifle. If the mean radius of these targets is less than 6.5 inches at 300 yards, or less than 13 inches at 500 yards, the rifles will be considered sufficiently accurate to be retained in the service. If the mean radius is greater than that stated the rifles will be submitted to an inspector or surveying officer for his action. The results of the test will be certified to by the officer supervising it, and will be shown in the case of each rifle, the rifle being designated by its number and the initials of the arsenal where it was manufactured. If a range of 500 yards is not available the test should be conducted under the same conditions at each of the ranges 200 and 300 yards. If the mean radius of these targets is less than 6.5 inches at 300 yards, or less than 4.5 inches at 200 yards the rifles will be considered sufficiently accurate to be continued in service.

4. The expenditure of the ammunition necessary to conduct the test prescribed in the preceding paragraph is authorized, but it will be furnished by the organization presenting the rifles for test from its allowance for target practice.

5. The mean radius of a group of shots is determined as follows: After removing the paper target from the frame, lay out vertical and horizontal axes which will contain the group of shots. Measure the vertical distance from the center of each shot hole to the horizontal axis; the mean of these distances gives the vertical ordinate of the center of impact. Measure the horizontal distance from the center of each shot hole to the vertical axis; the mean of these distances gives the horizontal ordinate of the center of impact of the group of shots. After plotting the center of impact, measure the distance from the center of impact to the center of each shot hole. The mean of the distances from the center of impact to the centers of the shot holes is the mean radius.

6. In preparing the inventory and inspection reports, or reports of survey, the following data will be shown thereon:

(a) The number of each rifle and its arsenal initial.

(b) The date of issue of the rifle to the organization (date of invoice) and the number of target seasons it has been fired.

(Par. I, Bul. 24, 1913, as amended by Par. II, Bul. 15, 1915, and Par. II, Bul. 31, 1915.)

296. Use in Swimming and Wall-scaling Exercises. 1. Hereafter United States rifles, caliber .30, model 1903, may be used in swimming or wall-scaling exercises, but company commanders will be held responsible therefor.

2. The rifles will be carefully prepared for swimming exercises by the use of plenty of oil, cosmoline, or other suitable substance, and after each swimming exercise will be carefully cleaned and dried.

3. In the wall-scaling exercise the rifle will not be thrown from the wall, but will be taken from the top of the wall to the ground on the person of the soldier to whom it belongs in such a manner as to be ready for immediate use on reaching the ground. (Par. I, Cir. 38, 1910, as amended by Par. I, G. O. 43, 1911.)

297. Telescopic Musket Sights Not to Be Separated from Rifles. 1. As each telescopic musket sight, model of 1908, has been carefully adjusted and fitted to a specially selected rifle by expert firings at the armories and marked with the number of the rifle to which it belongs, it is not intended that such telescopic musket sight should be permanently separated from its particular rifle.

2. In case it should become necessary to transfer a telescopic musket sight from one organization to another, the specially selected rifle to which it belongs should also be transferred.

3. Likewise, if it should become necessary to forward the specially selected rifle or its telescopic musket sight to an arsenal for repairs, both the rifle and the telescopic musket sight should be forwarded. (Par. II, Cir. 49, 1910, as amended by Par. IV, Bul. 38, 1914.)

298. Assembling. Instructions relative to the assembling of the 1907 gun sling on the rifle:

Assemblage. The sling is made up of four parts, the long strap, the short strap, and two keepers. To assemble it the plain end of the long strap is passed through the larger keeper, then through the metal loop of the short strap, passing from the undressed to the dressed side of the latter, then back through the larger keeper, forming the arm loop dressed side out. The same end is then passed through the smaller keeper, through the upper sling swivel from the butt toward the muzzle, and back through the smaller keeper, the arm loop being completed by engaging the claw of the long strap in the proper holes in the other end of same.

The size of the arm loop is adjusted to suit the individual who is to fire the piece, the loop being drawn through the upper swivel until the claw comes well up toward the upper swivel. The claw end of the short strap is then passed through the lower swivel from muzzle to butt and brought up and engaged in the proper holes in the long strap, drawing the sling taut. This gives the parade position of the sling.

To adjust it for firing or carrying, the claw of the short strap is disengaged and reengaged in the proper holes of the short strap, no change being necessary in the adjustment of the arm loop. (Cir. 16, 1907.)

Paragraphs 299 to 317 eliminated, as they have no application to Infantry.

318. Boxes and Bedding Rolls—Personal Baggage of Officers in the Field. The personal baggage of officers when taking the field will be packed in boxes or bundles conforming to descriptions as follows:

1. A box made of three-ply veneer covered with vulcanized fiber, 32 inches by 19 inches by 13 inches over all. Handles to be of leather and all hinges, locks, and handles to be as flat as possible so as not to interfere with proper packing in wagons. The weight of the box when packed will not exceed 100 pounds.

Any suitable equivalent, such as the Army trunk locker, a telescope, or leather trunk, conforming to the prescribed dimensions and weight and free from projecting parts is authorized.

2. A canvas roll, the bundle not to exceed 39 inches in length and 21 inches in diameter.

3. Canvas bedding rolls for use in the field, as contemplated herein, made in accordance with the sealed pattern in the office of the Quartermaster General of the Army, will be kept on hand by the Quartermaster Corps for sale to officers. (Par. I, G. O. 201, 1905; Par. I, Cir. 42, 1906; Cir. 22, 1909.)

319. Instructions Pertaining to Field Equipment. 1. Field service is defined to be service in mobilization, concentration, instruction, or maneuver camps, as well as service in campaign, in simulated campaign, or on the march.

The complete equipment for field service (equipment "C") consists of engineer, ordnance, signal, medical, and quartermaster property, and is divided into two classes, "A" and "B."

Equipment "A" is the equipment prescribed for use in campaign, in simulated campaign, or on the march. It is limited to the animals and vehicles prescribed in the Tables of Organization, the equipment and clothing worn on the person, and the articles carried on mount, and transported in field, combat, and divisional trains.

Equipment "B" is the equipment which, in addition to equipment "A," is

prescribed for the use of troops in mobilization, concentration, instruction, or maneuver camps, and during such pauses in operations against an enemy as permit the better care of troops.

Equipment "C" is the sum of equipments "A" and "B," and therefore includes every article prescribed for field service as hereinbefore defined.

When troops are ordered on field service, instructions will state the letter designation of the equipment to be taken. The instructions will also specify whether mosquito bars and head nets are to form a part of the equipment, and what winter articles, if any, are to be included. The same rule will apply in the issuance of subsequent orders when necessary. Articles distinctively for winter use can be transported as baggage on the march only when transportation in addition to that prescribed in equipment "A" is provided for that purpose. In addition to the allowances prescribed as the field equipments, service coats, cravats, fatigue clothing, and other articles of uniform, extra bedding, and toilet articles may be taken by officers and enlisted men with equipment "B," when authorized in orders directing the movement of troops.

2. The articles of engineer, ordnance, and signal property listed in the several Unit Accountability Equipment Manuals belong to equipment "A." The articles of medical property belonging to equipment "A" are shown in the Manual for the Medical Department. The articles of quartermaster property belonging to equipments "A," "B," and "C," respectively, are shown in Equipment Tables, Quartermaster Supplies, 1915, published in G. O. 39, 1915, A. G. O. (Par. I, G. O. 85, 1914.)

320. Clothing Component of the Field Kit and the Surplus Kit. 1. The field kit, clothing component, for all arms and branches of the service, mounted and dismounted, in addition to the clothing worn on the person, is composed of the following articles: One blanket; 1 comb; 1 drawers, pair; 1 poncho (dismounted men); 1 slicker (mounted men)¹; 1 soap, cake; 2 stockings, pairs; 1 toothbrush; 1 towel; 1 undershirt; 1 housewife (for 1 man of each squad). The foregoing field kit, which is carried on the person by dismounted men and on the packed saddle by mounted men, is supplemented by the surplus kit, the two together making up the clothing component of the service kit.

2. The surplus kit consists of 1 breeches, pair; 1 drawers, pair; 1 shirt, olive drab; 1 shoes, russet leather, pair; 2 stockings, pairs; 1 shoe laces, extra pair; 1 undershirt. The surplus kit pertains to equipment "B" (Par. I, G. O. 85, W. D., 1914, par. 319, this compilation), as part of the permanent camp equipment, to be forwarded to troops when serving in instruction, maneuver, mobilization, or concentration camps, or when in active service a temporary suspension of operations permits the troops to refit. In peace-time maneuvers and marches the surplus kit may accompany the troops, if so directed in the orders prescribing the movement. The vehicles and animals of the combat train and those representing the divisional supply train will be utilized to transport them.

3. The sweater will form part of equipment "A" (Par. I, G. O. 85, W. D., 1914, par. 319, this compilation), pertaining to field service, and when climatic conditions require its use will be carried by the soldier on his person. When sweaters are not prescribed to be worn on the person, they will be collected into bundles of convenient size and secured by burlap or other suitable material or will be boxed. They will be marked ready for shipment to be forwarded when required. In peace-time maneuvers and marches the sweater, even

¹For all enlisted men of the Quartermaster Corps, both mounted and dismounted; also for enlisted men of the Hospital Corps detailed as ambulance drivers and ambulance orderlies.

though not prescribed to be carried by the soldier on the march, may accompany the troops, if so directed in the orders prescribing the movements. The vehicles and animals of the combat train and those representing the divisional supply train will be utilized to transport them.

The same rule will apply in regard to overcoats.

4. Surplus kit bags will be issued to each organization at the rate of one to each squad, one for the sergeants and one for the cooks and buglers, and one for every eight men of detachments.

Each bag will be marked with the letter of the company and the number of the regiment, as provided in paragraph 295, Army Regulations, for haversacks, and the proper designation of the squads to which the bags belong, both markings to be in center of front cover flap, as shown in the following illustration:

5. The kit bag for the sergeants and that for the cooks and buglers will be marked "Sergeants," "Cooks and buglers" respectively. Similarly, the kit bags for detachments will be appropriately marked.

The kit of each man will be packed as follows:

Stockings to be rolled tightly, one pair in the toe of each shoe; shoes placed together, heels at opposite ends, soles outward, wrapped tightly in underwear, and bundle securely tied around the middle by the extra pair of the shoe laces, each bundle to be tagged with the company number of the owner. These individual kits will be packed in the surplus kit bag in two layers of four kits each, the breeches and olive-drab shirts to be neatly folded and packed on the top and sides of the layers, the jointed cleaning rod and case, provided for each squad, being attached by the thongs on the inside of the bag.

6. (a) In garrison, the surplus kit articles are not required to be kept habitually packed and stored, or kept apart from the rest of a soldier's belongings. The soldier should have the clothing component of the service kit. Surplus kits are packed only when commanders require it to be done.

(b) Organization commanders will keep on hand a sufficient supply of surplus kit bags, marked as prescribed above, but unpacked. (Par. I, G. O. 56, 1915.)

321. First-aid Packets, Field and Instruction. Two types of first-aid packets are supplied by the Medical Department, the field packet in a sealed metal case and the instruction packet in a cardboard box.

The field packet, which forms part of the full equipment of enlisted men,

will be inserted, ring down, in the pouch for first-aid packet, and will be carried as prescribed in the Uniform Regulations. The pouch and packet will be regularly inspected and will not be used except for the purposes for which they are issued, and when damaged, destroyed, or lost through the fault of the soldier to whom issued the cost will be charged against him on the pay rolls of his organization.

The instruction packet will be obtained by the surgeons of posts upon special requisition and supplied by them to company commanders. The allowance for this purpose will be 20 packets for each company, battery, and troop, and 10 packets for each band. The dressings contained in these packets can be used repeatedly for the practical instruction of officers and enlisted men, and after being used for this purpose they should be repacked in the original form.

Both packets are expendable, but officers will be held strictly accountable for their proper and economical use, and will exercise every care to prevent any unnecessary expenditure. (Par. I, Cir. 2, 1908, as amended by Par. I, Cir. 16, 1908, and Par. V, G. O. 44, 1913.)

Paragraph 322 eliminated, as it has no application to Infantry.

323. Care of Saddle Blankets. Saddle blankets, before being folded and put in the storeroom after use, will be dried thoroughly. When in constant use they will be washed at least once a month and will be folded so that the side next to the horse will be changed frequently. (Par. 6, Cir. 47, 1909.)

Paragraphs 324-334 (end of book) eliminated, as they have no application to Infantry.

EXTRACTS FROM GENERAL ORDERS OF THE ARMY, AS PERTAINS TO INFANTRY, FROM JANUARY 1, 1916, TO MAY, 1917 (G. O. 60).

General Orders, } As amended by par. iii,
No. 9. } G. O. 15, 1916.

War Department,
Washington, March 9, 1916.

I. 1. The act of Congress approved May 11, 1908 (35 Stat. 108), making appropriation for the support of the Army, fiscal year ending June 30, 1909, provides:

"That hereafter the United States shall furnish mounts and horse equipments for all officers of the Army below the grade of major required to be mounted, but in case any officer below the grade of major required to be mounted provides himself with suitable mounts at his own expense, he shall receive an addition to his pay of one hundred and fifty dollars per annum if he provides one mount, and two hundred dollars per annum if he provides two mounts."

The purpose of this provision is to cover the necessary expense, and to encourage individual ownership, thereby increasing interest and effort to assure a superior type of mount for mounted officers in the military service.

2. Hereafter private mounts owned by officers of all grades in the Army, for which the Government expends public funds in the matter of maintenance and care, or additional pay, must at least equal the requirements contained in the specifications prepared under the direction of the Quartermaster General, and published for the guidance of all concerned in the inspection and purchase of public animals for the military service, subject to the following modifications:

(a) For all officers of the mounted service who are 5 feet 10 inches or over in height and when only one mount is owned, it will be required that such animal be at least 15 hands 2 inches in height.

(b) For all officers of the mounted service who are under 5 feet 10 inch height, and for all officers of the dismounted service, it will be required, only one mount is owned, that such animal shall be at least 15 hands in height.

(c) For all officers of both the mounted and dismounted service who own a second mount is owned, the minimum requirement of height for such a mount will be 15 hands.

(d) White or gray horses and stallions will be considered unsuitable mounts. Mares will be considered suitable only when exceptionally well qualified.

(e) The weight should in all cases conform to height and both be such as to cause the animal, when in normal flesh, to be well proportioned and a good weight carrier. Animals which fail to meet the foregoing requirements, which have heretofore been considered suitable mounts, will, while serviceable, be so continued only for their present owners.

3. It will be the duty of post commanders to ascertain which officers of their respective commands are drawing additional pay for furnishing their own mounts, or are having private mounts maintained at Government expense. They will assure themselves by personal inspection and actual test that the private mounts at their respective posts for which additional pay is drawn that are foraged at Government expense, conform to the requirements of this order, and are such as will enable the officer to perform properly all his mounted duties, both in garrison and in the field. A certificate of suitability will be required in all cases of change of ownership.

4. All private mounts belonging to officers stationed at military posts will be inspected at least once a year by post commanders, and when found unserviceable or unsuitable, thirty days will be given the officer to dispose of the same, after which time they will not be foraged or maintained at Government expense, nor will additional pay therefor be allowed. A certificate of such inspection and suitability will be furnished the quartermaster, who will keep a register of private mounts, which will show that all animals foraged at Government expense, or for which additional pay is allowed, have been properly inspected, together with date of inspection, and no such mount shall be shipped on a Government bill of lading which has not been inspected and passed within the current year. No animal will be passed as a suitable mount that is less than four years old.

The certificate of inspection and suitability of private mounts will be furnished by the officers owning the mounts when such officers are not at the post of the immediate command of a post commander.

General Orders, } Extract
No. 11. } from

War Department
Washington, March 29, 1916

III. 1. Under the decisions of the Comptroller of the Treasury of December 18, 1912 (19 Comp., 367), and of March 24, 1915 (21 Comp., 651), a enlisted man of the Army, when discharged from the service, except by way of punishment for an offense, or when furloughed to the reserve, is entitled to travel allowances from place of discharge or furlough to place of acceptance for enlistment or as otherwise prescribed by paragraph 1378, Army Regulations, as amended by C. A. R., No. 39, March 17, 1916. In no case will the place of actual enlistment, if different from the place of acceptance, be considered in determining such travel allowance.

2. Pending the revision of the present final statement form (old Q. M. Form No. 16, now War Department Form No. 370), the officer preparing the final statement will enter on the form now in use under the head of "place of acceptance" the place of acceptance for enlistment so as to enable the quar-

master making settlement of such final statement to determine the travel allowance due the soldier. The provisions of this order become effective, as to all enlisted men discharged or furloughed to the reserve, on or after the date of its receipt, regardless of the date of enlistment.

General Orders, } Extract
No. 17. } from

War Department,
Washington, May 1, 1916.

The following tables, giving the allowance of clothing in kind for enlisted men, the articles of clothing issued without charge to enlisted men, the money allowance for clothing drawn by enlisted men, prices at which articles of clothing and equipage will be charged, sizes of clothing, and allowance of tableware and kitchen utensils, are published for the information and guidance of all concerned, to go into effect July 1, 1916.

The articles herein enumerated furnished to the Organized Militia shall have added to the prices herein given the cost of packing.

Clothing and equipage purchased in Manila for service in the Philippine Islands will be charged at invoice or cost price.

At posts where this order shall not have been received by July 1, 1916, General Orders, No. 22, War Department, 1915, as amended by Paragraph III, General Orders, No. 50, War Department, 1915, will govern until the receipt of this order.

By order of the Secretary of War:

TASKER H. BLISS,
Major General, Acting Chief of Staff.

Official:

H. P. McCAIN,
The Adjutant General.

Note: The original order gives the allowance of clothing in kind for enlisted men, articles of gratuitous issue, money allowance, prices of articles of clothing, sizes of clothing and allowance of table ware, etc. In view of the fact that the money allowance and prices will change July 1, 1917, it was deemed best to include only the tables pertaining to sizes of clothing.

LIST OF CLOTHING FURNISHED ENLISTED MEN BY THE QUARTERMASTER CORPS, WITH
DIMENSIONS TO DETERMINE SIZES.

BREECHES—OLIVE-DRAB WOOL AND OLIVE-DRAB COTTON; SERVICE; FOOT AND MOUNTED.

General Orders, } Extract
No. 21. } from

War Department,
Washington, June 16, 1916.

II. The following instructions in regard to accounting for quartermaster property which an enlisted man takes with him when ordered to temporary duty, are published for the information and guidance of all concerned:

1. When an enlisted man is ordered away from his organization on duty which is definitely known to involve only a temporary period of absence, he will sign a receipt for all quartermaster property which he is to take with him and this receipt will accompany the descriptive list to the place of temporary duty. Regular memorandum receipts to cover the property will then be made up and sent to the commanding officer to whom the descriptive list is sent, and the latter will designate some officer of his command to sign the memorandum receipt and return the same directly to the accountable officer. The foregoing procedure will not be followed when an enlisted man is ordered to temporary duty of an indefinite duration, but in such case accountability for the property will be covered by regular invoices. Regular invoices will also be used to cover accountability for the property in the case of an enlisted man who, while on temporary duty, is transferred to another organization, separated from the service, or transferred to the reserve.

2. Responsibility for property which is lost during travel will, if necessary, be fixed by a surveying officer.

3. A statement of charges, Q. M. C. Form No. 208, for all property charged against the soldier on the pay rolls, and survey reports of all property authorized to be dropped and not charged, will be furnished the accountable officer, who will issue a credit memorandum to the responsible officer for such property.

General Orders }
No. 36. }

War Department,
Washington, August 23, 1916.

The following compilation, having reference to the instruction and training of the National Guard mustered into the service of the United States, is published for the information and guidance of all concerned:

General Orders, No. 17, War Department, 1913, is the basic order for the training of mobile troops. In prescribing a course of training, it divides the course into garrison training and field training, but states that no sharp line of distinction is to be drawn between the two. (See par. 85 for G. O. 17, p. 908.)

In the training of new organizations to meet any great emergency, it will be manifestly impossible to divide the time into periods of garrison and field training. These two, i.e., the theoretical and the practical, must necessarily go hand in hand in any system adopted for the training of new forces.

Methods of training may alter, but the basic principles remain the same. Only by enforcing strict discipline and using well-considered and correct methods can the greatest results be obtained in the shortest time.

FIELD TRAINING.

Field training, in its technical meaning, comprises the tactical or war training of units to fit them for the field against an enemy.

(1) In order to secure the best results possible, officers must be systematic in their instruction and be quite clear in their own minds as to the lessons they wish each day to teach. The daily detail of instruction should, therefore, be carefully thought out beforehand, and consideration given as to how the time is to be allotted. Subalterns and noncommissioned officers should

be informed of the next day's program of work so that the proper rest may be studied and other necessary preparation made in advance.

(2) Practical work in the field should be varied with short talks by the company commander or other instructor, the men in the meanwhile being allowed to rest on the ground, every effort being made to interest them and to fix their minds on the instruction in hand. Noncommissioned officers should, as far as possible, receive special training in troop leading and command in the field.

(3) Men must be made to understand the object and meaning of the exercise about to be practiced, and their individual intelligence and self-reliance fostered, so that in the absence of a leader, action will not be paralyzed.

(4) To lend reality to field training, each exercise should be based on a simple tactical idea, which should be thought out beforehand and explained to all taking part before commencing the exercise.

(5) In the solution of tactical exercises, interest will be greatly stimulated if the enemy is at least outlined.

DISCIPLINE.

In new regiments, discipline will be best taught and more easily attained on the part of both the official and enlisted personnel by the inculcation of patriotic determination on the part of every one to make the most of the training given and to give unquestioning and cheerful obedience to the orders and instructions emanating from above.

The meaning of discipline in its highest and most important sense should be explained and taught early in the soldier's career, as first impressions are generally lasting ones. This can best be done in the form of talks and lectures by the higher officers of the regiment, and especially by the colonel whose eyes of the soldier, is the embodiment of military knowledge and virtue.

PHYSICAL TRAINING.

Every effort should be made to develop soldiers physically. The requirements for a trained soldier are suppleness, skill, and rapidity of movement to enable him to respond quickly to the perceptions of the senses and execute promptly the commands of his officers. He must also be endowed with great resistance to avoid fatigue and disease.

This result is best accomplished by a systematic and regular training of the muscles, and for this purpose the prescribed "setting-up" exercises, combined with a few minutes' marching at "double time," or certain games to develop agility and quick perception, should be practiced daily. These regular exercises should be supplemented by practice marches of such length as will not overtax the soldier. As the physical development of the soldier progresses, the length of these marches may be increased. The ordinary life of a soldier, with its drill, manual of arms, bayonet combat, etc., furnishes a considerable amount of exercise, but does not accomplish the physical development that can be brought about by daily, systematic exercises.

HYGIENE AND SANITATION.

The importance of personal hygiene and camp sanitation in the maintenance of health in individuals and in armies should be taught thoroughly to every officer and enlisted man. This should be done by means of lectures by the

officers and by personal admonition and explanation by line officers when errors in hygiene or sanitation are discovered in their commands.

All lectures and explanations should be in simple language, easily understood by the soldier. Technical or scientific terms should be avoided. Personal hygiene should be taught in the following general manner: The soldier should be impressed with the facts that the general health of a man is largely dependent upon the care which he takes of himself and which is taken of his surroundings; that it is very difficult for those in authority to maintain the proper sanitary condition of his surroundings unless he himself does his share; that nearly all diseases are caused by germs which live in the earth, food, water, excretions from the human body, on one's skin or clothing, or on various objects which one touches; that these germs to cause disease must first enter the body, and that this entrance can be largely prevented if proper hygiene and sanitation are observed; that even if disease germs do accidentally find entrance to the body, their injurious effects may be modified or prevented when one has a sound and vigorous body.

The common rules of personal hygiene, e.g., cleanliness, moderation in eating and drinking, proper exercise, sufficient sleep, care of clothing, and regularity in bowel movements should be taught in detail, and the reasons why they all have a bearing on one's health explained.

In teaching the essentials of camp sanitation, stress should be laid on the habits and breeding places of flies, mosquitoes, lice, and other disease-bearing insects; and the especial danger to health of urine and feces not properly disposed of.

Every soldier should be thoroughly drilled in the proper application of the first-aid packet, and the necessity for its use when wounded explained.

Reference: Books for use in teaching hygiene, sanitation, and first aid are *Military Hygiene* (Havard) and *Drill Regulations and Service Manual for Sanitary Troops*. These are both furnished regimental surgeons upon application to The Adjutant General of the Army.

FIELD PRACTICE.

The instruction in rifle practice, fire direction, fire control, and fire discipline should include the solution of problems in field combat with service ammunition, where conditions will permit. Special attention must be given, therefore, to the training in sight setting, assignment of targets; transmission of target designation and elevation; rate of fire; fire direction; fire control; and ammunition supply. The solution of such problems will be exceedingly valuable to both officers and men, and the value and necessity of good fire direction, fire control, and fire discipline can be brought to their understanding so forcibly in no other way.

MARCHING.

Short practice marches should be undertaken for the purpose of teaching march discipline, for instruction in adjusting and carrying packs and equipment, for gaining information concerning the fit of men's shoes, for instruction in the protection and care of the feet, making and breaking camp, and

camp expedients, packing field wagons, issuing ammunition on the march previous to an attack, sanitation on the march and in camp, individual marching, and many other things incident to the march and camp. Practice marches are most interesting and instructive when combined with the solution of tactical problems.

In all route marches, whether in regular practice marches or when going from the place of the solution of tactical problems, rigid marching discipline should be enforced. There is no surer test of the discipline and efficiency of a command than its conduct on the march. Straggling and other vices on the march are especially characteristic of all new troops.

USE OF COVER.

The instruction of the recruit in the use of cover should be begun very early, and great stress should be laid on this important subject during the training period, and especially in all field exercises. The details of the instruction in the use of cover are very fully explained in the Infantry Regulations.

SCHOOLS FOR OFFICERS.

Schools for officers should be held at least three times during each week. The instructors should be qualified officers of the regiment. The program of study should be arranged so that the subjects taught in the school will parallel the same work on the drill ground and in the field. To effect this, several subjects must be carried in the school at the same time, the length of each being shorter than those usually assigned in the present garrison schools. Discrimination must be used in the assignment of subject matter. There must be little enough time for the study of essentials. Unessentials must be eliminated.

SCHOOLS FOR NONCOMMISSIONED OFFICERS AND SELECTED PRIVATES.

Schools for noncommissioned officers and selected privates should be held at least three times during each week of the training period, the company officers being the instructors, if they have had sufficient training. If they have not had, the field officers must act as the instructors, at least in the beginning of the training period.

The subjects taught in these schools must likewise precede the same work on the drill ground and in the field. If the officers are competent, the instruction can be best given by short, pointed talks, in which the subject of the day's lesson is explained and summarized.

WEEKLY PROGRAMS OF INSTRUCTION.

Weekly programs of instruction will be submitted by organization commanders to the next higher commanders. Regimental and battalion commanders will exercise close supervision over these programs of instruction to the end that the general scheme of instruction is followed and that the training will be uniform and progressive throughout the regiment.

It is not possible to prescribe a course of instruction to be followed strictly by all organizations.

Some are much more advanced than others and the proportions of inexperienced officers and men will vary greatly.

Some organizations may be required for active duty at once and there may be no opportunity to train systematically; others remote from the Border may have ample ground, target ranges, etc., where their whole time may be devoted to training under favorable conditions.

Wherever conditions permit, a systematic course of training should be conducted.

The following program for 10 weeks' instruction of an Infantry regiment is intended as suggestive only.

It is constructed on the supposition that the regiment is complete in men, officers, and equipment; that conditions are favorable and that the entire time may be devoted to training.

PROGRAM FOR 10 WEEKS' INSTRUCTION.

FIRST WEEK.

| Instruction. | Hours. | Details of instruction. |
|---|--------|--|
| <i>Company training.</i> | | |
| Physical training..... | 6 | Setting up exercises, calisthenics, and running, in ½-hour periods. |
| Infantry Drill Regulations... | 18 | 6 hours without arms; 12 hours with arms. Schools of the soldier and squad. By company officers and noncommissioned officers. |
| Nomenclature and care of the rifle; care of clothing and equipment; making up the pack. | 4 | Instruction by company officers and noncommissioned officers. |
| Guard duty..... | 4 | Instruction by company officers and noncommissioned officers. |
| Lectures..... | 2 | Two lectures by the colonel of ½ hour each on discipline and patriotism. One lecture by the regimental surgeon on care of the health and personal hygiene. |
| Articles of War..... | 1 | Articles of War read and explained by the battalion commander. |
| Inspection..... | 1 | Arms, equipment, clothing, camp, or quarters. |
| <i>Special instruction.</i> | | |
| First aid..... | 2 | Regimental sanitary personnel instructing officers, noncommissioned officers and selected privates to fit them as instructors of the company. |
| Company administration.... | 2 | Battalion commander instructing company officers, sergeants and clerks. |
| Battalion school..... | 4 | Theoretical and practical. Instruction by the battalion commander in Infantry Drill Regulations and the Small-Arms Firing Manual. |
| Noncommissioned officers' school. | 4 | Theoretical and practical. Instruction by company officers in Infantry Drill Regulations and Small-Arms Firing Manual. |
| Trumpet practice..... | 12 | Company musicians and selected privates. |
| Visual signaling..... | 6 | Semaphore. Officers, noncommissioned officers, and selected privates. |
| Cooking..... | | Selected men to be instructed by the regular cooks. These men to attend company instruction 4 hours per day. |

SECOND WEEK.

| Instruction. | Hours. | Details of instruction. |
|--|--------|---|
| <i>Company training.</i> | | |
| Physical training..... | 6 | Setting up exercise, calisthenics, and running $\frac{1}{2}$ -hour periods. |
| Infantry Drill Regulations... | 12 | Schools of the squad and company; extended order. |
| Instruction preliminary to range practice. | 15 | Sighting, position, and aiming drills; practice. |
| Bayonet exercises..... | 3 | Foot movements, $\frac{1}{2}$ -hour periods. |
| Articles of War..... | 1 | Continued from first week. |
| Lecture..... | 1 | By surgeon, care of the health and personal hygiene. |
| Inspection..... | 1 | Arms, equipment, clothing, camp, or quarters. |
| <i>Special instruction.</i> | | |
| First aid..... | 2 | Continued from first week. |
| Company administration.... | 2 | Continued from first week. |
| Battalion school..... | 4 | Theoretical and practical. Infantry Drill Regulations, Small-Arms Firing Manual, battle, combat, orders, and signals. |
| Noncommissioned officers' school. | 4 | Theoretical and practical. Infantry Drill Regulations, Small-Arms Firing Manual, battle, combat, orders, and signals. |
| Trumpet practice..... | 12 | Continued from first week. |
| Visual signaling..... | 6 | Continued from first week. |
| Cooking..... | | Continued from first week. |

THIRD WEEK.

| Instruction. | Hours. | Details of instruction. |
|--|--------|--|
| <i>Company training.</i> | | |
| Physical training..... | 6 | Continued from second week. |
| Infantry Drill Regulations... | 18 | Extended order, use of cover, attack and defense, patrolling, fire direction, fire control and discipline. Battalion commander instructs company officers, and the latter instructs companies. |
| Instruction preliminary to range practice. | 8 | Position and aiming drills, gallery practice, estimating distance. |
| Bayonet exercise..... | 3 | Conducted with poles weighing about 3 pounds and use of rings and figures to insure accuracy. |
| Lecture..... | 1 | By surgeon, on care of the feet and socks. |
| First aid..... | 2 | By regimental sanitary personnel, assistance to company officers and noncommissioned officers. |
| Night work..... | 3 | Scope of soldier's handbook. |
| Inspection..... | 1 | Marching and patrolling. In addition to regular day instruction. |
| | | Arms, equipment, clothing, camp, or quarters. |
| <i>Special instruction.</i> | | |
| Battalion school..... | 4 | Theoretical and practical. Infantry Drill Regulations, Small-Arms Firing Manual. Position and transmission of orders and messages. Special attention to command and troop leading. |
| Noncommissioned officers' school. | 4 | Continued from second week. Special attention to troop leading. |
| Trumpet practice..... | 12 | Continued from second week. |
| Visual signaling..... | 6 | Continued from second week. |
| Nomenclature and use of the pistol. | 2 | Instruction by the battalion commander. Armed with the pistol. |
| Cooking..... | | Continued from second week. |

FOURTH WEEK.

| Instruction. | Hours. | Details of instruction. |
|--|--------|--|
| <i>Company, battalion, and regiment.</i> | | |
| Infantry Drill Regulations... | 9 | By company. Attack, defense, and use of ground. |
| Infantry Drill Regulations... | 6 | Battalion (3 hours) and regiment (3 hours) in close order. |
| Fire direction, control, and discipline. | 3 | Instruction by commands and signals by company commander under the supervision of the battalion commander. |
| Instruction preliminary to range practice. | 3 | Gallery practice. |
| Bayonet exercises..... | 3 | Continued from third week. |
| Tactical walk..... | 3 | Instruction of the company officers in patrolling by the battalion commander. |
| Tactical walk..... | 3 | Instruction of the noncommissioned officers in patrolling by the company officers. |
| Pitching tents..... | 2 | Instruction by company officers. |
| First aid..... | 2 | Continued from third week. |
| Lecture..... | 1 | By the surgeon. Sanitation in camp and on the march. |
| Inspection..... | 1 | Arms, equipments, clothing, camp, or quarters. |
| <i>Special instruction.</i> | | |
| Battalion school..... | 4 | Continued from third week. |
| Noncommissioned officers' school. | 4 | Continued from third week. |
| Trumpet practice..... | 12 | Continued from third week. |
| Visual signaling..... | 6 | Practice and test for qualification in the semaphore code, conducted by battalion commander. |
| Cooking..... | | Continued from third week. |

FIFTH WEEK.

| Instruction. | Hours. | Details of instruction. |
|-----------------------------------|------------------|--|
| <i>Company and battalion.</i> | | |
| Target practice..... | 16 | Practice on the range. |
| Bayonet combat..... | 3 | With improvised or regular fencing outfit. |
| Practice march..... | (¹) | By company. Marches of not more than 6 miles each day. Instruction in march discipline, advance and rear guards, outposts, communication on the march by means of written and verbal messages and visual signaling, packing wagons, making and breaking camp, individual cooking, camp sanitation. |
| Security and information.... | 4 | By company. Solution of tactical problems. |
| Night work..... | 3 | By company. In addition to regular day instruction. Tactical problem in outpost and patrolling. |
| Inspection..... | 1 | By battalion commander. Arms, equipment, clothing, camp, or quarters. |
| <i>Special instruction.</i> | | |
| Battalion schools..... | 4 | Continued from fourth week. |
| Noncommissioned officers' school. | 4 | Continued from fourth week. |
| Trumpet practice..... | 6 | Continued from fourth week. |
| Visual signaling..... | 6 | General Service Code. Officers, noncommissioned officers, musicians, and selected privates who qualified in the semaphore code. |
| Cooking..... | | Continued from fourth week. |

¹ Two days.

SIXTH WEEK.

| Instruction. | Hours. | Details of instruction. |
|-----------------------------------|------------------|---|
| <i>Company and battalion.</i> | | |
| Target practice..... | 16 | Practice on the range. |
| Bayonet combat..... | 3 | Continued from fifth week. |
| Practice march..... | (¹) | By battalion. March of not more than 6 or 7 miles each day. Instruction in march discipline, making and breaking camp, packing field wagons, camp sanitation, individual cooking; solution of simple problems involving advance and rear guards, outposts, attack and defense of positions, maintenance of communication between the elements of a command by means of written and verbal messages and visual signaling, the battalion to break camp after dark and return to the post or camp. |
| Intrenching..... | 4 | Construction of simple trenches. |
| Night work..... | 3 | In addition to the regular day instruction. Tactical problem-attack of a position. |
| Inspection..... | 1 | Company commander. Arms, equipment, clothing, camp, or quarters. |
| <i>Special instruction.</i> | | |
| Battalion school..... | 4 | Use of signals in extended order, attack and defense, fire direction and control. Field engineering, construction of intrenchments, head and overhead cover, obstacles, bridges. |
| Noncommissioned officers' school. | 4 | Use of signals in extended order, attack and defense, fire direction and control. Simple field engineering. |
| Visual signaling..... | 6 | Continued from fifth week. |
| Cooking..... | | Continued from fifth week. |

¹ Two days.

SEVENTH WEEK.

| Instruction. | Hours. | Details of instruction. |
|--|------------------|---|
| <i>Company, battalion, and regiment.</i> | | |
| Range practice..... | (¹) | Target practice and preliminary field practice; special attention to sight setting, assignment of target, transmission of target designation and elevation, rate of fire, ammunition supply, fire direction, discipline and control. |
| Bayonet combat..... | 3 | Fencing outfit or service rifle. |
| Intrenching..... | 4 | Simple problem in the occupation and strengthening of a defensive position. |
| Practice march..... | (²) | By regiment. Marches of not more than 7 or 8 miles each day; one march to be at night, camp to be broken and made after dark; marches and time in camp to be utilized in the solution of problems in advance and rear guards, outposts, convoys, meeting engagements, attack and defense of positions, etc. |
| Lecture..... | 1 | By battalion commander. "The Laws of War." |
| Swimming..... | 1 | Instruction in swimming with equipment. |
| Inspection..... | 1 | Inspection of arms and equipment by the battalion commander on the company parade. |
| <i>Special instruction.</i> | | |
| Battalion schools..... | 4 | Sketching and map reading. Field engineering continued from previous week. |
| Noncommissioned officers' schools. | 4 | Simple sketching and map reading. Field engineering continued from previous week. |
| Visual signaling..... | 6 | Continued from sixth week. |

¹ Two days.² Three days.

EIGHTH WEEK.

| Instruction. | Hours. | Details of instruction. |
|-----------------------------------|------------------|--|
| <i>Company and battalion.</i> | | |
| Field firing..... | (¹) | Solution of problems with service ammunition; special attention to sight setting, assignment of target, transmission of target designation and elevation, rate of fire, ammunition supply, fire direction, control and discipline. |
| Bayonet combat..... | 3 | Continued from seventh week. |
| Tactical problems..... | 15 | By company. Solution of tactical problems involving attack and defense of positions, advance and rear guards, outposts, meeting engagements, use of cover, etc. |
| Obstacles..... | 3 | Instruction in the construction of wire entanglements and other forms of obstacles. |
| Lectures..... | 2 | By battalion commander. 1. "The Laws of War." 2. "Passing of Obstacles." |
| Night work..... | 3 | In addition to regular day instruction. Solution of a problem involving the reconnaissance of a hostile outpost. |
| Inspection..... | 1 | By company commander. Arms, equipment, clothing, camp or quarters. |
| <i>Special instruction.</i> | | |
| Battalion school..... | 4 | Sketching and map reading; use of the range finder. |
| Noncommissioned officers' school. | 4 | Sketching and map reading; use of the range finder. |
| Visual signaling..... | 6 | Continued from seventh week. |

¹ Two days.

NINTH WEEK.

| Instruction. | Hours. | Details of instruction. |
|-----------------------------------|--------|---|
| <i>Battalion.</i> | | |
| Field problems..... | 30 | Solution of tactical problems involving the attack and defense of positions, including the reinforcement of troops under fire and the strengthening of a defensive position, advance and rear guards, meeting engagements, outposts, defense of a bridgehead, use of ground and cover, etc. |
| Passing of obstacles..... | 3 | Instruction. |
| Night work..... | 3 | Solution of a tactical problem involving marching to, taking up, and strengthening, a defensive position. |
| Lecture..... | 1 | Demolitions. By the battalion commander. |
| Review and inspection..... | 3 | With full field equipment; arms, equipment, clothing, camp or quarters. |
| <i>Special instruction.</i> | | |
| Battalion school..... | 4 | Practical instruction and test in the use of the range finder. |
| Noncommissioned officers' school. | 4 | Practical instruction and test in the use of the range finder. |
| Visual signaling..... | 6 | Practice and test for qualification in the general service code. |

TENTH WEEK.

| Instruction. | Hours. | Details of Instruction. |
|-----------------------------------|------------------|---|
| <i>Regimental.</i> | | |
| Practice march..... | (¹) | March from 7 to 10 miles each day with assumed situations. |
| Problem..... | (²) | Taking the field for prolonged service in war. Special attention to packing wagons with only authorized equipment and to the enforcement of strict march discipline. |
| Problems..... | (³) | First problem: Regiment as the advance guard of a larger force. Second problem: Withdrawal from a defensive position and assumption of the duties of a rear guard of a larger force. |
| Problems..... | (⁴) | First problem: Outpost. Tactical ride conducted by the battalion commanders for the officers of their battalions. Second problem: Regiment as escort for a convoy; to arrive in camp after dark. |
| Problems..... | (⁵) | First problem: March to the front and attack of an enemy in a defensive position. Second problem: Establishment of an outpost, the instruction continuing during the night. |
| Problems..... | (⁶) | Withdrawal of the outpost and march to the post or permanent camp; special attention to march discipline and condition of the men's feet; inspection of shoes and feet on arrival in post or camp by the battalion commander. |
| Review and inspection..... | 4 | Full equipment; inspection of arms, equipment, clothing, camp, or quarters. |
| <i>Special instruction.</i> | | |
| Battalion school..... | 2 | { Lectures by the battalion commander on (1) "Troop leading and command in the field," (2) "Night operations." |
| Noncommissioned officers' school. | | |

¹ Five days.² First day.³ Second day.⁴ Third day.⁵ Fourth day.⁶ Fifth day.

It is not to be hoped that the above program of instruction will fully meet the needs of all organizations. It will no doubt be necessary to modify it in many ways to meet the existing conditions. It is believed, however, that it will form a basis on which to build a program suitable to the needs of the particular organization undergoing training. A period of 10 weeks is a very short time in which to train a regiment for the field. However, the program as submitted requires from six to eight hours per day of actual work on the part of the enlisted men, and of considerably more hours on the part of the officers. It is believed that if the instruction is of the high character that it should be, there will be no trouble in holding the interest of the men for even longer hours each day.

It is not expected that men with only 10 weeks' instruction will be trained and efficient soldiers, capable of meeting all the responsibilities of the modern battle field. If more time is available, the training should be perfected and instruction given in things that were necessarily omitted during the first 10 weeks.

In order to determine the progress of instruction and training of various tactical units from time to time, tests should be made by battalion and regimental commanders.

The following tests for tactical organizations in the Second Division were prescribed and used.

They are published herewith as a guide:

**INFANTRY.
COMPANY.**

| Noncommissioned officers. | Individual soldier. | Close order. | Tactical exercises. | Field exercise. |
|--|---|--|---|---|
| <p>(a) Map making. (b) Map reading. (c) Range finding. (d) Writing messages. (e) Method of locating points of compass by sun, watch, stars, etc.</p> | <p>(a) Estimating distance. (b) First aid. (c) Morse and semaphore signaling (at least two men per company in each). (d) Sighting, position and aiming, deflection and elevation correction exercises. (e) Bayonet exercise. (f) Calisthenic exercises. (g) Cooking. (h) Swimming. (i) Receiving and delivering verbal messages. (j) Preparation of packs for field service. (k) Packing (at least four men per company).</p> | <p>(a) School of the soldier. (b) School of the squad. (c) School of the company. (d) Inspection, equipped for the field. (e) Pitching shelter camp.</p> | <p>(a) Construction of standing, kneeling, and lying in trenches. (b) Advance guard. (c) Rear guard. (d) Outpost. (e) Patrolling. (f) Combat. (g) Company commander to prepare problem for and conduct company tactical walk. (h) Lieutenants to prepare problems for and conduct company one-side map maneuver (tactical talk). (i) Combat practice.</p> | <p>Solution of problem simulating field service conditions.</p> |

BATTALION.

| Close order. | Tactical exercises. | Field exercise. |
|-------------------------------------|--|---|
| <p>(a) School of the battalion.</p> | <p>(a) Advance guard. (b) Rear guard. (c) Outpost. (d) Patrolling. (e) Maintenance of communication between elements of command. (f) Night march of concentration. (g) Battalion commander to prepare problem for and conduct tactical walk for officers of his battalion.</p> | <p>Solution of problem simulating field-service conditions.</p> |

REGIMENT.

| Officers. | Close order. | Tactical exercises. | Field exercise. |
|--|--|--|---|
| <p>(a) Map reading.</p> <p>(b) Map making, road and position sketches (captains and lieutenants).</p> <p>(c) Estimating distances and range finding.</p> <p>(d) Reconnaissance and selection of position and in addition captains and lieutenants to stake out lines and formulate written instructions for construction of intrenchments.</p> <p>(e) Writing problem for field exercise.</p> <p>(f) Writing field orders.</p> | <p>(a) Close order.</p> <p>(b) Ceremonies.</p> | <p>(a) Advance guard.</p> <p>(b) Rear guard.</p> <p>(c) Outpost.</p> <p>(d) Patrolling.</p> <p>(e) Regiment, fully equipped for the field, including combat and field trains with prescribed quantities of baggage, rations and forage, to be formed up at least a mile from camp, within three hours after receipt of orders.</p> <p>(f) Maintenance of communication between elements of command.</p> <p>(g) Regimental commander to prepare problem for and conduct tactical walk for officers of his regiment.</p> | <p>Solution of problem simulating field service conditions.</p> |

ORDERLY SECTION, HEADQUARTERS COMPANY.

| Equitation. | Messenger service. |
|---|---|
| <p>(a) Use of the aids.</p> <p>(b) Care of equipment, watering and feeding.</p> | <p>(a) Receiving and delivering verbal messages.</p> <p>(b) Receiving and delivering messages by means of field and camp telephones.</p> <p>(c) Morse and semaphore signaling.</p> <p>(d) Maintenance of specified rate of speed over distance of not less than 5 miles.</p> <p>(e) Map reading.</p> <p>(f) Estimating distances.</p> |

MACHINE GUN COMPANY.

| Noncommissioned officers. | Individual soldier. | Close order. | Tactical exercises. |
|---|---|---|---|
| (a) Map making. (b) Map reading. (c) Range finding. (d) Selection of position for machine guns. (e) Writing messages. (f) Morse and semaphore signaling. | (a) Estimating distances. (b) First aid. (c) Cooking. (d) Packing machine guns and ammunition. (e) Taking apart and assembling guns (day and night). (f) Reduction of jams, replacing broken parts (noncommissioned officers and gunners). (g) Preparation of packs for field service. (h) Receiving and delivering verbal messages. | (a) Inspection, equipped for the field. (b) Pitching shelter camp. | (a) Advancing to position and going into action. (b) Supplying ammunition to guns. (c) Constructing hasty cover for guns and pits with head cover for men. (d) Company commander to prepare problem for and conduct company tactical walk. (e) Combat practice. |

BRIGADE.

| Tactical exercises. | Field exercise. |
|--|--|
| (a) Formation of brigade. (b) Advance guard. (c) Rear guard. (d) Outpost. (e) Maintenance of communication between elements of command. (f) Brigade commander to prepare problem for and conduct tactical walk for officers of his command. | Solution of a problem simulating field-service conditions. |

Company and other commanders will be held responsible for results obtained. By frequent inspections, observation of methods, and by tests, the progress of organizations will be determined.

By order of the Secretary of War:

H. L. SCOTT,
Major General, Chief of Staff.

Official:

H. P. McCAIN,
The Adjutant General.

General Orders,
No. 40.

War Department,
Washington, August 30, 1916.

The instructions for the preparation of Army pay rolls and authorized abbreviations published as Quartermaster Corps Form No. 70, and model remarks for Army pay rolls published as Quartermaster Corps Form No. 69, are hereby rescinded, and the following is published in their stead for the information of all concerned:

INSTRUCTIONS FOR THE PREPARATION OF ARMY PAY ROLLS.

1. The pay rolls are not only the guide for the immediate payment of the troops interested, but when filed in the Treasury Department they become the record to which reference will thereafter be had in the investigation and settlement of claims or questions affecting the pay of the men whose names are borne thereon for the period involved. All officers are therefore enjoined to exercise every care to make the pay rolls with which they are concerned complete in every detail.

2. COMPOSITION OF A PAY ROLL.

A pay roll will be made up of one copy of War Department Form No. 366 and as many forms 366a as may be necessary, fastened together along the edge indicated by sewing or by means of a stapling machine or other permanent fastening, but not by use of glue or mucilage.

3. NUMBER OF COPIES AND DISPOSITION OF SAME.

Pay rolls will be made out in triplicate, and dated from the first to the last day of the month. Two of the three copies (one being the signed roll) will be forwarded to the quartermaster and the third copy duly extended will be retained with the records of the organization.

4. SIGNING OF ROLLS.

Only one copy will be signed by the men, and when carbon copies are made the original will always be the copy to be signed. The roll to be signed will always be completed and fastened together before being signed. When it is known that payment is to be made by check none of the rolls will be signed by the men. Only men who are to be paid will sign the roll; those who for any reason are not to be paid will not sign; if, however, in such case, the roll be inadvertently signed, the signature will be erased. In cases of stoppages equaling or exceeding the pay due, complete data will be carried to the next succeeding rolls until a sufficient amount of pay is due to satisfy all stoppages and leave a balance for the soldier. (See par. 15 below.) If for any reason a soldier whose name appears on the pay roll does not sign the roll and is not to be paid by check, a line will be drawn through the space intended for his signature.

5. TYPEWRITTEN AND CARBON COPIES AUTHORIZED.

The preparation of pay rolls on a typewriting machine is authorized provided a record ribbon is used. The making of carbon copies is also authorized, but they must be clear and legible throughout, and the original copy and the first carbon copy must be forwarded to the quartermaster, who will in turn forward the original copy, with his account current, to the Quartermaster General of the Army. Quartermasters will not be required to accept carbon copies that are not clear and legible throughout, and they are authorized to return illegible copies with request for legible ones.

6. NAMES TO BE ENTERED ON ROLL.

The names of officers of the Regular Army will not be entered on the roll, but all enlisted men will be taken up thereon from the date of receipt of notice of their assignment, whether or not they have yet joined, and will be entered in the column "Names, Present and Absent, and Rank," in the following order: First, noncommissioned officers, in the order of the grade given in paragraph 9, Army Regulations, 1913, the names under each grade-heading appearing in the order of the dates of warrants; second, all others, except buglers, first-class privates, and privates in alphabetical order of grade; third, buglers; fourth, first-class privates; fifth, privates. The names of the men under each grade-heading, except noncommissioned officers, will appear alphabetically. Lance corporals will be carried under the heading of "First-class privates" or "Privates," depending on the actual grade held.

The names and the headings will follow one another without interval, except when made necessary by the use of two or more lines, in the column of "Remarks" after a name.

Men on detached service will be carried on the roll of the organization to which they belong in their proper place with remarks showing them on detached service and place, if known.

In all cases the last name will be written first, e.g., Smith, John A., and not John A. Smith. Care will be taken to have the names correctly spelled and the dates of enlistment correct, and the signatures must correspond exactly with the names in the column, "Names, Present and Absent, and Rank."

7. DETACHMENT ROLLS.

The names of men mustered for pay at stations where their companies or organizations are not mustered may be borne on one consolidated pay roll.

All detachment pay rolls for detachments composed of various organizations will show in a column ruled for that purpose the company, battery, troop, or other organization to which each man belongs.

8. RULING EXTRA COLUMNS.

The use of dots and the word "ditto" is prohibited, but when items of the same character, such as subsistence credit sales, clothing due United States, post exchange, and post laundry, are to be made against a sufficiently large number of men, columns may be ruled therefor in the space under "Remarks."

9. BY WHOM AND TO WHAT DATE PAID.

In the cases of soldiers who were last paid to a date different from that to which the organization was last paid, or by a different quartermaster, as shown by the certificate of the commanding officer on the first page, the date to which last paid and the name of the quartermaster will be stated against their names under "Remarks."

10. COLUMN "REMARKS"—DATA OPPOSITE NAMES.

All data affecting a soldier's pay will be entered in the column "Remarks" in the manner indicated under the caption "Model Remarks" below.

Only such remarks as affect a soldier's pay will be entered.

Opposite the name of the person concerned will be carefully noted—

(a) All changes of rank or grade. In case of appointment the number, date, and source of order will be stated; in case of reduction the date of receipt of order at soldier's station will also be stated.

(b) All authorized stoppages, fines, sentences, with number, date, and source of order.

(c) All cases of absence of enlisted men without leave or absence sick without pay for one day or more.

(d) All cases of confinement of one day or more by civil authorities and whether such prisoners have been held for trial, tried, or discharged without trial, and, when tried, whether acquitted or convicted, with dates of absence.

(e) Everything else affecting the pay of every enlisted man, so as to insure justice to him and to the United States.

As many lines as may be necessary to avoid crowding will be taken after each name, and only one line of written matter will be placed on one ruled line. When the matter is typewritten, remarks exceeding one line will be single spaced without regard to the ruled lines on the paper.

11. CLOTHING ACCOUNT.

For regulations concerning the settlement of a soldier's clothing account, see paragraphs 1159-1169, Army Regulations, 1913.

12. RETENTION IN SERVICE BEYOND DATE OF ENLISTMENT.

When soldiers are retained in the service with the colors to make good time lost, the cause of such retention must be stated. In case a soldier who must be kept in the service beyond the date of expiration of term of enlistment in order to make good time lost and is in confinement at or after date of expiration of term of enlistment, the date of restoration to duty status, if so restored, will be stated.

13. CHANGES SINCE LAST MUSTER FOR PAY.

(a) Names of men belonging to a command will be immediately followed by those of the men who have ceased to belong to it since last muster for pay. These will be classed in the following order: (1) Discharged, (2) furloughed to the reserve, (3) transferred, (4) died, (5) retired, (6) deserted, (7) missing. Under each heading the names will appear in the order prescribed in paragraph 6 above.

(b) The character of discharge (honorably discharged, discharged, or dishonorably discharged) will be noted on the roll.

(c) In these cases: (1) Desertion; (2) dishonorable discharge; (3) discharged for desertion; (4) missing; (5) and discharge, honorable discharge, or furlough to the reserve when the stoppages equal or exceed the amount due soldier; the soldier's account will be stated in full, showing rank or grade, date to which last paid, and by whom. All stoppages and charges (special care being taken to note all dues to post exchanges, company fund, etc.), and credits for deposits, etc., and the balance due the United States or due the soldier on account of clothing, and when the desertion, discharge, or furlough occurs within the first six months of enlistment, the money value of clothing drawn since enlistment must also be stated; also dates and places will be given, and number, date, and source of order or other authority.

(d) In case of honorable discharge (except as prescribed in (c) above and (e) below), discharge or furlough (except as prescribed in (c) above), transfer, death, or retirement, only the rank or grade, the date of discharge, furlough, transfer, death, or retirement, and the number, date, and source of the order or other authority will be given.

(e) The names of men who are discharged during the period covered by the pay roll and who reenlist in the same company during that time will be carried in the body of the roll only.

14. DESERTERS.

The name of a soldier who has joined from desertion since last muster for pay will be placed in the body of the roll only. The following data will appear on the first roll: The same data that appeared on the rolls on which the soldier was dropped as a deserter; a statement of his new account opened after date of return to military control (the account at date of desertion and the account since return to military control being stated separately); the place and date of return to military control; and whether he was apprehended or surrendered. On subsequent rolls until the result of the trial has been published, or the case otherwise disposed of, will appear the remark, "Awaiting trial (or result of trial) for desertion. For statement of account, see rolls for ———, 191—." On the rolls following the final disposition of the case will appear a complete statement of the soldier's account at the date of such disposition of the case, the ante-desertion and post-desertion accounts to be stated separately, including the number, source, and date of the order announcing his return to duty, or the result of the trial.

The restoration to duty of a deserter by competent authority, namely, by the commander who would be authorized to direct that he be brought to trial, can be ordered only in case the desertion is admitted, and must not be confused with the removal (by the order of such commander or the War Department) of a charge of desertion erroneously entered on the rolls against a soldier.

15. When a soldier is not paid on a pay roll the organization commander must not attempt to settle the account by striking a balance between the undrawn pay and indebtedness, but the account as a whole must, except as provided in paragraph 14, be carried forward to succeeding rolls until the quartermaster can collect all dues to the United States and pay a balance to the soldier. (See A. R. 1374, 1913.)

16. Where changes occur in a quartermaster's figures in the "Balance paid" column, the company commander or officer witnessing the payment must certify in the margin of the roll the amount actually paid the soldier.

MODEL REMARKS FOR ARMY PAY ROLLS.

17. These model remarks are meant to cover only the more common cases. Cases arising not covered herein will be stated according to facts of record.

Any pay or allowances that may have accrued during a previous enlistment can not be paid by a quartermaster, but a claim for same must be made on the Auditor for the War Department.

18. ABSENCE.

(a) In hands of civil authorities. In hands CAuth fr Jan 10 to Feb 3/16, convicted (acquitted, released on bail, or released without trial).

(b) Without leave. Awol Jan 10 to 15/16.

(1) Absence in the hands of civil authorities or without leave will be stated by dates of departure and return as above. The day of departure is a day of

absence and day of return is a day of duty, without regard to hours, in case of enlisted men absent without leave or in hands of civil authorities. For example, "Awol Jan 10 to 15/16," is an absence of five days, January 10 the day the soldier left post being a day of absence and January 15 the day he returned to post being considered a day of duty. Hours of departure and return will not be stated. An absence of less than 24 hours will not be entered on the pay roll.

(c) Sick, not in line of duty, G. O. 31, 1912, and 45, 1914. Sick, not LDGO 31/12 and 45/14, Jan. 1 to 15/16, inc.

(1) G. O. 31, 1912, requires the inclusive dates sick to be stated as distinguished from the method of stating absence without leave indicated above. In deducting pay for time sick, quartermasters will treat the dates given as inclusive whether stated so or not.

19. ALLOTMENTS.

(a) Commencement. Alot \$12 per mo for 20 mos fr Jan 1/16 to Aug 31/17.

(1) Allotments should begin with the first day of a month, except that no allotment will begin prior to date of current enlistment.

(2) An allotment should be entered on the pay roll for the month in which it commences without waiting for any report from the Quartermaster General that the allotment papers have been received.

(3) A soldier should not be allowed to allot his entire monthly pay, except for good reasons warranting such action, so that he may have at least a small balance due him each month to meet unforeseen indebtedness.

(b) Discontinuance. (1) Alot \$12 per mo for 20 mos fr Jan 1/16; almt discontd with Apr 30/17, letter QMG Apr 15/17.

(2) Almt of \$12 per mo for 20 mos fr Jan 1/16, collected to Aug 31/17, discontd with May 31/17, letter QMG June 15/17. Due Sol \$36 deducted for almt for June, July, and Aug/17.

(3) Discontinuances close on the last day of the month, unless a soldier deserts, severs his connection from active duty with the Army, or the allotment is discontinued before the end of the period of allotment. In all such cases his commanding officer will make immediate report direct to the Quartermaster General, as required by Army Regulation 1350, stating the date to which the allotment has been collected, and in case of desertion, discharge, furlough to the reserve, death, etc., the date thereof.

(4) An allotment should not be entered on pay rolls subsequent to the expiration of the period for which the allotment was originally made, except when necessary to secure deduction or collection of the allotment for a month or months within such period yet due.

20. APPOINTMENTS.

(a) Aptd Sgt fr Corp R O 10 Jan 15/16.

(b) Aptd 1st Sgt fr Sgt O 5 Jan 10/16.

(c) Aptd Ck fr Pvt O 6 Jan 10/16.

(d) Aptd Corp fr Pvt O 7 Jan 20/16, under AR 275, the Co being absent from Regtl Hq (or AR 256 or 271, with statement that the company or battalion is serving away from regimental headquarters).

21. APPOINTMENTS CONTINUED IN FORCE.

(a) Disch Jan 5/16 wrnt as Sgt contd.

(b) Disch Jan 4/16 wrnt as Sgt and apmt as 1st Sgt contd.

(c) Disch Jan 5/16 apmt as Ck contd.

(d) Warrants and appointments may be continued only when reënlistment is accomplished within 20 days after discharge.

22. BONUS FOR FIRST REENLISTMENT.

(a) Due Sol bonus for reenl. Former service: Enl Jan 3/13; disch in US (give reason) Jan 2/17 from Co A 1st Inf as Pvt 1st enl period; SbO at date of disch drawing 35c. per day ED pay.

(b) Reason for discharge must always be stated.

23. CERTIFICATE OF MERIT.

(a) When Awarded in Current Enlistment. On first roll and all subsequent rolls until first payment: C of M fr Jan 5/16 (giving date of meritorious service, not date of order promulgating same). On subsequent rolls: C of M.

(b) When Awarded in Previous Enlistment. On first roll and on all subsequent rolls until first payment: C of M fr Jan 10/10; pay due for same fr enl. On subsequent rolls: C of M.

24. DAMAGE TO PRIVATE PROPERTY.

(a) Due Harvey J. Thompson, Lake City, Minn., under 105th AW \$8.65 for damage to private property per approved finding board of officers.

25. DESERTION.

(a) When within six months of enlistment a soldier deserts, is discharged, or furloughed to the reserve under the circumstances named in section (c) of paragraph 13 above, the money value of clothing drawn since enlistment will be stated in remarks on the pay roll, in addition to the balance due the United States or the soldier. Also in such cases the remarks will show the amount due post exchanges, company fund, etc.

(b) Simply Desertion. Deserted at Ft Jay N Y Jan 10/16. Due US at date of desertion, Ord \$1.52, C&GE \$1.75; due Sol Clo \$10; money value of clo drawn since enl \$35 (having deserted in first six months of enlistment); due PE Ft Jay N Y \$3. Last pd to Dec 31/15 by Capt. Howard. Awol during current enlistment Jan 5 to 8/16 (or No awol).

(c) Acquittal. Deserted at Ft Jay N Y Aug 10/15. Surrendered at Ft Sheridan Ill Aug 30/15. Tried for desertion and acquitted GCMO 60 C Dept Oct 5. 15. Last pd to June 30/15 by Maj Howard.

(d) Not Guilty of Desertion, But Guilty of Absence Without Leave. Deserted at Ft Sheridan Ill Oct 10/15. Apprehended by C Auth and delivered at Madison Bks N Y Jan 5/16. Tried, found guilty of awol only and sentd to forfeit 2/3 of his pay per mo for 2 mos GCMO 70 E Dept Feb 1/16. Last pd to Sep 30/15 by Capt Smith.

(e) Sentence of Desertion Not Involving Dishonorable Discharge. Deserted at Ft Missoula Mont June 5/15. Apprehended by C Auth and delivered at Ft McPherson Ga Jan 10/16. \$50 reward pd for apprehension and delivery. Due US at date of desertion: Clo \$10.50; PE Ft Missoula Mont \$5; due sol for depts \$10. (In case soldier deserts after six months from enlistment, statement of money value of clothing drawn at date of desertion not required.) Convicted of desertion and sentenced to be confined at hard labor for 6 mos and forfeit 2/3 of his pay per mo for like period GCMO 150 E Dept Apr 5/16. Last pd to May 31/15 by Maj Howard.

(f) Sentence of Desertion Involving Dishonorable Discharge. Deserted at Ft Jay N Y Feb 5/16. Apprehended by C Auth and delivered at Ft Sheridan Ill Feb 27/16. \$50 reward pd for apprehension and delivery. Due US at date of desertion: Clo \$10; money value of clo drawn to date of desertion \$35 (having deserted in first six months of enlistment). Clo drawn since apprehension \$2 (or no clo drawn since apprehension); due PE Ft Jay N Y \$3. Convicted of desertion and sentd to be dishonorably disch forfeiting all pay

and allowances due and to be confined at hard labor for two years GCMO 36 C Dept Apr 3/16. Dishonorably disch at Ft Sheridan Ill Apr 5/16. Last pd to Jan 31/16 by Capt Taylor.

(g) Restoration to Duty Without Trial. Deserted at Ft Snelling Minn Jan 20/16. Surrendered at Vancouver Bks Wash Feb 5/16. Restored to duty without trial SO 64 West Dept Mch 6/16. Due US at date of desertion: Clo \$10.50, PE Ft Missoula Mont \$5; due sol for deps \$10. (In case soldier deserts after six months from enlistment, statement of money value of clothing drawn at date of desertion not required.) Last pd to Dec 31/15 by Capt Hood.

(h) Removal of Charge of Desertion. Deserted Jan 12/16. Surrendered to military control Feb 10/16. Charge of desertion removed as erroneously made par 5 SO 30 E Dept Feb 25/16. Awol Jan 12 to Feb 10/16. Last pd to Dec 31/15 by Maj Jones.

26. DISCHARGE, OR FURLOUGH TO THE RESERVE.

(See sec. (a) par. 25, above.)

(a) Honorable. Honorably disch (or furloughed to the reserve) Jan 6/15 per (give reason).

(1) In case of retention in active service to make good time lost, or for other reason, the reason for retention must be stated. Thus: Held to make good time lost by awol fr Jan 2 to 10/16.

(b) Discharge. Disch Mch 4/16 by reason of imprisonment under sentence of a civil court par 6 SO 45 W D Feb 25/16.

(c) Dishonorable, for Offenses Other Than Desertion. Dishonorably disch at Ft Sam Houston Tex Mch 5/16, forfeiting all pay and allowances due GCMO 110 S Dept Mch 1/16. Due Sol: Deps \$150 Clo \$16. D&FS for deps given. Last pd to Jan 31/16 by Capt Smith.

(d) On Surgeon's Certificate of Disability. Disch Jan 12/16 on SCD par 5 SO 7 WD Jan 10/16.

(e) By Purchase. Disch Jan 10/16 by purchase par 2 SO 3 C Dept Jan 4/16.

(f) On account of a Dependent Parent. Disch Jan 25/16 on account of a dependent parent par 5 SO 20 W D Jan 24/16.

27. EXTRA DUTY.

(a) SbO Jan 1 to 31/16 26 days worked 1 holiday.

(b) SbO Jan 1 to 31/16 31 days worked 5 Sundays and 1 holiday.

(c) Clerk office C Def Art Engr Jan 1 to 31/16 26 days worked 1 holiday.

28. FOREIGN SERVICE.

(a) Left US for PI Jan 5/16.

(b) Arrived in US from Alaska Jan 10/16.

(c) Foreign service increase begins on date of leaving US for foreign service and continues to date of return to US both dates inclusive.

29. GUNNERS, RATED POSITIONS AND MARKSMANSHIP PAY.

(a) Pay due soldier under these headings will be entered as the first remark on pay roll.

(b) Remarks should be entered on the pay rolls as prescribed by paragraphs 1343, 1344, and 1345, A. R.

30. OVERPAYMENT.

- (a) Due US \$5 overpaid as ER for Jan/16 on Vou 200 of Capt Doe for Feb/16.
- (b) The nature of an overpayment must always be stated.

31. QUARTERMASTER SUPPLIES.

- (a) Due US Clo \$6.50.
- (b) Due US C&GE \$1.25.
- (c) Due US RS 50c.

32. REDUCTIONS.

- (a) Rd fr 1st Sgt to Sgt O 6 Jan 10/16.
- (b) Rd fr Sgt to Pvt RO 10 Jan 13/16 O recd sd.
- (c) Rd fr Ck to Pvt O 7 Jan 12/16.
- (d) Rd fr Corp to Pvt SC Jan 6/16.
- (e) Rd fr Sgt to Pvt and to forfeit 2/3 of his pay per mo for 2 mos GCMO 150 E Dept Mch 2/16.

33. RETIREMENT.

Retired Jan 25/16 par 1 S O 20 WD Jan 24/16.

34. SENTENCES.

- (a) Forfeit 3 days pay SC Jan 5/16. (Date of approval by post commander.)
- (b) To be confined for 3 mos and to forfeit 2/3 of his pay per mo for a like period GCMO 50 E Dept Mch 2/16. \$20 deducted for Feb and Mch on Mch/16 roll. Unexecuted portion of sent remitted SO 55 E Dept Apr 5/16.
- (c) In a case where the full amount of the sentence has not been deducted, the sum already stopped should be shown on next roll.

35. SUBSISTENCE CHARGES.

- (a) All charges entered against enlisted men on account of subsistence must be concisely noted.
- (b) Due US credit sales Sub/16 \$1.50.
- (c) Due US refundment of Sub/16 \$3.
- (d) Due US increased cost of rations Sub/16 \$1.25.
- (e) Due US com of rations \$3 furnished by Capt Doe Ft Myer Va June 5/16.

36. TRANSFER.

- (a) Transferred to 24th Inf Jan 20/16 par 1 SO 10 WD Jan 15/16. (Under loss, transferred.)
- (b) Transferred as Sgt fr Sgt Co B this Regt RO 7 Jan 25/16.
- (c) Transferred as Pvt fr Sgt Co B this Regt RO 8 Jan 27/16. O recd at station of Sol Jan 30/16.
- (d) Date of receipt of order at station where soldier is serving is the date the transfer takes effect. If the transfer of a soldier from one organization to another changes his rate of pay, the date of the receipt of the order at the post where he is serving must always be shown.

37. TRANSPORTATION.

Due US \$20 for trans fr New York City to Ft Snelling Minn furnished by Capt Doe QM T/R No 7565 Feb 1/16.

By order of the Secretary of War:

Official:

H. P. McCAIN,
The Adjutant General.

H. L. SCOTT,
Major General, Chief of Staff.

General Orders,
No. 45.

War Department,
Washington, September 11, 1916.

The following sanitary regulations are published for the guidance of all concerned:

1. Division Surgeon. The division surgeon is charged, under the commanding general, with the general conduct and supervision of the Medical Department of the division, in the performance of its duties and will make recommendation concerning all matters pertaining to the sanitary welfare of the command.

2. Sanitary Inspector. The sanitary inspector is assistant to the division surgeon and is charged especially with the supervision of the sanitation of the command to which he is assigned. It is the duty of organization commanders to remedy defects reported to them by the inspector.

3. Water Supply. Precaution must be taken to prevent contamination of the camp water supply by keeping all containers scrupulously clean and protected from dust and other sources of infection.

An appliance carried on the supply table as "Water Bag, Field, Sterilizing," consists of a canvas bag of specially woven flax, 20 inches in diameter and 28 inches in length, sewn to a flat galvanized iron ring, hinged so it folds at one diameter. Spliced at four equidistant points on the ring are two crossed pieces of hemp rope, enabling the bag to be suspended on any convenient support capable of holding the weight of the bag when filled with water, which is about 330 pounds. Five nickel, spring faucets are placed at equal spaces about the bottom edge of the bag. The neck of these faucets is small enough to enter a canteen, which can be filled in 10 seconds. The self-closing faucets prevent wastage.

The purpose of the bag is not for transporting water, but to provide a stationary receptacle in which water can be held long enough to sterilize and then distribute it. The empty bag weighs from 7 to $7\frac{1}{2}$ pounds and folds into a convenient package for carriage in the field.

After the bag is suspended and filled with water, it is sterilized by the addition of a small amount of hypochlorite of calcium. This is carried in measured doses, sealed in glass tubes. A package of 60 of these tubes weighs 10 ounces and measures $7\frac{1}{2}$ by $3\frac{1}{2}$ by $4\frac{1}{4}$ inches. Packed in corrugated paper it will stand rough usage.

The tubes themselves are 3 inches in length by three-fifths of an inch in diameter and are marked with a file, enabling them to be easily broken in the fingers without fragments. They contain from 14 to 15 grains of calcium hypochlorite. This chemical contains from 30 to 32 per cent. chlorin, which forms in the water hypochlorous acid and results in sterilizing the water. The process is one of oxidation. In the strength used, waters highly infected are rendered safe. Of course, in such strengths (1-500,000) grossly polluted water, such as sewage, will not be rendered safe. Water ordinarily used will be entirely safe after being so treated. As the chemical acts more efficiently in clear waters, a filter cloth, to be fastened over the opening of the bag and weighing 1 ounce, is provided, or water may be strained through a blanket. The bag is filled after it is in place. Suspended matter, such as clay, is largely removed and not left to interfere with the action of the chlorin.

Comprehensive experiments demonstrate the bacteriological efficiency of the appliance. The organisms causing typhoid fever, the dysenteries, including amoebic or tropical dysentery, and ciliates are promptly destroyed. Even in the vegetative form amoebæ are killed in 15 minutes—ordinarily 5-10 minutes suffices after the addition of the powder to render the water safe to drink. Exposure of 30 minutes has been found to destroy all amoebæ and ciliates under most severe conditions in a test.

4. Disposal of Garbage. For detachments or companies in camps, or in isolated locations where other means are not available, the incinerator will be installed.

If wood is plentiful and medium-sized stones can be obtained, both liquid and solid refuse can be disposed of by using incinerators improvised for each company as follows:

A pit is dug about 5 feet long, $2\frac{1}{2}$ feet wide, and 6 inches deep at one end and 12 inches at the other; the excavated earth is banked around the pit and the latter is then filled with stones on which a fire is built; when the stones have become heated, liquid refuse is poured into the pit (shallow end), where it gradually evaporates; solid matter is burned on the fire.

The efficiency of this type of incinerator depends largely upon the fact that porous earth absorbs a very large part of the liquid slops, but it is not considered practicable to destroy the usual accumulation of slops every day without using an extravagant amount of fuel.

A type of incinerator having a fire bed of rock 1 foot deep will not permit the heat from the fire to penetrate beyond that depth. The rock wall on three sides of the fire bed absorbs much heat that otherwise might be dissipated into space, which increases the evaporating capacity of the incinerator enormously, and requires a comparatively very small amount of fuel. Incinerators built of large rocks are considered to be most efficient.

About one-sixth of a cord of wood per day per company is considered more than sufficient for the destruction of all slops and garbage if ordinary care and attention are given the incinerator. Liquid slops should be evaporated by being poured slowly along the vertical walls of the incinerator, not upon the fire bed, and the solid garbage should be placed on top of the fuel. It has

been determined that a skilled attendant can destroy 100 gallons of liquid and 23 cubic feet of solid garbage in about 12 hours by using one-six cord of wood.

Where rock is not available, material (brick 340, lime three-fourths b be obtained on requisition from the quartermaster. Where disposal in tary way can be made by means of carts, the garbage can may be use cans will be thoroughly cleaned, scalded, and coated with crude pe after emptying.

5. Disposal of Manure and Care of Picket Lines. All manure will be to the camp dump. Picket lines will be kept broom swept, and all and straw hauled off daily. A weekly incineration of the picket lines accomplished with crude oil at the rate of 10 gallons to each line. C may be obtained from the Quartermaster Corps on usual requisition.

6. Disposal of Excreta. Where a water-carriage system is not feasi Havard box will be used over the earth latrines. Daily inspection system is enjoined on the part of the medical officer of the organizati will see that the following plan is carried out:

(a) The latrine will be burned out daily with crude oil and hay. (Eac ing, 1 gallon crude oil and 15 pounds of hay or straw.)

(b) The boxes will be at all times kept fly tight; this implies closur cracks, care of the hinges and a back construction so that the lids dro matically. The latrine seats will be washed off twice weekly with a o hundredths solution of cresoline, or other disinfectant, and whitewashe twice weekly.

(c) When filled to within 2 feet of the top, latrines will be filled w their position marked, and new latrines constructed.

(d) Where water-carriage system is in vogue, either the automatic t rough system will be installed.

7. Kitchens and Mess Rooms. Kitchens and mess rooms will be s screened and an efficient fly trap provided for catching such flies entrance thereto. An effective fly trap consisting of a light wooden covered with wire gauze, extending to about one-eighth of an inch of t of the trap, is readily constructed. It has been found that sweetene slightly acidulated with vinegar is an excellent bait.

Ice boxes installed will be inspected daily and drip pans empti scalded out.

Garbage cans will be kept on wooden racks and elevated from the and cans burned out daily with oil to prevent fouling, and kept clean with a coat of whitewash.

8. Arrangements will be made for the installation of shower baths troops, and a careful inspection will be made daily to see that waste therefrom is so disposed of as to prevent mosquito breeding.

9. The use of the mosquito bar is imperative, and it will be used in tricts where mosquitoes are prevalent.

10. Food and Drinks. No food, drinks, or like commodities will be camp except in the authorized exchanges.

Attention is called to the use of the following foods, the elimina which from the messes will serve to prevent a variety of intestinal diso

(a) Canned milk and fish opened the day before. (Fish and milk pois

(b) Hashes of meats and potatoes prepared the night previous. (Pt poisoning of severe type.)

(c) Locally grown green vegetables, uncooked. (Dysenteries and diar

11. Malaria. When malaria prevails, the daily use of 3 grains of s of quinine, to be increased as indicated, as a malarial prophylactic is compulsory.

12. Inspections. Surgeons of organizations will make a daily inspection of the commands to which they pertain, covering the following: Picket lines, latrines, kitchens, barracks, inclosed toilets, baths, garbage receptacles, incinerators, and all food supplies; they will make a verbal report at once to their respective commanding officers for the correction of any sanitary defects noted, and a similar report, with the action taken, to the sanitary inspector on his next visit.

13. Special reports will be made at once by the surgeon of each organization to the organization commander and the division surgeon in the following cases:

- (a) Acute infectious or contagious diseases developing in barracks or camps.
- (b) Cases of fever of 101° or over, attended with albuminuria.
- (c) Unusual prevalence of mosquitoes in vicinity.
- (d) Development of amœbic or bacillary dysentery or malaria in the command.

14. Venereal prophylaxis and venereal inspections will be carried out thoroughly, and the required monthly report of the number of new cases of venereal diseases will be sent to the division surgeon each month.

15. Areas about camps in which mosquitoes could breed, such as cisterns, tanks, woods, gutters, pools, and drains, will be kept under close observation by the surgeon, and the proper remedies applied, i.e., screening, draining, oiling, etc.

16. Sanitary squads composed of medical officers, noncommissioned officers, and privates of the Medical Department will be organized by the division surgeon. The sanitary squad will supervise and assist in the disposal of camp wastes. Civilians employed as sanitary laborers will be hired by the Quartermaster Corps for the Medical Department.

17. Flies. All possible breeding places of flies, accumulations of wastes, and filth should be destroyed by incineration and particular attention given to the manure and refuse from the picket lines and stables.

An energetic campaign must be begun at once against the mature flies.

Each company or organization will provide itself with several large fly traps, to be placed near kitchen doors, store tents, and wherever flies are present.

INFECTIOUS DISEASES.

Certain infectious diseases are of primary importance in military sanitation and will be mentioned briefly in the following notes.

Typhoid Fever. Is caused by a specific organism, the typhoid bacillus. When the bacillus finds an entrance into man's intestinal tract, typhoid fever is likely to result.

The excreta, and particularly the stools and urine of the victim of typhoid, are loaded with the typhoid bacilli. Hence the necessity for extreme care in properly disposing of excreta and the strict avoidance of camp pollution.

Typhoid fever is chiefly a filth disease and one widely distributed over the world. Its presence in a camp or community is chiefly determined by the personal cleanliness of the occupants and largely by their method of disposing of human excreta.

Through careless means of disposing of feces and urine, water, milk, and food become infected, very largely through the agency of insects, principally the fly, which, breeding in accumulations of refuse, manure, and various forms of filth, transfer the disease germ mechanically on their bodies and in their secretions from the infected source to the food. Absolute protection of food supply of all kinds and persistent warfare on the fly are imperative.

The most common mode of infection in typhoid is by contact, direct and indirect, with the infected individual. About 60 per cent of all cases are believed to be due to contact infection.

Direct contact infection follows intimate association with the infected person.

Indirect contact infection results from clothing, bedding, drinking cups, dishes, etc., which may serve to carry the infection from one person to another.

The necessity for great care as to personal cleanliness is obvious.

Frequent bathing, the washing of hands before eating, attention to laundry, underclothing, and general personal cleanliness are obligatory, as well as the prompt sterilization of all articles which have been used by those suffering from the disease, as well as by "carriers," those excreting typhoid germs though presenting no active symptoms of the disease.

These "carriers" are an insidious menace, an even greater one than a case of typhoid fever, because so frequently unrecognized. The greatest cautions must be taken by medical officers for the prompt recognition, isolation, and treatment of these "carriers."

The regulations direct that all soldiers, immediately on entrance into service, be protected against typhoid fever by vaccination, as well as against smallpox. This regulation will be strictly enforced.

Malaria. Is caused by a microorganism (*Plasmodium malarie*) which gains access to the body through the bites of mosquitoes, belonging to the genus *Anopheles*.

The predisposing causes of the disease are those that favor the development of mosquito life.

On account of the nocturnal habits of the malaria-bearing mosquito, the disease is more likely to be contracted at night.

Camps should not be located near swamps, or in places where stagnant water favors the development of the mosquito. Every precaution will be taken to destroy these breeding places by draining and filling, or by oiling the water, or by the cutting away of all grass or undergrowth for a distance of 200 feet about camps and habitations, in order that the adult mosquitoes may not find lodgment and protection there.

Since the malarial mosquito is chiefly a night biter, the regulation requiring the use of the mosquito bar at night will be enforced and frequent inspection made to see that no evasion of this order occurs.

In certain conditions the use of preventive doses of quinine may be required and administered by order under the supervision of the medical officer. Cases of malaria will be promptly isolated for treatment and protected from further attacks by mosquitoes.

Yellow Fever. Is transmitted by the bite of the yellow fever mosquito (*Stegomyia calopus*).

Yellow fever is essentially a disease of the Tropics and its existence is entirely dependent upon the distribution of this single species of mosquito. It is a small and silver-striped, active principally at evening time, and breeds generally in small accumulations of water close to the habitations of man.

The prevention of this disease, as in malaria, depends chiefly on the destruction of the mosquito and its breeding places, the proper protection against the bites of the insects, at all times, and the early isolation, protection, and treatment of each case of yellow fever as soon as suspected.

Cholera. Is an acute infectious disease caused by a comma-shaped microorganism—the cholera bacillus.

These germs breed in the intestine of man and find their way into the mouth of another individual through the medium of infected water, milk, food, or the germs can be conveyed by carriers, by flies, and by other means of infection as in typhoid fever.

In every case this connection is certain and absolute. The disease is not spread in any other manner.

In the cholera patient practically the only infected discharge is the stool. It is, therefore, essentially a filth disease.

As in typhoid fever, contaminated food, dirty hands, flies, and infected clothing and bedding are frequent sources of danger. All the sanitary precautions used in the prevention of typhoid fever should be exercised, including the careful searching out of carriers, those individuals having the germs of cholera in their intestines and excreting them in their stools, thus scattering the infection and unknowingly infecting those about them and greatly assisting in the rapid spread of the disease.

These "carriers" in an infected district are often numerous, ranging in numbers from 5 to 10 per cent of the apparently normal population in a community where an epidemic prevails. "Carriers" are specially dangerous if connected in any way with the handling of the food supply.

In cholera, as in typhoid fever, dysentery, and other so-called diarrhœal diseases, great care should be exercised to provide that—

- (1) Only sterilized water is used.

- (2) Only recently cooked and properly served food is allowed.

- (3) All kitchens are screened.

- (4) All refuse burned and constant warfare made against the fly and its breeding places.

Anticholera vaccination has been proved an effective preventive measure also, but again, as in typhoid fever, the application of vaccination in these diseases does not lessen in any degree the responsibility or importance of rigidly enforcing all the general sanitary rules which have been here briefly stated.

Dysentery. Under this head are included at least two severe specific diseases—bacillary dysentery and amœbic dysentery—each caused by distinctive organisms.

In addition there may be mentioned under this heading all the various forms of diarrhœa and colitis, characterized by colic, bloody stools, and tenesmus.

Some of these are undoubtedly of a nonspecific and temporary nature, due to chill or to indiscretions in eating and drinking.

Prevention is the same as in typhoid fever and cholera, since there is no doubt that in the specific bacillary and amœbic dysenteries the cause of the infection leaves the infected man by his excreta, largely in his feces.

Attention is again directed to what has already been said, to the great importance of strict attention to the disposal of all excreta and wastes and to the careful investigation and protection of the water supply.

The three diseases—typhoid fever, cholera, and dysentery—may, from the standpoint of prevention, be considered as forming a well-marked group.

In all the mode of departure from the infected man is in his dejecta; in all it enters the infected man in food and drink and in all three the fly very often provides the most important link.

Typhus fever is an acute infectious disease, caused by a specific germ, characterized by sudden onset, high fever, marked nervous symptoms, and macular eruption. It has prevailed in Mexico since the middle of the sixteenth century.

Typhus fever is transmitted to man only by the bite of the louse, which infests the body and clothing of the victims.

The prevention of typhus fever depends, therefore, upon personal cleanliness and the avoidance and destruction of infected lice.

Frequent bathing and cleansing of clothing, with repeated inspections of garments, particularly the seams where the eggs of the louse are deposited, are imperative precautions.

The body louse lays its eggs among and attached to the fibers of cloth with a special preference for seams and linings, a point to be remembered in the destruction of lice.

These eggs are the size of a small pinhead, yellowish white in color, pear-shaped, and attached at the lower end to the cloth by a cement excrement. The female. They can be destroyed by boiling water or kerosene.

The avoidance of buildings, places, and persons known to be infected with lice is of first importance.

In case troops are sent into a typhus area, a railway disinfecting and bathing train will be provided and stationary plants of like character at the base.

Smallpox. All soldiers will be vaccinated against this disease on enlistment. Vaccination confers immunity against smallpox for a number of years.

Any case occurring among recruits will be isolated and contacts notified and protected by recent successful vaccination will be revaccinated.

Epidemic Cerebro-Meningitis. Preventive measures in this disease consist of prompt recognition, isolation, and treatment of the patient.

"Carriers" will be also carefully sought for and kept under close observation.

Measles, Mumps, and Scarlet Fever. When these diseases appear in a command, all cases will be immediately isolated, all "contacts" inspected and, where the diseases show a tendency to spread, a detention camp will be established where all recently arrived recruits will be detained under observation for a period of 12 days before being permitted to join their organizations.

Venereal Diseases. The cause of these diseases is a matter of common knowledge. They are entirely preventable and the government punishes those who expose themselves and contract venereal disease, by prompt stoppage of pay and restriction of privileges while under treatment.

All preventive measures prescribed by Army Regulations against infection of this character will be rigidly enforced.

Major General, Chief of Staff.

General Orders, }
No. 54. }

War Department,
Washington, October 10, 1916.

I. The following extracts from a decision of the Comptroller of the Treasury of August 28, 1916, regarding longevity and continuous-service pay of officers and enlisted men of the militia or National Guard brought into the service of the United States under the acts of January 21, 1903 (32 Stat., 776) and May 27, 1908 (35 Stat., 400), and the instructions relative thereto are published for the information and guidance of all concerned:

1. (a) Question. "Whether officers and enlisted men of the militia or National Guard brought into the actual service of the United States under section 4 of the act of January 21, 1903, as amended by section 3 of the act of May 27, 1908, are entitled to count their services in the militia or National Guard, either before or after the date when brought into the actual service of the United States, for the purpose of longevity or continuous-service pay."

Answer. "Neither officers nor enlisted men are entitled to count their services in the militia or National Guard before the date when brought into the actual service of the United States for the purpose of longevity or continuous-service pay; that officers are entitled to count their service after the date when brought into the actual service of the United States for the purpose of longevity or continuous-service pay; and that enlisted men are not entitled to count such service for the purpose of continuous-service pay."

(b) Question. "Whether said officers or enlisted men who had prior service in the Regular Army, or the Marine Corps, are entitled to count such service for the purpose of increase of pay."

Answer. "Officers who had prior service in the Regular Army or Marine Corps are entitled to count such service for the purpose of increase of pay, but enlisted men who had such prior service are not entitled to count it for such purpose, except for one enlistment period as provided in the above act of May 11, 1908."

(c) Question. "Whether an enlisted man discharged from the Regular Army, who enlists or is given a commission in a militia or National Guard organization which has been brought into the actual service of the United States, under the acts of 1903 and 1908, is entitled to count his service in the Regular Army for the purpose of increase of pay as an enlisted man or commissioned officer of the militia or National Guard. If this question be answered in the negative will the soldier, in the event that he remains out of the Regular Army for a period of more than three months, lose his right to count the continuous service which he had when discharged from the Regular Army in the event that he again enlists in the Regular Army."

Answer. "An enlisted man discharged from the Regular Army who is given a commission in a militia or National Guard organization brought into the actual service of the United States as aforesaid is entitled to count his service in the Regular Army for the purpose of increase of pay as a commissioned officer of the militia or National Guard, but an enlisted man so discharged who enlists in such an organization is not entitled to count his service in the Regular Army for the purpose of such increase of pay; and that in either case if he remains out of the Regular Army for a period of more than three months he loses his right to count the continuous service which he had when discharged from the Regular Army in the event that he again enlists in the Regular Army."

(d) Question. "Whether a commissioned officer of the Regular Army who holds a commission in a higher grade in the militia or National Guard brought into the actual service of the United States under the acts of 1903 and 1908 is entitled to longevity increase on pay of his grade in the Regular Army or to longevity increase on pay of his grade in the militia or National Guard."

Answer. " * * * A commissioned officer of the Regular Army who holds a commission in a higher grade in the militia or National Guard brought into the actual service of the United States under the acts of 1903 and 1908, is entitled to the pay of the grade he holds in the militia or National Guard and for such time as he holds it he is not entitled to pay of his grade under his commission in the Regular Army. The pay in the higher grade is his 'annual pay' within the meaning of the act of May 11, 1908, and it is on that pay that such officer is entitled to have his longevity increase of pay computed. * * *"

2. In the case of an officer of the militia or National Guard in the service of the United States, entitled to increase of pay for length of service under the foregoing decision, remarks showing the following information will be entered on the pay roll or individual pay account if not paid on pay rolls:

(a) On first pay roll on which longevity increase of pay is claimed and on subsequent pay rolls until paid (or on individual pay account, if not paid on pay rolls) the remarks will show a full statement of the prior service the officer is entitled to count for purposes of longevity pay with dates of beginning and ending of such service and names of organizations in which such service was rendered.

(b) On pay rolls (or on individual pay account, if not paid on pay rolls) subsequent to first payment of longevity increase, remarks will be stated as follows: "Entitled to longevity pay for over ——— years' service; for state-

ment of service see pay roll (or pay account) for month of ———,

3. In the case of an enlisted man of the militia or National Guard in service of the United States who is entitled to continuous-service pay during the second enlistment period on account of having been honorably discharged from the Regular Army or the Marine Corps at the termination of an enlistment period, prior to his entry into the militia or National Guard, his name will be entered on the pay rolls as follows:

(a) On the first pay roll on which continuous-service pay is claimed and on subsequent pay rolls until paid the remarks will show the soldier served during the second enlistment period and a full statement of prior service in the Regular Army or Marine Corps with dates of enlistment and discharge and names of organizations in which such service was rendered.

(b) On pay rolls subsequent to first payment of continuous-service pay the remarks will be stated as follows: "Entitled to pay as of 2d enlistment period for statement of prior service see pay rolls for month of ———, 191—."

4. Quartermasters will make payment of the increase in pay for longer enlistment continuous service to which the officer or enlisted man is entitled upon the statement of service entered upon the first pay roll (or individual pay account) and the notations on subsequent pay rolls or pay accounts and the responsibility for the correctness of the statement and notations will rest with the quartermaster certifying to the correctness of the roll or pay account.

By order of the Secretary of War:

H. L. SCOTT

Official:

Major General, Chief of

H. P. McCAIN,

The Adjutant General.

No. 60. }
General Orders, }

War Department,
Washington, November 10,

In order to comply with the provisions of section 24 of the National Infantry Act approved June 3, 1916, paragraph 2, General Orders, No. 64, War Department, 1915, is amended to read as follows:

2. (a) Vacancies in the grade of second lieutenant created or caused by the act of June 3, 1916, in the Infantry, Cavalry, Field Artillery, and the Artillery Corps occurring in any fiscal year will be filled by appointment required by law, first, of cadets graduated from the United States Military Academy during the preceding fiscal year, for whom vacancies did not exist during the fiscal year in which they were graduated; second, of the provisions of existing law, of enlisted men, including officers of the United States Marine Scouts, whose fitness for promotion shall have been determined by competitive examination; third, of members of the Officers' Reserve Corps between the ages of 21 and 27 years; fourth, of commissioned officers of the National Guard between the ages of 21 and 27 years; fifth, of such honor graduates between the ages of 21 and 27 years, of distinguished colleges as are named hereafter may hereafter be entitled to preference by general orders of the War Department; and sixth, of candidates from civil life between the ages of 21 and 27 years.

Candidates from the second class will be selected by the competitive examination prescribed for this class by Paragraph I, General Orders, No. 2, War Department, July 20, 1916, from those designated by the War Department. Candidates of this class must be under 30 years of age and unmarried. Candidates from the third, fourth, fifth, and sixth classes will be selected by competitive examination prescribed in General Orders, No. 64, War Department, 1915, from those designated by the War Department, and candidates from these classes must be between the ages of 21 and 27 years at date of appointment.

Paragraph 7, General Orders, No. 64, War Department, 1915, is amended to read as follows:

7. A soldier to be eligible to compete for provisional appointment to the grade of second lieutenant for vacancies not caused or created by the act of June 3, 1916, must be a citizen of the United States, unmarried, and under 30 years of age at the date of the commencement of the competitive examination and must have served honorably not less than two years in the Army as an enlisted man on or before that date; for vacancies caused or created by the act of June 3, 1916, an enlisted man of the Regular Army or officer of the Philippine Scouts must comply with the same conditions except that only one year's service is required; in either case he must also be physically sound and of good moral character before and after entering the Army, and must be an enlisted man or officer of the Philippine Scouts when he submits his application and when he appears for examination, and if appointed a second lieutenant he must be an enlisted man of the Regular Army or officer of the Philippine Scouts at the date of his appointment.

Paragraph 39, General Orders, No. 64, War Department, 1915, is amended to read as follows:

39. Vacancies created or caused by the act of June 3, 1916, remaining after the appointment of qualified candidates from (1) enlisted men and officers of the Philippine Scouts, (2) Officers' Reserve Corps, (3) officers of the National Guard, and (4) honor graduates of "distinguished colleges," will be filled in order of merit as determined by their general average, first, from those candidates whose general average is 85 per cent or more, by taking first those from Class B, second those from Class C, third those from Class D; second, the remaining available vacancies will then be filled in order of merit from the remaining qualified candidates without regard to the classification.

By order of the Secretary of War:

Official:

H. P. McCAIN,
The Adjutant General.

H. L. SCOTT,
Major General, Chief of Staff.

General Orders, }
No. 21. }

War Department,
Washington, February 9, 1917.

I. Section IV, General Orders, No. 69, War Department, 1916, is amended to read as follows:

Until further orders, persons holding provisional appointments to the grade of second lieutenant will be required to provide themselves only with the service and dress uniforms, and with the arms and personal equipments pertaining to their rank and duty. Horse equipments will be furnished under the laws and regulations governing issues to officers of the Army.

II. Until further orders, members of the Officers' Reserve Corps will be required to provide themselves only with the service uniform, and with the arms and personal and horse equipments pertaining to their rank and duty, except that members of the Medical Officers' Reserve Corps, when on active duty at posts, will provide themselves also with the dress uniform. Horse equipments will be furnished to officers below the grade of major under the same laws and regulations governing issues to officers of the Army.

By order of the Secretary of War:

Official:

H. P. McCAIN,
The Adjutant General.

H. L. SCOTT,
Major General, Chief of Staff.

229. Stoppage of Pay for Absence from Duty on Account of Disease Resulting from Intemperate Use of Drugs, Liquors, or Other Misconduct. 1. The statute provides that no officer or enlisted man in active service, who shall be absent from duty on account of disease resulting from his own intemperate use of drugs, or alcoholic liquors, or other misconduct, shall receive pay for the period of such absence from any part of the appropriation in this act. In the case of officers or enlisted men, the time so absent and the cause thereof shall be ascertained under such procedure and regulation as may be prescribed by the Secretary of War.

2. Absence from duty because of the intemperate use of drugs or alcoholic liquors, or because of incapacity resulting from venereal diseases not contracted in line of duty, is within the purview of the statute quoted above; and an officer or enlisted man who is absent from duty for any such cause or for any other cause is not entitled to pay, as distinguished from allowances, for the period of such absence.

3. Whenever an officer or enlisted man is absent from duty due to causes within the purview of the statute quoted above, the Company commander shall state in the "Daily Sick Report" his opinion to that effect by noting "G. O. 31, 1912," in the column headed "In line of duty" of the "Company Commander's Report," and the surgeon will in like manner record his opinion in the column "In line of duty" of the "Medical Officer's Report." Notice that when an entry has been made will at once be brought to the attention of the Company Commander or enlisted man concerned by the Company Commander.

When the Company Commander and the surgeon are in accord, the stoppage of pay, if approved by the Commanding Officer, shall be final. Should the Company Commander and the surgeon disagree, or should the Commanding Officer dissent, the latter will call a Board of Officers of not less than two members, one of whom shall be a Medical Officer, to report upon and make recommendations in the case. Approval by the Commanding Officer of the findings of this Board shall be final; but if the Commanding Officer disapprove the findings of the Board the proceedings will be forwarded for the action of the next higher authority.

In the case of a Company Commander or of an Officer or enlisted man who has been carried upon the rolls of a Company, the duties hereinbefore required of the Company Commander will be performed by the next superior officer in command whose command or direction the Officer or enlisted man concerned is serving.

The terms "company" and "company commander" will be understood to include including a troop, battery, band, or detachment and the commanding officer thereof.

4. When it has been determined in the manner hereinbefore prescribed that an officer has been absent from duty due to causes within the purview of the statute quoted above, the proper commanding officer will forward to the next higher command commander a report showing the inclusive dates of the absence and the cause thereof. This report will be forwarded to the Adjutant General of the Army for transmission to the Quartermaster General, who will take the necessary action looking to stoppage of pay for the period of absence from duty. In cases arising in the Philippine Department, the department commander will, at the time of sending of the original report to the Adjutant General, will transmit a copy thereof to the department quartermaster, Philippine Department, who will take the necessary action toward securing the proper stoppage of pay.

When it has been determined in the manner hereinbefore prescribed that an officer or enlisted man has been absent from duty due to causes within the purview of the statute quoted above, the proper commanding officer will take notation

effect on the pay rolls or on final statements giving the inclusive dates of the absence, and the quartermaster will make deduction of pay for such period. If it is impracticable to determine within the month in which the absence from duty occurs that such absence was due to causes which should deprive the soldier of his pay, he will not be permitted to draw pay for that or any subsequent month-until the cause of the absence from duty has been determined.

When cases marked not in line of duty are transferred to a general, division, or district hospital, and the commanding officer of such hospital shall have reason to doubt the justice of the notation, he will report the matter to the department commander, who will call a board of three medical officers to consider and determine whether the disease was incurred in the line of duty or not. The proceedings of the board, with all the papers in the case will be forwarded to the department commander for final decision. Similar action will be taken when a patient from a post enters a general, division, or district hospital and the surgeon of such hospital is the first medical officer to express an opinion and he and the company commander are not in accord as to the finding.

Circular }
No. 2. }

War Department,
The Adjutant General's Office,
Washington, November 1, 1916.

UNITED STATES ARMY RECRUITING CIRCULAR.

Note: The following instructions sent to recruiting officers by the Adjutant General of the Army apply to the present war:

Telegram April 10, 1917.

"Requirements maximum age and educational qualifications do not apply to enlistments for Regular Army in time of war. You are authorized to accept for Regular Army, applicants under forty years if they can speak English and to accept subject to examination at Depot, applicants whom you deem fit for Military Service, without regard to minor physical defects, using proper care to send only good risks.

"This authority does not apply to enlistments for National Guard; Enlistment of applicants under sixteen will not be made without special authority from this office. All applicants under eighteen must have proper consent."

Telegram, April 13, 1917.

"It is the policy of the War Department to discharge from service at the termination of the emergency all men who have enlisted in the Regular Army since the declaration of war or who now enlist. This policy also applies to National Guard."

Telegram, May 30, 1917.

Act approved May 18th, 1917, provides: "Commencing June 1, 1917, and continuing until the termination of the emergency, all enlisted men of the Army of the United States in active service whose base pay does not exceed twenty-one dollar per month shall receive an increase of fifteen dollars per month; those whose base pay is twenty-four dollars, an increase of twelve dollars per month; those whose base pay is thirty, thirty-six, or forty dollars, an increase of eight dollars per month; and those whose pay is forty-five dollars, or more, an increase of six dollars per month; provided that the increase of pay herein authorized shall not enter into the computation of continuous service pay. Twenty per centum foreign service increase does not accrue on increases herein mentioned. Advise all posts and stations, including independent stations, within geographical limits, of your department.

McCain."

The following instructions will govern recruiting for the Regular Army:

Applicants for first enlistment must be under 35 years of age, of good character and temperate habits, able-bodied, free from disease, and must be able to speak, read, and write the English language.

No person under 18 years of age will be enlisted, reënlisted, or accepted with a view to enlistment without the written consent of the father, only surviving parent, or legally appointed guardian to the minor's enlistment.

No man who has been a member of the Organized Militia or National Guard of any State, Territory, or the District of Columbia will be enlisted in the Regular Army until he presents satisfactory evidence that he has been honorably discharged therefrom. In no case shall an applicant known to be a member of the Organized Militia or National Guard be accepted with a view to enlistment. Recruiting officers will question carefully all applicants regarding membership in militia or National Guard organizations, and will require those who acknowledge themselves to be or to have been members of such organizations to exhibit their discharges therefrom before accepting them.

Original enlistments will be confined to persons who are citizens of the United States or of Porto Rico, or who have made legal declaration of their intention to become citizens of the United States. Applicants for original enlistment who claim to have been naturalized or to have declared their intention to become citizens of the United States will not be accepted for enlistment nor enlisted unless they exhibit to the recruiting officer documentary evidence, under the seal of a court of competent jurisdiction, of their naturalization or their declaration of intention to become citizens. The notation "certificate of naturalization exhibited" or "copy of declaration of intention exhibited," with date, serial number, and title of court from which issued, will be made by the accepting officer, under the head of remarks, on the report of physical examination, Form No. 135, A. G. O., in the case of each such applicant who is accepted.

Married men will be enlisted only upon the approval of a regimental commander, or other proper commanding officer if for other than a regimental organization.

Applicants will be required to satisfy the recruiting officer regarding age and character and should be prepared to furnish the necessary evidence.

For Infantry, Coast Artillery, and Engineers, the height of applicants 21 years of age or over must be not less than 5 feet 4 inches and weight not more than one hundred and ninety (190) pounds.

For Cavalry, the height of applicants 21 years of age or over must be not less than 5 feet 4 inches and not more than 5 feet 10 inches and weight not to exceed one hundred and sixty-five (165) pounds.

For Field Artillery the height of applicants 21 years of age or over must be not less than 5 feet 4 inches and not more than 6 feet and weight not more than one hundred and ninety (190) pounds. For the mountain batteries the height must be not less than 5 feet 8 inches.

A variation not exceeding a fraction of an inch above the maximum or below the minimum height given for Cavalry and Field Artillery is permissible if the applicant is in good health and is in other respects desirable as a recruit.

The minimum weight of applicants 21 years of age or over for all arms of the service is one hundred and twenty-eight (128) pounds, subject to variations below that standard as explained herein, but in no case will an applicant whose weight falls below one hundred and twenty (120) pounds be accepted without special authority from the Adjutant General of the Army.

PHYSICAL PROPORTIONS FOR HEIGHT, WEIGHT, AND CHEST MEASUREMENT
OF APPLICANTS 21 YEARS OF AGE OR OVER.

| Height. | | Weight. | Chest measurement. | |
|---------|---------|----------------|--------------------|----------------|
| Feet. | Inches. | | At expiration. | Mobility. |
| | | <i>Pounds.</i> | <i>Inches.</i> | <i>Inches.</i> |
| | 64 | 128 | 32 | 2 |
| | 65 | 130 | 32 | 2 |
| | 66 | 132 | 32½ | 2 |
| | 67 | 134 | 33 | 2 |
| | 68 | 141 | 33¼ | 2½ |
| | 69 | 148 | 33½ | 2½ |
| | 70 | 155 | 34 | 2½ |
| | 71 | 162 | 34¼ | 2½ |
| | 72 | 169 | 34¾ | 3 |
| | 73 | 176 | 35¼ | 3 |

PHYSICAL PROPORTIONS FOR HEIGHT, WEIGHT, AND CHEST MOBILITY FOR
APPLICANTS UNDER 21 YEARS OF AGE.

| | Minimum height. | Minimum weight. | Chest mobility. |
|-------------------|-----------------|-----------------|-----------------|
| | <i>Inches.</i> | <i>Pounds.</i> | <i>Inches.</i> |
| years of age..... | 62 | 110 | 2 |
| rs of age..... | 64 | 115 | 2 |
| rs of age..... | 64 | 120 | 2 |
| rs of age..... | 64 | 125 | 2 |

Calculating the proportional weight and chest measurements of an applicant, any fractional part of an inch in height equal to or greater than a half inch will be counted as a full inch; any fractional part of an inch less than a half inch will be disregarded.

It is not necessary that the applicant should conform exactly to the figures in the foregoing table. The following variations below the standard in the table are permissible when the applicant is active, has firm muscles, and is physically vigorous and healthy:

| Height. | Chest at expiration. | Weight. |
|----------------|----------------------|----------------|
| <i>Inches.</i> | <i>Inches.</i> | <i>Pounds.</i> |
| Under 68..... | 2 | 8 |
| Under 69..... | 2 | 12 |
| Under 70..... | 2 | 15 |
| Over 70..... | 2 | 20 |

A disproportion of weight over height is not a cause for rejection unless the applicant is manifestly obese.

Applicants must defray their own expenses while traveling to the recruiting station.

The term of enlistment for all enlistment contracts made on or after November 1, 1916, is seven years; the first three years to be in the service with the regular Army and the last four years to be on furlough and attached to the Army Reserve.

Following alternatives are open to a soldier who may be thus enlisted: (1) After the expiration of three years' continuous service with organizations, upon the expiration of a first or any subsequent enlistment, he may be reënlisted for a period of seven years, as above, in which event he shall receive his final discharge from his prior enlistment; or

(b) After the expiration of one year's honorable service any enlistee serving within the continental limits of the United States whose company, troop, battery, or detachment commander shall report him as proficient and sufficiently trained, may, in the discretion of the Secretary of War, be furloughed to the Regular Army Reserve under such regulations as the Secretary may prescribe, but no man furloughed to the Reserve shall be eligible to reënlist in the service until the expiration of his term of seven years.

(c) In addition to military training, soldiers while in the active service hereafter be given the opportunity to study and receive instruction upon educational lines of such character as to increase their military efficiency and enable them to return to civil life better equipped for industrial, commercial, and general business occupations. Civilian teachers may be employed by the Army officers in giving such instruction, and part of this instruction may consist of vocational education either in agriculture or the mechanic arts.

When any soldier is furloughed to the Reserve his accounts will be settled and he will be paid in full to the date such furlough becomes effective. He will receive travel allowances as provided for in the case of discharged soldiers.

Subject to such regulations as the President may prescribe for their identification and location and physical condition, the members of the Regular Army Reserve shall be paid semiannually at the rate of \$24 a year while in the Reserve. The President may summon the Regular Army Reserve or any part thereof for field training for a period not exceeding 15 days in each year. Reservists to receive travel expenses and pay at the rate of their regular grades in the Regular Army during such periods of training, and in the event of actual or threatened hostilities he may mobilize the Regular Army Reserve in such manner as he may determine, and thereafter retain it, or any part thereof, in active service for such period as he may determine the commander in chief may demand.

For all enlistment contracts made on and after June 3, 1916, three years shall be counted as an enlistment period in computing continuous service for pension service rendered on and after that date.

All soldiers receive from the government, during active service, with their pay (in addition to their pay), rations, clothing, bedding, medicines, and medical attendance.

The following are the rates of pay during the first enlistment as fixed by law:

| Grade. | |
|---|-------|
| Quartermaster sergeant, senior grade—Quartermaster Corps. | |
| Band leader. | |
| Master signal electrician. | |
| Master electrician—Coast Artillery, Quartermaster Corps. | |
| Master engineer, senior grade—Engineers. | |
| Master hospital sergeant—Medical Department. | |
| Band sergeant and assistant band leader—Military Academy. | |
| Hospital sergeant—Medical Department. | |
| Master engineer, junior grade—Engineers. | |
| Engineer—Coast Artillery. | |
| Sergeant, first class—Medical Department. | |
| Sergeant, field musician—Military Academy. | |
| Regimental sergeant major—Cavalry, Field Artillery, Infantry, Engineers. | |
| Regimental supply sergeant—Cavalry, Field Artillery, Infantry, Engineers. | |
| Sergeant major, senior grade—Coast Artillery. | |
| Quartermaster sergeant—Quartermaster Corps. | |
| Ordnance sergeant. | |
| First sergeant—Cavalry, Artillery, Infantry, Engineers. | |
| Battalion sergeant major—Engineers. | |
| Battalion supply sergeant—Engineers. | |

| Grade. | Monthly pay. |
|---|--------------|
| Electrician sergeant, first class—Coast Artillery..... | 45 |
| Sergeant, first class—Engineers, Quartermaster Corps, Signal Corps..... | 45 |
| Assistant engineer—Coast Artillery..... | 45 |
| Musician, first class—Military Academy..... | 45 |
| Battalion sergeant major—Field Artillery, Infantry..... | 40 |
| Squadron sergeant major..... | 40 |
| Sergeant major, junior grade—Coast Artillery..... | 40 |
| Master gunner—Coast Artillery..... | 40 |
| Sergeant bugler—Cavalry, Artillery, Engineers..... | 40 |
| Assistant band leader—Cavalry, Artillery, Infantry, Engineers..... | 40 |
| Sergeant—Engineers, Ordnance, Signal Corps, Quartermaster Corps, Medical Department..... | 36 |
| Stable sergeant—Engineers..... | 36 |
| Supply sergeant—Engineers..... | 36 |
| Mess sergeant—Engineers..... | 36 |
| Color sergeant—Cavalry, Field Artillery, Infantry, Engineers..... | 36 |
| Electrician sergeant, second class—Coast Artillery..... | 36 |
| Band sergeant..... | 36 |
| Musician, first class—Cavalry, Artillery, Infantry, Engineers..... | 36 |
| Musician, second class—Military Academy..... | 36 |
| Sergeant—Cavalry, Artillery, Infantry..... | 30 |
| Stable sergeant—Cavalry, Field Artillery, Infantry..... | 30 |
| Supply sergeant—Cavalry, Artillery, Infantry..... | 30 |
| Mess sergeant—Cavalry, Artillery, Infantry..... | 30 |
| Cook..... | 30 |
| Horseshoer..... | 30 |
| Radio sergeant—Coast Artillery..... | 30 |
| Fireman—Coast Artillery..... | 30 |
| Band corporal..... | 30 |
| Musician, second class—Cavalry, Artillery, Infantry, Engineers..... | 30 |
| Musician, third class—Military Academy..... | 30 |
| Corporal—Engineers, Ordnance, Signal Corps, Quartermaster Corps, Medical Department..... | 24 |
| Mechanic—Coast Artillery..... | 24 |
| Chief mechanic—Field Artillery..... | 24 |
| Musician, third class—Cavalry, Artillery, Infantry, Engineers..... | 24 |
| Corporal—Cavalry, Artillery, Infantry..... | 21 |
| Saddler—Cavalry, Field Artillery, Infantry, Engineers, Medical Depart- ment..... | 21 |
| Mechanic—Cavalry, Field Artillery, Infantry, Medical Department..... | 21 |
| Farrier—Medical Department..... | 21 |
| Wagoner—Cavalry, Field Artillery, Infantry, Engineers..... | 21 |
| Private, first class—Cavalry, Artillery, Infantry, Engineers, Signal Corps, Ordnance, Quartermaster Corps, Medical Department..... | 18 |
| Private—Second class, and bugler..... | 15 |

For continuous service the pay of enlisted men is increased as follows, viz.: For those whose initial pay as set forth herein is \$36 or more an increase of \$4 a month for and during the second enlistment period, and a further increase of \$4 a month for and during each subsequent enlistment period up to and including the seventh. For those whose initial pay as set forth herein is \$18, \$21, \$24, or \$30, an increase of \$3 a month for and during the second enlistment period, and a further increase of \$3 a month for and during each subsequent enlistment period up to and including the seventh. For those whose initial pay as set forth herein is \$15, an increase of \$3 a month for and during the second and third enlistment periods each, and a further increase of \$1 a month for and during each subsequent enlistment period up to and including the seventh. When a soldier reenlists within three months from the date of discharge at the termination of an enlistment period, his service is continuous for the purpose of increase of pay provided herein. When a soldier has been honorably dis-

- charged at the termination of his first or any succeeding enlistment period and reënlists after the expiration of three months, he is regarded as in his second enlistment period, and a soldier who receives an honorable discharge for the convenience of the government after having served more than half of his enlistment is considered as having served an enlistment period.

Any private soldier, or bugler, honorably discharged at the termination of his first enlistment period who reënlists within three months of the date of said discharge is entitled upon such reënlistment to an amount equal to three months' pay at the rate he was receiving at the time of his discharge.

Qualified gunner, first class, Artillery, \$3 a month additional; qualified gunner, second class, Artillery, \$2 a month additional; qualified expert rifleman, \$5 a month additional; qualified sharp shooter, \$3 a month additional; qualified marksman, \$2 a month additional. In the Coast Artillery Corps: Casemate electrician, observer, first class, plotter and coxswain, \$9 a month additional; chief planter, chief loader, observer, second class, gun commander-gun pointer, \$7 a month additional. Mess sergeant, \$6 a month additional in organizations in which such grade does not exist by law.

The pay of enlisted men "serving beyond the limits of the States comprising the Union and the territories of the United States contiguous thereto (excepting Porto Rico, Hawaii, and the Canal Zone, Panama)" is increased 20 per cent, and the time of such service is counted from the date of departure from the United States to the date of return thereto. Increase accrues on additional pay for length of service, gunners, expert riflemen, casemate electricians, etc.

Whenever a soldier is honorably discharged at the expiration of his term of enlistment, or on account of disability, or when furloughed to the reserve, his travel allowances are ample to carry him to the place of enlistment.

By care and economy a soldier can save from his clothing allowance a considerable sum, payable to him on his discharge or when furloughed to the reserve.

The soldier can deposit his savings in sums of not less than \$5 with any Army paymaster, and for sums so deposited for the period of six months or longer the soldier, on his discharge, or when furloughed to the reserve, will be paid interest at the rate of 4 per cent per annum.

Soldiers who have served honestly and faithfully for 20 years, or who have been discharged on account of wounds received or disease contracted in the line of duty, are entitled to admission to the Soldier's Home in the city of Washington, D. C.

After 30 years' service enlisted men are entitled to be retired, and upon retirement will receive three-fourths of the monthly pay allowed to them by law in the grade they held when retired, \$9.50 a month additional as commutation for clothing and subsistence, and \$6.25 a month additional in lieu of quarters, fuel, and light.

A certificate of merit for distinguished service entitles a soldier to \$2 a month additional while in the Army, whether on the active or the retired list.

In case an enlisted man on the active list dies from wounds or disease not the result of his own misconduct, his widow or any other person previously designated by him is entitled to an amount equal to six months' pay at the rate received by him at the date of death, less \$35 or such part thereof as is expended by the Government for interment.

With the regiments recently organized, and those authorized under existing law to be organized during the succeeding four years, there is an excellent opportunity for active, intelligent young men of temperate habits, who may enlist as privates and develop the necessary qualifications, to secure promotion to the grade of noncommissioned officer. Unmarried soldiers, between the ages

of 21 and 30 years, who are citizens of the United States, who are physically sound, and who have served honorably not less than one year in the Army, and who have borne a good moral character before and after enlistment, are permitted to compete, by examination, for promotion to the rank of second lieutenant. The present and prospective increases in the authorized commissioned personnel make this opportunity unusually attractive.

Young men between the ages of 19 and 22, who have served in the Regular Army or the National Guard as enlisted men for not less than one year, have an opportunity for appointment by the President as cadets to the United States Military Academy.

H. P. McCAIN,
The Adjutant General.

Approved by order of the Secretary of War:

H. L. SCOTT,
Major General, Chief of Staff.

EXTRACTS FROM BULLETINS OF THE ARMY TO MAY, 1917 (BULLETIN 28).

Bulletin } Washington, February 5th, 1914.
No. 3. } War Department,

1. The articles named in List A and List B herein are supplied by the Quartermaster Corps for issue to troops, and are considered as expendable under the conditions set forth in the heading of each list.

LIST A.

2. List of articles of supplies of the Quartermaster Corps of minor quality to be expended when worn out by fair wear and tear in the public service when, in the opinion of the commanding officer, they have no material salable value. The certificate of expenditure submitted by the accountable officer and approved by the commanding officer should be supported by a certificate of a disinterested officer that the property has been destroyed in his presence. When, however, any of the articles specified in List A have, in the opinion of the commanding officer, a salable value, such articles should be submitted to an inspector. Articles ordered destroyed may be broken up and serviceable parts thereof used in making repairs.

uch other supplies of the Quartermaster Corps of minor value which consumed in the maintenance and upkeep of the public service. Also such s as are not listed herein which become permanent fixtures to public gs, machinery, etc. These and all other articles in List B herein to be ed by the accountable officer only when issued to troops or for repairs hen installed as permanent fixtures.

rticles in List A will be dropped from accountability only under con- set forth in paragraph 2 of this circular.

ems of bedding for animals, bedding for enlisted men, fuel, gasoline, oil, and mineral oil when used as fuel or for lighting purposes are not ed in List B for the reason that the issue of these articles is directed lowances fixed in Army regulations or by authority of department anders.

order of the Secretary of War:

LEONARD WOOD,
Major General, Chief of Staff.

l:
EO. ANDREWS,
The Adjutant General.

**FACTS FROM BULLETIN NO. 16, WAR DEPARTMENT,
JUNE 22, 1916, CONTAINING THE ACT OF CONGRESS
OF JUNE 3, 1916, GENERALLY KNOWN AS THE
"NATIONAL DEFENSE ACT."**

17. Composition of Infantry Units. Each regiment of Infantry shall t of one colonel, one lieutenant colonel, three majors, fifteen captains, first lieutenants, fifteen second lieutenants, one headquarters company, achine-gun company, one supply company, and twelve Infantry com- organized into three battalions of four companies each.

a battalion shall consist of one major, one first lieutenant, mounted ion adjutant), and four companies. Each Infantry company in battalion onstist of one captain, one first lieutenant, one second lieutenant, one rgeant, one mess sergeant, one supply sergeant, six sergeants, eleven als, two cooks, two buglers, one mechanic, nineteen privates (first class), ty-six privates.

a Infantry headquarters company shall consist of one captain, mounted ental adjutant); one regimental sergeant major, mounted; three bat- sergeants major, mounted; one first sergeant (drum major); two color ts; one mess sergeant; one supply sergeant; one stable sergeant; one nt; two cooks; one horseshoer; one band leader; one assistant band one sergeant bugler; two band sergeants; four band corporals; two ns, first class; four musicians, second class; thirteen musicians, third our privates, first class, mounted; and twelve privates, mounted.

Each Infantry machine-gun company shall consist of one captain, mounted; one first lieutenant, mounted; two second lieutenants, mounted; one first sergeant, mounted; one mess sergeant; one supply sergeant, mounted; one stable sergeant, mounted; one horseshoer; five sergeants; six corporals; two cooks; two buglers; one mechanic; eight privates, first class; and twenty-four privates.

Each Infantry supply company shall consist of one captain, mounted; one second lieutenant, mounted; three regimental supply sergeants, mounted; one first sergeant, mounted; one mess sergeant; one stable sergeant; one corporal, mounted; one cook; one saddler; one horseshoer; and one wagoner for each authorized wagon of the field and combat train: Provided, That the President may in his discretion increase a company of Infantry by two sergeants, six corporals, one cook, one mechanic, nine privates (first class), and thirty-one privates; an Infantry machine-gun company by two sergeants, two corporals, one mechanic, four privates, first class, and twelve privates.

The commissioned officers required for the Infantry headquarters, supply, and machine-gun companies and for the companies organized into battalions shall be assigned from those hereinbefore authorized.

Sec. 27. Enlistments in the Regular Army. On and after the first day of November, nineteen hundred and sixteen, all enlistments in the Regular Army shall be for a term of seven years, the first three years to be in the active service with the organizations of which those enlisted form a part and, except as otherwise provided herein, the last four years in the Regular Army Reserve hereinafter provided for: Provided, That at the expiration of three years' continuous service with such organizations, either under a first or any subsequent enlistment, any soldier may be reenlisted for another period of seven years, as above provided for, in which event he shall receive his final discharge from his prior enlistment: Provided further, That after the expiration of one year's honorable service any enlisted man serving within the continental limits of the United States whose company, troop, battery, or detachment commander shall report him as proficient and sufficiently trained may, in the discretion of the Secretary of War, be furloughed to the Regular Army Reserve under such regulations as the Secretary of War may prescribe, but no man furloughed to the reserve shall be eligible to reenlist in the service until the expiration of his term of seven years: Provided further, That in all enlistments hereafter accomplished under the provisions of this Act three years shall be counted as an enlistment period in computing continuous-service pay: Provided further, That any noncommissioned officer discharged with an excellent character shall be permitted, at the expiration of three years in the active service, to reenlist in the organization from which discharged with the rank and grade held by him at the time of his discharge if he reenlists within twenty days after the date of such discharge: Provided further, That no person under the age of eighteen years shall be enlisted or mustered into the military service of the United States without the written consent of his parents or guardians, provided that such minor has such parents or guardians entitled to his custody and control: And provided further, That the President is authorized in his discretion to utilize the services of postmasters of the second, third, and fourth classes in procuring the enlistments of recruits for the Army, and for each recruit accepted for enlistment in the Army, the postmaster procuring his enlistment shall receive the sum of \$5.

In addition to military training, soldiers while in the active service shall hereafter be given the opportunity to study and receive instruction upon educational lines of such character as to increase their military efficiency and enable them to return to civil life better equipped for industrial, commercial, and general business occupations. Civilian teachers may be employed to aid

the Army officers in giving such instruction, and part of this instruction may consist of vocational education either in agriculture or the mechanic arts. The Secretary of War, with the approval of the President, shall prescribe rules and regulations for conducting the instruction herein provided for, and the Secretary of War shall have the power at all times to suspend, increase, or decrease the amount of such instruction offered as may in his judgment be consistent with the requirements of military instruction and service of the soldiers.

Sec. 29. Final Discharge of Enlisted Men. No enlisted man in the Regular Army shall receive his final discharge until the termination of his seven-year term of enlistment except upon reenlistment as provided for in this Act or as provided by law for discharge prior to expiration of term of enlistment, but when an enlisted man is furloughed to the Regular Army Reserve his account shall be closed and he shall be paid in full to the date such furlough becomes effective, including allowances provided by law for discharged soldiers: Provided, That when by reason of death or disability of a member of the family of an enlisted man occurring after his enlistment members of his family become dependent upon him for support, he may, in the discretion of the Secretary of War, be discharged from the service of the United States or be furloughed to the Regular Army Reserve, upon due proof being made of such condition: Provided further, That when an enlisted man is discharged by purchase while in active service he shall be furloughed to the Regular Army Reserve, unless, in the discretion of the Secretary of War, he is given a final discharge from the Army.

Sec. 30. Composition of the Regular Army Reserve. The Regular Army Reserve shall consist of, first, all enlisted men now in the Army Reserve or who shall hereafter become members of the Army Reserve under the provisions of existing law; second, all enlisted men furloughed to or enlisted in the Regular Army Reserve under the provisions of this Act; and, third, any person holding an honorable discharge from the Regular Army with character reported at least good who is physically qualified for the duties of a soldier and not over forty-five years of age who enlists in the Regular Army Reserve for a period of four years.

Sec. 31. The President is authorized to assign members of the Regular Army Reserve as reserves to particular organizations of the Regular Army, or to organize the Regular Army Reserve, or any part thereof, into units or detachments of any arm, corps, or department in such manner as he may prescribe, and to assign to such units and detachments officers of the Regular Army or of the Officers' Reserve Corps herein provided for; and he may summon the Regular Army Reserve or any part thereof for field training for a period not exceeding fifteen days in each year, the reservists to receive travel expenses and pay at the rate of their respective grades in the Regular Army during such periods of training; and in the event of actual or threatened hostilities he may mobilize the Regular Army Reserve in such manner as he may determine, and thereafter retain it, or any part thereof, in active service for such period as he may determine the conditions demand: Provided, That all enlistments in the Regular Army, including those in the Regular Army Reserve, which are in force on the date of the outbreak of war shall continue in force for one year, unless sooner terminated by order of the Secretary of War, but nothing herein shall be construed to shorten the time of enlistment prescribed: Provided further, That subject to such regulations as the President may prescribe for their proper identification, and location, and physical condition, the members of the Regular Army Reserve shall be paid semi-annually at the rate of \$24 a year while in the reserve.

Sec. 32. Regular Army Reserve in Time of War. When mobilized by order

of the President, the members of the Regular Army Reserve shall, so long as they may remain in active service, receive the pay and allowances of enlisted men of the Regular Army of like grades: Provided, That any enlisted man who shall have reenlisted in the Regular Army Reserve shall receive during such active service the additional pay now provided by law for enlisted men in his arm of the service in the second enlistment period: Provided further, That upon reporting for duty, and being found physically fit for service, members of the Regular Army Reserve shall receive a sum equal to \$3 per month for each month during which they shall have belonged to the reserve, as well as the actual necessary cost of transportation and subsistence from their homes to the places at which they may be ordered to report for duty under such summons: And provided further, That service in the Regular Army Reserve shall confer no right to retirement or retired pay, and members of the Regular Army Reserve shall become entitled to pension only through disability incurred while on active duty in the service of the United States.

Sec. 34. Reenlistment in Time of War. For the purpose of utilizing as an auxiliary to the Regular Army Reserve the services of men who have had experience and training in the Regular Army, or in the United States Volunteers, outside of the continental limits of the United States, in time of actual or threatened hostilities, and after the President shall, by proclamation, have called upon honorably discharged soldiers of the Regular Army to present themselves for reenlistment therein within a specified period, subject to such conditions as may be prescribed, any person who shall have been discharged honorably from said Army, with character reported as at least good, and who, having been found physically qualified for the duties of a soldier, if not over fifty years of age, shall reenlist in the line of said Army, or in the Signal, Quartermaster, or Medical Department thereof, within the period that shall be specified in said proclamation, shall receive on so reenlisting a bounty which shall be computed at the rate of \$8 for each month for the first year of the period that shall have elapsed since his last discharge from the Regular Army and the date of his reenlistment therein under the terms of said proclamation; at the rate of \$6 per month for the second year of such period; at the rate of \$4 per month for the third year of such period; and at the rate of \$2 per month for any subsequent year of such period; but no bounty in excess of \$300 shall be paid to any person under the terms of this section.

Sec. 37. The Officers' Reserve Corps. For the purpose of securing a reserve of officers available for service as temporary officers in the Regular Army, as provided for this Act and in section eight of the Act approved April twenty-fifth, nineteen hundred and fourteen, as officers of the Quartermaster Corps and other staff corps and departments, as officers for recruit rendezvous and depots, and as officers of volunteers, there shall be organized, under such rules and regulations as the President may prescribe not inconsistent with the provisions of this Act, an Officers' Reserve Corps of the Regular Army. Said corps shall consist of sections corresponding to the various arms, staff corps, and departments of the Regular Army. Except as otherwise herein provided, a member of the Officers' Reserve Corps shall not be subject to call for service in time of peace, and whenever called upon for service shall not, without his consent, be so called in a lower grade than that held by him in said reserve corps.

The President alone shall be authorized to appoint and commission as reserve officers in the various sections of the Officers' Reserve Corps, in all grades up to and including that of major, such citizens as, upon examination prescribed by the President, shall be found physically, mentally, and morally qualified to hold such commissions: Provided, That the proportion of officers

in any section of the Officers' Reserve Corps shall not exceed the proportion for the same grade in the corresponding arm, corps, or department of the Regular Army, except that the number commissioned in the lowest authorized grade in any section of the Officers' Reserve Corps shall not be limited.

All persons now carried as duly qualified and registered pursuant to section twenty-three of the Act of Congress approved January twenty-first, nineteen hundred and three, shall, for a period of three years after the passage of this Act, be eligible for appointment in the Officers' Reserve Corps in the section corresponding to the arm, corps, or department for which they have been found qualified, without further examination, except a physical examination, and subject to the limitations as to age and rank herein prescribed: Provided, That any person carried as qualified and registered in the grade of colonel or lieutenant colonel pursuant to the provisions of said Act on the date when this Act becomes effective may be commissioned and recommissioned in the Officers' Reserve Corps with the rank for which he has been found qualified and registered, but when such person thereafter shall become separated from the Officers' Reserve Corps for any reason the vacancy so caused shall not be filled, and such office shall cease and determine.

No person shall, except as hereinafter provided, be appointed or reappointed a second lieutenant in the Officers' Reserve Corps after he shall have reached the age of thirty-two years, a first lieutenant after he shall have reached the age of thirty-six years, a captain after he shall have reached the age of forty years, or a major after he shall have reached the age of forty-five years. When an officer of the Reserve Corps shall reach the age limit fixed for appointment or reappointment in the grade in which commissioned he shall be honorably discharged from the service of the United States, and be entitled to retain his official title and, on occasions of ceremony, to wear the uniform of the highest grade he shall have held in the Officers' Reserve Corps: Provided, That nothing in the foregoing provisions as to the ages of officers shall apply to the appointment or reappointment of officers of the Quartermaster, Engineer, Ordnance, Signal, Judge Advocate, and Medical sections of said Reserve Corps.

One year after the passage of this Act the Medical Reserve Corps, as now constituted by law, shall cease to exist. Members thereof may be commissioned in the Officers' Reserve Corps, subject to the provisions of this Act, or may be honorably discharged from the service. The Secretary of War may, in time of peace, order first lieutenants of the medical section of the Officers' Reserve Corps, with their consent, to active duty in the service of the United States in such numbers as the public interests may require and the funds appropriated may permit, and may relieve them from such duty when their services are no longer necessary. While on such duty they shall receive the pay and allowances, including pay for periods of sickness and leaves of absence, of officers of corresponding rank and length of active service in the Regular Army.

The commissions of all officers of the Officers' Reserve Corps shall be in force for a period of five years unless sooner terminated in the discretion of the President. Such officers may be recommissioned, either in the same or higher grades, for successive periods of five years, subject to such examinations and qualifications as the President may prescribe and to the age limits prescribed herein: Provided, That officers of the Officers' Reserve Corps shall have rank therein in the various sections of said Reserve Corps according to grades and to length of service in their grades.

Sec. 38. The Officers' Reserve Corps in War. In time of actual or threatened hostilities the President may order officers of the Officers' Reserve Corps,

subject to such subsequent physical examinations as he may prescribe, to temporary duty with the Regular Army in grades thereof which can not, for the time being, be filled by promotion, or as officers in volunteer or other organizations that may be authorized by law, or as officers at recruit rendezvous and depots, or on such other duty as the President may prescribe. While such reserve officers are on such service they shall, by virtue of their commissions as reserve officers, exercise command appropriate to their grade and range in the organizations to which they may be assigned, and shall be entitled to the pay and allowances of the corresponding grades in the Regular Army, with increase of pay for length of active service, as allowed by law for officers of the Regular Army, from the date upon which they shall be required by the terms of their orders to obey the same: Provided, That officers so ordered to active service shall take temporary rank among themselves, and in their grades in the organizations to which assigned, according to the dates of orders placing them on active service; and they may be promoted, in accordance with such rank, to vacancies in volunteer organizations or to temporary vacancies in the Regular Army thereafter occurring in the organizations in which they shall be serving: Provided further, That officers of the Officers' Reserve Corps shall not be entitled to retirement or retired pay, and shall be entitled to pension only for disability incurred in the line of duty and while in active service.

Any officer who, while holding a commission in the Officers' Reserve Corps, shall be ordered to active service by the Secretary of War shall, from the time he shall be required by the terms of his order to obey the same, be subject to the laws and regulations for the government of the Army of the United States, in so far as they are applicable to officers whose permanent retention in the military service is not contemplated.

Sec. 39. Instruction of Officers of the Officers' Reserve Corps. To the extent provided for from time to time by appropriations for this specific purpose, the Secretary of War is authorized to order reserve officers to duty with troops or at field exercises, or for instruction, for periods not to exceed fifteen days in any one calendar year, and while so serving such officers shall receive the pay and allowances of their respective grades in the Regular Army: Provided, That, with the consent of the reserve officers concerned, and within the limit of funds available for the purpose, such periods of duty may be extended for reserve officers as the Secretary of War may direct; Provided further, That in time of actual or threatened hostilities, after all available officers of any section of the Officers' Reserve Corps corresponding to any arm, corps, or department of the Regular Army shall have been ordered into active service, officers of Volunteers may be appointed in such arm, corps, or department as may be authorized by law: Provided further, That nothing herein shall operate to prevent the appointment of any officer of the Regular Army as an officer of Volunteers before all the officers of the Officers' Reserve Corps or any section thereof shall have been ordered into active service: And provided further, That in determining the relative rank and the right to retirement of an officer of the Regular Army, active duty performed by him while serving in the Officers' Reserve Corps shall not be reckoned.

Sec. 57. Composition of the Militia. The militia of the United States shall consist of all able-bodied male citizens of the United States and all other able-bodied males who have or shall have declared their intention to become citizens of the United States, who shall be more than eighteen years of age and, except as hereinafter provided, not more than forty-five years of age, and said militia shall be divided into three classes, the National Guard, the Naval Militia, and the Unorganized Militia.

Sec. 58. Composition of the National Guard. The National Guard shall

consist of the regularly enlisted militia between the ages of eighteen and forty-five years organized, armed, and equipped as hereinafter provided, and of commissioned officers between the ages of twenty-one and sixty-four years.

Sec. 59. Exemptions from Military Duty. The Vice President of the United States; the officers, judicial and executive, of the Government of the United States and of the several States and Territories; persons in the military or naval service of the United States; customhouse clerks; persons employed by the United States in the transmission of the mail; artificers and workmen employed in the armories, arsenals, and navy yards of the United States; pilots; mariners actually employed in the sea service of any citizen or merchant within the United States, shall be exempt from militia duty without regard to age, and all persons who because of religious belief shall claim exemption from military service, if the conscientious holding of such belief by such person shall be established under such regulations as the President shall prescribe, shall be exempted from militia service in a combatant capacity; but no person so exempted shall be exempt from militia service in any capacity that the President shall declare to be noncombatant.

Sec. 69. Enlistments in the National Guard. Hereafter the period of enlistment in the National Guard shall be for six years, the first three years of which shall be in an active organization and the remaining three years in the National Guard Reserve, hereinafter provided for, and the qualifications for enlistment shall be the same as those prescribed for admission to the Regular Army: Provided, That in the National Guard the privilege of continuing in active service during the whole of an enlistment period and of reenlisting in said service shall not be denied by reason of anything contained in this Act.

Sec. 70. Federal Enlistment Contract. Enlisted men in the National Guard of the several states, territories, and the District of Columbia now serving under enlistment contracts which contain an obligation to defend the Constitution of the United States and to obey the orders of the President of the United States shall be recognized as members of the National Guard under the provisions of this Act for the unexpired portion of their present enlistment contracts. When any such enlistment contract does not contain such obligation, the enlisted man shall not be recognized as a member of the National Guard until he shall have signed an enlistment contract and taken and subscribed to the following oath of enlistment, upon signing which credit shall be given for the period already served under the old enlistment contract: "I do hereby acknowledge to have voluntarily enlisted this — day of —, 19—, as a soldier in the National Guard of the United States and of the State of —, for the period of three years in service and three years in the reserve, under the conditions prescribed by law, unless sooner discharged by proper authority. And I do solemnly swear that I will bear true faith and allegiance to the United States of America and to the State of —, and that I will serve them honestly and faithfully against all their enemies whomsoever, and that I will obey the orders of the President of the United States and of the governor of the State of —, and of the officers appointed over me according to law and the rules and articles of war."

Sec. 71. Hereafter all men enlisting for service in the National Guard shall sign an enlistment contract and take and subscribe to the oath prescribed in the preceding section of this Act.

Sec. 72. Discharge of Enlisted Men from the National Guard. An enlisted man discharged from service in the National Guard shall receive a discharge in writing in such form and with such classification as is or shall be prescribed for the Regular Army, and in time of peace discharges may be given prior to the expiration of terms of enlistment under such regulations as the President may prescribe.

Sec. 73. Federal Oath for National Guard Officers. Commissioned officers of the National Guard of the several states, territories, and the District of Columbia now serving under commissions regularly issued shall continue in office, as officers of the National Guard, without the issuance of new commissions: Provided, That said officers have taken or shall take and subscribe to the following oath of office: "I, ———, do solemnly swear that I will support and defend the Constitution of the United States and the constitution of the State of ———, against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I will obey the orders of the President of the United States and of the governor of the State of ———; I make this obligation freely, without any mental reservation or purpose of evasion, and that I will well and faithfully discharge the duties of the office of ——— in the National Guard of the United States and of the State of ——— upon which I am about to enter, so help me God."

Sec. 74. Qualifications for National Guard Officers. Persons hereafter commissioned as officers of the National Guard shall not be recognized as such under any of the provisions of this Act unless they shall have been selected from the following classes and shall have taken and subscribed to the oath of office prescribed in the preceding section of this Act: Officers or enlisted men of the National Guard; officers on the reserve or unassigned list of the National Guard; officers, active or retired, and former officers of the United States Army, Navy, and Marine Corps; graduates of the United States Military and Naval Academies and graduates of schools, colleges, and universities where military science is taught under the supervision of an officer of the Regular Army, and, for the technical branches and staff corps or departments, such other civilians as may be especially qualified for duty therein.

Sec. 75. The provisions of this Act shall not apply to any person hereafter appointed an officer of the National Guard unless he first shall have successfully passed such tests as to his physical, moral, and professional fitness as the President shall prescribe. The examination to determine such qualifications for commission shall be conducted by a board of three commissioned officers appointed by the Secretary of War from the Regular Army or the National Guard, or both.

Sec. 76. Filling of Vacancies When Drafted Into Federal Service. All vacancies occurring in any grade of commissioned officers in any organization in the military service of the United States and composed of persons drafted from the National Guard under the provision of this Act shall be filled by the President, as far as practicable by the appointment of persons similarly drafted from said guard, and in the manner prescribed by law for filling similar vacancies occurring in the volunteer forces.

Sec. 77. Elimination and Disposition of Officers. At any time the physical character, capacity, and general fitness for the service of any National Guard officer may be determined by an efficiency board of three commissioned officers senior in rank to the officer whose fitness for service shall be under investigation, and if the findings of such board be unfavorable to such officer and not approved by the official authorized to appoint such an officer, he shall be discharged. Commissions of officers of the National Guard may be vacated by resignation, absence without leave for three months, upon the recommendation of an efficiency board, or pursuant to sentence of a court-martial. Officers of said guard rendered surplus by the disbandment of their organizations shall be placed in the National Guard Reserve. Officers may, upon their own application, be placed in the said reserve.

Sec. 78. The National Guard Reserve. Subject to such rules and regulations as the President may prescribe, a National Guard Reserve shall be organized in each state, territory, and the District of Columbia, and shall consist

such organizations, officers, and enlisted men as the President may prescribe, or members thereof may be assigned as reserves to an active organization of the National Guard: Provided, That members of said reserve, when engaged in field or coast-defense training with the active National Guard, shall receive the same Federal pay and allowances as enlisted men of like grade on the active list of said guard when likewise engaged: Provided further, That, except as otherwise specifically provided in this Act, no commissioned or enlisted reservist shall receive any pay or allowances out of any appropriation made by Congress for National Guard purposes.

Sec. 79. Reserve Battalions for Recruit Training. When members of the National Guard and the enlisted reserve thereof of any state, territory, or the District of Columbia shall have been brought into the service of the United States in time of war, there shall be immediately organized, either from such enlisted reserve, or from the unorganized militia, in such state, territory, or district, one reserve battalion for each regiment of Infantry or Cavalry, or each nine batteries of Field Artillery, or each twelve companies of Coast Artillery, brought into the service of the United States, and such reserve battalion shall constitute the fourth battalion of any such regiment or twelve companies of Coast Artillery. Reserve battalions shall consist of four companies of such strength as may be prescribed by the President of the United States. When the members of three or more regiments of the National Guard of any state, territory, or district shall have been brought into the service of the United States, the reserve battalions of such regiments may be organized into provisional regiments and higher units. If for any reason there shall not be enough voluntary enlistments to keep the reserve battalions at the prescribed strength, a sufficient number of the unorganized militia shall be drafted into the service of the United States to maintain each of such battalions at the proper strength. As vacancies occur from death or other causes in any organization in the service of the United States and composed of men taken from the National Guard, men shall be transferred from the reserve battalions to the organizations in the field so that such organizations may be maintained at war strength. Officers for the reserve battalions provided for herein shall be drafted from the National Guard Reserve or Coast Artillery companies of the National Guard or the Officers' Reserve Corps, such officers to be taken, if practicable, from the states, respectively, in which the battalions shall be organized. Officers and noncommissioned officers returned to their home stations because of their inability to perform active field service may be assigned to reserve battalions for duty, and all soldiers invalided home shall be assigned to and carried on the rolls of reserve battalions until returned to duty or until discharged.

Sec. 101. National Guard, When Subject to Laws Governing Regular Army. The National Guard when called as such into the service of the United States shall, from the time they are required by the terms of the call to respond thereto, be subject to the laws and regulations governing the Regular Army, so far as such laws and regulations are applicable to officers and enlisted men whose permanent retention in the military service, either on the active list or on the retired list, is not contemplated by existing law.

Sec. 111. National Guard When Drafted Into Federal Service. When Congress shall have authorized the use of the armed land forces of the United States, for any purpose requiring the use of troops in excess of those of the Regular Army, the President may, under such regulations, including such physical examination, as he may prescribe, draft into the military service of the United States, to serve therein for the period of the war unless sooner discharged, any or all members of the National Guard and of the National Guard Reserve. All persons so drafted shall, from the date of their draft, stand

discharged from the militia, and shall from said date be subject to such orders and regulations for the government of the Army of the United States as may be applicable to members of the Volunteer Army, and shall be employed in such organizations corresponding as far as practicable to those of the Regular Army, or shall be otherwise assigned as the President may direct. The commissioned officers of said organizations shall be appointed from among the ranks of the Regular Army, thereof, officers with rank not above that of colonel to be appointed by the President alone, and all other officers to be appointed by the President, with the advice and consent of the Senate. Officers and enlisted men of said organizations in the service of the United States under the terms of this section shall receive the same pay and allowances as officers and enlisted men of the Regular Army of the same grades and the same prior service.

Sec. 112. Rights to Pensions. When any officer or enlisted man of the Regular Army or National Guard drafted into the service of the United States in time of war, is disabled by reason of wounds or disability received or incurred while in the active service of the United States in time of war, he shall be entitled to the benefits of the pension laws existing at the time of his service, and if such officer or enlisted man dies in the active service of the United States in time of war or in returning to his place of residence after being mustered out of such service, or at any other time in consequence of wounds or disability received in such active service, his widow and children, if any, shall be entitled to all the benefits of such pension laws.

Sec. 114. Temporary Vacancies in Regular Army Due to Details. In time of war the temporary vacancies created in any grade or rank not above that of colonel among the commissioned personnel of any arm, corps, or department of the Regular Army, through appointments of officers thereof to higher rank in organizations composed of members taken from the National Guard, shall be filled by temporary promotions according to such regulations as may be prescribed by the President, with the advice and consent of the Senate, in rank from officers holding commissions in the next lower grade in the arm, staff corps, or department, and all vacancies created in any grade or rank by such temporary promotions shall be in like manner filled from, and thus the temporary vacancies in, the next lower grade, and the vacancies that may thereafter exist in said arm, staff corps, or department and that can not be filled by temporary promotions, as prescribed in this section, may be filled by temporary appointment of officers of such number and grade or grades as may be necessary to maintain said arm, corps, or department at the full commission strength authorized by law: Provided, That in the staff corps and departments subject to the provisions of sections twenty-six and twenty-seven of the Act of February 26, 1901, second, nineteen hundred and one, and Acts amendatory thereof, temporary vacancies that can not be filled by temporary promotions as hereinbefore prescribed shall be filled by temporary details in the manner prescribed in sections twenty-six and twenty-seven, and Acts amendatory thereof, and the resulting temporary vacancies in the branches of the Army from which such details shall be so made shall be filled as hereinbefore in this section prescribed. Provided further, That officers temporarily promoted or appointed under the terms of this section shall be promoted or appointed by the President, with the advice and consent of the Senate, for terms that shall not extend beyond the war or the passing of the emergency for which additional forces were brought into the military service of the United States, and at the termination of the war or the passing of the emergencies said officers shall be discharged from the positions held by them under their temporary commissions or appointments, and officers detailed as herein authorized shall be relieved from their temporary details: And provided further, That officers temporarily promoted or appointed under the provisions of this section shall not vacate their permanent commissions.

sions nor be prejudiced in their relative or lineal standing in the Regular Army.

Sec. 115. Physical Examination. Every officer and enlisted man of the National Guard who shall be called into the service of the United States as such shall be examined as to his physical fitness under such regulations as the President may prescribe without further commission or enlistment: Provided, That immediately preceding the muster out of an officer or enlisted man called into the active service of the United States he shall be physically examined under rules prescribed by the President of the United States, and the record thereof shall be filed and kept in the War Department.

Bulletin }
No. 49. }

War Department,
Washington, November 20, 1916.

1. A slide rule showing the percentage of accuracy of an estimate of distance, designed by Capt. Parker Hitt, Nineteenth Infantry, has been adopted for use in the military service, and the following information with reference thereto is published for the information and guidance of all concerned. These rules are to be issued at the rate of one to each company of Infantry, troop of Cavalry, headquarters company or troop and machine gun company or troop. Instructions for their use, with illustrations, follow.

FIG. 1.

2. Figure 1 shows the general idea of the slide rule. The bottom scale is the scale of the true range. The next scale is the scale of the estimate, while the next scale in connection with the arrow gives the percentage of accuracy of the estimate. To use the rule, set the slide section so that the estimate comes opposite the true range; the arrow will then point to the percentage of accuracy of the estimate.

FIG. 2.

3. Figure 2 shows how the slide rule is used in finding the percentage of accuracy of an estimate. The true range is 900 yards, while the estimate is 860 yards. The percentage of accuracy of the estimate is shown to be 95.5 per cent.

By order of the Secretary of War:

Official:

H. P. McCAIN,
The Adjutant General.

H. L. SCOTT,
Major General, Chief of Staff.

EXTRACTS FROM ENGINEER FIELD MANUAL

- I. RECONNAISSANCE**
- II. BRIDGES**
- III. ROADS**
- V. FIELD FORTIFICATION**
- VI. ANIMAL TRANSPORTATION**

FROM

FOURTH (REVISED) EDITION, 1912

The following extracts are taken from the Engineer Field Manual, States Army, prepared under the direction of the Chief of Engineers, Army, and published to the Army in the fourth and revised edition, 1911.

EXTRACTS FROM ENGINEER FIELD MANUAL PART I.

RECONNAISSANCE.

Topographical reconnaissance, as here treated, includes suitable means for finding and recording all needful information of a terrain in the shortest possible time, and within the limits of accuracy required for the operations of war in the field.

Also, the interpretation of a record when made, to determine from it the probable or unfavorable effect of the terrain, for the purpose of directing military operations with reference thereto.

The information to be obtained in a topographical reconnaissance may be divided under the headings of **time, cover, resources and nomenclature**. The reconnaissance should permit a determination of the time which a column will require to pass between any two given points by showing the distance between them and the condition of the road or country which must be traversed, as regards its effect on the rate of march; the accidents of ground which will afford cover to an army or to the enemy; the location, quantity, and quality of water, fuel, and other resources, etc., and should give to each feature its local name. The last requirement is of great importance and is the one most often neglected.

The fundamental topographical operation is the determination of the position and distance of one point from another point.

The direction of one point from another is composed of two elements: First, the angle made by the line joining the two points, with a vertical plane passing through one of them. This angle is measured in a horizontal plane and is called the **azimuth**; second, the angle made by the line joining the two points, with a horizontal plane passing through one of them. This angle is measured in a vertical plane passing through both points, and for convenience will be called the **gradient**.

Azimuths. As an infinite number of vertical planes may pass through a given point, it is necessary to select one as the origin of azimuths. In topographical reconnaissance the plane selected is that of the magnetic meridian at the point. Its direction in a horizontal plane is the line of rest of a freely suspended and balanced magnetic needle, and this line is the origin of azimuths. From this origin azimuths are measured in degrees of arc from 0 to 360,

FIG. 1.

FIG. 3.

FIG. 2.

passing from the north point through the east, south, and west to north again. Azimuths of 0° to 90° are in the northeast or first quadrant, Fig. 1; those of 90° to 180° are in the southeast or second quadrant; those from 180° to 270° in the southwest or third quadrant, and those from 270° to 360° in the northwest or fourth quadrant.

Azimuths are bearings between stations taken in the direction of progress of the reconnaissance. Bearings taken in the other direction are called **back azimuths**. If the stations are numbered in the order they are occupied, a bearing from a lower to a higher numbered station is an azimuth, and a bearing from a higher to a lower numbered station is a back azimuth.

The method of stating azimuths described above is that commonly used in surveying when direction is maintained by carrying an azimuth. It is the simplest to understand and use, and permits the angle between any two lines to be read at a glance.

There are other ways of expressing azimuths, adapted to special conditions or circumstances. In astronomical work and tables the azimuth is reckoned from the south, through W., N., and E., 360° to south again. Any astronomical azimuth differs from the corresponding survey azimuth by 180° .

In navigation azimuths are reckoned from the mariner's compass, and are called bearings. The dial is divided into 32 points and each point into quarter points. The names of the points and their relation to survey azimuths are shown in Fig. 1.

Land surveyors reckon bearings in both directions from N. and S. Their compasses are graduated 90° in each direction from the N. and S. points, and a bearing is stated by giving the angle and direction from N. or S., whichever may be nearest; as N. 46° W., S. 29° E.

Formerly such bearings were reckoned from the nearest cardinal point, N., S., E., or W., as W. 44° N., which corresponds to N. 46° W. This method is very convenient for giving directions in orders and reports. It is shown in the middle circle of Fig. 1.

A special method of azimuth measurement has been adopted for use in the fire control of field artillery. The unit, called a mil, is the arc whose length is one one-thousandth of the radius. By computation this arc is $3'.437+$. This length is not commensurate with the length of the circle being contained in it 6,283.24 times. For convenience of graduation, the circle is divided into 6,400 equal parts, assumed to be mils, the angular value of each of which is $3'.375$, differing from the computed value by nearly 2 per cent, which error enters into all determinations and is neglected.

Each change of 1 mil in az. corresponds to a change in position in a direction perpendicular to the line of sight of one one-thousandth of the range. This method reduces all elements of fire control to functions of the range.

5. The **compass** is the standard instrument for the determination of azimuths in topographical reconnaissance. It consists of case, needle, card, pivot, and stop, Figs. 2 and 3.

The **card** may be **fixed** to the case or movable, attached to the needle and revolving with it. The stop raises the needle from the pivot and clamps it against the glass cover. A good compass must have a needle sufficiently magnetized to settle accurately and a pivot free from rust and roughness. If the needle becomes too weak, it may be remagnetized by rubbing gently from pivot to point on a permanent or electro magnet, each end of the needle to be rubbed on the pole which attracts it. In returning the needle for another

stroke, carry it a foot or more from the magnet. The pivot may be polished with Putz pomade or similar substances on a soft stick.

If possible, however, turn in the defective compass and get a good one in place of it.

A needle loses part of its magnetism if kept for a long time out of the plane of the magnetic meridian. In storing a compass, care should be taken to place it in the case or on the shelf with the N. end of its needle pointing north.

6. **Dip.** The earth's magnetic poles are beneath the surface, and the end of a symmetrical needle is drawn downward out of the horizontal plane so as to point to the nearest pole. This displacement from the horizontal plane is called **dip**, and is measured in degrees of arc. The dip increases generally with the latitude. Immediately over a magnetic pole the needle stands vertical, or has a dip of 90°. Near the equator, where north and south poles exert an equal influence, the needle may be horizontal, or the dip 0.

For reading azimuths the needle must be kept in a horizontal plane, which is done by a small movable counterweight. For considerable changes in latitude, as in passing from the United States to the Philippine Islands, the counterweight will require adjustment to keep the needle horizontal; and in passing from the northern to the southern hemisphere, the counterweight must be changed to the opposite side of the pivot.

7. There are two adopted forms of compass for topographical reconnaissance, one of the fixed and one of the movable card type.

The box compass is shown in Fig. 2. The card is fixed and graduated counter-clockwise from No. 360° to N. again. The E. and W. points, if marked, are reversed. The stop is operated by opening and closing the lid. The lid is hinged parallel to the north and south line, and when open its upper edge forms a convenient line of sight. The needle when stationary can be read to the nearest degree by the eye, and to half a degree with a reading glass.

Another pattern which has been issued has the lid on an E. and W. side, and the sighting line is a fine line drawn across the lid.

Some of the box compasses in use are graduated clockwise. Care must be taken in using these. The true azimuth is 360° minus the reading of the needle. The actual reading of such a compass should never be recorded; the corresponding azimuth only should be set down. It will be safer to add a rough graduation in the proper direction.

8. The prismatic compass is shown in Fig. 3. It is of the movable-card type. It is read through a reflecting inverting magnifying prism. The prism revolves on an axis and is over the circumference of the card for reading, and against the edge of the case for carrying. It slides up and down in the support which attaches it to the case, which motion permits it to be focussed on the scale. The focus for each observer should be determined when the compass is resting on a level surface, and not thereafter varied. If, when so adjusted, the scale is out of focus when the sight is taken, it shows that the card is not horizontal, and the case must be tilted until the scale comes into focus. The needle may be compensated for dip by a bit of sealing wax stuck on the underside of the card. The leaf sight folds down for carrying, and in so doing stops the needle.

In the pattern illustrated, the metal cover goes on outside the leaf sight when folded down. When the compass is used, the cover is removed and placed for convenience on the bottom of the case, where it fits closely. In another pattern, the metal cover has a window in it opposite the prism, and is not

removed when sighting. The leaf sight folds down outside the cover and is not protected.

9. Compass Errors. The magnetic and true meridians generally do not coincide. The angle which the needle makes with the true north at any place is called the declination of the needle, or magnetic declination at that place. For latitudes of 60° and less the declination ordinarily varies between limits of 20° east and 20° west. For high latitudes the declination is greater and more irregular.

There are daily and secular variations of declination at every place, but they are too small to have any bearing on the class of work now under consideration, and for purposes of topographical reconnaissance the declination at any place may be considered constant for the period of the survey.

A close watch must be kept for the change in declination from place to place, and for local disturbances of the needle due to the proximity of magnetized substances, natural or artificial.

Change of declination or normal direction of the needle should be checked frequently. If a change is observed, it is certain to have taken place gradually, and, if desired, may be distributed among the courses run, though the change will seldom be great enough in a single day's work to make its distribution practicable.

Abnormal deflections of the needle, due to local disturbances, are sudden and erratic and should not be distributed among all the courses, but only among those in which there is reason to believe the disturbance occurs.

A simple way to detect—not measure—such disturbances is to take frequent back azimuths. If the position of the needle is normal at both stations, the azimuth and back azimuth will differ by 180° . If there is local attraction on the course, it will usually be stronger or cause a greater deflection at one station than at the other, and the azimuth and back azimuth will not differ by 180° .

Another way is, when taking the bearing to a station, to select a well-defined point beyond and on the same course. On arriving at the new station, take a bearing from there to the selected point ahead. If it is the same as the first bearing to that point, there probably is no local disturbance. If the two bearings to the same point differ, there probably is local disturbance.

A course in which local attraction is detected or suspected should be noted, and if, on closing, an azimuth correction is necessary, it should be applied to the suspected courses.

10. Gradients. There can be but one horizontal plane through a given point, and it may be determined by the spirit level or plumb line without serious error. Gradients are measured by taking the angle of the line of direction with a horizontal line through the point.

11. Gradients are commonly called grades or slopes and are expressed in degrees, as 1° , 2° , $3\frac{1}{2}^\circ$, $6\frac{1}{4}^\circ$ slope, etc.

Each angle corresponds to two slopes, one up and one down from the initial point. Rising grades may be recorded with a + before, or an R after the number of degrees; falling grades with — before, or F after. On a map, general slopes are indicated by an arrow pointing in the direction of the drainage, with the gradient written beside it, thus $\xrightarrow{4^\circ}$. Road grades are indicated by an arrowhead at top and bottom of the grade, the one at top pointing toward the road and the one at bottom away from it, thus $\downarrow \xrightarrow{4^\circ} \downarrow$.

Gradients are also expressed by the relation between the change of elevation—rise or fall—and the corresponding horizontal distance. This relation is stated in various ways.

By the rise in ft. per 100 ft. hor. or the ft. rise as a percentage, as "the slope is 4 in 100, or 4 per cent."

By the ft. rise for 1 mile of hor. distance; as "the grade is 50 ft.," or "a 50 ft. grade." This method and the preceding are commonly used for R. R. track grades.

By the number of ft. hor. corresponding to 1 ft. rise; as 3 to 1, 10 to 1. This method is commonly used for slopes of embankments and excavations when less than 45° .

By the ft. rise corresponding to 1 ft. hor.; as, 1 on 1, 6 on 1. This method is commonly used for slopes of embankments and excavations, etc., from 45° to 75° .

By the number of inches hor. corresponding to 1 ft. rise; as, 3 ins. to the ft., 1 inch in the ft. This method is commonly used for gradients of 70° and over, and is called batter.

Paragraph 12 eliminated, as it has no application to Infantry.

13. The **clinometer** is the instrument adopted for measuring gradients, with the horizontal plane indicated by a spirit level. It consists, Fig. 4, of a sight-

FIG. 4.

Fig. 5.

tube, A, with a graduated vertical arc, B, fastened to it, and a level-tube, C, with attached index arm, D, revolving about a horizontal axis through the center of the vertical arm. The base of the sight-tube is a plane parallel to the line of sight. Under the center of the level-tube is an opening in the sight-tube, inside of which is a mirror occupying one-half the width of the sight-tube and facing the eye end at an angle of 45° with the line of sight. A horizontal wire extends across the middle of the sight-tube in front of the mirror. When the bubble is brought to the center, its reflected image seen from the eye end appears to be bisected by the wire.

The central position of the bubble indicates that the level-tube is horizontal, and the reading of the index arm upon the arc is the angle between the axis of the level-tube and the line of sight. This reading should be 0° when these lines are parallel. The vertical arc is graduated each way from 0° at its middle point. The index arm has a double vernier whose smallest reading is $10'$ of arc. Gradients of more than 45° are difficult to measure on account of the foreshortening of the level-tube as reflected in the mirror.

When the vernier is set at 0° , the instrument may be used as a hand level to locate points at the same elevation as the eye. The graduation on the inner edge of the vertical limb corresponds to the ordinary fractional method of

indicating slopes, as 1 on 2, 1 on 10, etc. This scale should be read on the forward edge of the index arm, or in some forms on a special index mark on a shorter part of the arm.

The level-tube is made parallel to the sight-tube by the adjusting screws E, Fig. 4. To test and correct the adjustment, place the instrument on a smooth surface, the more nearly horizontal the better, and mark carefully the position of one side and one end of the sight-tube. Center the bubble by moving the index arm, and read the vernier. Reverse the instrument, bringing the other side and end of the sight-tube to the marks. Center the bubble by moving the index arm, and read again. Note and record for each reading its direction from 0° , whether toward or away from the eye end of the sight-tube. Note and record also the location of the eye end in each position with respect to some fixed object, so that the instrument can be replaced in the first position or second position at will.

If the first and second readings are the same, the adjustment is correct. If they differ, take the mean of the two and set the vernier at that reading on the side corresponding to the first reading. Place the instrument in the first position and bring the bubble to the center by means of the adjusting screws E. For a check, set the same reading on the side corresponding to the second reading and place the instrument in the second position. The bubble should come to the middle.

14. The determination of gradients by the plumb line is quicker and simpler, but less precise, than with the clinometer, though exact enough for ordinary purposes. If a line of sight be taken along the edge of a board and a line be drawn on the board perpendicular to the sighting edge, this line, when the board is held in a vertical plane, will make the same angle with the plumb line that the sighting edge makes with the horizontal, or, in other words, will indicate the gradient, Fig. 5.

Such a construction is called a slope board and is readily improvised. The scale may be constructed by sweeping an arc of a circle AB, Fig. 5, from the point C, at the intersection of the perpendicular and the sighting edge. From the perpendicular at D lay off each way on the arc chords equal in length to the radius CD divided by 57.3. It is convenient to take a radius of 5.73 ins., or $5\frac{3}{4}$ ins. scant, when the chords will be $\frac{1}{10}$ in., or a radius of $7\frac{7}{16}$ ins., when the chords will be $\frac{1}{8}$ in., accordingly as the scale used is graduated to 10ths or 8ths.

Short radial lines drawn at the ends of the chords form a graduation in degrees. The scale may be drawn on the lower edge of the board by prolonging the radial lines as indicated in the figure. The plumb line is suspended from the point C.

In use, the board is held so that the plumb line swings free but very close to the board. The sighting edge is directed to the object and when the line is steady the board is quickly tilted so that the line draws across the edge. The board is then turned to a horizontal position or nearly so, and the reading taken; or, when the line is steady, it may be pressed against the board with the finger and held in place until the reading is taken. With a straight scale and for steep grades, the latter method is better.

15. Elevations. From the slope and distance the elevation of a point above an assumed plane of reference may be derived. The difference of height of any two points is known by comparing their elevations above a common plane, called the plane of reference, or datum.

The plane of reference is taken low enough so that no point of the area covered by the reconnaissance will be below it. This makes all elevations relative. Knowing the height of a point above this plane of reference, the height of any other point may be obtained by taking the gradient and distance to that point, deriving from them the difference of height between the two points, adding this difference to the elevation of the first point if the gradient is rising or subtracting it if the gradient is falling.

The elevation for a given gradient and distance depends upon whether the distance is measured along the gradient or along the horizontal. Distances paced are along the gradient. Those measured with a chain will also be on the slope, though sometimes care is taken to hold the chain horizontal in which case the table for horizontal distances is to be used. Those determined by intersections or scaled from a map are along the horizontal.

Paragraphs 16 to 20 eliminated as they have no application to Infantry.

21. Use of Compasses. A good needle requires time to settle even if the case is firmly supported, and the user should cultivate the knack of catching it at the middle of its swing, which is the desired reading. If the compass cannot be supported, it is always better to do so. Then the sight can be taken and the position of the eye changed to read the needle. Wait until the swing gets down to 4° or 5° , which it will usually do in a few seconds, catch the highest and the lowest readings on the same swing and take the mean for the true reading. If the first swings are very large, catch the mean with the stop near the middle of the swing and release it quickly. It will suddenly check the swings and shorten the time in which the reading can be taken.

In using the box compass without a support, hold it sufficiently high so that the eye so that the swing of the needle can be seen. Point the edge of the compass in the required direction, catch the needle with the stop in the middle of the swing and hold it stopped until the reading is taken. Stop readings are less accurate than sight readings, as the needle may be displaced slightly when it strikes the pivot. When the stop is used, press it quickly and firmly. Always use a fixed-card compass from the south end of the card and read the number on the needle.

With the prismatic compass the stop is not used except to check the readings. Utilize a support if practicable. The prism having been adjusted for focus, as already explained, par. 8, adjust the case so as to bring the scale into focus, and when the swings become small, read the extreme readings and take the mean.

Compasses for night marching are on the market, but are not very reliable. They have the dial rendered luminous by a paint. After exposure to bright or strong daylight, they give off light, at first rather strong, but gradually diminishing in intensity. After a few hours they are not bright enough for much use.

The surest preparation for night marching is a provision for illuminating the compass by ordinary means without allowing the light to be seen.

Paragraphs 22 to 24 eliminated as they have no application to Infantry.

25. Distances passed over are ordinarily measured by the stride of a man, the pace of a horse, or by the revolutions of a wheel. Distances not passed over are determined by intersection, or are estimated.

Pacing on Foot. The length of a man's pace at a natural walk is about 30 inches, varying somewhat above and below. Each sketcher must determine

length of pace by walking several times over a known distance. An unnatural stride should never be taken. Knowing the length of a pace or step, the measurement of a distance is only a matter of counting steps. The counting may be done mentally, and with practice becomes a subconscious operation, leaving the attention free to take note of surrounding objects and conditions. The greatest danger is of dropping one hundred paces. It is better to keep a tally of the hundreds.

A pace tally is issued for use when desired. It is the size and shape of an ordinary watch.

On level ground, careful pacing will give distance correct to 3 per cent or less. The normal length of pace decreases on slopes. The decrease varies with the slope and with the direction, whether ascending or descending.

Paragraphs 26 and 27 eliminated as they have no application to Infantry.

28. Pacing Mounted. The average walk of a horse is a mile in 16 mins., or $3\frac{3}{4}$ miles per hour, making 120 steps, covering 110 yds. per min., the step being 0.916 of a yd., or 33 ins.

The average trot is a mile in 8 mins., or $7\frac{1}{2}$ miles an hour, making 180 steps, covering 220 yds. per min., the length of step being 1.22 yds. or 44 ins.

It will generally be found more convenient in pacing, both on foot and mounted, to count the steps of one foot only, and multiply the number counted by the stride of one foot, which is twice the length of step given above. In this case, the number counted is doubled for use with the tables and scales given herein.

Timing. Counting the steps of a horse diverts the attention more than is desirable, and it is better to determine distances in mounted reconnaissance from the times occupied by the horse in passing over them. The rating is done by ascertaining the time required to pass over a known distance. Time and step ratings should be taken together by counting and timing at once. Ratings should be taken before the reconnaissance, if possible, but for short stretches of hasty work, the average given above may be used without serious error.

Horses travel better in pairs, and two men should be sent out together, one to do the sketching and the other to give his entire attention to taking the time and keeping his horse at a regular gait. It is better to rate the pairs together. If it has not been done, take the rate of the timer's horse.

When a sketcher is traveling with a party and must keep their gait, an occasional count of his horse's steps for a minute or two will give a special scale for use in plotting.

29. The speed of a horse over road grades, even in moderately hilly countries, is not affected by the slope sufficiently to make an allowance necessary. Distances up and down grades measured by timing in mounted reconnaissance will require no correction.

30. The Walk is the Normal Gait for Reconnaissance. If greater speed is necessary, the timer may go on while the sketcher is taking angles and plotting; the latter taking the trot or the gallop and overtaking the timer just before he reaches the next station. This method should be used only when the required distance can not be covered at a walk.

If circumstances require short distances to be covered at a trot or gallop, the times may be reduced to walking time by multiplying by 2 for the trot and 3 for the gallop.

Paragraphs 31 and 32 eliminated, as they have no application to Infantry.

33. Estimation of distances is a knack which may be cultivated by practice to

a degree of accuracy far beyond that which is at first attainable, and sufficient for the location of many objects off the traverse line. Short distances are more closely estimated than longer ones; those on a level, than those down hill. When the intermediate ground can be seen, the estimation is closer than when it can not.

34. The location of a point by intersection is done by taking azimuths from two known points. As each of these azimuths when plotted must pass through the unknown point, it must be at their intersection.

An observer at an unknown point may locate himself from two visible points by taking an azimuth to each. From the known points plot the corresponding back azimuths and they will intersect at the point of observation. This process is called resection. It is subject to errors of local attraction. (Par. 9.)

The accuracy of a location by intersection is affected by the relation of the azimuths and of the distances. The greatest accuracy results when the azimuths differ by 90° or 270° and the distances are equal; in which case the two lines and the base form a right-angled triangle. A difference of azimuths of 30° or more than 330° should be avoided.

Errors in length of the base, or distance between the known points, affect the distances in the same proportion. If the base is 5 or 10 per cent. in error, the distances will be in error in the same direction by the same percentage.

Distances are most easily determined from intersections by plotting the lines and scaling. The distances are horizontal. If gradients are taken at the points as the azimuths or at one of them, the elevation of the unknown point may be determined after the distance has been scaled.

Paragraphs 35 to 39 eliminated, as they have no application to Infantry.

40. The protractor is an angular scale of equal parts used for plotting azimuths. That adopted for reconnaissance is the rectangular form, Figs. 12 and 13. It is graduated on one face, which will be called the A face, Fig. 12, from 0° to 180° , and on the other, or B face, Fig. 13, from 180° to 360° . The graduations are clockwise on both faces. It has a scale of inches and tenths along one edge. The protractor may be used as ruler, scale, triangle, and compass.

To plot a given azimuth from a given point, draw a meridian through the point. If the azimuth is less than 180° , lay the protractor down A face with the center at the point and the edge on the meridian, 0° to the north. Draw a pencil dot on the paper at the proper graduation on the edge of the protractor. Move the protractor so that one of its edges passes through the two points. Draw a line, which will be the desired azimuth.

If the azimuth is more than 180° , lay the protractor down B face with the center at the point, and proceed as before. The moving of the protractor after the first dot is off the angle and before drawing the line may be avoided by adding a counter-clockwise graduation to the protractor. The sum of the two graduations from any point will be 180° . Place the center of the protractor and the given point on a meridian, read on the counter-clockwise graduation, on a meridian, and slide the protractor up or down, keeping the two points on the meridian until one of its edges passes through the given point, when the azimuth may be drawn along that edge.

A semicircular protractor is shown in Fig. 14. It is usually double graduated in opposite directions from 0° to 180° . With this form an azimuth may be plotted off and the line drawn along the diameter without moving the protractor.

Fig. 12. A. Face.

Fig. 13. B. Face.

Fig. 14

Fig. 15.

Fig. 16.

Fig. 17.

the protractor down with the center on a meridian. If the azimuth is less than 180° place its number of degrees on the counter-clockwise scale on the meridian, north of the center, Fig. 15. If it is greater than 180° , subtract its number of degrees from 360 and place the difference on the clockwise scale over the N. end of the meridian, Fig. 16. In either case slide the protractor up or down, keeping the center and the graduation on the meridian until the diam. passes through the point, when the az. may be drawn along the diameter of the protractor. Fig. 17 shows a triangle graduated for use as a protractor.

41. Improvised Protractors. If a rule is at hand, a protractor may be made as described for slope board in par. 14 by extending the 1° graduations around a half or whole circle. If without compasses, measure off the radius on a piece of paper, stick a pin through one extremity for a center and a fine pencil point through the other extremity and sweep the circle.

If without a rule, fold a piece of paper carefully through the middle. The folded edge should be straight. Place the ends of the folded edge together and fold again. The two edges now make an angle of 90° . Fold again through the middle and the angle will be 45° . Now fold in three parts and the angle is 15° . Spread the paper out flat, and the creases will represent radii of 15° intervals. These may be divided into three equal parts by the eye, and the protractor will then read to 5° .

The hour graduations of a watch are 30° apart, and the minutes 6° .

42. The scale of a map is the ratio between dimensions on the map and the corresponding dimensions on the ground. If the lengths on map and ground were expressed in the same unit, the scale ratio would always be expressed by the number of ground units corresponding to the map unit. If 1 in. (map) corresponds to 120,000 ins. (ground), the ratio, or scale, is plainly $1 \div 120,000$, or as usually described, 1 to 120,000. This fraction is called the representative fraction, and designated R. F. But ground distances are so much greater than map distances that they are ordinarily expressed in a larger unit, which makes the scale ratio less apparent. If 1 in. (map) equals 10,000 ft. (ground), the scale is still 1 to 120,000 because 10,000 ft. equal 120,000 ins. The map unit is almost always inches. Hence, a good rule for obtaining the scale ratio is to reduce the given number of ground units to inches, which will indicate the ratio.

Another method of stating scales, much employed in military map making, is to take ratios which will give $\frac{1}{2}$, 1, 2, 3, 6, 12, or 15 ins. on the map to 1 mile on the ground, and call the scales $\frac{1}{2}$, 1, 2, 3, 6, 12, or 15 ins. to the mile. Such scales can be put into terms which express the ratio by dividing 63,360, the number of ins. in 1 mile, by the number of ins. given in the scale. Thus, 1 in. to 1 mile equals $1 \div 63,360$; 2 ins. to 1 mile equals $1 \div 31,680$; 3 ins. to 1 mile equals $1 \div 21,120$, etc.

The scale ratio is true for all units. If a scale ratio is $1 \div 9,600$, 1 in. (map) = 9,600 ins. (ground); 1 ft. (map) = 9,600 ft. (ground); 1 meter (map) = 9,600 meters (ground), etc.

When the scale of a map is changed, as by reduction or enlargement, the R. F. changes too, and hence the ratio should not be given on maps which are to be reproduced. A linear scale should be drawn on every map. This will be enlarged or reduced with the map and will always be true. Such a scale is also very convenient for taking distances from the map. It consists of a straight line divided into equal parts which are numbered with reference to the relation between distances on the ground and distances on the map. The

numbers relate to distances on the ground and the graduations, or lengths set off on the line, relate to distances on the map. A distance on the map equal to that from the zero of the scale to any graduation corresponds to the distance on the ground represented by the number of that graduation. Scales are designated by the unit of their parts, as scales of miles, scales of feet, scales of meters, etc.

A scale might be constructed by drawing a scale of inches on the map and placing opposite the divisions the numbers expressing the equivalent ground distances. It is customary, however, because more convenient, to take the numbers at intervals of 10, 100, or 1,000, or multiples of them, and make the divisions of the line correspond. A scale should be divided into a convenient number of equal parts called primary divisions. The zero should be between the first and second primary divisions, counting from the left. The primary divisions are numbered from the zero to the right. The primary division on the left of the zero is subdivided into smaller parts, called secondary divisions, and these are numbered from the zero to the left. The secondary are usually $\frac{1}{10}$, or $\frac{1}{100}$ of the primary divisions.

To take off any distance from such a scale, put one leg of the dividers on the primary division next below the distance sought, and the other leg on the secondary division corresponding to the remaining figures.

Figs. 18 and 19 give scales for the usual range of topographic maps, which may be taken off on the edge of a strip of paper and transferred to a map. Fig. 20 gives scales for plotting distances measured by pacing on foot, and Fig. 21 for those by pacing mounted.

Scales may be constructed on strips of paper, wood, celluloid, or metal instead of on the map, and are then called plotting scales. The scales given in Figs. 18-21 are plotting scales. A distance may be taken between dividers from any map and read by applying the dividers to the proper one of these scales.

These scales are not engraved and can not be relied upon within 1 per cent. They are sufficiently exact for reconnaissance and, in fact, for most topographical drawing and scaling.

43. A series of points connected by azimuths and distances is called a traverse, and the operation of determining the azimuths and distances is called traversing. The latter term is usually extended to include all azimuths, distances and elevations taken while running such a line.

A traverse line with elevations along it may also be called a profile, and when the traverse is run for the express purpose of taking the elevations, the operation is called profiling; and the line on the ground and the plot of it on paper, are called profiles.

Distances in topography are so much greater than elevations that both can not conveniently be represented on the same scale. It is usual to take a scale for elevations called the vertical scale, much larger than the scale of distances, or horizontal scale. The ratio of the two scales is called the distortion or exaggeration. Ten or 20 ft. to the in. is a common scale for elevations. If the horizontal scale is 3 ins. to the mile, the resulting distortions are 176 and 88 times. Both scales should always be written below every profile.

Angles on a distorted profile are also distorted, and gradients can not be plotted or read with an ordinary protractor.

Angles can be plotted or read on a profile by any of the other methods of expressing gradients, par. 11. The horizontal distance is plotted to the horizontal scale and the corresponding vertical distance to the vertical

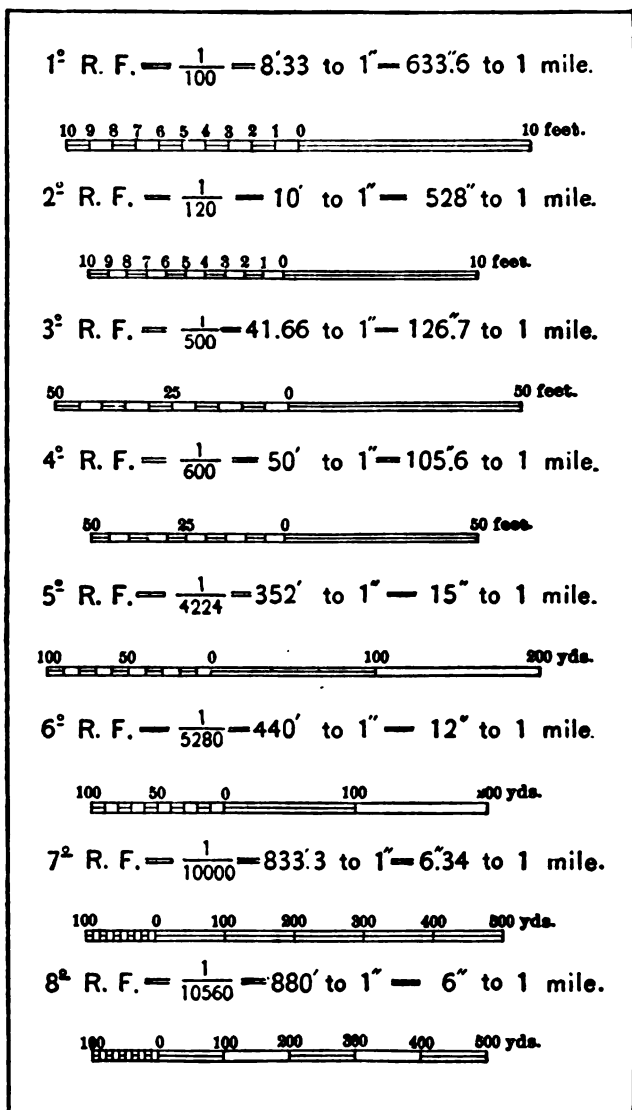

FIG. 18.

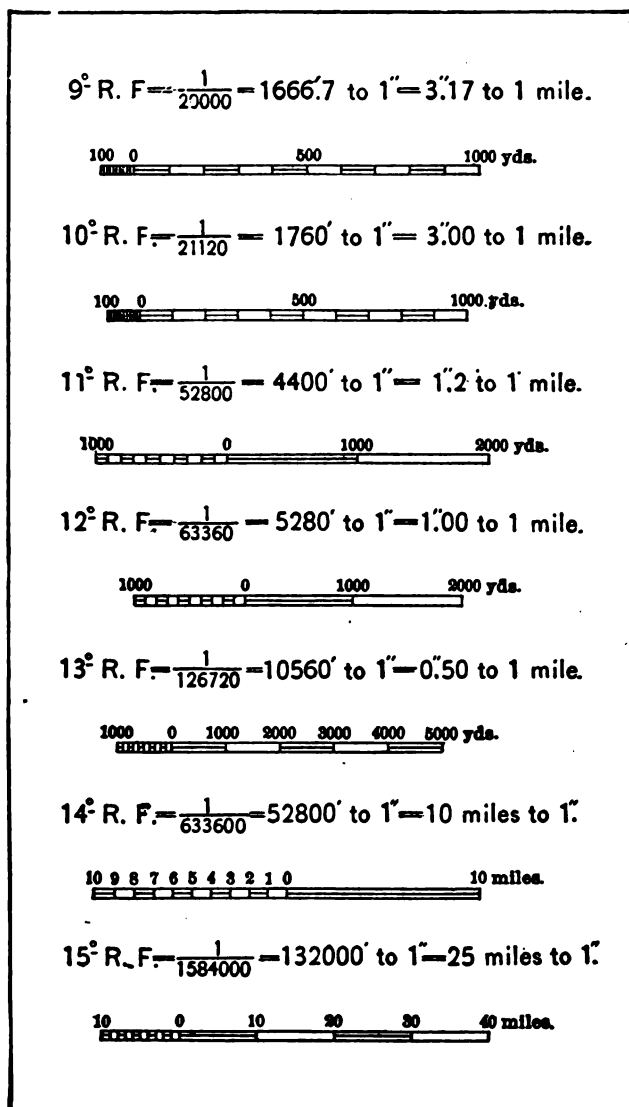

FIG. 19.

FIG. 20.

FIG. 21.

scale. A special protractor may be made for any given distortion and used to plot and read angles directly on a profile having that distortion. To make such a protractor, lay off a distance of 100 to the horizontal scale. At one end of it erect a perpendicular, and lay off on this, from the intersection, distances corresponding to 1° , 2° , 3° , etc. These distances must be laid off to the vertical scale. Draw lines through the points on the perpendicular and the other end of the horizontal line. These lines represent the angles on the profile corresponding to the slopes on the ground.

44. Fieldwork. Measurements and additional notes may be recorded and afterwards plotted on a map, or may be plotted on a map as taken, or the two operations may be combined, as circumstances demand. A written report also will often be required.

45. A road sketch consists of a map of the road with a narrow belt of country on either side. If roads, parallel and intersecting, are not too far apart, the road sketches may be combined into a fairly good map of the entire area.

The road itself will, if practicable, be traversed with the degree of precision already indicated as required for topographical reconnaissance. If the country is open, so that long sights are possible, a trained observer will get better work by the use of the prismatic compass and clinometer. For shorter courses, when the object is of sufficient importance to use a chain for distances, the prismatic compass and clinometer should also be used and the readings taken with the greatest care.

Usually, however, the box compass will be used for azimuths and the slope board for gradients, or else the sketching case, to be described later, par. 54.

Side features will, if important, be located by intersection; otherwise by estimation. A convenient method is to estimate the distance of an object when it bears at right angles to the course, and plot it from that point. In such case the azimuth will be denoted by R or L. Thus, house 300 R would mean a house at a distance of 300 units to the right, on a line at right angles to the course through the point where the observation was taken.

46. Traversing with Compass and Notebook. Rule a column $\frac{3}{4}$ of an inch wide down the center of each left-hand page of the notebook. Select for the starting point some object or point which can be identified by description. Standing at this point, sight with the compass toward some object—tree, stump, telegraph pole, or stone—that will serve as the second station of the traverse line. Note the reading of the compass and record it in the center column of the notebook, at the bottom of the first left-hand page, making also the symbol for $\odot 1$. Observe and record also the azimuths of any other objects which are to be located from $\odot 1$. All the observations taken at this station are written in order in the central column from the bottom upward and are bracketed together with the station symbol. The name of each object is written on the same horizontal line with its azimuth, on the right side of the page if on the right of the traverse, and on the left side of the page if on the left of the traverse. If elevations are to be obtained, observe the gradients from $\odot 1$ to the several objects and place each in the notebook next to the corresponding azimuth.

Proceed toward $\odot 2$, counting paces. Halt when necessary to sketch and measure offsets to objects on either side of the course, to take bearings of intersecting roads, paths, streams, etc. When a halt is made, a mark is scored on the ground, the distance in paces from the last \odot recorded in the central column and the desired notes made. Distances along the main line, azimuths,

ient angles only are recorded in the central column. All descriptive relative to side objects is placed outside of that column on the side depending to that where the objects lie. Return to the scored mark and the pacing, beginning with the number recorded at the halt, so that the sum of paces at any point shall be the number taken since leaving the

center column of the page is taken to represent the line actually paced without width, so that offsets in the side sketches are shown measured from the sides of the column and not from its center.

Reaching the second \odot , record its distance from \odot 1; draw a horizontal line across the page; write \odot 2 in the center column above the line, and continue the line to \odot 3.

At \odot 2 to take a back azimuth on \odot 1. This should differ from the azimuth of \odot 2 from \odot 1 by exactly 180° . A marked discrepancy indicates a mistake in observation or the effect of local attraction on the needle, and should be investigated before proceeding. If a back azimuth is taken, it should be observed and recorded.

Whenever opportunity offers, take bearings on distant bends of the road, spires, hilltops, tall trees, etc., and enter the angles in the center column with the name of each object written beside its bearing. Endeavor to get bearings on the same distant object from several stations or from two stations at some distance apart. These, when plotted, should intersect at a common point if the bearings are correct and the compass has not suffered local disturbance. It is not to be expected in work of this grade that an exact intersection of more than two bearings can be obtained except by accident.

When a sketcher at any point of the traverse finds himself in prolongation of a line that defines or bounds a feature of the country, such as a fence, the edge of a wood, a reach of shore line of river or lake, a gully, canyon, or ridge, or the corner of a building, or a stretch of road or railroad, its bearing should be taken. The same rule should be observed when important features come into range of observation from a point on the traverse. A valuable check on the relative positions of such features is thus obtained.

If the traverse line is interrupted by any obstacle that interferes with the measurement of distance, its width should be estimated and the pacing resumed on the other side; or, for greater exactness, make an offset, perpendicular to the traverse line if possible, long enough to clear the obstacle, continue the line parallel to the original course and return to the latter after passing the obstacle by a second offset parallel and equal to the first and in the opposite direction; or, locate points on the farther side by intersections.

The Unit of Measure Should be Clearly Stated in the Notes. Ordinarily measurements along the course are in paces, while estimated offsets may be in paces, rods, or fractions of a mile, according to their distances, and also according to the unit in which the sketcher finds he can make the closest estimate.

On the usual reconnaissance scales, the dimensions of buildings, widths of bridges, etc., can not be plotted to scale. They are shown exaggerated, but their true dimensions, if important, must be given in figures.

The best method of plotting is to plot the traverse lines and the check lines first. Then any error discovered by means of the latter, or by closure on the initial or other known point, can be more readily corrected. When the traverse line has been adjusted, the details on either side are plotted in and do not need to be changed.

The outfit desirable for the method of traversing with compass and book is the following: Notebook or sheets of paper ruled as described, pocket compass, pencil of medium hardness, rubber eraser, pocket tape, a piece of twine 100 ft. long. The absolute necessities are the compass, pocket knife or pencil sharpener, and rubber-tipped pen. Tape measure is to be used for making small measurements of distance or sections. The cord is useful for measuring depths of water, heights of stations, etc. It should be graduated to yards by knots.

49. The topographic field notebook is designed to facilitate the method of traversing. In addition to the central column, it has columns on either side in which to record the offset distances, each of which is plotted on the proper side of the central column, avoiding the necessity of using letters R and L, and eliminating the liability of mistakes in confusion of direction.

The opposite right-hand page is ruled in 1 in. squares, and has a protractor graduated to degrees printed on it. This page facilitates a method of the traverse with respect to which many details can be sketched more clearly and certainly than they could be recorded in writing. At the bottom of the page are scales of tenths and eighths of inches. The alternate pairs of pages are plain ruled for notes and memoranda. Figs. 22 and 23 show the method and illustrate the use of the book described.

50. Traversing with Compass and Drawing Board. The observations are taken as in traversing with a notebook and compass, but the traverse is plotted as such offsets as come within the limits of the sketch are plotted at once on the map as the observer proceeds over the ground. A great advantage of this method is that any large error in measurements is likely to be detected by the eye, as the map is compared with the ground, and errors can be corrected on the spot. The plotting scale of equal parts should be prepared before starting to suit the scale of the map. If this scale can be pasted or drawn on the back of the protractor opposite the angular graduation, it is a convenience.

The sides of the sheet of paper should be lettered N, E, S, and W to correspond with the points of the compass. If the paper is ruled or water-lined, the lines are taken parallel to the magnetic meridian.

Having observed the azimuth at $\odot 1$, draw through the point designated by the station a line having the observed azimuth. Azimuth lines are erased as a rule, and hence should be lightly drawn and with a fairly hard pencil. Prolong this line in the direction of $\odot 2$ far enough to surely reach the point. Other azimuths are taken at $\odot 1$, plot them also, and note on each the object to which it bears. If the distance to the object is estimated, it is laid off on the azimuth and the position of the object plotted at once.

Proceeding toward $\odot 2$ to take any desired side shot, halt abreast of the object, plot the distance from $\odot 1$ on the course, estimate the distance to the object, and plot it in at that distance opposite the point plotted on the course and on the proper side.

Arrived at $\odot 2$, lay off the entire distance from $\odot 1$, and plot and mark the point. Erase the azimuth line beyond $\odot 2$; take and plot any other desired azimuths. If any of them are to points previously sighted to, make the intersections and mark the points. In plotting azimuths to side objects, it is better to lay off only a short part of the line near the object to avoid confusion of lines in the sketch and especially near the station.

51. The following outfit is desirable for traversing by this method:

board 12 × 15 ins. to which the paper is attached by thumbtacks or rubbers, prismatic or pocket compass, clinometer or slope board, a reprotractor, a plotting scale, lead pencil, No. 3 or 4, rubber eraser, 25 ft. of twine, watch, pocket knife, canvas cover for board and paper, etc. A field glass is also very useful. Good work can be done with a complete outfit, or with improvised arrangements for some of those mentioned. The drawing board may be utilized as a slope board.

A road sketch will be long and narrow, and two or more stretches should be on a board if possible. In this way a board of the size indicated will hold a day's work. When a section runs off the paper mark it with a letter, and make a note, Continued at B. Mark the beginning of the next section and write Continued from A.

Whenever else a road runs off the map, make a marginal note "To ———, ——— miles," giving the name and distance of nearest settlement or conspicuous geographical feature. If the road crosses one parallel to the main route, so "To crossing, ——— miles."

Traversing with Oriented Drawing Board. A drawing is said to be oriented when so placed that its true meridian is parallel to the true meridian of the ground. When using magnetic azimuths, making the magnetic meridian of the map and ground—parallel, may be accepted as a proper orientation. The map is oriented, with any given point vertically over the corresponding point on the ground, a ruler held on the point or station on the map, and pointed in the direction of any object gives the azimuth of that object on the map. No measurements need be made. A compass is not necessary, but it is very convenient, as it affords the quickest means of orienting the map.

In a traverse by this method, assume on the map the initial point and the true meridian, selecting them so that the general direction of the traverse coincides with the longest dimension of the paper. Place the board over the first station; lay the compass on it with the north-and-south line parallel to the assumed meridian, and turn the board until the needle reads north. The map is then oriented, and must be in this position whenever a sight is taken. The board should also be level, as nearly as can be determined by the eye.

Place a ruler on the station point of the map and sight it in the direction of the object which it is desired to plot. Draw a line along the edge of the ruler and lay off to the adopted scale the distance of the object if known or estimated. When all the desired azimuths have been taken from the station, sight from the station to the second station and draw its azimuth, and then proceed to that station, pacing the distance. Arrived at the forward station, plot the paced distance, orient the board over the station, and proceed as before. If any of the sights taken at the first station can be seen from the second, new azimuths are taken to them which will locate them by intersection, Fig. 24. If no sight is at hand, orient the board arbitrarily at the first station, and at the second station orient it by placing the ruler on the line between the two, and sight back to the station just left. Fig. 25 shows the relative positions of the map and ground at four successive stations.

Traversing with Sketching Case. The sketching case is a compact device for traversing by the oriented-map method. The simplest form issued to the troops is usually called the cavalry sketching case, is shown in Fig. 26. The compass is set into the board, and a movable index is provided which can be revolved until it is parallel to the assumed meridian on the map. When the needle is parallel to the wire the board is oriented. The needle may be parallel

FIG. 22.

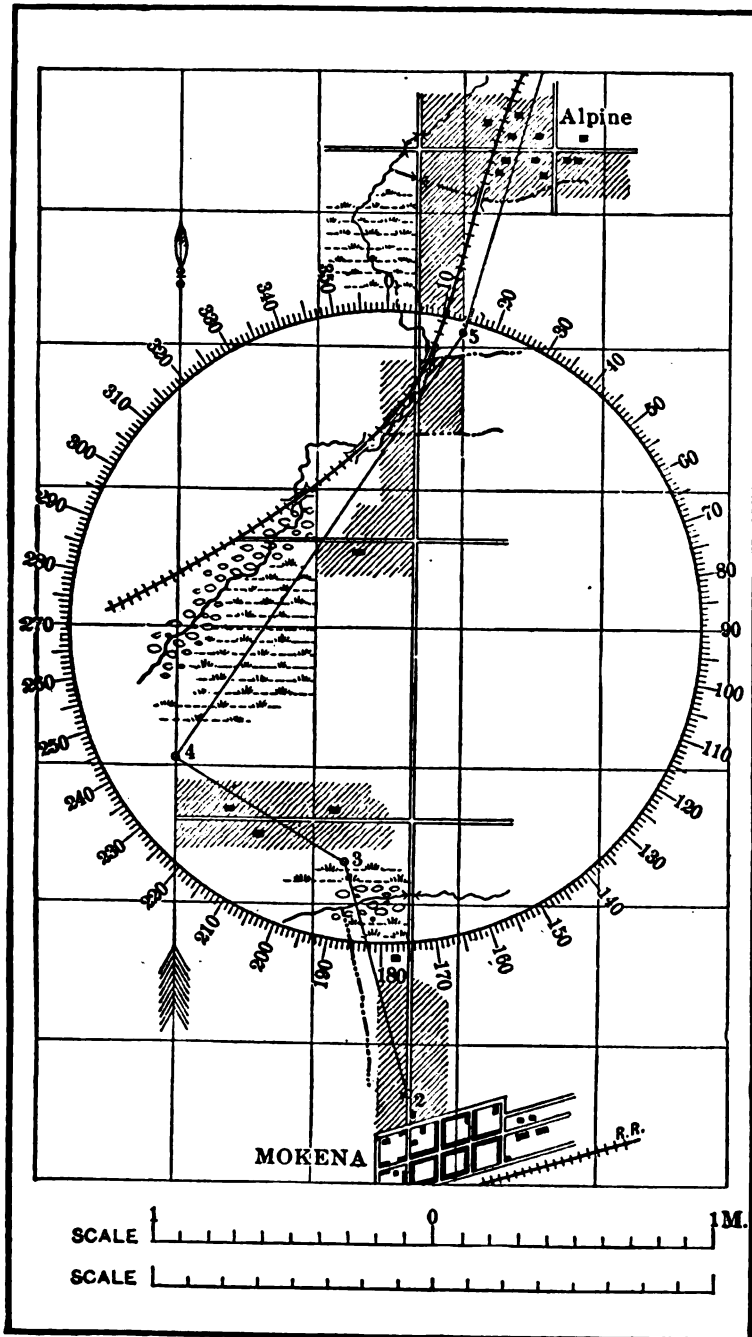

FIG. 23.

to the index wires, but end for end, or 180° out of its true position, in case the sketcher is turned completely around. Such a mistake is and so obvious that it needs no preventive, but a sketcher may note at whether the N or S end of the needle is toward the stud which moves and keep it in this position.

The ruler A is pivoted to a slide, moving in a slot in the radial arm B in turn to the board near the compass. The screw C clamps the slide with respect to the arm, and the screw D clamps the arm on the board. The combination permits the ruler to be set on any point of the board in any direction through that point and clamped there.

To facilitate road sketching rollers KK are provided, on which 30 in. of paper may be placed. The paper should roll on and off the undersides of the rollers. If the traverse runs off either edge of the paper draw a line through the last station, roll back the paper until that station is off the edge, plot the same station in a new assumed position with a new meridian line, and continue the sketch. When the paper is cut and one position is placed over the other with the two meridians coinciding, the true positions of the sketch are in their true relative positions.

By clamping the ruler with the stud F engaged in the notch G, loosening screw D and holding the board in a vertical plane, the case may be used as a slope board. The tops of the roller screws HH form a sighting line. The angle is read from the left edge of the arm, on the scale across the board of the board.

55. Another form of sketching case is shown in Fig. 27. The radial arm and cavalry case is replaced by two sliding motions at right angles to each other which permit the compass to be placed over the pivot end of the ruler and it directly under the eye when aligning the ruler. Several minor details have been worked out to promote convenience and accuracy of use. These advantages are secured at some sacrifice of simplicity and compactness, and this form of case will not stand as much rough usage as the cavalry case.

56. Improvised Instruments. By the oriented-map method a very good sketch may be made with improvised instruments. Any smooth surface on which the map will show will answer for the board and paper. The edge of a book, a slope, or a piece of paper carefully folded makes the ruler. A narrow strip of paper folded double several times makes a scale of equal parts.

57. A road reconnaissance should procure data on the following subjects:
The Road. Gradients, especially the steepest; width of roadway; width, kind, and condition of paving; width and depth of side ditches; whether wet or dry; if not paved, character of soil, sand, clay, or gravel; location of fences and width between them. The sketch should also show whether the road is in embankment or cutting; where wagons can not double or pass; where foot troops can not march along the side between the wagon tracks and the fences.

Bridges. Material of piers and abutments; type and material of superstructure, as girder, truss, arch, suspension, wood, steel, stone, etc.; width of roadway, and clear headroom; safe load (see Bridges). Of bridges over streams, clear width and height; over streams, the nearest bridges above and below; whatever information can be obtained about them.

The Country. Character of cultivation or natural vegetation; areas of forest, density of timber, underbrush, vines, especially poisonous ones; marshes and swamps; kinds of fences, nature of soil; general configuration of surface, especially

Traversing by plane table and Resection

Fig. 26. Cavalry Sketching Case

Fig. 27. Bower Sketching Case

ridges or valleys, bluffs or slopes too steep to scale, and practicable their crests.

Crossed. Name, width, depth, and surface velocity in swiftest current noted as sluggish, moderate, quick, or swift; elevation of high-ways in relation to the road; which bank is the higher at crossing and below, and how much; accessibility of water for stock; fords at crossing; length, depth, and steepness of approaches; levees or embankment, and thickness on top; if navigable, to what distance above and below for what class of vessels—steamers, flatboats, rowboats.

and Villages Passed Through. Name, location on map, and population of streets to be traversed. Material, as stone, brick, frame, log; number of stories, and distribution, close or scattered, of the houses in those places; gradients of intersecting streets; location of railway depots, post, telegraph, telephone offices; of drinking fountains and watering troughs; of warehouses, or other accumulations of food or forage; of blacksmith, and machine shops.

Ordered to make a complete examination of a town or village, note the foregoing, location and size of principal buildings, halls, court and houses, churches, banks, jails, and their ownership; sources, maximum and distribution of water supply; sanitary conditions and disposal of sewage; location of railroads, depots, freight houses, sidings, etc.; for all roads from the surrounding country the same information as scheduled above; location and extent of open spaces, and of large substantial buildings; location and extent of high ground with range, especially where which streets can be enfiladed.

Is Crossed. Name, gauge, single or double track, sidings and loading platform at point of crossing; crossing at grade, over or under; distance and direction of nearest station each way; direction and distance of nearest roundhouse,

or Reconnaissance. Designate the banks as right or left, the right bank being that on the right hand when looking down the stream. If, when standing on the bank facing across the stream, the current flows from left to right, the observer is on the right bank; if from right to left, he is on the left bank.

When a stream is navigated, pilots and residents will know distances by channel soundings with sufficient accuracy for the purposes of a field reconnaissance. In making a traverse along the banks of the river, it may be desirable to go from one side to the other to save distance or avoid obstacles. When a traverse is to be made, at two or three stations from the point of crossing on the other side and take an azimuth to it. From the last station take an azimuth to the selected point, locating it by intersection. If the intersection prevent an intersection, take an azimuth from the last station to the point on the opposite bank and estimate the distance.

Valley. General configuration, heights of limiting ranges, and positions of roads crossing them; commanding ground from which a stretch of line of considerable length can be enfiladed by artillery; forest growth on the banks; soil and cultivation of the valley; roads parallel to river, and means of access to them from the river.

Stream. Its width, depth, and velocity; navigability, as for steamboats, rowboats, rafts, and head of navigation for each; nature of obstructions

to navigation and possibility of removing or avoiding them; season of low water; average rise and fall; rapidity of rise and fall and causes of drift; character of banks and relative command. Quality of water and kind of sediment borne; usual period and thickness of ice.

Tributaries and Canals. Width, depth, navigability, and means of Nature and purpose of canals; dimensions and lifts of locks; time for means of destroying locks and effect of destruction; floating plant four

Bridges and Fords. As in road report. Also for bridges note position of channel and navigable width between piers; height of arches and low above the water at different stages; dimensions and operation of draw. Note the exact position of fords and the marks on both banks by which they may be found; length, width, and nature of bottom; velocity of current; position of deep holes; aids to crossing. Fords should not be more than 4 ins. for cavalry, $3\frac{1}{2}$ ft. for infantry, and 2 ft. 4 ins. for guns and ammunition. Note nature of approaches to bridges and fords; width of roadways; soil, effect of weather and traffic. Note especially the defensibility of bridges and fords.

Ferries, Boats, and Other Means of Crossing. Position of ferries; approach and practicability for horses and loaded wagons; sizes, number, and names of boats; method of propulsion; sites for military bridges or ferries; location of site for construction, use, and defense; proximity of islands and streams; approaches and slope of banks; width of river and maximum velocity of current; materials for the construction or repair of boats and ferries.

Inundations. Places suitable for inundations by damming or obstructing narrow bridge span, or by cutting a levee or dike. Note raised roads or bridges liable to natural or artificial inundations and the safest route to find known landmarks when the road is overflowed. An extensive inundation 2 ft. deep on level ground is a serious obstacle unless the roads are well sound and marked by trees, posts, etc. Even when so marked a deep roadbed of 3 or 4 ft. may render the road impassable. A railroad track soon washed out even by a slight overflow.

59. Reconnaissance of a Railroad. The Line. Local name; terminations and distances between stations and other points; gauge; single or double track; condition of roadbed, ties, and rails; drainage and liability to floods or washouts; facilities for repair; condition of right of way for troops along the line.

Tunnels and Bridges. Number and location; dimensions; strength of structure; means of destroying and repairing; of blocking traffic.

Rolling Stock. Number and nature of engines and cars available; facilities for transporting troops between given points; facilities for constructing and repairing loaded trains, as spare rails, old boilers, etc., location and capacity of storage yards.

Stations. Name and location; facilities for entraining and detraining troops with wagons and horses; platforms on through line and sidings; range of tracks, number and capacity; turntables; water tanks; fuel supply facilities; derricks or cranes; cross-overs for teams and pedestrians. Note what is at hand for hospitals, camps, depots; for feeding men, heating coffee, and for horses during temporary halts.

Other Communications. Telegraph lines; number and location of lines; number of wires; connections; parallel highways, roads, rivers, or canals; means of access from same to railroad; junctions and crossings of other lines; elevation; facilities for laying temporary switches and sidings at stations between crossing lines.

bility. Heights commanding line of road; defense of stations; defense and telegraph lines against raiding parties; structures exposed to defense and attack of same; defiles and river crossings.

Connaissance of a Wood or Forest. Note all roads and paths, and all creeks, and streams within the wood or skirting the edges; kinds of trees, and growth; underbrush, prevalence of poisonous shrubs and vines; large open spaces; practicability of forming new roads by cutting; removal of obstacles by felling trees; if there are no roads traverse the shortest path between the point of entrance and point of exit, and mark the path by blaze trees, set stakes, or otherwise indicate this path, and also give bearings of the route to be followed. Note the exterior forms of the wood, whether parts of the edge flank other parts; connection with neighboring woods of wood by scattered trees or clearings; undulations of the ground and give cover to attacking force or to defenders.

Connaissance of Mountains. Note the number and positions of passes and saddles, the mountains, of roads and trails leading to these passes, their condition, practicability and means of repair; steepness of slopes on the sides of mountains; means of constructing additional roads; water courses, their direction, and time of floods; means of crossing. Note ravines and open glades on the sides, lookout points, and good signal stations; note time and duration of drifts on roads or passes; depth of drifts and possibility of removing them; possibility of traveling on the surface of the snow. Note extent and nature of the snow.

Connaissance for a Camp or Winter Quarters. Site. Location, elevation, area; sanitary features, such as drainage, dryness, and general character of soil; proximity of swampy ground or stagnant ponds.

Communications. Sufficiency of existing roads and paths, maximum grades, condition under heavy traffic and in bad weather, location and kind of roads available for improvement or repair, railroad or water communication and other facilities of same.

Food and Fuel. Location, kind, and quantity of fuel at hand; quality and quantity of water; facilities for filling water carts, for watering animals and for cooking and bathing; nature of supply, as wells, springs, running streams, and other sources.

Shelter and Conveniences. Proximity of trees, brush, wood, hay, and straw for bedding; of markets; of towns and villages.

Defensibility. Location of outposts and guards; location and character of positions in or near the camp; force required to hold positions which command the camp.

Connaissance of a Position. This problem usually includes the selection of a position, and is therefore tactical as well as topographical. Certain required conditions must be observed in the selection, and the extent and nature of the position which they are found must be clearly shown on the map or in the sketch.

Length of the position, or its development along the firing line, should be commensurate with the force available for its occupation. Exact rules can not be given, but 5,000 infantry per mile or 3 men per yard is the usual estimate.

Flanks Must be Secure. Impassable natural features—a river, mountain, or cliff—form the best flank. Lacking these, a wood, a deep ravine, a cliff, or a steep bank will serve. Even with these features absent a flank may be strengthened by the construction of a strong earthwork, but the general rule obtains that the weakness of the flanks must be made up by a greater number of troops, or by the substitution of cavalry for infantry in case the ground favors them. Positions of mounted troops.

If the flanks are naturally strong the line should be withdrawn to entire position reëntrant; if the flanks are naturally weak the connection should be held straight or advanced so as to make the position salient.

The depth of the position, or its extent in rear of the firing line, should be determined by the nature of the ground, and the amount of natural cover for supports, reserves, and trains, which may require a distance of 800 to 2,400 yds.; but a short position may be relatively shallow and a long one. Three or four parallel ridges, 300 to 600 yds. apart, with the intervening ground practicable, form an excellent position. If the first ridge is higher than the rest, so much the better. Whatever cover there may be in the component parts of the force, whether natural or artificial, fences, trees, etc., should be shown or described. If digging is necessary, its extent and the character of the soil should be stated.

Strong points in front of the line, which may be occupied as outposts, should be shown.

Communication should be free in every direction, concealed so far as possible from the enemy's view.

Artillery positions are required when that arm is represented in the force, as will usually be the case. They should permit the guns to command the ground in front of the positions over which the enemy can advance, to a distance of effective range. Every point in front of the position and within range of the commands any part of it, is an element of weakness.

Ranges at which the enemy can be seen and reached by artillery, and points beyond rifle range covered by such fire and its relative command, of reverse artillery positions should be shown or described.

If possible, similar information should be obtained of the ground likely to be occupied by the enemy in forming for attack, or in taking up a counter-attack.

64. A position occupied by an enemy must be reconnoitered from a distance, and few details can actually be seen. Valuable inferences may be drawn from the position, remembering that the enemy has probably chosen his position in accordance with the principles above given.

Especial attention should be given to the flanks and the feasibility of attacking one of them.

65. A position sketch will usually be on a scale of 6 ins. or 12 ins. to a mile. It will be found most convenient and expeditious to make it by the compass and drawing-board method, par. 50, or the method with oriented board, par. 53. The traverse will include the fewest points from which the position can be seen, often only two, and all other features will be located by bearings from these points. Elevations may be taken by slope board or by aneroid, the height of the first point occupied being arbitrarily assumed if none is available.

If two points can be found which overlook the area in front of the position, which are also visible from each other, the compass may be dispensed with, except for a meridian. Measure the distance between the two points, and mark the position of one of the points and of the line joining them, so as to show the desired area on the paper. From the first point lay off on the line the distance between the two points to the adopted scale and plot the second point. The line joining the two is called the base, and will be near one edge of the board, if all the area to be mapped is on one side of the line, or to the middle if it is on both sides.

Place the board over the first point; lay the ruler along the base and draw the board until the ruler points to the second point. Keep the board in this position and point the ruler successively to the objects to be located, drawing them as explained in par. 53. Gradients are written along the corresponding lines. One gradient should be taken to each point determined.

to the second point. Lay the ruler along the base and point it to the
c. Point the ruler to the objects to be located, marking where it
e line to the same object drawn from the first point.

touring is a method of exhibiting relief of ground by means of lines
on a map as to indicate points of equal elevation. The lines so drawn
and the corresponding lines on the ground are called contours. The
touring is applied to the field work directed especially to obtaining data
ng contours.

erence of elevation of points in adjacent contours is called the contour
nd is usually constant for all the contours on the same map. The
distance between contours, measured in a radial direction with refer-
e curvature of the contours, will be referred to as contour distance.

ory of contouring is that no inadmissible error will be made by sup-
slope of the ground from a point in one contour to the corresponding
ne next, or along the contour distance, to be a straight line. The less
interval, the less error will be made. If in Fig. 28 the curved line
ents the actual surface of the ground, and points 1, 3, 5, the elevation
ive contours, the broken line 1, 3, 5, will represent the assumed ground
nd its departure from the line AB is the error introduced. If now
2, 4, and 6 are also determined, or the contour intervals be reduced
the assumed slope is 1, 2, 3, 4, 5, 6, which differs less from the line
the line 1, 3, 5, and hence introduces less error. With points deter-
very short intervals the error is practically eliminated.

ur distances decrease with elevation, or the contours become closer
o higher, the slope is concave, and points between contours are lower
straight line joining corresponding contour points. If the contours
loser as the ground falls, the ground is convex, or lies above the
ne joining corresponding contour points. A point of inflection, or
om convex to concave, is at the point where the contour distance is
reater than those on either side of it. Equal contour distances corre-
uniform slope.

contour does not necessarily join all the points of the same elevation
ap but only those which have a continuous series of points of the
ation joining them. It may require several contours to take in all the
a given elevation on the map. Parts of the same contour will appear
e when the ground over which they could be connected is not on the
e selection of the points to connect in one contour is the difficult part
ccess and can not be done correctly without thorough knowledge of
ples of the method and a good idea of the general shape of the ground
oured. In military reconnaissance only enough elevations can usually
in the field to guide one who has seen and studied the ground in draw-
contours. No one who has not seen and studied the ground should be
or permitted to draw contours from such data. Erroneous information
orse than none at all.

equal contour intervals the map contours are closer together as the
eeper. It follows that for steep slopes the map contours will approach
r very closely, and for a vertical wall or cliff they will coincide.

contours can not cross, but map contours may cross in the very un-
e of a cave or a bluff overhanging by an amount which can be shown
horizontal scale. This is so rare that it is usual to say that map contours
cross.

contour must close upon itself in a loop or else must extend unbroken
point on the margin on the map to some other point on the margin.
tion is made in the case of large streams, the contour on each bank

being carried upstream until it cuts the water surface, when it is dropped. The two ends must be directly opposite, Fig. 29. In a small stream or dry stream bed, the contour crosses at the point where the elevation of the bed is that of the contour, Fig. 30.

Maximum ridge and minimum valley contours go in pairs. A single contour can not lie between two higher ones, or a single higher between two lower. When two adjacent contours have the same elevation, the ground between them will be still lower if they are valley, or still higher if ridge contour.

69. Contours are designated by their heights above a datum plane. The height is expressed in feet, except when the metric scale is used, when contour intervals are in meters.

The elevation of each contour should be shown in figures at points close enough together to allow the eye to run from one to the other with ease. It is best to break the contours and write the numbers between the ends. If the numbers are alongside, the numbers should always be on the higher side of the contour. Figs. 31 and 32.

70. Straight contours are very rare. They may be determined by two points, or by locating one point and observing the azimuth of the line.

Simple curved contours are more frequent than straight ones, but they are often found of any considerable length. They may be determined by two points; or by 2 points with the radius estimated; or by 1 point with the radius assumed.

The typical contour is a wavy line, alternately salient and reëntrant. The contour may be determined with the precision needful for hasty reconnaissance by finding the extreme points of the convex and concave portions.

71. Looking at contours from the higher side, the salient parts, or the reëntrant parts, correspond to the ridges, and the reëntrant parts, or the convex to the observer, correspond to the valleys. The valleys are also lines of drainage. Hence, half of the points necessary to determine a wavy contour will be on drainage lines, as indicated by rivers, creeks, brooks, and rivulets, ravines, or other depressions dry at most seasons.

The slope of a drainage line grows less in the direction of flow. Tributaries or branches, are usually steeper than the main stream at their junction. They also increase in slope toward their sources. Generally, in a limited area, the sources will be at nearly the same elevation. To apply this principle in drawing the amount of topographical relief that may legitimately be drawn from a given number of known elevations, let Fig. 33 represent the drainage of an area taken from a civil map. Suppose the ground to have been studied at elevations to have been determined at 2 points, A and B. How much topography can be drawn?

The 110 ft. contour will be above the 105 ft. and by a distance somewhat greater than the length AB, because the slope becomes steeper and the contour interval less in going upstream. The succeeding contours at 10 ft. intervals will cross the tributary at gradually decreasing distances, as indicated, and for the same reason. The source is found to be about 130 ft. Take the other source to be also 130 ft., and draw the contour at that level, remembering that the ground is concave where it crosses the streams, and that the part between the sources is convex and advanced. Lay off the contour points on the other stream, keeping in mind the law of slopes, and draw the other contours, following the same rule as for the first.

72. If enough elevations were taken on stream lines the concave parts of the contours would be fairly well determined, but the convex points would be in part uncertain. It is known that they are convex and salient, and how much. This information is supplied by elevations taken along the crests, or divides which lie between adjacent drainage lines. The typical

Fig. 28.

Fig. 29.

Fig. 30.

Fig. 31.

Fig. 32.

of a crest is a reversed curve, flat and convex between the sources of flat and concave near the junctions of streams, and steepest in the middle of the inflection at the steepest point. The form of crests is not so regular as that of valleys, and less use can be made of it. It should be kept in mind that for comparison, so that actual forms can be more readily remembered.

73. The field work of contouring an area which has a sufficient relief to show drainage lines clearly may begin by traversing these lines, with gradient measured by clinometer or slope board. It is most convenient to begin where the drainage leaves the area to be mapped, and follow each valley to its source.

If the valley is open and the flanks of the ridges on each side can be seen, time may be saved by taking level sights from some of the contour points on the drainage line to points on the ridges as far advanced as possible where the line of sight is tangent to the hill. This gives two points, 32 and 33, near the apex of the salient from which the contour may be drawn as well as by a point at the apex. If this can be generally done, it may be necessary to run out the ridges. Notes should be made of the appearance of the contours near the drainage line, whether sharp or blunt, or whether the valley is narrow or wide. The general shape of the sky line of the area and its projection against higher ground should be noted whenever a latitude of it can be had.

If hill points can not be taken from the valley traverse, the ridge line must be run out. They must be connected in plan (distance and azimuth) and elevation with the drainage lines. When drainage and ridge lines are plotted on the map, the contour points, if not actually observed, may be interpolated between the contours drawn.

The symmetry of adjacent contours is obvious from the inspection of a contoured map, and this relation may be utilized, where one contour is well determined, to draw the one on either side of it from a very few points, often but one. If the contours are wavy, they will generally be a little farther apart at the concave and convex points than at the reversion points between them. If the contours are not wavy, they are generally parallel.

74. If the relief of the ground is so slight that the drainage and ridge lines are uncertain, the field work of contouring is best done by taking level sights at points arbitrarily selected. Such points will usually be in straight lines running in the general direction of the steepest slope. The points are plotted on the map, the corresponding elevations written near them, and the contours interpolated as indicated in Fig. 34, assuming that the surface of the ground between observed points is a straight line. The closer the points are, the less error is involved in this assumption.

If the country is comparatively flat and unbroken, profiles may be taken along roads and paths, and contours sketched in on each side so far as they can be seen. Then by going over the intervening ground and observing its slope, the portions drawn can be joined with the eye with sufficient accuracy.

In towns and villages profiles along intersecting streets and the space between the intervening space furnish data for approximate contours.

75. Slope Equivalents. Actual distances between contours on a map depend on the contour interval, the scale of the map, and the gradient. For a given map the contour interval and scale are constant, and the distances between contours depend on the slope alone. On any map with contours at a given interval each gradient has its corresponding contour distance, which is its equivalent. A line subdivided to show the equivalents of various slopes on any map is called a scale of slope equivalents for that map, or a scale of slopes, and by applying such a scale to the distance between successive contours the slope of the ground between them may be read off.

Different maps slope equivalents vary with the ratio between the contour and the scale. A scale of slope equivalents may be constructed for a ratio and will be true for all maps having that ratio, no matter how much the scales may vary. The ratio may be taken as the fraction of an inch on the map corresponding to the contour interval. If the scale of the map is 1 in. to the inch and the contour interval 1 ft., the ratio is $\frac{1}{12}$ or 0.002, which is the fraction of an inch corresponding to 1 ft. on a scale of 500 ft. to an inch. If the scale is 1,000, 5,000, 10,000, or 50,000 ft. to the inch, and the corresponding contour interval is 2, 10, 20, or 100 ft., the ratio in each case is 1 in. to the contour interval corresponds to 0.002 in. on the scale of the map. A scale of slope equivalents corresponding to the ratio applies.

Fig. 35 contains scales of slope equivalents for ratios of $\frac{1}{12}$ to $\frac{1}{50,000}$, which cover the usual range.

To get any desired scale of slope equivalents from the figure, divide the number of feet in the contour interval by the number of feet per inch of the scale, or divide the number of inches in the contour interval by the denominator of the ratio. R. F. The result is the ratio. Place the straight edge of a piece of paper horizontally on the diagram and passing through the corresponding point on the ratio scale on the left of the figure, and prick off the scale.

Slope equivalents afford a convenient and rapid method of determining contours on any line of a map the gradient of which is known.

The fraction of the equivalent for any slope corresponds to the same fraction of the contour interval. If an end of the line is on a contour, the slope equivalent may be stepped off along the line and each point so determined will be on a contour point. If the end of the line is between contours, measure off on the line the part of the slope equivalent corresponding to the rise or fall to the next contour point. From this step off the slope equivalent as before. If a small distance remains at the end of the line, find what part of the slope equivalent it is, and add to or subtract from the last contour elevation the corresponding part of the contour interval for the elevation of the end of the line. To illustrate: If in Fig. 36 elevation at a of the line ab is 103, gradient $\frac{1}{10}$, contour interval 10 ft. and the slope equivalent cd, then the rise to the next contour is $110 - 103 = 7$ ft. or $\frac{7}{10}$ of the contour interval. Seven-tenths of 10 is 7, and hence e is the position of the 110 ft. contour point. Lay off ed = 7 ft. and gh = cd and locate the 120 ft., 130 ft. and 140 ft. contour points. The distance hb = $\frac{3}{4}$ of cd, hence the rise beyond h = $2\frac{1}{2}$ ft. and the elevation of b = 142.5.

In the absence of contours relief may be indicated by hachures, which are short parallel or slightly divergent lines running in the direction of the slope. Hachures should be used only to indicate areas which present a steep enough to offer cover or become obstacles. The use of hachures is illustrated in Fig. 37.

For the reconnaissance with a moving column will require the simultaneous work of a number of sketchers and must be so organized that each sketcher gets his full share in the time allowed; that the sketches and reports shall be made in about the same hour, and that the assigned ground shall be thoroughly covered without unnecessary duplication.

A good sketcher on foot can take about 10 miles of road in a day, or can keep up with a slowly advancing column. A good sketcher mounted can cover 20 miles a day steadily, or in an emergency 20 or 25 miles, and can keep up with infantry on a forced march or with cavalry marching at ordinary rate.

Reconnaissance for a column should include besides the road traveled the parallel road on each side and all connecting roads between them. Each road traversed by the column on the main road will thus involve $2\frac{1}{2}$ to 5 miles of sketching.

Fig. 33

Fig. 34.

Fig. 35.

Fig. 36.

Fig. 37.

If a reconnaissance is to be made when a force is not in motion, the area to be covered will usually be so large and the time allowed so short as to make it necessary to combine the work of a number of sketchers.

78. If any map is available, the area to be reconnoitered should be divided on it and subdivided into as many parts as there are sketchers, the parts made equal, not in size necessarily, but in amount of work and time, the important point being that all the parts shall be finished at the same time.

Each of these parts is assigned to a sketcher, with full instructions as to the amount and class of work to be done, the scale to be used—which should be the same for all—and the place and hour at which the sketch must be turned in. For each practicable, each sketcher should be given a tracing or copy of enough of the map to show the boundaries of his own task and the adjacent features of interest next to his.

If there is no map, the area may be indicated by land marks, but it is usually necessary, and always desirable, to go over the ground and assign his task to each sketcher. When boundaries are definite, there need be little overlapping. The amount of reduplication must increase as the boundaries become more vague.

79. The area to be mapped may be divided up in any convenient way, but it is best to use roads, fences, streams, or other well-defined lines as far as possible. Lacking these, compass courses passing through well-defined points will answer.

In a road sketch one man should be assigned to the main road on which the column is marching. Others will be assigned to such parts as intersecting roads as it may be necessary to map. So far as practicable, the parties should leave the main road by an intersecting road, traverse a short stretch of parallel road, and return to the main road by another crossing.

80. **Compilation.** The sketches when turned in are consolidated, usually by pasting them in their proper relative positions on a large sheet of paper, and by pasting them together at their edges so that corresponding features will be in line. If one of them does not exactly fit, as will often happen, the adjustment is best made by cutting the sketch into two or more pieces and moving them into their proper respect to each other so as to absorb the discrepancy. Thus, if a piece is half an inch too short, cut it at three or four places on lines perpendicular to the road and separate the pieces by a sixth or eighth of an inch, so they will long, overlap the pieces instead of separating them. If a road or other feature is out of azimuth, make a cut through one of its ends and swing it into position. These operations may be combined. The adjustment is rapid and sure, and is exact. If a sketch is too much out to be adjusted by this process, it will be of little value and time will be saved by leaving it out of the compilation and filling in the gap freehand, using the sketch as a guide.

Fig. 38 illustrates this method of adjustment.

Paragraphs 81 to 84 eliminated, as not essential.

85. **Landscape Sketching.** Free-hand sketching can not take the place of topography, but it is a valuable adjunct and should be practiced by every soldier who has any aptitude for pictorial drawing.

A sketch differs from a photograph only in that it shows in sharp relief a limited number of the larger and characteristic features easily seen and understood, while the photograph shows all details, many of them so minute that they are lost in a mass of confused forms, with the form lines, of the sky line, relatively inconspicuous. All the lines of a perfect sketch are in a photograph, but close scrutiny is often necessary to find them. When the sketch is out and traced, however, a perfect sketch results. Tracing from photograph is excellent practice.

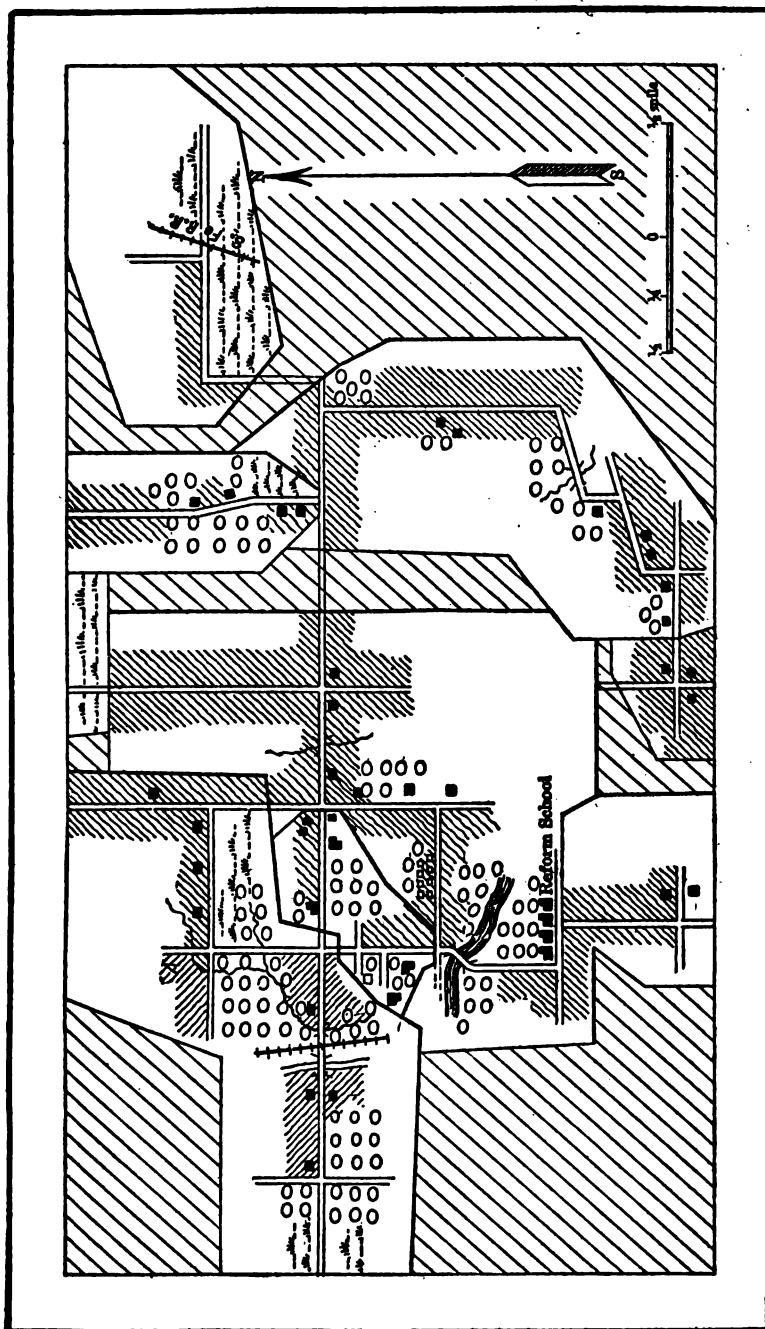

FIG. 38.

The outfit for field sketching should be as simple as possible. A sketchbook with a canvas cover, carried in a water-tight case, together with a pencil, pencils B, F, and H, and pieces of soft and hard rubber are the essentials for satisfactory work. For active field work the book should be no wider than 5 inches, and be carried in the pocket of a service blouse, and relatively long, say 5 inches.

The point of view should as a rule be high enough to give a comprehensive grasp of all that is important—a rock, a knoll, a hill, a peak—depending on the conditions. Face toward the middle of the field of view which is determined by the conditions. Hold the board or sketchbook vertically before the eye and move it backward or forward until the sheet just fills the field. Lower the board until the sky line of the hills can be seen above its top edge, and with a pencil mark on that edge the points corresponding to the principal salients and recesses of the hill forms. If desirable the board can be moved sideways far enough to enable the principal heights and depressions to be marked on the top edge. By intersecting references the locations can then be easily established on the sheet. From these points the forms can be sketched in with much greater accuracy.

Proceed next to draw the hills in outline, but faintly, with attention to the larger curves or humps at first. Go over them again with more care, and mark out the small irregularities. If any part of the horizon is visible, draw it lightly, and then complete the general mass of hills by drawing the top or base lines. Seek now for the surface character of the hills by tracing the ravine lines. The knobs and foothills are brought out by tracing the meanders that show form. All changes in form or breaks in the line will produce corresponding breaks in the foliage of the tree masses, which are drawn in the distance as irregular lines. If the more important of these are so drawn, the general character of the hill will result. Add now the foot of the crest, and the skeleton of the sketch is complete.

The road and railroad meanders should follow as a rule, and the fence lines of fields. Cultivated land is rendered by parallel irregularly broken lines. Fortifications, trenches, etc., will be drawn more or less in detail according to distance and importance. Enemy's lines or trenches even at a great distance should be strongly marked by simple black lines. The indication of trees and trees is the most difficult feature for students. The indications of the accompanying sketches will show the treatment in outline work.

Figs. 39 and 40 show a variety of forms sufficient for most localities.

86. Hydrography. Depth of water and character of bottom are determined by sounding with a pole or with a lead and line. The sounding pole may be of wood, or of permanent form. A convenient one is 10 ft. long, octagonal in section, tapering slightly from middle to ends, divided into feet by rings, painted alternately white, and black or red. There should be an iron hook at the bottom, heavy enough to make the rod stand erect when free in deep water. Such a rod is convenient to use in water 9 ft. or less in depth.

If a sounding lead is not furnished, any compact weight may be used. The sounding line should be of braided hemp or cotton, $\frac{3}{8}$ to $\frac{1}{2}$ in. in diameter, and tagged with cloth or leather. The tagging will depend on the depth to be measured, and degree of precision required. Cloth of different colors may be used for different units, and leather tags may be distinguished by notches or punching holes in them. The line should be thoroughly stretched, and allowed to dry. It should then be wet again and tagged. The zero of the graduation is at the bottom of the lead or weight. The lead and line are best connected by a rawhide thong passing through an eye in the lead and an eye made in the end of the line.

Soundings are usually referred to a plane parallel to the water surface.

FIG. 39.

FIG. 40.

cept in flowing streams. The plane usually selected is the water surface if stationary, or one of its positions if variable, so that soundings will be approximately the actual depths of water. The elevation of the water in the position selected is called the datum level. If the surface elevations, a gauge rod must be set near the water's edge, and read often to plot a continuous curve of water level. The time of beginning and a particular group of soundings is noted. The mean elevation of the surface during that interval is taken from the curve, and the soundings corrected by the difference between the actual level and the datum level. If the correction to be applied is less than half a foot, it is usually neglected. The material of the bottom, as rock, gravel, sand, or mud, can usually be told by the feeling of the rod or lead when it strikes. A specimen of the bottom is brought up by smearing the end of the lead with tallow.

A direct sounding is obtained only when the line or rod is plumb and its length correct, or its error known and applied. Except for the error in reading the line, only one source of error operates to make the soundings too small, and that is a line which has stretched since it was tagged too long. All other sources of error make the soundings too large, and they are apt to be so, and actual depths slightly less than those recorded usually be found.

For a plumb sounding from a boat moving through the water, the lead is out on the pole inclined in the direction of motion far enough to allow the lead to touch bottom by the time the boat is directly over the spot where it is to be taken. Soundings taken with a line from a moving boat will always be too small.

The most accurate soundings with lead and line in running water are taken from a boat floating with the current, with line allowed to hang and move with the current. It is raised only a foot or so between soundings, just enough to keep the lead on the bottom.

Location of Soundings. The simplest method is by two simultaneous azimuths from known points on shore. If the soundings are taken on a line passing through one of the points, all azimuths from that point will be constant, and a single measurement will suffice. This line is plainly marked by range flags, and the boat's crew instructed to keep the flags in range. Only one instrument and one observer are required. This is the usual method for streams and is best for open water when the soundings can be taken in straight lines. Locations may also be determined from the boat by two observers taking simultaneous compass bearings on known points on shore—see resection—or by two simultaneous sextant observations. The latter is less convenient, as a special protractor is required for plotting.

The following notation or its equivalent should be made on a map or chart for each sounding: "Soundings are in feet (or meters) and are referred to the datum level of water at (location of gauge) at — o'clock, on the — day of —. The elevation of this datum level is — ft. (or meters)." If the reference plane is inclined, add: "and its inclination is — in a — direction." The first blank is left for the rate of fall expressed in any recognized way, and the second blank is left for the compass bearing.

Map reading is essentially the reverse of map making. In the latter process the ground is measured and studied with a view of forming a mental picture of the ground as it will look. In the former—map reading—a map is measured and studied with a view of forming a mental picture of how the ground will look. All rules and principles heretofore stated as to relations between map and ground are to be used in studying the relations of map to ground.

FIG. 41.

Following suggestions will aid the beginner:

the meridian on the map and associate it in the mind with the local n. This may be done by turning the map so that the meridian will be to the north, using the compass as a guide if necessary. If there is no n on the map, look for indications of direction in local names, or for road, stream, ridge, or other feature the general direction of which is

the scale of the map. Estimate certain distances, as the total width or length or distance between prominent points and test these estimates on the map. If there is no scale, look for some indications of distance. It may be found in local names, as Three Mile Creek, Two Mile House, etc.; in uniformly spaced, as the U. S. land surveys; city blocks, which are usually 100 yds. on the shorter side; railroad stations or sidings, the distance of which may be taken from time tables. If the map has parallels of latitude a scale may be drawn by assuming 69 miles to each degree, or 1.15 miles to a minute. If the ground is accessible, take two convenient points shown on the map and measure the distance between them.

If the map is contoured, note the contour intervals and the scale of slope between contours. If the contours are not numbered, decide which are the high ones and which are the low ones. Closed contours are much more likely to be elevations than depressions, especially if several are concentric. A single closed contour may be uncertain. Look for indications of marsh or water inside of it. If a contour interval is not given, it will be difficult to get any clue to it unless elevations appear on the map. If the ground is accessible the contour may be determined by actual measurement of a gradient.

Associate all topographical and cultural signs, and associate them in mind with their advantages or disadvantages for military operations.

A problem frequently arising in map reading is that of determining what points are visible from a given point. A point is visible when the gradient to it is rising, is greater, and, if falling, is smaller, than the gradient to any intermediate point.

These comparison gradients are conveniently represented by the quotient of the elevation in ft. divided by the difference of elevation in ft. The point will be visible when this quotient is smaller, if rising, and larger if falling, than the quotient for the intermediate point. Thus, to determine whether the bridge on Frenchman's Fig. 41, is visible from Atchison Hill or is concealed by intermediate ground, assume the highest point of Atchison Hill to be in the center of the 1,040 contour and to have an elevation of 1,050. The distance from the hill to the bridge is 5,610 ft., fall 250 ft., quotient 22.4. The line of sight from the hill to the bridge crosses the 960 ft. contour on the flank of Sentinel Hill. The distance is 3,060 ft. distance, fall 90 ft., quotient 34, hence bridge is not visible from Atchison Hill, since the gradient is falling, and the nearer point has the smaller quotient.

When rising from the bridge the quotient for the whole distance is 22.4 as before, since the gradient is rising. The distance from the bridge to the high point is 1,600 ft., rising; differences of elevation 160 ft., quotient 16, hence, as before, the bridge on Atchison Hill is not visible from the bridge, since the gradient is rising and the nearer point has the smaller quotient.

If the gradient is rising and the other falling, no computation is necessary. A rising gradient will hide a farther point of falling gradient, but will not be hidden by a nearer one.

Drawing. The essential requirements for a good topographical drawing are accuracy and clearness. By accuracy is meant a faithful exhibit of measurements and observations made in the field, or of data taken from other maps.

FIG. 41.

Following suggestions will aid the beginner:

Find the meridian on the map and associate it with the local meridian. This may be done by turning the map so that the meridian will be to the north, using the compass as a guide if necessary. If there is no meridian on the map, look for indications of direction by the names, or for a road, stream, ridge, or other feature the general direction of which is

known from the scale of the map. Estimate certain distances and the total width or length or distance between prominent points on the map. These estimates may be used as a check on the scale. If there is no scale, look for some indication of distance. It may be found in local names, as Three Mile Creek, or Mile House, etc.; or in uniformly spaced, as the U. S. land surveys with sections which are usually 3600 yds. on the shorter side; railroad stations or the distance of travel may be taken from time tables. If the map is a map of latitude and longitude a scale may be drawn by assuming 69 miles in one degree or 1.15 miles to one minute. If the ground is accessible, measure the distance between points shown on the map and measure the distance between them.

If the map is contoured, note the contour interval and the scale of slope or gradient. If the contours are not numbered, note which are the high ones and which are the low ones. Closed contours are more likely to be elevations than depressions, especially if several are concentric. A single closed contour may be uncertain. Look for indications of water inside of it. If the contour interval is not given, it will be difficult to get any clue to it unless elevations appear on the map. If the ground is accessible the contour interval may be determined by actual measurement on a gradient.

Remember all topographical and cultural signs and associate them in mind with their advantages or disadvantages for military operations. The problem frequently arising in map reading is that of determining what is visible from a given point. A point is visible when the gradient to it is rising, is greater, and, if falling, is steeper than the gradient to any intervening point.

These comparison gradients are conveniently represented by the quotient of the rise in ft. divided by the difference of elevation in ft. The point will be visible when this quotient is smaller, if rising, and larger if falling, than the quotient for the intermediate point. Thus, to determine whether the bridge on Frenchman's Fig. 41, is visible from Atchison Hill or is concealed by intervening ground, assume the highest point of Atchison Hill to be in the line of the 1,040 contour and to have an elevation of 1,050. The distance from the point to the bridge is 5,610 ft., fall 250 ft., quotient 22.4. The line of sight from this point to the bridge crosses the 960 ft. contour on the flank of Sentinel Hill, 3,060 ft. distance, fall 90 ft., quotient 34, hence bridge is not visible from Atchison Hill, since the gradient is falling, and the nearer point has the larger quotient.

Looking from the bridge the quotient for the whole distance is 22.4 as before, since the gradient is rising. The distance from the bridge to the high point of Atchison Hill is not visible from the bridge, since the gradient is rising, and the nearer point has the smaller quotient.

If the gradient is rising and the other falling, no computation is necessary. A point of rising gradient will hide a farther point of falling gradient.

Drawing. The essential requirements for a good topographical drawing are accuracy and clearness. By accuracy is meant a faithful exhibit of the facts and observations made in the field, and of data taken from other sources.

or

the

used

geol

riptive

ade, as

sion of

Clearness involves absence of confusion or crowding, and neatness in Beauty and pictorial effect are obtainable by skilled draftsmen only, always desirable, are rarely necessary. Persons who are not skillful men should not attempt pictorial effect, as it will detract from accuracy clearness without substituting anything of equal value.

Avoid unnecessary haste in plotting and drawing. If possible, take check carefully all azimuths and distances plotted and be sure they are correct. There should be no approximation on the drawing board. Although the server may have simply guessed a distance to be 550 yds. in the absence of other information, the plotter should be careful to lay it down at exactly 550 yards.

Start with clean paper and keep it as clean as possible. In the morning, wipe off the instruments before using, especially rulers, scales, and triangles. Clean the drawing carefully before beginning work. Dust again when stopped. Cover with a cloth or paper. If necessary, dust the drawing and wash the instruments occasionally while at work.

Make all ink lines firm and very black. A drawing to be made in ink is usually drawn first in pencil, and in such cases a very hard pencil (4B) is best. If the pencil drawing is to be traced, a softer and blacker pencil should be used, but must be kept well pointed.

India ink in stick form gives the best results, but the time required for grinding precludes its extensive use in military field work. The prepared inks in liquid form are ready for use and are satisfactory. They must be well corked when not actually filling a pen. If the ink gets thick in the pen, so that it will not run freely from a fresh-filled pen, add a little water.

The ruling, or right-line pen, is best for making lines of uniform thickness. The points must be kept clean, and when worn must be ground on a fine stone to the form shown and to exactly equal length. The points must be closed and the ends shaped together, which will make them identical. To open the points and grind each on the outside to a proper edge. Right-line pens are set to make lines of different thicknesses by the screw D, but the range for any one pen is limited, and different sizes of pens are made. A very fine line can not be made with a coarse pen, and it is difficult to make a very thick line with a fine one. The points should never touch. If a line made with a pen is slightly separated is too coarse, take a smaller pen. These pens are graded by the length over all. Five inches is a medium and useful size.

Right-line pens may be filled by dipping an ordinary pen in the ink bottle, or by inserting it between the points. A strip of paper closely folded may be used in the same way. In the bottles of prepared ink the cork carries a small tube for filling. Take only as much ink as can be used in two or three strokes. As soon as the flow becomes the least sluggish, the pen should be emptied and refilled. To empty or clean the pen, pass a piece of paper (the corner of a blotter is excellent) between the points.

The adjusting screw should not be disturbed while working on lines of uniform thickness. When changing from one thickness to another, open the pen and clean more thoroughly. To reset for a given thickness, draw a line of the desired length on a scrap of paper and lay it alongside of a line of the desired thickness previously drawn. The difference will be seen, the pen can be changed, and another trial made, and so on until the lines are matched.

For ruled lines the ruler or curve is laid in the proper position and the line is drawn along the edge, lightly pressing against it. The pen should be held so that the plane of its points perpendicular to the plane of the paper and in the direction of motion. The handle should be slightly inclined in the same

free-hand lines, as contours, hold the pen in the same way and move the pen as to cause the points to follow the line.

When writing with a writing pen, choose one of a size which will make a line of uniform thickness without pressing on the paper. Dip the point only in the ink. If the ruler has a beveled edge place it with the top projecting. A curve of the pen not beveled should be raised slightly from the paper. The pen should be held above the point which touches the ruler. It is held as described in the use of the ruling pen. Parallel lines close together may be drawn with one setting of the ruler by inclining the pen slightly.

Writing pens are best for stream lines. When it can be done, vary the size of the pen to suit the thickness of line. When using a writing pen free-hand do not vary the work as possible by drawing the pen toward the body in about the direction of the down stroke in writing.

For lettering, signs, and all free-hand work with the writing pen, keep the pen clean and freshly inked and the ink free from dust and of proper consistency. Do not write freely without dripping from the pen in blots.

When using a circular pen, set the legs of the compass so that they will span the desired distance and the pen point will be vertical. The lead of a pencil point should be sharpened to the shape of the ruling-pen points with the flat side toward the pivot leg of the compasses. When using compasses with pen or pencil incline them slightly in the direction of motion and rotate the head of the compass with the thumb and forefinger. Very slight pressure only should be used to keep the pen beyond the weight of the instrument.

Paragraphs 92-94 eliminated, as not essential.

Paraffin tracing linen is usually dull back, having one side glazed and the other side rough. Tracing can be done on the glazed side only. The glazed side is used for pen work and the dull side for pencil work. The glazed side requires preparation before use to remove excess of paraffin, which prevents ink from running well. To prepare the pen. Rubbing hard with fresh blotting paper is the simplest method.

Conventional Signs. The symbols or signs used to represent topographical features are designed to be rapidly made and readily understood, and to clearly indicate or suggest the actual features they represent. Multiplicity of signs is undesirable, and a verbal designation or description of the features is often necessary to make them intelligible and more quickly recorded. For instance, it is better to write the names of the growing crops of a district, as tobacco, corn, or cane, than to indicate the entire area with a symbol. Another method of expediting mapping is to draw around an area with a narrow border of the proper sign and leave the interior blank.

Conventional signs, United States Army maps, 1912, are changed as follows: It is desirable, where practicable, to indicate on military maps the character of the lands in regard to the difficulty which they offer to the passage of troops.

This will be accomplished by the use of the symbol  in woods or

or arboreal growth of any kind which offers such obstruction to the movement of troops as to require cutting, illustrated in following cut.

Conventional signs for other woodlands on which this symbol is not used are to describe open woods, where cutting is not necessary for the passage of troops. (C. C. S. U. S. A. M., No. 1, Feb. 8, 1916.)

Titles, Notes, Etc. Every finished drawing should have a descriptive title consisting of—

1. The designation of the organization under whose auspices it is made, as War Department; Bureau of Insular Affairs, War Department; Division of Insular Affairs, War Department; 1st Division, 2d Corps.

(2) Its kind, as map, sketch, plot, plan, profile, section, or elevation. than one kind of drawing appears on the sheet, each should be mentioned in the title, as Plan and sections of battery; Plan, section, and elevations of houses, etc.

(3) Its subject, if it relates to a particular object, feature or purpose.

(4) Its locality. This and the preceding may be interchanged in position.

(5) Its sources, as Compiled from, etc.; Reduced from, etc.; From original, etc.

(6) Its authorship. If the work has been done by one person, acting under the instructions of another, both should be named, as under the direction of Colonel John Doe, General Staff, by Captain William Roe, 1st U. S. Infantry.

(7) Its date.

(8) Its linear scale; its contour interval; its scale of slope equivalent.

Titles should be adapted in size and boldness to the size and importance of the sheet. They should be divided into lines, following mainly the divisions of the sheet. The middle letter of each line should fall on a line drawn across the sheet.

Dense woods or woods of heavy undergrowth. Serious obstruction to movement of troops, especially in the case of a night march. Necessary to cut passage.

through the middle of the space allotted to the title. Lines should be of various lengths, not all equally long and short, and if the long lines are symmetrically disposed the effect is better.

To prepare a title, write down the matter under the various headings, proper connecting words, and divide it up into lines. Then block out the title, observing the division of lines decided upon, and make such alterations as may be desirable. Finally, letter the title on the map. The following is an example.

Division of the Philippines. | Sketch map | of a tract of land north of Zamboanga, | Island of Mindanao, | showing the proposed location of the encampment of U. S. troops. | From a reconnaissance by | Capt. A. . . . Chief Engr., Department of Mindanao, | Jan. 15, 1904. | Scale | 1 inch = 1 mile, contour interval, 20 ft.

Notes. Besides the title, such information as will help to a proper understanding of the meaning and value of the map should be given in the notes. These usually relate to methods used in the survey, datum point, etc.

Fig. 50 shows the title corresponding to the above example, with notes on the magnetic meridian. The magnetic meridian should be shown, and the true

the declination is known. The true meridian may be a line, of 3 ins. or in length, with a star at its north and the feather of an arrow at its end. The magnetic meridian may be an arrow crossing the former at the point and making with it an angle equivalent to the declination. The drawing should be inclosed in a rectangle, preferably with its sides N. and S. and E. and W. The border consists of two parallel lines, the inner one medium fine, the outer one medium heavy, with a space between them equal to the width of the outer. For geographical maps a double border is used, the space between sufficient to contain the numbers of meridians and parallels. The letters of the border should be placed on the outside. Names and figures relating to points on the map should be made to fit the space between the border lines and be placed on one side. Names and figures relating to extended features or large areas should be disposed along the feature or across the area in straight or curved lines.

Unnecessary lettering should be avoided. A plain unshaded letter is best. All varieties of effect and prominence may be obtained by the size, spacing, and inclination of such letters and the larger initials for important points. Fig. 51 shows the style of letter described, upright and inclined—called italic—with normal, condensed, and extended spacing. Fig. 51A shows the method for spacing letters and determining the length of a given line. This gives equal space to all letters, which is not strictly correct, but is simple and works well enough for present purposes. It is the method necessarily employed in typewriters and the eye is accustomed to it.

Ordinary or normal lettering the height of letters is the width of the letter in the second line below that adopted for the widths of the letters, as in Fig. 51A.

Condensed lettering take for the height the space in the third or fourth line below; and for extended letters make the height equal to the width or take the height of the first line below.

Every good effect may be obtained by the exclusive use of capitals. The letters require one-half the space of capitals in the same line. They are easy to make well as the capitals, but can be made more rapidly and look better on the face of the map. A very good general rule is to use inclined letters for all names and words on the face of the map which relate to water and straight letters for those which do not.

Enlargement and Reduction. The simplest method is by squares. Divide the original into squares of 2 ins. or less by lines drawn parallel to the borders,

Divide the paper on which the copy is to be made into squares with sides corresponding to the same distance on the scale of the copy that the side of the square on the original itself does to the scale of the original, Fig. 53. If a plot of the original be placed on the side of a square on the original and the corresponding scale of the copy on the side of a square of the copy, the readings will be the same. The square on the copy will be larger if the drawing is to be enlarged and smaller if it is to be reduced. The ratio between the sides of the squares on the original and the copy is the ratio of reduction or enlargement. This ratio must not be confused with the ratio of areas of the squares, which is different and not important.

Take a square of the original and reproduce its contents in the corresponding square of the copy; or take a feature of the original, as a road or stream, and draw it through several squares.

Usually the position of a point in a square or on one of the sides can be estimated with sufficient accuracy. Important points may be located by measurement of distances from the nearest sides of the squares, using the scale of the original and the scale of the copy respectively.

Instead of drawing the squares on the original, they may be drawn on tracing paper laid over it, or fine threads may be stretched to form the squares. The drawing board should have a scale of inches on each edge marked with fine cuts or with small tacks to facilitate the drawing of squares.

99. To Measure an Irregular Area. Lay over the area a piece of cross-section tracing paper, Fig. 54. Count the full squares inside the area and to their number add the sum of the estimated fractional ones. In the figure the fractional squares to be added are shaded. Multiply the equivalent number of full squares in the area by the area of one square to the scale of the figure. If the scale is 500 ft. to the inch = 250,000 sq. ft. to the sq. in., and the squares $\frac{1}{16}$ of an inch on one side, then the area of one square is $\frac{1}{16}$ of a sq. in., and its value to the scale of 500 ft. to 1 in. = 2,500 sq. ins. = 17.36 sq. ft. The number of squares counted, multiplied by 17.36, is the number of square feet in the area.

If the scale is distorted, the area per sq. in. of the drawing is found by multiplying the scales together. Thus, in a profile plotted to a hor. scale of 500 ft. to 1 in. and a vert. scale of 10 ft. to 1 in., the area of a sq. in. of the drawing is $500 \times 10 = 5,000$ sq. ins. On such a profile a square of $\frac{1}{16}$ in. on a side, or $\frac{1}{16}$ in. area, corresponds to 50 sq. ins.

Paragraphs 100 to 128 eliminated as they have no application to Infantry.

ADDENDA, 1907.

129. Military Reconnaissance of Cuba. In October, 1906, Gen. J. Franklin Bell, commanding the Army of Cuban Pacification, ordered a military reconnaissance of the Island of Cuba. This work, though done under conditions somewhat different from those assumed in the foregoing pages, and covering territory much larger than is likely to be reconnoitered by a marching army, is such a valuable practical exemplification of the principles upon which all military reconnaissance must be based that a succinct description of it is given.

130. The reconnaissance was organized and conducted as prescribed in Field Service Regulations through the agency of the Chief of Staff and the Chief Engineer of the Army of Cuban Pacification. The subjoined description is condensed from the instructions issued and information supplied by the Chief Engineer.

131. A military map of Cuba prepared, largely by compilation, after the close of the Spanish war, was used as a base. Its scale was 1:250,000. This map was divided into 87 rectangles of 30' of latitude 30' of longitude. These rectangles were enlarged to 1:62,500 by pantograph, and blueprints made of the enlargements. The prints were reversed, showing blue lines on white ground. Each rectangle was then divided into 35 subrectangles or sections arranged and numbered according to the following scheme:

N.

Reconnaissance.

52-54.

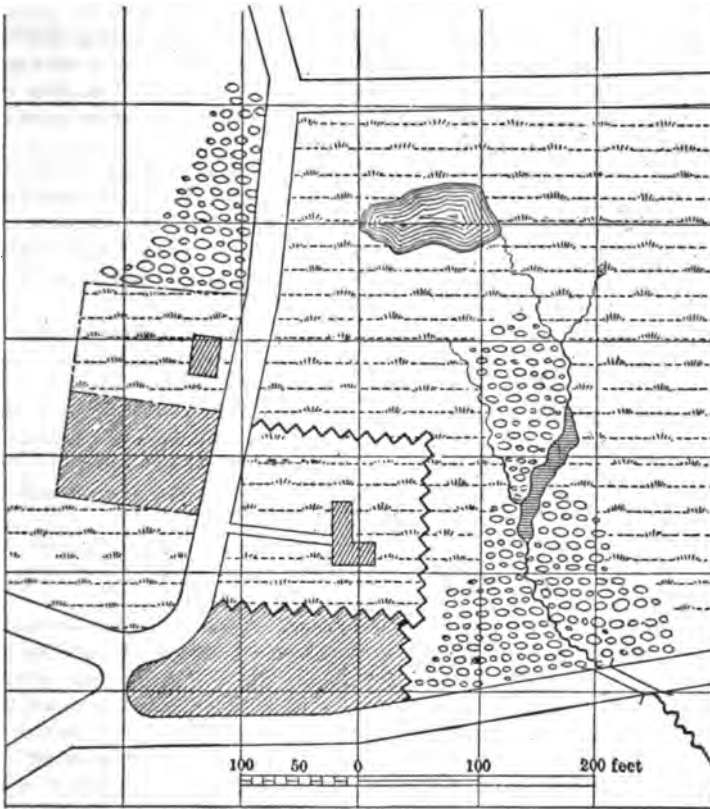

Fig. 52

Fig. 53

Fig. 54

These sections were about 5 by 7 ins., and two copies of each large section were cut up into sections and the smaller parts pasted on heavy cardboard. Each such card was numbered on the back to correspond with its place on the full sheet. When a full sheet extended beyond the land area the portion falling entirely on the water were omitted, but the number of a section corresponding to its place on the full sheet was never changed. Two sets of cards were sent to each officer charged with the area covered by them, in addition two or more uncut sheets or rectangles.

132. When several parties worked from the same station a competent reconnaissance officer was appointed to supervise the work of all, allotting to the various parties, preventing duplications, and seeing that the work was done and checked. For convenience, plotting was authorized to be done on a scale of 1 in. to 1 mile. The work was done by officers assisted by enlisted men.

The method of procedure was as follows:

Each party took into the field one or more of the cardboard sections. They actually traversed all roads, railways, public and private (plantation), important trails. Inaccuracies of the base map were corrected to show in detail all roads, buildings, bridges, large culverts, fords, telegraph and telephone lines, fortifications, and other features of military importance. Lines of communication not shown on the base map were followed and drawn in. Features shown on the map but not found on the ground were crossed off and marked "Out."

Contouring was not attempted on flat or ordinary rolling country, but on hills, forms, prominent ridges, and accessible mountains were shown by contour lines at 50-ft. intervals.

Swamps, woods, cultivated land, etc., were shown by conventional symbols. Villages and towns were shown in true plan when practicable, with the names correctly spelled. If a true plan could not be shown on the scale of the map, a sketch of the village on a larger scale was included in the notebook as descriptive matter, which was very complete. The rule, however, was to show on the map everything that could be shown there without confusion. Features which could not be so shown were entered in the notebooks which were carried in with the completed sheets.

The work of each day was transferred in ink to the large sheet in the evening. If parties were to be carried out more than one day and there was no more of the large sheet available to carry with them, each day's work was transferred with ink on the cards themselves in the evening. Care was taken in transferring continuing features, as roads and streams crossing the dividing lines of the cards, checked by comparison with adjacent cards before sending in. When this could not be done on account of the adjacent territory not yet having been covered by field parties, such features were continued far enough to the border of the card to be checked with well-defined points on the other side, a special description of the checking point being made and attached to the card when necessary.

Distances were measured by pacing, foot or mounted, and by odometer or bicycle. Directions were by compass, with sufficient attention to magnetic variation to permit the deduction of true bearings.

The large sheets were sent in to the office of the Chief Engineer as soon as completed. The card sections were sent in as opportunity offered as soon as practicable after work on them was completed and transferred.

The base map was found so defective in many parts that practically nothing on it was marked "out" and the cards were used as though nothing on them. In some cases the cards were entirely discarded to avoid accumulative errors, the following method was adopted: Reconnaissance, showing all road and stream crossings, were first made so as

loops of 20 to 60 miles in perimeter, the several loops covering the entire island. Each of these loops was made to close on itself and adjusted so as to properly connect with the adjacent loops. The crossroads, etc., were then made and adjusted to fit the crossings as already determined, the adjusted loops forming in some degree the place of a triangulation system. This method was found to give good results.

The total area covered by the survey was 40,000 square miles, and the work was completed between the middle of October and the middle of November. More than 90 per cent, however, was completed in five of these six months. A battalion of engineers completed 14,000 square miles in four and a half months. Three companies of another battalion of engineers completed 4,800 square miles in about two months. Five officers of marines with assistants from that corps completed 1,200 square miles. The remainder, 10,000 miles, was assigned to infantry and cavalry commanders at twenty different locations throughout the island.

By direction of the Chief of Staff, the conventional signs adopted in 1904 and published to the Army in pamphlet form as War Department Document No. 1, Office of Chief of Staff, are included in the revised edition of the Engineer Field Manual. These signs are shown in Figs. 79-91, inclusive. Except for the signs, which have been reengraved, the original plates, slightly modified, have been used, with some changes in spacing and disposition of matter to suit the form and size of the Manual page. The modifications alluded to, which have been approved by the Chief of Staff, are in the classification of wagon roads (Fig. 79), and of streams (Fig. 85), and in the sign for a canal (Fig. 80). Other signs are additional and explanatory.

The adaptation of conventional signs to the size and scale of the map is accomplished in part by varying the boldness of the pen or brush strokes and in part by wider spacing of them. The strokes must never be so small as to make the sign illegible and never larger than can be easily made with a medium pen. The object is to produce a result which, while distinct as to conventional signs, shall not be so heavy in general tone as to catch the eye, or, what is equally important in military maps, to obscure any additions which may be made. Topographical signs should be perfectly clear when looked for, but not intrusive.

As a rough guide, it may be stated that the signs shown in the plates are suitable for continuous areas of 3 sq. ins. or less in maps of scales of 2 or 3 inches to the mile. If the map areas are large or the scale smaller, the signs should be lightened some, but not much, by making the strokes smaller and by making them wider. Some examples of good maps show the meadow sign, for example, with 2 or 3 elements to the sq. in. For very large scale maps or field sketches the strokes may be made heavier and the spacing increased. These remarks apply only to cultural signs, and a few others of no significance of which is independent of size and shape. All natural or physical features in which size and form are in any way material should be shown with as much regard to the scale as practicable. This becomes more important as the scale is larger.

It may, therefore, happen that the same feature will be differently shown on maps of different scales. This is well illustrated in the case of streams. Fig. 85 shows three signs for streams. On a large-scale map, say 1:1,000, a rivulet a few feet wide would be shown by the third sign, or probably the second, while on a scale of 1:1,000,000 a stream 1 mile wide would be shown by the first sign. There should always be a certain correspondence between the refinement of the map drawing and the accuracy and elaborateness of the field measurements and observations on which the map is based. The general appearance

a map suggests the class of fieldwork from which it should be derived, and if this suggestion is not in accordance with fact the map is deceptive. A broad simple drawing corresponds to rough and rapid fieldwork. A finely drawn and highly finished map corresponds to a deliberate and exact survey. If rough fieldwork is represented by a highly finished work, it is given more value than it deserves, and more confidence in its details may lead to disaster. If, on the contrary, high-class fieldwork is crudely drawn, its apparent is less than its true value and time may be wasted in needless verification. The former contingency is much more serious than the latter.

96d. On civil maps explanatory matter is usually confined to notes. On military maps much use should be made of explanatory matter in the body of the map relating to single features. The design, material, and dimensions of bridges may be indicated; the height and width of channels and dimensions of locks and canals may be given; the width, depth, and character of streams may be indicated, and other data of tactical value may be set forth. This method of expression will be more freely used as the maps or sketches are of less permanency or more historical in character. For maps designed for permanent use, or for use at an indefinite future time, this method must be employed with caution, in view of the fact that most of such data is of changeable type and may become obsolete, when its presence on the map will do more harm than good.

The following abbreviations of words of frequent recurrence have been adopted by the War Department for use on all military maps and sketches. It is not required that an abbreviation shall be used when space and time permit the full word to be written, but it is required that when any of the following words is used it must be written in full or abbreviated as shown, and none of the abbreviations given may be used for any other word than the one for which it stands in the table. Words not given in the table should not be abbreviated if it can be avoided.

FIG. 92.

PART II.

BRIDGES.

The kind of bridge to be built depends upon the load, the nature of the country, and the materials available. Time is of prime importance in the construction of bridges for troops in campaign, and the proper distribution of load and material to do the work quickly must be made.

Loads. Loads are classified as dead or stationary and live or moving. Usually speaking, the former is the weight of the bridge itself and the latter is the weight of the traffic over it. Loads are usually stated in lbs. per sq. ft. for highway and per lin. ft. for military and railway bridges. Some loads of military bridges are as follows, all in lbs. per lin. ft.: Infantry, single file, 140; infantry, column of twos, 280; infantry, column of fours, 560; cavalry in single file, 320; cavalry in column of twos, 392. Infantry in heavy marching order, 200 lbs. per man; when unarmed, 160 lbs. When crowded in a mass they weigh 133 lbs. per sq. ft. of standing room.

Weights of guns and military carriages, fully loaded for traveling:

TABLE I.

| | Weight on the wheels. | | Distance between axles, c. to c. | | Width of wheel track, c. to c. |
|-------------------|-----------------------|-------------|----------------------------------|-------------|--------------------------------|
| | Front. | Hind. | | | |

| 3. L. F. gun..... | 2,510 | 6,920 | 8 | 1¼ | 5 |
| 3. L. F. gun..... | 1,950 | 1,230 | 7 | 0 | 5 |
| 3. L. F. gun..... | 754 | 1,075 | 7 | 0 | 5 |
| 3. L. F. gun..... | 2,500 | 2,500 | 5 | 9½ | 5 |
| 3. L. F. gun..... | 3,500 | 3,500 | 6 | 11½ | 5 |

Bridges for General Road Traffic. The dead load is the weight of the structure. Estimate quantities of the different materials and multiply by the unit stresses from the tables following.

The live load is assumed at 100 lbs. per sq. ft. of floor, or 5 tons concentrated on two axles 5 ft. long and 8 ft. c. to c.

Loads for a special purpose exclusively may be proportioned for the corresponding load.

Paragraph 5 eliminated, as it has no application to Infantry.

Site. Favorable conditions are narrowness of stream; stable banks of stream; hard but penetrable bottom; moderate depth and current; permanent water level, and absence of navigation.

Measurement of width will be done directly by use of tape, wire, or line, if practicable. Boats or floats may be used to support a long line. Otherwise, use of sections (see Topographical reconnaissance).

Strength of Wooden Beams. For crushing, tensile, and shearing strength, multiply the cross section in sq. ins. by the unit stresses in Table II. The result

will be the ultimate tensile strength in lbs. This divided by the adopted factor of safety gives the safe tensile load in lbs. From this the crushing and shearing strengths are derived by applying the percentages given in the table.

For transverse strength. Multiply breadth of cross section by sq. of depth; divide by $\frac{3}{4}$ of the length between supports, all in ins.; multiply by factor in column 2, Table II. The result will be the breaking load in lbs. applied uniformly, or twice the breaking load applied at center of span. The safe load is $\frac{1}{4}$ to $\frac{1}{6}$ of the above, depending upon the importance of the structure, its temporary or permanent character, and the amount of vibration probably caused by the live load. The ratio of breaking load to maximum actual load is the factor of safety. It should be 4 to 6 as above.

The breadth of a rectangular cross section is the face to which a load is applied. The depth is the face at right angles to the breadth.

A round beam has $\frac{1}{10}$ the transverse strength of a square beam with breadth and depth equal to its middle diameter.

9. Constants of strength and weight of a number of species of wood when dry; principal authority, Trautwine:

EXTRACTS FROM TABLE II.

| Species. | R. | Tensile strength. | Weight per cubic foot. |
|-----------------------------------|--------------------------------|--------------------------------|------------------------|
| | <i>Pounds per square inch.</i> | <i>Pounds per square inch.</i> | <i>Pounds.</i> |
| Ash, American white..... | 7,800 | 16,500 | 38 |
| Elm, American white..... | 7,800 | 6,000 | 36 |
| Oak, red..... | 10,200 | 10,000 | 32-45 |
| Oak, American white and live..... | 7,200 | 10,000 | 48 |
| Pine, American Georgia..... | 10,200 | 12,000 | 65 |

The crushing strength may be taken at 40 per cent of the tensile strength in the direction of the grain and 5 per cent across the grain, except oak, which is 10 per cent across the grain. The shearing strength may be taken at $\frac{2}{3}$ of the crushing strength across the grain. These ratios are approximate only, but sufficiently exact for field designing.

10. A rapidly moving load produces about double the stress of an equal quiescent load. A concentrated moving load must be considered as applied at the point where the greatest strains are produced, usually midway between the supports.

11. A beam safe against breaking may bend too much under the desired load. The maximum allowable deflection in permanent structures is $\frac{1}{300}$ of the span. In military bridges for temporary use, and especially in bridges with floating supports, a greater deflection is permissible. The factor of safety will generally give enough stiffness.

12. **Safe Loads.** The formula is,

$$S = \frac{1}{f.s.} \times \frac{bd^2}{3} \times \frac{4R}{l} \quad (A)$$

in which

S = safe load in lbs., uniformly distributed.

b = breadth

d = depth

l = length

} of beam, all in ins.

R = coefficient of resistance for the timber used, Table II, column 2.

f. s. = factor of safety.

Examples. Determine the safe uniform load on a horizontal beam of pine 3 ins. thick, 12 ins. deep, and 20 ft. clear span, factor of safety 5. Formula (A), uniformly distributed safe load S equals $3 \times 12 \times 12 \div 240$, multiplied by $\frac{1}{5}$ of 7,750 divided by 5, equals 3,720 lbs. Safe center load = 3,720 lbs.

Various sizes of materials are available, the inverse problem may be used to determine the size which will give requisite strength with least weight. The ratio of breadth to depth must be assumed.

Example: Determine the size of beam to carry a safe load of 3,750 lbs., uniformly distributed over a clear span of 20 ft.; factor of safety, 5; breadth, $\frac{1}{4}$ of depth, material, yellow pine, seasoned.

Formula (A),

$$3,750 = \frac{\frac{1}{4}d \times d^3}{240} \times 10,333 \div 5$$

$$d^3 = 1,728; \quad d = 12; \quad b = \frac{1}{4}d = 3.$$

Beam should be 3 by 12 ins.

Paragraphs 14 and 15 eliminated, as they have no application to Infantry.

Working load in lbs. of pillars of half-seasoned white or common yellow pine, fixed and equally loaded; based on formula of C. Shaler Smith, C. E., factor of safety 5:

TABLE IV.

Side of square pillar in inches.

When a wooden beam is to bear compression in the direction of the fibers, no matter whether vertical, horizontal, or inclined, its safe load is that given in this

The factor of safety of timber against crushing should be 6 to 8 for important structures, and 4 to 6 for temporary ones.

17. A horizontal beam should have a part of its length equal to its width firmly bearing on the support at each end, and more if possible. A pillar can not have a greater bearing surface than its end section. Crushing effect may be reduced by interposing a hard-wood plank or sheet of iron between the end of the beam and its support.

Paragraphs 18 to 44 eliminated, as they have no application to Infantry.

KNOTS.

45. The following knots are most useful in bridging:

Overhand knot, Fig. 38a, used at the end of a rope to prevent unreeving or to prevent the end of the rope from slipping through a block.

Figure-of-eight knot, Fig. 38b, used for purposes similar to above.

Square or reef knot, Fig. 38, commonly used for joining two ropes of the same size. The standing and running parts of each rope must pass through the loop of the other in the same direction, i.e., from above downward or vice versa; otherwise a granny, Fig. 39, is made, which is a useless knot that will not hold. The reef knot can be upset by taking one end of the rope and its standing part and pulling them in opposite directions. With dry rope a reef knot is as strong as the rope; with wet rope it slips before the rope breaks, while a double sheet bend is found to hold.

The thief knot, Fig. 40, commonly mistaken for a reef knot, should be avoided, as it will not hold. The figure shows that the end of each rope turns around the standing part instead of around the end of the other, as in a reef knot.

Single sheet bend, weaver's knot, Fig. 41, used for joining ropes together, especially when unequal in size. It is more secure than the reef knot but more difficult to untie.

Double sheet bend, Fig. 42, used also for fastening ropes of unequal sizes, especially wet ones, and is more secure than the single sheet bend.

Two half hitches, Fig. 43, especially useful for belaying or making fast the end of a rope round its own standing part. The end may be lashed down or seized to the standing part with a piece of spun yarn; this adds to its security and prevents slipping.

This knot should never be used for hoisting a spar.

Round turn and two half hitches, Fig. 44, like the preceding except that a turn is first taken round the spar or post.

Fisherman's bend or anchor knot, Fig. 45, used for fastening a rope to a ring or anchor. Take two turns round the iron, then a half hitch round the standing part and between the rings and the turns, lastly a half hitch round the standing part.

Clove hitch, Fig. 46, generally used for fastening a rope at right angles to a spar or at the commencement of a lashing. If the end of the spar is free, the hitch is made by first forming two loops, as in Fig. 47, placing the right-hand loop over the other one and slipping the double loop (Fig. 48) over the end of the spar. If this can not be done, pass the end of the rope round the spar, bring it up to the right of the standing part, cross over the latter, make another turn round the spar, and bring up the end between the spar, the last turn, and the standing part, Fig. 49. When used for securing guys to sheer legs, etc., the knot should be made with a long end, which is formed into two half hitches round the standing part and secured to it with spun yarn.

Timber hitch, Fig. 50, used for hauling and lifting spars. It can easily be

Fig. 76.

Fig. 76a.

loosed when the strain is taken off, but will not slip under a pull. for hauling spars, a half hitch is added near the end of the spar, Fig. 51.

Telegraph hitch, Fig. 52, used for hoisting or hauling a spar.

Hawser bend, Fig. 53, used for joining two large cables. Each end is made to its own standing part.

Bowline, Fig. 54, forms a loop that will not slip. Make loop with the end of the rope underneath, pass the end from below through the loop, then the part round the standing part of the rope, and then down through the loop. The length of bight depends upon the purpose for which the knot is used.

Bowline on a bight, Fig. 55. The first part is made like the above, but the end is doubled part of a rope; then the bight is pulled through sufficiently to be bent past it and come up in the position shown. It makes a comfortable sling for a man than a single bight.

Running bowline, Fig. 56.

To sling a barrel or box horizontally, Fig. 57, make a bowline with the end of the rope, bight and apply it as shown.

To sling a barrel vertically, Fig. 58, make an overhand knot on top of the rope; open out the knot and slip each half of it down the side of the cask; secure with a bowline.

Cat's-paw, Figs. 59 and 60. Form two equal bights, as in Fig. 59; take each hand and roll them along the standing part till surrounded by the standing part; then bring both loops (or bights) together and secure with the hook of a block, as in Fig. 60, where the hook is shown moused.

Sheep shank, Fig. 61, used for shortening a rope or to pass by a wall. A half hitch is taken with the standing parts around the bights.

Rolling hitch, Fig. 62, used for hauling a larger rope or cable. The ends are taken round the large rope in the direction in which it is to be hauled, one half hitch on the other side of the hauling part. A useful knot for making a rope.

For armored cable, or wet manila rope, the hitch must be made with the end of rope yarn, Fig. 86. Rope will not hold.

Blackwall hitch, Fig. 63, used for attaching a single rope to a hook for hoisting.

Mooring knot, Fig. 64. Take two turns round the mooring or snub, pass the free end of the rope under the standing part; take a third turn round the other and pass the free end between the two upper turns.

Carrick bend, Fig. 65, much used for hawsers and to fasten guys to a post. Wall knot, Figs. 66 and 67, and

Crown on wall, Figs. 68 and 69; both used for finishing off the end of a rope to prevent unstranding.

To make a short splice, Figs. 70, 71, and 72, unlay the strands of the rope for a convenient length. Bring the rope ends together so that the end of one rope lies between the two consecutive strands of the other rope. Lay the strands of the first rope along the second and grasp with one hand. Then work a free strand of the second rope over the nearest strand of the first rope and under the second strand, working in a direction opposite to the first rope. The same operation applied to all the strands will give the rope the appearance of Fig. 71. The splicing may be continued in the same manner to the end of the rope (Fig. 72) and the free ends of the strands may be cut off when done. The splice may be neatly tapered by cutting out a few fibers from each end of the strands the time it is passed through the rope. Rolling under a board or the foot of a plank will make the splice compact.

Long Splice (Figs. 73, 74). Unlay the strands of each rope for a convenient length and bring together as for a short splice. Unlay to any desired length.

d, of one rope, laying in its place the nearest strand, a, of the other. Repeat the operation in the opposite direction with two other strands,

Fig. 74 shows strands c and f secured by tying together. Strands b are shown secured by unlaying half of each for a suitable length and half of the other in place of the unlayed portions, the loose ends being run through the rope. This splice is used when the rope is to run through

The diameter of the rope is not enlarged at the splice. The ends of strands should not be trimmed off close until the splice has been thoroughly finished by work.

Splice (Figs. 75, 75a, 76, 76a). Unlay a convenient length of rope. Pass the first strand, a, under one strand of the rope, as shown in Fig. 75, forming a loop of the proper size. Pass a second loose strand, b, under the strand of the rope next to the strand which secures a, Fig. 75a. Pass the third strand, c, under the strand next to that which secures b, Fig. 76. Draw all taut and complete as for a short splice.

LASHINGS.

To Lash a Transom to an Upright Spar, Fig. 77, Transom in Front of Upright. A clove hitch is made round the upright a few inches below the transom. The lashing is brought under the transom, up in front of it, horizontally to the upright, down in front of the transom, and back behind the upright to the level of the bottom of the transom and above the clove hitch. The following turns are kept outside the previous ones on one spar and inside on the other, not riding over the turns already made. Four turns or more are required. The ends of frapping turns are then taken between the spars, around the lashing, and the lashing is finished off either round one of the spars or any part of the rope through which the rope can be passed. The final clove hitch should be made around the spar on the side toward which the stress is to come, so that it may jam and be difficult to remove. The lashing must be well beaten with a mallet or pick handle to tighten it up. This is called a square lashing.

Lashing for a Pair of Shears, Fig. 78. The two spars for the shears are lashed on the outside of each other with their butts on the ground, the points below the lashing is to be resting on a skid. A clove hitch is made round one of the spars and the lashing taken loosely eight or nine times about the two spars above the skid, not riding. A couple of frapping turns are then taken between the spars and the lashing is finished off with a clove hitch above the turns on one of the spars. The butts of the spars are then opened out and a sling passed over the top of the block which the block is hooked or lashed, and fore and back guys are made to the bottom and top spars, respectively, just above the lashing, Fig. 79.

To Lash Three Spars Together as for a Gin or Tripod. Mark on each spar the distance from the butt to the center of the lashing. Lay two of the spars parallel to each other with an interval a little greater than the diameter. Lay the third spar between them with its butt in the same direction so that the marks on the three spars will be in line. Make a clove hitch on one of the outer spars below the lashing and take eight or nine turns around the three, as shown in Fig. 80. Take a couple of frapping turns between each pair of spars in succession and finish with a clove hitch on the third spar above the lashing. Pass a sling over the lashing and the tripod is ready for raising.

Oldfasts. To prepare a fastening in the ground for the attachment of cables or purchases, stout pickets are driven into the ground one behind the other in the line of pull. The head of each picket except the last is secured by

**Fig. 79****Fig. 77****Fig. 78****Fig. 80**

Fig. 81

Fig. 82

Fig. 83

Fig. 84

a lashing to the foot of the picket next behind, Fig. 81. The lashing is made by rack sticks, the points of which are driven into the ground in position. The distance between the stakes should be seven feet, or the height of the stake above the ground.

Another form requiring more labor but having much greater strength is a "deadman," and consists of a log laid in a transverse trench, the trench intersecting it at its middle point. The cable is passed down the trench, takes several round turns on the log, and is fastened to it by marlin stopping, Figs. 82, 83, and 84. If the cable is to lead inclined downward, it should pass over a log at the outlet of the trench, Fig. 83. If the cable is to lead upward, this log is not necessary, but the log must be buried deeper.

BLOCKS AND TACKLES.

50. The parts of a block are the shell or frame, the sheave or wheel, which the rope runs, and the pin upon which the wheel turns in the shell. A strap of iron or rope passes around the shell and forms attachment at one end and an eye at the other; see Figs. 85, 86, 87, and 88.

Blocks are also made entirely of metal, in which the strap is replaced by a ring, Fig. 89.

Blocks are designated by the length of the shell in inches and by the number of their sheaves. Those with one, two, three, and four sheaves are called single, double, triple, and quadruple. The largest rope a wooden block will hold is a circumference equal to one-third the length of the shell. Metal blocks may be obtained and are to be preferred.

A snatch block is a single block with the shell and strap open so as to admit a rope without passing the end through, Fig. 90.

A running block is attached to the object to be moved; a snub block is fixed to some permanent support, Figs. 94, 95, and 96. A simple tackle consists of one or more blocks rove with a single rope or fall. The end of the rope in the tackle is called the standing end; the other is the running end. The fall is the part of the rope between the two blocks, or between either end and the snub block, or a return.

To overhaul is to separate the blocks; to round in, to bring them together. When the blocks are in contact the fall is said to be choked.

A whip is a single fixed block and fall; it gives no increase of power, but on a whip, Fig. 98, doubles its power.

A luff tackle consists of a single and double block, either fixed or running, Fig. 94.

A gun tackle consists of a double and a single block, the standing end of the rope being attached to the fixed block, Fig. 95.

GENERAL NOTES ON BRIDGE DESIGN.

51. When frequent supports can be obtained, the floor system consists of longitudinal beams and cross planking, or their equivalents, called stringers and sleepers. This method of construction should be adopted whenever long spans are necessary, the floor system must be sustained by trusses, arches, or cables resting on the supports and forming a continuous arch, or suspension bridges.

52. A roadway 9 ft. wide in the clear should be provided to pass four abreast, cavalry two abreast, and military wagons in one direction; this will suffice for infantry in column of twos, cavalry in single file, or for the passage of a single file, passed over by hand.

The clear width of roadway of an ordinary highway bridge less than 12 ft. for single track, or 20 ft. for double track.

The clear head room in ordinary military bridges should not be less than 14 ft. for wagons and cavalry; for highway bridges not less than 14 ft.

Ramps at the ends of a bridge, if intended for artillery, should be not less than 1 on 7. For animals, slopes steeper than 1 on 10 are incon-

If the bridges are high, hand rails should be provided. A screen will suffice, or it may have brush placed upon it to form a screen.

A guard rail should be provided along each side of the roadway at the ends of the flooring planks. In hasty bridges it may be secured by lashings through the planking to the stringer underneath. Other fastenings may be fastened with spikes or bolts.

53. Examples of improvised short-span military bridges:

Trussed Ladder Bridge. A ladder may be used as a bridge by using its edge, thus forming a kind of trussed beam. A portable bridge was used in China in 1860 for crossing canals. Two beams 24 ft. long were formed out of four scaling ladders, each 12 ft. long, by lashing the ends to end, with planks 3 ft. long covering the junctions. The planks were laid across the canal, set on edge in grooves cut into the beams. The 12 ft. long were laid across from beam to beam to form the roadway.

This bridge, 24 ft. long, was laid and crossed in a quarter of an hour. Its total weight was 750 lbs., or 31 lbs. per ft. It was crossed by a company of infantry, two abreast, files well closed and in step.

The ladder beam may be greatly strengthened by trussing with ropes, as shown in Fig. 100.

In shallow streams intermediate supports may be quickly obtained by driving wagons into the water.

54. Spar Bridges. This name is applied to bridges built of spars lashed together. Intermediate points of support are provided by using the spars acting as struts to transmit weight from the middle of the bridge to the footings. The single-lock and double-lock bridges with two and three spans respectively, are the ones of most utility.

The first step in constructing a spar bridge is to measure the width of the gap to be bridged and select the position of the footings on either bank. The distance from each footing to the middle point of the roadway is marked on the spars, or the two corresponding points of a double-lock bridge. Next the spars are marked on each spar except the diagonals the places where other spars will be lashed. The marking may be done with chalk, or with an ax. If possible, a standard notation should be adopted. As, for example, in marking with an ax, the mark around the spar where the edge of the crossing spar will come, and the mark across the part which will be hidden by the crossing spar.

A simple way to determine the length of spars is the following: Lay out small lines somewhat longer than the width of the gap, double them and bring the bights together. Stretch them tightly across the gap so that they come at the middle, as at A, Fig. 109. Release one end of each line and bring it to the footing on the same side as indicated by the dotted line. The line from the footing C or C', and at the position chosen for the other footing B or B'. Cut the lashing and take each piece of rope to its own place. The distances AB and AB' are the lengths between the transoms, and will give the length of road bearers required. The distances AC and AC' are the lengths of struts from butt to top of transom, and with 3 ft. added will give the length of spars required.

For double-lock bridge, a piece of rope of a length equal to the width of the middle bay replaces the lashing. If the banks are not parallel, the lashing should be taken on each side of the middle bay.

Fig. 110

Fig. 109

red, a section of the gap may be laid down on the ground in full size lengths of spars determined by laying them in place. This method, given as standard by all authorities, requires more time and more hand-material than the other and gives no better results.

Construction of a frame is shown in Fig. 101, and the system of marking 102. The arrangement of frames to form a single-lock bridge is shown 104 and 105, and a double-lock bridge in Fig. 107.

Construction of Single-lock Bridges, Figs. 104, 105, and 106. Suitable for 30 ft. or less. The two frames lock together at the center of the span; they must not be more than 4 on 7. The bridge can be erected by two or uncommissioned officers and 20 men, one-half on each side of the gap. Spars require more men.

Footings at A and B must be firm, horizontal if possible, and at right angles to the axis of the bridge. In a masonry pier they may be cut out. In yielding soil a plank or sill must be laid under the footing. The frames are made of such length as to give a slight camber to the bridge, which may be increased to allow for probable settlement of the footings.

The inside dimension of one frame is made slightly greater than the outside dimension of the other, so that one frame may fall inside of the other when pulled into position. For a 9 ft. roadway the standards of the narrow frame should be 9 ft. 6 ins. apart at the transom and 10 ft. 6 ins. at the foot, the clear, and the other (outside) frame 1 ft. 6 ins. wider throughout. The frame is constructed on each bank. The standards are laid on the ground at the foot of the bridge, butts toward the bank. The ledgers are lashed on to the transoms beneath the standards at the positions marked. The cross-braces are lashed to the standards, two butts and one tip above the transom and two to each other. Before the braces are lashed, the frame must be pulled into position by checking the measurements of the diagonals.

When necessary, pickets for the foot and guy ropes are driven, the former about 10 paces from the bank and 4 paces on each side of the axis of the bridge; the latter about 20 paces from the bank and 10 paces on each side of the axis. The foot ropes, CC, Fig. 106, are secured by timber hitches to the butts of the standards, and the back and fore guys, DD and EE, to the tips; the fore guys are lashed across to the opposite bank. The guys of the narrow frame should be lashed to the guys and standards of the wide frame.

The frames are put into position one after the other, or simultaneously if there are enough men. A man is told off to each foot rope and one to each back guy rope. As required, two turns being taken with each of these ropes around the standards by effective pickets. The other men raise the frame and launch it forward, by pulling on the fore guys, until the frame is balanced on the edge of the footings.

The frame is then tilted until the butts rest on the footing, by slackening the foot ropes and hauling on the fore guys, Fig. 106. After the head of the frame has been hauled over beyond the perpendicular, it is lowered nearly to its final position by slacking off the back guys. When the two frames are in position opposite each other, the narrow frame is further lowered until its butts rest upon the transom of the other. The wider (outer) frame is lowered until the two lock into each other, the standards of each resting on the transom of the other.

The fork transom, Figs. 104 and 105, is then passed from shore and placed between the two frames. This forms the central support of the bridge and a floor system of two bays, built as already described.

The estimated time for construction of such a bridge is about one hour if material is available and in position on both sides of the stream. The construction of the roadway requires about twenty minutes; forming footings in the stream about one hour.

56. Construction of Double-lock Bridge, Fig. 107. Suitable for exceeding 45 ft., and consisting of two inclined frames which locking horizontal frame of two or more distance pieces, with cross bracing the gap to be bridged into three equal bays of about 15 ft. each. Required is two or three noncommissioned officers and 25 to 50 men for construction, except roadway, about two and one-half hours; 15 minutes allowed for difficult footings.

The width of gap is measured, the position of footings determined, and the length of standards from butt to transom determined and marked.

The inclined frames in this case are built of equal widths, lashed and held by guys just above their final position. Two stringers are run from each bank to the main transom. The distance pieces, Fig. 107, are placed inside the standards, using tackle if necessary, and the standards are placed and lashed to the distance pieces at the places marked. They are now lowered until they jam.

57. Round timber required for spar bridges:

TABLE XX.

| Kind of bridge. | Spars. | Length. | Diameter. | |
|----------------------------|--------|---------|-----------|----------------------|
| | | | At tip. | Through-out or mean. |
| | No. | Feet. | Inches. | Inches. |
| Single lock, 30 foot span. | 4 | 22 | 7 | 6 |
| | 2 | 15 | | 6 |
| | 4 | 15 | | 4 to 6 |

| | 1 | 15 | | 10 |
| | 10 | 20 | | 6 |
| | 4 | 20 | | 3 to 6 |
| | 4 | 20 | 7 | 6 |
| | 2 | 15 | | 6 |
| | 4 | 15 | | 4 to 6 |
| Double lock, 45 foot span. | 2 | 25 | | 8 |
| | 2 | 15 | | 10 |
| | 4 | 20 | | 3 |
| | 15 | 20 | | 6 |
| | 4 | 20 | | 4 to 6 |

58. Rope required for spar bridges:

TABLE XXI.

| Description and size of ropes. | Single lock. | | | |
|---|--------------|---------------|-----------------|--------|
| | Ropes. | Total length. | Maximum weight. | Ropes. |
| | No. | Feet. | Pounds. | No. |
| Foot ropes, 3 in. circ., 40 to 60 ft., | 4 | 240 | 71 | 4 |
| Guys, 3 in. circ., 120 to 150 ft. | 8 | 1,200 | 356 | 8 |
| 2 in. circ., 108 ft. | 2 | 216 | 29 | 2 |
| 1½ in. circ., 54 ft., for transom lashings | 4 | 216 | 29 | 8 |
| 1½ in. circ., 36 ft., for ledger and brace lashings | 10 | 360 | 27 | 14 |
| 1 in. circ., 21 ft., for road bearers | 10 | 210 | 7 | 10 |
| Spun yarn. | | | 7 | |
| Aggregate length and weight of rope required | | 2,442 | 526 | |

aneous materials: 2 pieces chalk; 8 pickets, 5 ft. long; 4 pickets, 3 ft. long; 12 pickets; plank for chess ($1\frac{1}{2}$ by 12 ins. by 10 ft.) (according to span); 2 pieces of bamboo sticks and lashings (at 4 ft. intervals) (according to span); 2 pieces of bamboo, 150 ft. each.

Highway of Spar Bridge. For infantry in fours crowded the transoms have a diam. of not less than 9 ins. for a span of 15 ft. Five stringers 2 ft. apart, 6 ins. diam. at the tip will suffice. If the sticks vary in size, the smaller ones should be notched down on the transom so as to bring the tops in the same plane. The stringers should be long enough to overlap the transoms, and should be lashed together at each tip. The floor is held down by side rails outside stringers and lashed to them. If lumber can not be obtained, the floor may be made of small spars, the interstices filled with brush, and the floor covered with loam or clay; Figs. 108 and 110.

Trestle Bridges. Applicable to shallow rivers with firm bottoms and not subject to sudden change in water level. Improvised structures are seldom necessary. On a rocky bottom they are difficult to fit; on a muddy bottom they sink, and on a sandy bottom they undermine. Portable trestles require but little labor and can easily be transported. The parts are fitted together and lashed to facilitate assembling. A trestle bridge is not limited as to length. The spans are of convenient length, usually 12 to 15 ft., depending upon the material and the available material.

Soundings across the stream along both sides of the bridge are required where the bottom is irregular, to determine the length of legs and the height of the cap of each trestle above the bottom.

Trestles of spars and lashings are applicable to rocky ravines, or when circumstances make it difficult to drive piles. They may be two, three, or four

legged. The two-legged form is similar to a frame for a single-lock bridge (par. 55), the difference being that the trestle standards have a greater slope. Four standards would make the trestle in forty-five minutes. If the timber be weak, both standards and transom may be doubled, as in Fig. 103. Light material may be used for diagonal braces, as little strain is brought upon them. Two-legged trestles are maintained in upright positions by lashing the stringers to the transoms by longitudinal bracing of adjacent trestles. The trestles next the bank must be rigidly braced by spars lashed to the standards and to stout piles driven in the bank. This end bracing is very important.

Three-legged trestles, Fig. 111, have the advantage of utilizing light material. They will stand without bracing and admit of more ready adjustment than the two-legged forms.

To make a tripod, the lashing of the tips may be done as described in par. 48. The tripod is shown in Fig. 112, the latter method permitting a transom to be placed in the center. In the latter method the tips of the two legs are lashed together with bamboo lashing, par. 47, and the third leg or tripod is then added. The tripod is raised, the feet placed on the angles of an equilateral triangle with sides equal to half the height of the tripod, and secured by lashing three light ledgers, as shown in the figure.

Three-legged trestles of bamboo fitted with three transoms lashed at different heights for varying depths of water were used near Manila for a portable bridge. The floor was made of bamboo frames covered with bamboo mats. The bridge for each bay was carried entire and was designed to be hung by ropes to the transoms. The entire bridge could be carried by 120 men, but was too heavy for them.

A four-legged trestle made of spars and lashings is shown in Fig. 113. It consists of two frames similar to two-legged trestles, locked together at the

transoms and connected by short ledgers at the feet. The breadth of on which the trestle stands should not be less than one-half the height. Fig. 114 shows a four-legged trestle for same use as that shown in Fig. 113. Fig. 115 presents slightly different arrangements of the parts and of the lashing. Two-legged trestles are not convenient for use on uneven bottom.

If trestles are placed in considerable depth of water it may be necessary to use ballast them temporarily until the weight of the roadway can be put on the bottom. If of rock or sacks of gravel may be used for ballast, or any articles of timber in compact form and of considerable weight may be lashed to the trestles when it is set, and removed to the next when no longer needed.

In setting trestles of all forms on dry foundations they may be made of uniform length as prescribed in the text, set up in place, and fitted to the ground by lashing suitable extension pieces to the feet.

62. Spars and lashings for trestles:

TABLE XXII.

| Kind of trestle. | Number of spars or lashings. | Length. | Diameter of spars or circumference of rope. | |
|-------------------|------------------------------|--------------|---|---|
| | | <i>Feet.</i> | <i>Inches.</i> | |
| Two-legged..... | 2 | | 4½ to 6 | L |

| | 4 | | 3 to 3½ | D |
| | 4 | | 2½ to 3 | L |
| | 12 | 30 | 1½ | L |
| | 6 | 15 | 1½ | L |

63. Erecting Trestle Bridges. Trestles may be placed in position in dry situations, and also in shallow streams of moderate current if the weather will permit men to work in the water. This method facilitates construction, as several trestles can be placed simultaneously. Another method is slower of execution, since but one trestle can be placed at a time. If the bridge be built from one end, or two if work is prosecuted from both ends. One of these methods is shown in Fig. 115. Inclined timber is pushed out from the end of the bridge, their lower ends resting on the bottom at the point where the next trestle is to stand. Slide the trestle down these until it strikes the bottom. Lash stringers to the cap and push the bent into position. Lay the remaining stringers and complete the roadway over the bay, and place another trestle as before.

Another method is shown in Fig. 121, involving the use of beams, and rope. The beams used must be about twice the length of the bay.

Fig. 122 illustrates a method of placing trestles when a boat or raft is

trestles are usually erected by the use of a balance beam, Fig. 131, forward as the floor advances, and projecting beyond the last bent com-

Framed Trestles. The trestle is also one of the most useful methods of dimension timbers for bridge supports. In framed trestle bents, Figs. 117, the posts rest on a sill placed on the ground or supported by footings of some kind. The names of the principal parts of a trestle bent are indicated in Fig. 117. In varying the height of the trestle the cap remains of the same length and the batter posts have the same inclination. The length of the trestle varies, as indicated in dotted lines, Fig. 116.

The simplest framed trestle is the sawhorse. The relative dimensions and arrangement of its parts are as shown in Figs. 118, 119, 120. The figures and proportions given are to be regarded as typical only, with the widest latitude of variation to materials available.

Figs. 123 and 124 illustrate a trestle bridge designed to carry the loaded wagon with a factor of safety of 3. If the height of the trestle is not greater than its width, the bracing shown in Fig. 125 may be used. It has the advantage of giving a middle support to the transom. Figs. 126 and 127 show a trestle bridge thrown across Conemaugh River at Johnstown, Pa., by a committee of engineers, June, 1889. The piers are stiffened laterally by plank-uprights on both sides for some distance above the bottom, and are self-anchoring by filling the 6-inch space between the planks with scrap iron or other heavy material.

Trestles of considerable height may be made in two or more tiers, the cap of the lower tier forming the sill of the one next above and resting upon it, or the posts may be continuous, Figs. 128, 129, 130.

In trestle sills are supported on footings or piles, the points of support are under the posts.

Pile bents are similar in construction to trestle bents. The sill is omitted, and the posts are driven into the ground, and usually are all vertical. Pile bents are preferred on soft ground and in rapid streams. Piles should be from 8 to 12 in. in diameter at the butt for highway traffic, and must be approximately square at the top, or they can not be driven. Dimension timbers, the nearer square the better, make excellent piles.

Various arrangements of piling for railroad work are shown in Figs. 132 to 136.

For bents more than 10 ft. high, the outside piles may be driven with a batter. Bents 10 to 20 ft. in height have one set of sway braces. Crossed diagonals of 4 in. plank, one on each side of the bent, suffice, Fig. 140. Heights of more than 20 ft. should have additional sets of crossed diagonals, with horizontal bracing between them, Fig. 142.

In streams subject to floods, longitudinal bracing also is required. It may be in one or more tiers, as described for sway bracing, or as is shown in Figs. 137, 138, 139.

A bent for water 10 ft. deep is shown in Fig. 137. Figs. 138 and 139 show bents built across the Portuges River, Porto Rico, and designed to allow boats to pass over it without other injury than carrying away the hand rail. The bents are lightly constructed with that end in view. Figs. 140 and 141 show a pile bridge of which several were built in the Philippines.

Pile-driving. Piles may be driven with a hammer in mud or any loose material except sand. In still water or moderate currents, and to the penetration of the pile sufficient for light work, piles may be driven with sledges or mauls. The best done from a platform attached to the pile and going down with it, as shown in Fig. 143. The weights of drivers balance, and after the pile is well

Fig. 132

place the shore ends of the spars may be held shoulder high and lowered as the pile goes down, so as to keep the platform horizontal for the hard driving. Heavier blows can be struck by the device shown in Fig. 143a. For four men the hammer may weigh 250 to 300 lbs.

For sand, a force pump and water jet are required, and these will often facilitate driving in other soils. For driving with the jet, a length of hose and a piece of wrought-iron pipe, long enough to reach from the point of the pile to a point above the water level when driven, are required. After the pile is hoisted into position, attach the pipe to one side, its lower end opposite the point, which should not be sharpened, using two or three wrought-iron spikes driven a short distance into the wood and bent over the pipe. Place the pile in position, lower the hammer onto the head, couple the hose to the pipe and start the pump. If the pile does not settle under the weight of the hammer, tap it lightly. Heavy blows are to be avoided, as they will dislodge the pipe.

In the Philippine streams piles are often placed by setting them up in position and working the tops back and forth by guy lines or twisting them by hand. On a tributary of Camilleis River between Bayambang and Camilleis, piles were sunk in the river to 10 or 12 ft. penetration. The peculiar softness of bottom and the great weight of native woods contribute to the success of this method.

When the piles of a bridge are to be driven by hand, the following method, which utilizes the floor of the bridge as a working platform, has been found to be admirably. It was devised by Captain Rees, instructor of engineering in the General Service and Staff College, Fort Leavenworth, Kans., and used by him in the instruction of his classes.

The first bent is driven at the water's edge, and connected with the shore by a roadway. A derrick frame is prepared as shown in Fig. 142A. The standards are forked to embrace the trestle cap. The floor frame is held by lashing two stringers to a trestle cap and placing a diagonal. This is laid on the floor of the last bay with the free ends of the stringers resting on the last cap and lashed to it, the lashings passing up on the rear side and down on the front side of the caps, Fig. 142a (first stage). The new cap and diagonal are on top of the stringers in this position. The frame is raised by hand and later by the fore guys and rotates about the cap to which the standards are lashed. As the frame passes the vertical, it is held by the back guys and lowered to a slightly inclined position (second stage). The derrick is then placed with its claws embracing the cap outside of the stringers, raised by hand, and the back guys made fast at the tops of its posts (second stage).

The two frames are then revolved about the cap by slacking the back guys until the floor frame is nearly horizontal (third stage). It then forms a working platform for driving the piles of the next bent. By lashing the cap to the standards and slacking the guys (fourth stage), the weight of the platform and standards may be thrown onto the piles to assist in sinking them.

Designs for Pile Drivers. If two service pontoons with balk and chess are used, a floating hand pile driver, shown in Figs. 144, 145, and 146, may be employed. The construction is obvious from the drawings. The hammer is a heavy wood 16 in. in diam. and 4 or 5 ft. long, flattened on opposite sides and loosely between the leads. Pairs of pins are inserted near the top and bottom of the block on both sides, to serve as guides.

Another form of field pile driver is shown in Figs. 147 and 148. It can be constructed from balk, chess, and 2-in. plank by six men in about six hours. It is rolled forward on the bridge as built.

The form of driver shown in Figs. 150, 151, and 152 also rolls forward on the bridge projecting beyond the last one driven far enough to drive the one ahead.

Fig. 143

Fig. 144

Fig. 143A

Fig. 145

Fig. 146

Improvised Hand-Power Pile-Driver.

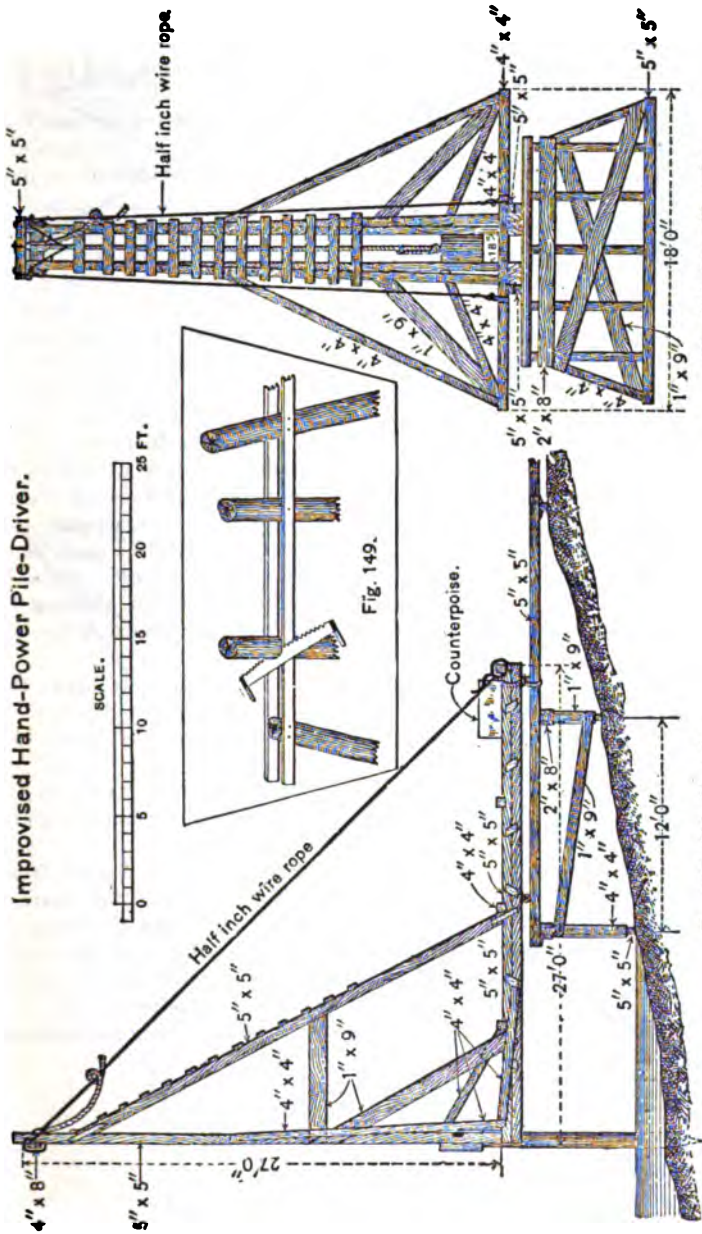

Fig. 148. Rear Elevation.

For two or four pile bents the double leads, shown in this construction, have the advantage, as they reduce the lateral shifting, besides doubling the resistance to the pile.

The tops of the piles must be cut accurately to the plane of the cap to give firm bearings. If cut by hand, nail a straight strip on each side of the pile with its upper edge in the desired plane, and run the saw on top of these strips, Fig. 149.

In the field pile driver shown in Figs. 150 and 151, a swinging saw is indicated. When in use it is hung from a pivot attached to the hammer. Starting the cut, the sag of the saw must be lifted until its middle is over its ends and held so until engaged in the cut.

69. Operating Field Driver. (Figs. 150, 151, and 152.) A bent just before overhaul the shifting tackles and attach them by straps to the last cap blocks to the caps on the outside of the sills of the machine to serve as a slush or soap the runners, and haul away on the shifting tackles to a machine the proper distance. Lash the heel of the machine to the cap. As soon as the leads clear the last cap, the hammers may be lowered in water to take off their weight. When made fast in the new position, lower the hammers to the top of leads; hook onto piles with the hoisting tackles and pull them in place; pass lashings to hold them and lower the hammers to their tops. Hoist and drop the hammers until the piles are driven to the required penetration or resistance. Hoist the hammers, hang the saw and adjust to proper height. While sawing off, hook onto a cap with the shifting tackles, sling it horizontally into position, and onto the piles as soon as the cap has bored through the cap into piles and drive driftbolts or treenails. Secure the longitudinal braces that stay this bent against the pull of the shifting tackles and advance to the next bent. Other bracing may be placed after the driver has passed.

Above applies to bents with two piles. For driving four-pile bents the machine is shifted laterally on cross skids with tackle or with handspikes. If mules are available they may replace the men on the hammer line to the advantage.

70. The supporting power of piles is not of paramount importance in bridges of hasty or temporary character, since a slight settlement is of no especial consequence.

It may be said in general that the bearing power of piles will vary from 70 tons according to the size of the stick, its penetration, and the character of the soil into which it is driven. A frictional resistance per sq. ft. of the pile in contact with the soil may have working limits of 200 lbs. The smaller should not be exceeded in alluvial and soft soil nor the larger in firmer material such as stiff clay, sand and gravel, or mixed material.

If it is necessary to insure against settlement, the following formula, known as the "Engineering News Formula," may be used:

$$L = \frac{2wh}{S_1 + 1}$$

in which

L = safe load in lbs.

w = weight of hammer in lbs.

h = fall of hammer in ft. (average of last few blows).

S = penetration per blow in ins. (average of last few blows).

This formula includes a factor of safety of 6, or is based on the assumption that $\frac{12wh}{S+1}$ = the ultimate supporting capacity of the pile.

No pile formula yet proposed is absolutely reliable. The above is the latest and simplest, and probably among the best.

CRIB CONSTRUCTION.

71. In dry situations the cribs are built on the site and no fastenings are required. The ground is prepared to receive the bottom timbers, level and bearing firmly toward the ends and but lightly in the middle. The sticks of the next course are laid across their ends, noting that they rest fair and do not rock. If logs are used, the ends are flattened sufficiently to give bearing surfaces. With dimension timbers each piece which does not lay fair must be given a solid bearing by shims or wedges before the next one is put on. These small pieces must be fastened so that they can not jar out. The construction of a dry crib is shown in Fig. 153.

The part of a crib that is to stand in water must be tied together and adapted to form a cage for the ballast. Enough of the ballast to overcome the flotation of the wood should be so confined that it can not escape. For the rest, it is better to leave the ballast free to run out through the floor of the crib and fill any cavities in the bottom which may exist or be formed by the scour of the current. A crib may be given a level bearing on a rough or sloping bottom by holding it in the desired position and throwing in ballast which runs through.

A large crib may be made in compartments or pockets, the interior ones floored to take the sinking ballast and the others open at the bottom to allow ballast to run through, Figs. 154 and 155. A small crib made in one pocket may have extra logs in the second course on which a large rock can be laid to sink the crib, after which smaller ballast may be thrown in around it, Fig. 156.

72. Cribs are built on shore usually on inclined ways, and when up to a sufficient height to form a substantial raft may be launched. They are built up to a little more than the depth of the water in which they are to stand and are floated to their places. The sinking ballast is then placed in the closed compartments or on the floor prepared to receive it, until the crib is well grounded. By means of spars set at the corners with tackle attached, the lower corners may be raised until the crib is level, and the rest of the ballast thrown in.

The construction of the sides of a crib must be adapted to the ballast to be used. If large stones are available, the full interval may be left between sticks as described for dry cribs. If the ballast is small, the timbers must be gained together to make the spaces smaller, and it may even be necessary to plank the sides of the crib.

73. To resist the outward thrust of the ballast the logs may project in full size a foot or two at each end, so that each one rests in a notch cut in the one below. A log may be split into quarters and one of these placed in each outside corner, nailed or pinned to each timber. For light cribs in shoal water the projection may be small and a pole substituted for the quarter log. Both of these methods are shown in Figs. 155 and 156. For cribs of squared timbers, two planks nailed or pinned in the outside corner, as shown in Fig. 157, are best.

74. On a bottom of soft mud it may be necessary to distribute the weight of the pier over a greater area than its own bottom. For this purpose riprap stone is commonly used if easily procurable. A quantity is thrown in on the site of the crib and allowed to find its bed. When the bottom is well covered and no further settlement appears, the top is roughly leveled and the pier sunk on top of the mound.

If stone can not be had, a raft of logs may be sunk on the bottom and the pier built on that. The logs should run parallel to the short side of the crib or pier. Figs. 162 and 163.

75. A pier placed in running water increases the tendency to scour in its vicinity, and if the bottom is erodible may be undermined. To prevent this, a flexible construction of brush, called a mattress, may be used. Its construction and use are illustrated in Figs. 158-161.

Fig. 155

Fig. 156

Fig. 157

Fig. 153

Fig. 154

Fig. 163.

Fig. 162.

Fig. 159.

Fig. 158.

Fig. 160.

Fig. 161.

llage of poles is made on the ground or on skids, and at every intersection is set somewhat longer than the desired thickness of mattress. A lashing is attached to the grillage at each stake, brought to the top of the pile, and loosely fastened with plenty of end.

It is now laid on in one or more tiers until the desired thickness is obtained. A second grillage is laid on the top with its intersections at the stakes. The lashings are removed from the stakes, passed around the upper grillage, and taken up with levers and rack sticks, Fig. 160. Such mattresses are usually 18 to 2 ft. in thickness.

A mattress is launched and floated to its place, where it is sunk on the bottom by throwing on rock or other ballast. When in place the crib or pier is on top of it.

The effect of a mattress is shown in Fig. 161. As the current scours under the edge the mattress bends downward, following the bottom until the current ceases. The mattress must be large enough so that this action at the ends will not disturb the middle.

LANDING PIERS.

The dispositions described for pile and crib bridges are those usually adopted for temporary piers, wharves, or docks for loading or discharging vessels. The chief difference is in the provision made against lateral thrusts, which are much greater than in the case of bridges. Vessels warping in and out and striking the pier, which can not be avoided, cause excessive lateral strains and call for special features in addition to much heavier construction throughout.

Vessels can be discharged at a properly constructed dock in considerable numbers. Transports can also be discharged in a moderate seaway by providing suitable mooring devices at bow, stern, and on the outside, so that the vessel is held alongside of the pier, but not touching it. Only in perfectly proper situations can a large ship lie directly against a pier.

The best mooring is a massive structure of piles driven close together and tied near their tops by a cable, or by bolts, or both. Such a construction is called a dolphin. It yields readily to the first impact and develops resistance readily but rapidly. Fig. 164 shows the usual construction, and Fig. 165 shows the method of binding with wire rope. The end of the rope is stapled to a pile and the rope drawn around the dolphin until it bears on the next one. A strain is put on with a tackle, and a staple or spike driven in the second pile and so on. At least three or four complete turns should be taken. Wire rope is used in the chain next.

Such dolphins require heavy plant for their construction. If materials are abundant, a crib mooring may be made with ordinary tools. The crib should be square, with a side not less than the depth of water at low tide. It should be exceptionally well fastened. It should be constructed with a middle pile to be kept free from ballast until the crib is sunk and cluster of piles are then put down through the pocket and driven into the bottom as far as possible. The tops of the piles should be arranged like the dolphin. Ballast, of moderate size, will now be thrown into the middle pocket and piled closely around the piles to support them. Such a mooring is less elastic than the dolphin and will be more destructive of lines and of fastenings on the vessel but it can be made when a dolphin of sufficient strength can not.

Figs. 167 to 170 illustrate points which must receive especial attention in the design of pile docks. These are the arrangement of fender piles and chocks so that vessels may ride up and down against the dock without catching, the inner or spur piles driven to resist lateral thrusts, and the arrangement of fastenings on the dock to take heavy strains.

**Fig. 164****Fig. 166****Fig. 165****Fig. 167****Fig. 168****Fig. 169****Fig. 170**

FLOATING BRIDGES.

bridges of this class have several disadvantages, due to change in grade way with change of water level and with change of load, and to their capacity, which can not exceed the flotation of the supports. As a rule, bridges will be resorted to only when the materials for them are plentiful and materials for other kinds scarce.

As a rule finds an important exception in the organized bridge equipage prepared in advance to be carried with an army. Such a bridge possesses a great advantage in the paramount element of time, since it can be laid, crossed, and removed in less time than any other form of bridge can be built, and its components can be used as water transportation for several important purposes which no other kind of bridge can subserve.

The bridge equipage adopted for the United States service is of two forms, heavy and light. The heavy equipage is sufficient in capacity for all requirements of an army on the march, and is mobile enough to be carried at the ordinary rate of marching. In the light equipage, capacity is somewhat sacrificed for the sake of further mobility to enable a bridge to be carried with a rapidly moving column.

The heavy and light equipage are organized into trains and in each the train is composed of four divisions each complete in itself, with the necessary tools and tools for repairs and the requisite wagon transportation for land transport. With one train four short bridges can be built, or two twice the length in the same or different localities, or three four-thirds the length or one times the length in the same locality, with obvious intermediate combinations.

The principal parts in both forms of bridge are pontoons or boats; the long bearers or stringers joining them called balks; the cross planks, called chesses, and the beams which hold the chess in position, called side rails, Fig. 181.

In the heavy train each division will construct a bridge of 11 bays, or 225 feet in length, and is divided into four sections, two of which are called pontoon sections and the other two abutment sections. The two abutment or end sections suffice for any length of bridge. Increase in length is accomplished by adding one or more pontoon or interior sections. The pontoon section is never increased as it can not be done without breaking wagon loads. This equipage includes wagons included, 315 lbs. per ft. of bridge, or without wagon 169 lbs.

A division of light equipage will construct 186 ft. of bridge. It is not divided into sections, as each pontoon wagon carries the material for a complete bay, and the bridge may be lengthened by adding one or more pontoon wagons. This equipage weighs, including wagons, 275 lbs. per ft. of bridge, or without wagons 169 lbs.

Heavy Equipage. A division is loaded on 16 wagons. Eight of them are pontoon wagons and carry each a pontoon, 7 long balks, anchor, cable, 5 boat hooks, 20 lashings, 6 rack sticks, 2 scoops, ax, hatchet, bucket, and gun yarn. Four of the wagons carry chess or floor planks only, 60 each, enough for 3 bays, and are called chess wagons. Two wagons carry each a trestle, 7 long balks, 7 trestle balks, 2 abutment sills, and 2 coils of rope. The tool wagon carries axes, shovels, picks, tools and materials for carpentry, saddlery, calking and painting, and spare cordage. The forge wagon carries a forge, smithing tools, iron and other materials. Each wagon is drawn by mules with one driver.

Supporting Power of Boats. The boats of the heavy train are of wood, of 10 tons displacement, and weigh 1,600 lbs. Each can carry 40 infantrymen and fully equipped besides its crew, a total of about 9,300 lbs. This is the normal load of the boat and should be used only in favorable conditions. In rough water and swift currents 20 men and the crew make a suitable load. The pontoon should be loaded evenly, and uneven loading and shifting of loads must be avoided.

The light or canvas pontoon is of 6 tons capacity and weighs 510 lbs. The normal load is 20 men and crew, which should be reduced for unfavorable conditions.

85. The supporting power of the bridge is determined by that of the spans, which are purposely made less than that of the pontoons. With a factor of safety of 4, the safe uniform load of the standard heavy bridge of 5 balks is 9 tons, or the 14 ft. 4 ins. between the supports, or 660 lbs. per lin. ft. This is the weight of infantry armed and equipped in column of fours, but less than the weight of such a column if crowded by a check. The corresponding concentrated center load is 4,750 lbs., which is about that on one axle of a heavy wagon, or 2 tons gross weight. It is more than the field gun and carriage and less than the siege gun. Each additional balk above 5 adds 165 lbs. to the safe uniform load, or 1,280 lbs. to safe concentrated load. Seven balks will carry the siege gun with a factor of safety of nearly 4.

Six extra balks, or 11 in all, will carry as much concentrated load as the standard bridge will support. Extra balks when used should be added in pairs and centered under the wheel tracks.

When either end of a bay is supported at one point only, as on a trestle or saddle sill, 30% more balks must be used for the same load and span. If both ends are so supported, 50% more balks will be required for the same load and span.

The above loadings should not be exceeded except under unusual circumstances and with great caution. With new and perfectly sound materials, in emergency of actual service an officer in charge of a bridge would be justified in doubling the loads given, or, in other words, reducing the factor of safety to 2.

Heavy loads on wheels may be partially distributed by track plates, or by skidding the wagons over on shoes or runners. For long continuous spans, a false floor of common lumber should be laid to take the wear of the wheels. Such a floor serves also to partially distribute the load. A covering of straw is advantageous.

The floor system of the light train has $\frac{1}{10}$ the strength of the heavy train. The number of balks for concentrated loads and equal capacity per lin. ft. of span, or form loads, as the bays are shorter. The standard floor of 5 balks will support as much as the boats will safely support.

86. Names and dimensions of the principal parts of the light and heavy trains.

TABLE XXIII.

| Name of part. | Light train. | Heavy train. |
|-----------------------------------|---|---|
| Pontoon, $9\frac{1}{2}$ tons..... | | 31 ft. by 5 ft. 7 ins. |
| Canvas pontoon, 6 tons.... | 21 ft. by 5 ft. 4 ins. by 2 ft. 4 ins. | |
| Balks and side rails..... | 22 ft. by $4\frac{1}{2}$ by $4\frac{1}{2}$ ins. | 27 ft. by 5 by 8 ins. |
| Trestle balks..... | | 21 ft. 8 ins. by 13 ft. 12 by 14 ft. by 8 by 20 ft. by 12 by 15 ft. by 7 by |
| Chess..... | 11 ft. by 12 by $1\frac{1}{2}$ ins. | |
| Abutment sills..... | | |
| Trestle caps, 2 planks, each..... | | |
| Trestle legs..... | | |
| Trestle shoe..... | | |
| Suspension chains..... | | $\frac{1}{2}$ in. by 8 ft. |
| Paddles..... | 8 ft..... | |
| Oars..... | | 18 ft. |
| Boat hooks..... | 8 ft., blunted points..... | 10 ft. |
| Rack sticks..... | $1\frac{1}{4}$ ins. diam., 2 ft. long..... | $1\frac{1}{4}$ ins. diam., 150 lbs. |
| Anchor..... | 75 lbs..... | |
| Anchor cable..... | 3 ins. circ., 180 ft. long..... | 3 ins. circ., 240 ft. long..... |
| Lashings..... | 1 in. circ., 18 ft. long..... | 1 in. circ., 18 ft. long..... |
| Canvas-pontoon cover..... | No. 0000 cotton duck..... | |
| Pontoon chest..... | 8 ft. long, 2 ft. 4 ins. wide, 18 ins. deep. | |

Weights of wagons and their loads:

TABLE XXIV.

| Kind of wagon. | Light train. | | | Heavy train. | | |

| and forge. | 2,081 | 600 | 2,681 | 2,081 | 600 | 2,681 |

Boat Bridges. When it becomes necessary to use boats found on the river or elsewhere, select those as nearly of one size as possible. Of these, select the largest for the shore ends and for the swiftest currents. Estimate their supporting power roughly by comparing their size with the pontoon boat, heavy scow, or compute as in par. 100. Support the bunks on saddle sills and transoms locked up from the frames of the boats. If boats differing very much in size are used, make the bays supported by the small boats shorter than those supported by the larger ones. Avoid getting a very large and a small boat adjacent. The floor system may be designed as in par. 59 for spar.

With scow-built barges, which will usually have excess of supporting power, a serviceable bridge is readily built. If the boats are large and well spaced, they may be placed endwise in the bridge, separated by 20 ft. or more, the intervals spanned by bays of roadway and the decks used for roadway on the boats themselves. With boats of different shapes and sizes, such a bridge should be attempted with great caution, and only under exceptional circumstances.

Barrel Piers. When barrels are available, floating piers can be made by placing a sufficient number of them by means of timbers or lashings, or both. An ordinary 50-gallon barrel has a buoyancy of about 400 lbs. when completely submerged; those of other sizes in proportion to their capacity. The supporting power of any barrel or keg can be determined with sufficient accuracy by weighing it when full of water and again when empty; the difference is the supporting power.

The number of barrels required for a pier is obtained by dividing the total weight to be borne by the supporting power of one barrel. A margin of 20% or more should be allowed, as the barrels of a pier must not be completely submerged.

In forming the piers the barrels are laid out in line with the bunks uppermost.

The gunwale timbers are placed over and the rope slings under the barrels. The slings are secured to the gunwales at each end of the line. Between each pair of barrels on each side a brace is secured to the sling and then led under the gunwale on its own side, round the opposite brace rope and back to its own gunwale, where it is made fast, Figs. 171, 172, and 173. Care should be taken in launching to avoid injuring the ropes by chafing on the ground. Rafts so formed may be united into larger ones as indicated in Fig. 174. Where timber is available the best method of forming a barrel pier is to make a cribbed box crib of lumber or timbers nailed, bolted, or lashed together. If the timber is as strong as it should be, it may be inverted over the barrels, which require no other fastenings. Fig. 175 shows this method.

Raft Piers. Rafts of timber may be used for floating piers when other materials are not at hand. They are durable if not disturbed and secure against sinking by hostile fire. Their defects are: small and decreasing buoyancy, weight, and bulk; Figs. 176 to 179.

Fig. 173

Fig. 174

Fig. 175

Fig. 179

g. 178

Fig. 177

Fig. 176

Fig. 180

The buoyancy of each stick used may be obtained from the following rule: Find the girth or circ. at middle point in ft., multiply it by itself, multiply this product by the factor 0.08, and multiply again by the length of the stick in ft. The result will be the volume of the stick in cu. ft., which, multiplied by the difference between $62\frac{1}{2}$ and the weight of a cu. ft. of the timber, gives the supporting power in lbs. when fully submerged.

Example: Find the net buoyancy of a pine log with a middle girth of 6 ft. and a length of 35 ft., and which weighs 40 lbs. to the cu. ft.

Volume in cu. ft. = $6 \times 6 \times 0.08 \times 35 = 100.80$ cu. ft.

Buoyancy = $100.80 \times (62\frac{1}{2} - 40) = 2,268$ lbs.

Allowing $\frac{1}{2}$ of this as available buoyancy, a bridge of 7 such logs in each pier, with 20 ft. bays, will carry the maximum infantry loads calculated in paragraph 85 for the heavy bridge.

91. Construction of the rafts is done in the water if possible. Arrange the logs side by side to form a point upstream, Fig. 177. The upstream ends should be beveled on the lower side, Fig. 176. The logs are held together by cross timbers pinned or spiked over the tops. Where the logs are of small size additional sticks may be placed in the intervals between the others, or two or more courses may be built up, the logs of each layer at right angles to those below. The latter method has been found advantageous in constructing rafts of bamboo.

92. Anchorage of Floating Bridges. The anchorage of the piers of a floating bridge is of the greatest importance. The piers should be so constructed and placed as to present the least obstruction to the current. In non-tidal streams all the bows are placed upstream; in tidal estuaries they should alternate up and down stream.

The piers near the shore should be secured by strong cables to rocks, trees, or deadmen on the shore above and below.

For the heavy and light bridge equipage the anchors provided are sufficient, and in moderate currents it will answer to anchor alternate boats upstream and every fourth one downstream; the downstream anchors always on boats which have upstream anchors also. In swift currents it may be necessary to anchor every boat upstream. Even in slack water every second or third boat should be anchored both up and down stream to reduce oscillation.

For any other kind of floating bridge every pier must be securely anchored. Ordinary anchors can be relied upon in good holding ground only; when it is poor or the current unusually swift, two anchors may be used, one backing up the other, Fig. 180. Or, the following devices may be used.

A line of schooners or large barges may be anchored above the bridge, and the piers moored to them, or,

A hawser may be stretched across the stream, buoyed on intermediate floats if necessary, and the anchor cables carried to it, or,

Long guys may be carried direct from each pier to the shore and secured as before indicated.

The length of cable between anchor and pier should be at least ten times the depth of the stream. Otherwise the anchor is likely to drag and a downward pull is brought on the upstream end of the pier. The anchor must be cast as nearly as possible directly upstream from the position which the pier is to occupy, so that the pier in the bridge will have the same position that it would assume at anchor.

Improvised anchors may be made of any heavy materials on hand, as railway iron, pieces of machinery, or large stones. Such anchors must be of considerable weight, as dependence is placed on their mass rather than their attachment to the bottom.

Construction of Floating Bridges. The regular bridge equipage is de-unloading, construction, removal, and reloading in the shortest possible and its systematic drill is given in a separate manual. This elaborate necessary only for troops handling the equipage habitually. The design of the methods of construction recommended involve the principles of the Pontoon Manual and are illustrated for the heavy equipage, but are applicable in language to all kinds of floating bridges, the pontoon equipage being considered simply as one kind of bridge of that class. The method selected depend upon the character of the stream, the kind and location of the force available, and the proximity of the enemy. It may be determined by combining two or more of the methods described.

For power launch is of the greatest assistance and no effort should be made to obtain one.

The methods available are: (1) By successive bays, (2) by parts, (3) by

Successive Bays, Fig. 181. In a trench 1 ft. deep and wide lay the sill horizontal and at right angles to the axis of the bridge. Secure large pickets, two in front and two in rear, near the ends. A support for the boat, barrels, or raft, is brought close to the bank opposite the abutment.

The free ends of cables, previously fastened on the bank 30 or more feet above and below, are passed onto the pier. A set of barks are brought up, the ends placed on the saddle sill of the pier and lightly secured. The barks are shoved off until the inner ends of the barks can be placed on the abutment and all fastenings are completed. The floor is then laid on the barks and the second pier is brought alongside of the first, its anchor having previously been cast. A second set of barks are brought up and the operation is repeated until the other shore is reached, where an abutment sill is laid as described and the shore bay completed. Unless the supports are man-boats, all anchors should be dropped from a special boat and the cables hauled to the piers.

Construction by Parts, Fig. 182. For long bridges the method by successive bays requires materials to be transported considerable distances. These are reduced by constructing the bridge in parts along the shore above. The parts may conveniently consist of three bays. To construct the parts a support is placed close to the shore, and gangways are temporarily laid to it from the shore.

The other two piers are brought up outside the first, and two bays are constructed successively, as above described, except that the outer bay is constructed first and shoved out into the stream by the barks of the inner bay. The floor is omitted from each end of the part to permit fastenings to be made.

The materials for the floor of one bay are loaded on the part thus constructed, which is then pushed off and conducted to the line of upstream anchors, where it casts its anchors and drops down to its place in the bridge. If not manageable, the part may be swung out into the stream on an anchor and then laid.

When the abutment will have been formed and one or more floating bays constructed, the construction of the part, a few planks being omitted from the outer end of the first part is brought into position opposite the shore end and connected to it by constructing one bay of roadway from the material loaded on the part. The other parts are joined in the same way until the opposite shore is reached, when an abutment bay is formed, as before described.

Construction by Rafts, Fig. 183. Rafts differ from parts only in having the roadway completed. Rafts are assembled in the bridge with the outer piers at the ends in contact. The roadway is made continuous by connecting the rafts with planks laid on top of the floor over the outer barks and connected to them

to form a splice. For the heavy train, devices called rack collars are provided for clamping the false balks, Fig. 184.

This method is not often employed, as it requires more piers for the same length of bridge and distributes the support unequally, throwing the roadway into humps when loaded.

97. Draw Spans in Floating Bridges, Fig. 185. To form a draw a raft is introduced into the bridge over the channel of navigation. The attachments of the false balks are adapted to convenient removal and replacement. To open the draw the raft is disconnected from the bridge, the upstream cables slacked off, the raft dropped out of the opening, made fast at one end to the bridge and allowed to swing around. If the current does not suffice, the raft must be moved by hauling on the downstream cables and on a swinging cable laid for the purpose. A wide draw in a strong current may be made of two rafts, one swinging on each end of the bridge.

The draw is closed by hauling the raft around until parallel to the bridge and just below it, and then hauling it into the gap.

98. Care must be taken to provide a free hinging motion between abutment or trestle bays and those next to them. In case of a staunch boat with straight sides, the balks may join on one gunwale, one set only extending across. The hinge should be on the side toward the abutment or trestle, Fig. 186. A saddle sill on the first pier to receive the balks will answer, Figs. 187, 189. In fact, with the exception of the heavy bridge train, balks will usually be supported on saddle gills.

The abutment sill should be placed as low as possible without danger of being washed out. The abutment bay will usually be nearly horizontal when the bridge is light. When the bottom is of mud or sand, and shoals gradually, the sill may be placed about 2 ft. above high-water mark, and the part of the bridge near the shore built at high water by successive bays. As the water falls, the piers ground successively, forming a gentle ramp from the abutment to the floating part of the bridge. Ordinary boats can not be so used, as they will not support the weight when grounded. If the banks are high, ramps must be dug, reaching the proper level for the abutment sill, and long enough to give a practicable slope for the traffic using the bridge, Fig. 189.

A bridge may be laid with extended intervals to cover a greater length by placing the balks as in Fig. 188. Proper allowance must be made in loading.

99. Figs. 190, 191, 192, and 193 illustrate the assembling and placing of the Birago trestle, which forms part of the pontoon bridge equipage. Two methods are shown, one by means of a raft of two boats, and the other by a single boat. In either method the trestle assembled and in a vertical position is brought up to the end of the bridge, the trestle balks placed on the cap and lashed, and the boat or raft then pushed out until the inner ends of the balks fall in place. The trestle legs are then let go, and, when the shoes are on the bottom, the false legs are set and the boat or raft removed.

100. Examples of calculations for floating bridges:

To find length of bay: Piers of flat-bottomed boats with vertical sides, 5 ft. wide, 3 ft. deep, allowed immersion $2\frac{1}{2}$ ft. Mean length of part immersed 16 ft. Weight of boat = 1,000 lbs. Dead load, 80 lbs. per lin. ft.; live load, 560 lbs. per lin. ft.

Maximum displacement, 16 by 5 by $2\frac{1}{2}$ ft. = 200 cu. ft.

Weight of water displaced, 12,500 lbs.

Weight of boat deducted, 1,000 lbs.

Available buoyancy of one boat, 11,500 lbs.

Maximum length of bay = $\frac{11500}{560+80} = 18$ ft. nearly.

Fig. 182. Floating Bridge by parts.

Fig. 183. Floating Bridge by Rafts.

Fig. 184.

Fig. 186.

Fig. 187.

Fig. 188.

Fig. 189.

Fig. 190.

Fig. 191.

Fig. 192.

Fig. 193.

To find capacity of bridge with barrel piers: Pier of 70 barrels, buoyancy per barrel, $112\frac{1}{2}$ lbs.; length of bay, 10 ft.; dead load, 105 lbs. per lin. ft.

Required the maximum live load:

Available buoyancy of one pier $112\frac{1}{2} \times 70 \times .8 = 6,300$ lbs. Deduct weight of superstructure, 10×105 lbs. = 1,050 lbs.

Available buoyancy per bay, 5,250 lbs.

Maximum live load per lin. ft., $\frac{5250}{10} = 525$ lbs., or, length of bay for any assumed live load, say 400 lbs. per lin. ft., $\frac{5250}{400} = 13$ ft. +

To find capacity of bridge with raft piers: Piers of 7 logs each; length of logs 45 ft.; mean girth, $4\frac{1}{2}$ ft.; weight of timber, 35 lbs. per cu. ft.; dead load, 150 lbs. per lin. ft. of roadway; intervals between centers of piers, 19 ft.

Required the maximum live load: Volume of log, par. 90, $4.5 \times 4.5 \times 0.08 \times 45 = 72.5$ cu. ft. Volume of 7 such logs, 507.5 cu. ft. Supporting power of pier, $507.5 \times (62.5 - 35) \times 0.8 = 11,160$ lbs. Deduct dead load, $150 \times 19 = 2,850$ lbs. Net buoyancy per bay, 8,310 lbs. Maximum live load for 19-ft. span, $\frac{8310}{19} = 437$ lbs. per lin. ft., or, length of bay for any assumed live load, say 500 lbs. per lin. ft., $\frac{8310}{500} = 16.6$ ft.

101. Precautions in Passing Floating Bridges. Infantry must break step and music cease; distances must be maintained or extended; riders and drivers must dismount and all horses must be led. Halting on a bridge should be avoided. If it is absolutely necessary to halt on a floating bridge, concentrated loads, such as the wheels of wagons and guns, should rest between piers. Interruptions of the column of march and alternations of direction should be made as few as possible. The greatest strains on the bridge occur when part of it is empty and the rest loaded. The column should also be so arranged as to make the alternations among the different classes of loads, as troops, artillery, and trains, as infrequent as possible.

If a bridge begins to sway or oscillate considerably the column must be halted and not allowed to resume its march until the swaying has ceased.

102. Protection of Floating Bridges. The bridge must be kept clear of drift and other floating objects, especial attention being given to the anchor cables. If the objects are not too large or too numerous they may be passed under the bridge by men working with pike poles from the piers and roadway. Large trees may be disposed of in this way by sawing them up into logs of manageable length. Floating objects may be prevented from striking the bridge by a guard upstream, or by a draw span in the bridge, or by a floating boom crossing the stream obliquely.

A guard, if used, is placed about 1,000 yards above the bridge. It is stationed in boats at different points across the stream and is provided with cables, grapnels, anchors, dogs, hammers, saws, etc. The business of this guard is to anchor or tow ashore dangerous drifting bodies.

The floating boom is constructed of trees united by chains and forms a continuous barrier to surface drift. Its general direction should form an angle of about 20° with the current, giving it a length about $2\frac{1}{4}$ times the width of the river. A boom is not a very reliable protection.

A guard should always be posted at a floating bridge with a sentry at each end, and, if the bridge is long, at intermediate points. Sentries turn out the guard whenever the bridge is in danger from any cause. The body of the guard should be stationed near one end of the bridge.

ward will regulate the traffic over the bridge and enforce orders as to way of vehicles desiring to cross in opposite directions. They will see that greater than those prescribed for the particular bridge do not enter. The officer in charge of a floating bridge must frequently inspect the cables to see that they are not chafing and that the anchors do not drag. He will cause the cables to be tightened up when they work loose and see that boats are pumped when they leak or ship water. A suitable depot of spare planks, cordage, etc., should be established on shore near one end of the bridge. The guard will be stationed at the same end.

Thin or rotten, is a serious obstacle to crossing a stream; if thick and strong is a very good bridge itself. Boats used in ice must be protected with ice pieces, especially near the water line at the bows. Heavy ice, rapidly changing, makes a crossing impracticable.

On sound ice, infantry may pass on 3 ins. thickness and cavalry on 4, but at long intervals. Fieldpieces are safe on 6 ins., and ice 10 ins. thick will support a load that an army is likely to have.

Heavy loads may be carried on lesser thicknesses or on unsound ice by distributing the loads in small boats. Infantry may cross on lines of planks. The wheels of wagons may be supported on planks. Wagon boxes may be placed on boards and used as storage for supplies. Animals may be hauled across on platforms.

Low lakes, springs are apt to cause weak spots. A path should be marked by chopping through the ice at frequent intervals to determine its thickness and quality, and when a safe track is found it should be marked on both sides by bushes stuck in holes in the ice.

BARGES.

Several types of barges of simple, quick construction are shown in the illustrations. They are useful in towing and lightering, are easy to manage, and are of great use in rough weather. Fig. 194 shows a barge or flying bridge used at Vicksburg during the civil war for crossing men and wagons over the Tennessean river. It will carry four 6-mule teams and wagons besides infantry and artillery. The cable was attached to an island above and was supported upon posts. The connection with the boat was made by a rope with both ends attached to the end of the cable, passing through snatch blocks at the bow and stern of the boat on the upstream side and around a windlass at the middle. The direction of the boat was controlled by turning the windlass to give the hull the proper position with respect to the current. Leeboards near bow and stern were used to catch the current and increase its force.

In strong currents the scow can not be held broadside to the stream. The boat must then be made across instead of along the deck. To make the boat cross the stream, attach the end of the main cable at the middle of the bow. Stop the cable by a line to the cable 50 to 75 ft. above the scow and lead its ends to tackles on the starboard and port sides. By slacking the port tackle and holding the starboard, a bridle is formed to the right, and by the reverse process a bridle is formed to the left, Fig. 185a. If it be desired to stop quickly, as on landing or unloading floating objects, let both tackles go, and the scow rides at ease on the cable.

Fig. 185b shows a smaller barge than the preceding. It is operated by the force of the current, but by means of a traveler or trolley running on a cable stretched across the stream. It will carry two field pieces, with four horses each, side by side. It differs from the former one in having the flooring on the bottom of the boat instead of being decked. For temporary use, loose planks called floats can be laid on the bottom frames.

FIG. 194.

FIG. 195.

Figs. 196 to 199 show a type of barge easily built by ordinary carpenters. It is best built bottom side up. Place skids or ways on or near the ground parallel to each other and about 10 ft. apart, with their upper sides in a plane, horizontal or slightly inclined. Get out the gunwales complete, with timberheads attached, and place them on the ways in their relative positions, but upside down. Build the intermediate frames in their relative positions, also upside down. Plank the bottom, making close joints on the inside and beveling the plank at the edges so as to have a $\frac{1}{8}$ to $\frac{1}{4}$ in. open seam on the outside. This is called outgauge and facilitates calking. Put on the head blocks and the corner irons. Then calk, and stay the gunwales by spiking a few deck planks on. Slide the barge into the water, still bottom side up.

Calking is done with oakum or cotton, which is driven into the seam with the calking tool and calking mallet. Oakum comes in bales and must be picked and spun before use. Picking is the process of loosening up the compressed fibers of the oakum by pulling and beating. The loose oakum is spun by rolling it into a rope or strand usually under one hand across the knee, feeding the material from the loose pile with the other hand. The spun oakum is $\frac{1}{2}$ to 1 in. diam., according to the thickness of planks and size of seams.

Calking cotton comes in a strand wound into balls and is ready for driving.

Seams should be well filled with material driven hard.

In recalking, the old work should be horsed up, which is done by driving it in with the large tool and a sledge.

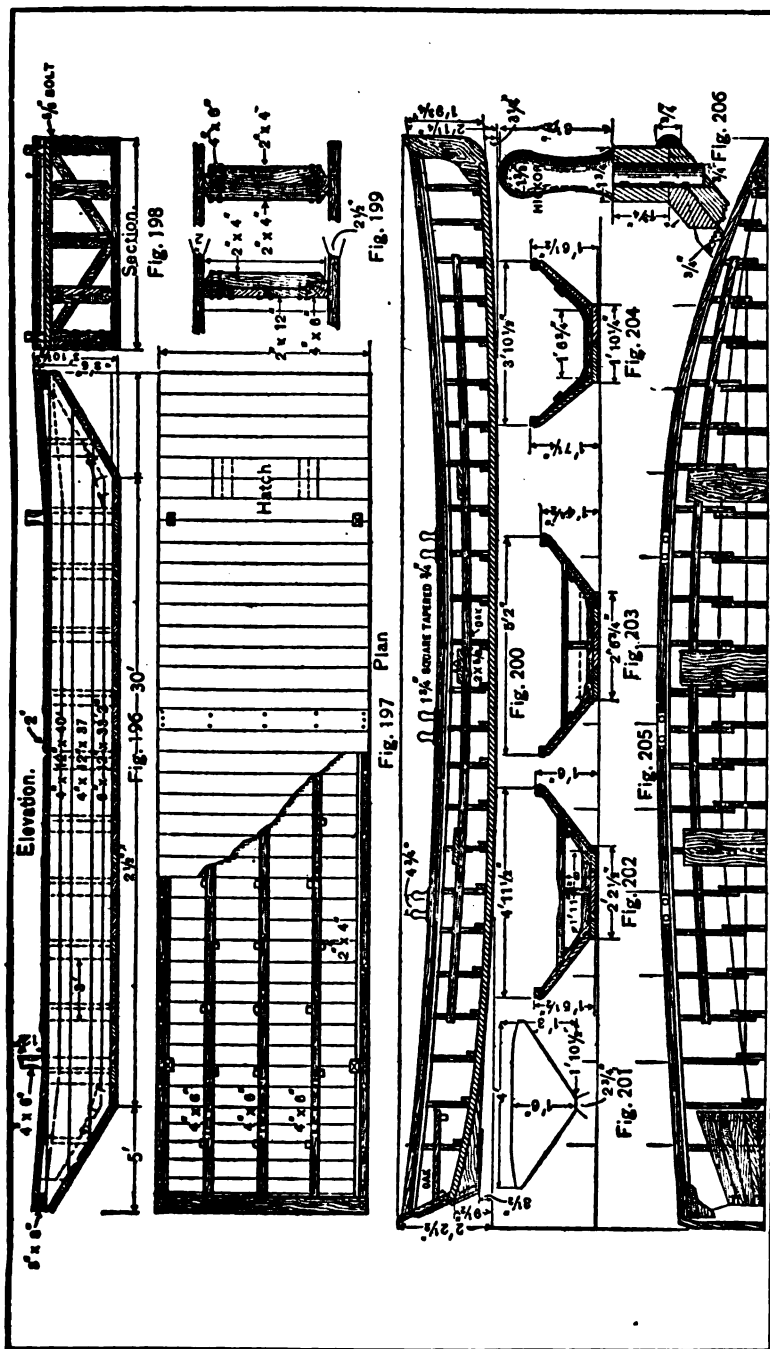

The seam is finished by a paying with paint or pitch.

Certain marine animals destroy calking by eating the oakum. This may be prevented by laying a strand of hard-twisted rope, called ratline, on the top of the seam, secured to the planks by staples. If the seams are wide, wide strips of wood may be used.

To turn the barge over lay her along the bank. Fasten two lines to the outside gunwales, pass them under the boat, and lead well upstream. Shovel earth on the outer edge of the bottom till it is partially submerged, then slack off the upper line, allowing the upper end to swing out into the stream until the barge lies with one end to the bank instead of the side. Hold fast both lines and the current will right the boat. A depth of water of somewhat more than half the width of the boat and a current of $1\frac{1}{2}$ miles per hour are necessary to the success of this operation. It is most conveniently done at the shore, but may be done in the stream or in slack water if a tug or other means be available to set a strain on the lines.

104. Bill of materials:

- Gunwales, 2 pieces, 4 by 12 ins. by 40 ft.
- Gunwales, 2 pieces, 4 by 12 ins. by 37 ft.
- Gunwales, 2 pieces, 6 by 12 ins. by 33 ft. 2 ins.
- Head blocks, 2 pieces, 8 by 8 ins. by 10 ft.
- Knees, 6 pieces, 4 by 6 ins. by 3 ft.
- Struts, 42 pieces, 2 by 4 ins. by 2 ft. 10 ins.
- Braces, 4 pieces, 2 by 4 ins. by 7 ft.
- Timberheads, 4 pieces, 4 by 6 ins. by 4 ft., oak.
- Deck stringers, 3 pieces, 4 by 6 ins. by 40 ft.
- Floor stringers, 3 pieces, 4 by 6 ins. by 33 ft.
- Rake stringers, 6 pieces, 4 by 6 ins. by 6 ft.
- Bottom planks, 45 pieces, $2\frac{1}{2}$ by 12 ins. by 10 ft.
- Deck planks, 43 pieces, 2 by 12 ins. by 10 ft.
- Driftbolts, 20, $\frac{3}{8}$ in. by 3 ft. 10 ins.
- Driftbolts, 4, $\frac{5}{8}$ in. by 2 ft. 6 ins.
- Driftbolts, 4, $\frac{5}{8}$ by 12 ins.

Design for a large Barge.

FIG. 207.

Driftbolts, 4, $\frac{5}{8}$ by 8 ins.
Carriage bolts, 20, $\frac{5}{8}$ by 9 ins.
Carriage bolts, 12, $\frac{5}{8}$ by 12 ins.
Spikes, 6-in., 150 lbs.
Spikes, 5-in., 250 lbs.
Corner bands, 4, $\frac{3}{4}$ by 4 ins. by 4 ft.
Countersunk-head spikes, 40, $\frac{1}{4}$ by 4 ins.
Oakum, 30 lbs.
Pitch or seam paint, 5 gals.

Figs. 200 to 206 show a skiff easily constructed and valuable for a number of purposes. It may be 18 to 26 ft. long, with parts proportioned as in the drawings.

Figs. 207 and 208 show a design for a 100-ft. barge. This barge is of greater dimensions than any of the preceding and somewhat more elaborate in construction. It was designed specially for carrying stone and would be useful in heavy water transportation generally. The construction is shown in detail and to scale, and is within the limits of ordinary rough carpentry. It should be built on ways, top side up, and planked from below.

CANTILEVERS.

105. A cantilever is a projecting or overhanging support, transmitting all of its load to one of its ends.

The cantilever principle may be utilized in military field bridges for short spans and moderate loads. Some typical forms are shown in Figs. 209 to 212. The main points to be observed are that the maximum pressure on the abutment is greater than the heaviest load, live and dead, on the projecting part of the cantilever; that any settlement of the abutment causes a greater disturbance of the bridge; and that the weight or resistance of the anchor multiplied by its distance from the abutment must be greater than the greatest concentrated load multiplied by the length of the projecting part, or the greatest uniform load multiplied by half that length.

If the anchorage is beneath the beams as in Figs. 209 and 210, the roadway may be laid directly upon them. If the anchorage is above the beams, separate road bearers must be provided resting on transoms carried by the cantilevers, and high enough at the inner end to pass over the anchorage; or the cantilevers may be at the sides only, as in Figs. 211 and 212.

Bear in mind that the safe load of a cantilever, concentrated or uniform, is $\frac{1}{4}$ of the corresponding safe load of the same beam supported at both ends with the same span, and that the deflection of the cantilever under any load less than the safe load will be 10 to 16 times greater than the deflection of the same beam under the same load when supported at both ends. Much greater vibrations must be expected than in girder or truss bridges.

If the two cantilevers meet at the middle of the bridge they must be fastened together. This doubles the safe concentrated load for the bridge, making it equal to one-half the safe uniform load of both cantilevers instead of one, or one-half the safe concentrated load on a beam of the size and length of one cantilever supported at both ends.

When separate road bearers are used, the transoms are better arranged so that there will be a middle bay resting one end on each cantilever, Figs. 211 and 212.

If the cantilevers do not meet, the gap is filled by a girder or truss supported by the ends of the cantilevers. This arrangement may be useful in case timbers too short to span the gap have to be used. To get the maximum strength

Fig. 209

Fig. 210

Fig. 211

Fig. 212

Fig. 213

for timbers of a given size, the cantilevers should be $\frac{1}{7}$ and the girder the span.

106. When objects of sufficient mass and stability are available, the balance is not necessary and the cantilevers take the form of brackets. If the opposite brackets meet and are well connected the structure is of the spar-bridge type, and there is no overturning moment on the abutments which will sustain the weight of the cantilevers themselves. Working parties before they are connected will permit the construction of a bridge. The two brackets on the same side should be connected by a cross member.

107. The horizontal and inclined members of a bracket are single members built up as may be most convenient. They are connected by fish plates. The vertical member is best made in two pieces. The parts should be assembled on the ground and bored for the bolts. The fish plates are used as the strut. Place the strut between the verticals and connect them at the ends by a single bolt. Launch the three over the edge of the wall or lower until the tops of the ties are at the proper height, and make fish plates an auxiliary piece bolted or lashed to the ties on the outside, leaving them free to rotate about the bolt at its foot. Then raise the end of the beam to the top of the strut and connect by one bolt. Launch out the beam until its end falls in place between the ties. Then set all the bolts and tighten up.

TRUSS BRIDGES.

108. A truss is a compound beam the parts of which are so disposed as to form one or more triangles in the same plane. The triangle is the only figure which is rigid. Four given sides may be formed into an infinite number of quadrilaterals, and similarly for a greater number of sides. It is the resistance of the joints to bending which prevents the distortion of any figure, or its complete collapse. But a given three sides can be formed into a triangle and only one; hence, if the joints do not separate, no side of the triangle can leave the position in which it is placed for another in the same plane.

Except in some of the simplest forms, the parts of a truss are subjected to tension and compression only, transverse strains being practically eliminated. For this reason parts can be combined into a truss of much greater strength and supporting power than a possible single beam.

109. The simplest form is the trussed beam, in which a part of the load is taken up at an intermediate point and transferred directly to the ends. See Figs. 218 and 219.

In the king-post truss, Fig. 214, the upright member is in tension and carries the gross load on the truss, or $\frac{1}{4}$ the gross load on the bridge. On the other hand, the inclined struts, or $\frac{1}{8}$ the gross load on the bridge, is transmitted in compression to the ends of the beam at B and C. See Table XXV.

In the queen-post truss, Fig. 215, two points of the beam are supported, forming three equal bays. The counter braces in the middle panel are frequently omitted, and the resulting combination of two triangles and a parallelogram is not rigid and is not a true truss. As half of the bridge is loaded the beam tends to rise, permitting the loaded half to sink, the beam taking the form of an S. If the beam be stiff enough to withstand this double bending the bridge will be safe, but no stronger than if the beam were divided into three bays instead of three. In this form each post carries $\frac{1}{6}$ of the total load, and live, on the bridge, all of which is transmitted down the corresponding posts.

110. The stresses in king and queen post trusses depend upon the load and the inclination of the struts. The load may be stated in tons or lbs.

ridge. The inclination of the struts is represented by the ratio between height of posts and the length of bay.

As the stresses on rods and struts there is a tension on the beam. It is in the same way as the other stresses, and sufficient cross section must be given to the beam to withstand it, in addition to that figured for the transverse stress. In the queen-post truss the upper horizontal member or straining beam takes this same stress, but in compression.

Stresses on members of king and queen post trusses in terms of total height of bridge, for various inclinations of struts:

TABLE XXV.

| Height of post to length of bay. | King-post. | | Queen-post. | |
|----------------------------------|-----------------------|----------------------|-----------------------|----------------------|
| | Stress on each strut. | Stress on each beam. | Stress on each strut. | Stress on each beam. |
| 1. | 2. | 3. | 4. | 5. |
| Range for king post truss. | 0.05 | 2.50 | 3.33 | 3.33 |
| | 0.10 | 1.25 | 1.66 | 1.66 |

| | 1.00 | 0.18 | 0.23 | 0.17 |

Sizes and tensile strengths of iron rods, standard threaded, with assumed limit of 30,000 lbs. per sq. in., strength computed for area inside threads:

TABLE XXVI.

| | Tensile strength. | Diameter of rod. | Tensile strength. | Diameter of rod. | Tensile strength. |
|--|-------------------|------------------|-------------------|------------------|-------------------|
| | <i>Pounds.</i> | <i>Inches.</i> | <i>Pounds.</i> | <i>Inches.</i> | <i>Pounds.</i> |
| | 294 | 1 1/4 | 23,857 | 2 1/4 | 85,119 |
| | 1,178 | 1 1/2 | 29,453 | 2 1/2 | 95,426 |
| | 2,650 | 1 3/4 | 35,638 | 2 3/4 | 106,322 |
| | 4,712 | 1 7/8 | 42,412 | 2 7/8 | 117,809 |
| | 7,363 | 2 | 48,774 | 3 | 129,886 |
| | 10,603 | 2 1/8 | 57,727 | 3 1/8 | 142,552 |
| | 14,432 | 2 1/4 | 66,269 | 3 1/4 | 155,803 |
| | 18,850 | 2 1/2 | 75,399 | 3 1/2 | 169,646 |

To design such a truss, determine the span and gross load per lin. ft., then find the total load on the bridge. Take from Table XXVI the size of rod corresponding to the load. This size gives a factor of safety of 4 for king post and 6 for queen-post. If timber is used, divide the load by the tensile strength of the wood, Table II, column 4. The result will be the required cross section in ins. of each post, with the same factors of safety as before.

To determine the size of struts, divide the length of post by length of bay, then the quotient enter Table XXV and take out the factor from column 2 for king-post or column 4 for queen-post truss. Multiply the load by the factor. The result will be the maximum stress on the strut. With the length of strut enter Table IV and take out the size corresponding to a load next above the result found. Sticks of this size will give a factor of safety of 5.

Multiply the load by the factor in column 3 or 5, Table XXV, corresponding to the inclination of the strut already found, and the result will be the stress (tension) on the beams. Divide this stress by the tensile strength of the material, Table II, column 4. The result, multiplied by 5, will be the sq. in. of cross section to be allowed for this stress, with a factor of safety of 5. Unless the posts are short, this strain may be neglected.

Consider $\frac{1}{4}$ the load applied uniformly to $\frac{1}{2}$ the beam for king-post and $\frac{1}{6}$ the load to $\frac{1}{3}$ the beam for queen-post, and determine, as in paragraph 13, the size of beam of sufficient transverse strength. Add the cross section found above for the tensile strain. The sum will be the entire cross section of the beam.

114. Example. To design a queen-post truss for a span of 45 ft., a dead load of 150 lbs., and a live load of 850 lbs. per lin. ft., or 1,000 lbs. gross. Total load, 45,000 lbs. Assume height of posts at 10 ft.

Size of rod, Table XXVI, $1\frac{1}{8}$ ins. diam.; or, if wood be used, then—

Size of posts (yellow pine), $\frac{45,000}{9,000}$, Table II, column 4 = 5 sq. in. area of cross section. A larger post with excess of strength would be used to give better joints.

Size of Struts. Height of the post, 10 ft. \div by length of bay, 15 ft., = 0.67. From Table XXV, column 4, opposite 0.70 in column 1, take factor 0.22. 45,000 multiplied by 0.22 = 9,900 lbs. = maximum stress on each strut. Length of struts = $\sqrt{15^2 + 10^2}$ = 18 ft. In Table IV, opposite 18 ft. in column 1, the load 10,182 lbs. corresponds to a post 7 by 7 ins., which is the minimum size for struts.

Longitudinal Stress on Beam. Multiply 45,000 by the factor 0.24 in column 5, Table XXV, corresponding to 0.70 in column 1. The result, 10,800 lbs., is the longitudinal stress on the beam. This divided by the tensile strength, 9,000, gives 1.2 sq. ins., which multiplied by a f. s. of 5 gives 6 sq. ins. to be added to the cross section of beam on account of this stress.

For Transverse Strength of Beam. One-sixth of load, 7,500 lbs. uniformly distributed over a clear span of 15 ft., breadth $\frac{3}{4}$ of depth, requires, by Formula A, paragraph 13, a beam 6.2 by 9.3 ins. = 57.66 sq. ins. Add the area to resist tensile strain on the beam, 6 sq. ins., as found above, and there results a total cross-sectional area of 63.66 sq. ins., or, in practice, a beam 7 by 10 ins.

The compression on the upper chord or straining beam is the same as the tension on the lower beam, 10,800 lbs. Its length is 15 ft., and from Table IV a 7 by 7 in. stick is found to be amply strong.

Each truss will then consist of a beam of 45 ft. clear span, not less than 7 by 10 ins. in cross section; two struts 18 ft. long, not less than 7 by 7 ins. in cross section; one straining beam, 15 ft. long, not less than 7 by 7 ins. in cross section; and two rods $1\frac{1}{8}$ ins. diam., or wooden posts of not less than 5 sq. ins. in cross section. In framed wooden structures it is desirable to have one dimension the same in all the pieces that meet at a point, and a considerable excess of material in the structure often results. In this case it will be convenient to take the beam 7 by 10 ins., struts 7 by 7 ins., straining beams 7 by 7 ins., and posts, if of wood, double, each half 3 by 7 ins.; or else beams 6 by 11 ins., struts 6 by 8 ins., straining beams 6 by 8 ins., and posts 3 by 7 ins., double.

Fig. 232 shows arrangement of a 30 ft. queen-post truss for a highway bridge, having about the dimensions above computed.

115. For a light railroad bridge of 30 ft. span and 10 ft. high, the following dimensions may be used for a king-post truss: Chord 10 by 18 ins., struts 10 by 10 ins., and rods $2\frac{3}{4}$ ins. diam. or better, two rods at each post, each $1\frac{1}{8}$ ins. diam., and several inches apart transversely of the bridge.

116. Inverted Forms. Both king and queen post trusses may be inverted, Figs. 216 and 217. All stresses of tension and compression are then reversed. The principles of design are not affected by the change, but wood must be used for posts, and iron is much better for the inclined members and for the lower chords of queen-post trusses. The rods are best made double, one on each side of the beam, and fastened to bolts through the beam at the middle point of its depth. Three or more inverted trusses may be placed beneath a single-track roadway. Of the erect type but two can be used. Double-track bridges are often built with three erect trusses.

117. Erection of Small Trusses. With a single beam long enough to span the opening the truss may be built in place. The same may be done with a spliced beam, provided it is stiff enough to support its own weight plus that of the men and materials necessary to complete the truss.

The simplest way to get a beam across an opening is to attach a rope to one end and pass it over to the other side; then launch the beam out and haul the front end up with the rope, Fig. 222.

Two methods, in which the further bank need not be occupied, are illustrated in Figs. 223 to 225. In one case an auxiliary beam, and wheels and axle from an ordinary wagon or cart, are used as indicated to place the beam on its abutments. No support between banks is needed. In the other case, two spars are stepped on the bottom as indicated, and their tops lashed together to form a fork, into which the beam is placed. The beam is then pushed across, the spars revolving on their lower ends. The spars must be long enough to reach the higher of the two banks.

Complete trusses may be sprung across by similar means. The application of the second method to an erect king-post is illustrated in Fig. 224. Inverted trusses may be kept upside down until on the abutments and then turned over, provided the chord has sufficient lateral stiffness.

118. Completion of the Bridge. The trusses being in position, vertical and parallel to each other and secured, lay floor joists from truss to truss 18 to 30 ins., c. to c., and on them lay a double course of diagonal planking, the upper course at right angles to the lower. Or, lay floor transoms at intervals of about 5 ft., and on them stringers, the latter carrying a single course of cross plank, or two diagonal courses crossed. Planks should be at least $1\frac{1}{2}$ ins. thick; if less, lay more courses.

Assuming a live load of 100 lbs. per sq. ft. for highway bridges, 3 by 10 in. floor joists spaced 30 ins., c. to c., will be safe up to 12 ft. clear width between trusses, or 3 by 12 ins. up to 16 ft. For the same load, floor transoms 5 by 10 ins., 5 ft. apart, will be safe up to 13 ft. clear distance between trusses, or 6 by 12 ins. up to 17 ft. On these transoms stringers should be 4 by 6 ins., spaced 18 ins., c. to c., for single, and 30 ins., c. to c., for double planking.

If the beam of the truss has not been designed to take transverse strains, the floor transoms must be placed at the panel points on the beam, or hung below them, as in Fig. 232. Such a transom must be strong enough to take the load on one span of the bridge. The stringers, spaced as above, must be increased in size for their increased length. If a queen-post truss, it will be necessary to introduce the diagonal counter braces which may be smaller than the struts. One must run through and the other be made in two pieces so that both counters may be in the same plane, Fig. 232.

119. The Fink truss, Figs. 220 and 221, is a superposition of king-post trusses. It is practicable in the inverted form only, but may be elevated on posts as shown in Fig. 221. In this case all the posts are best made of equal length to

form the supports of the roadway. A primary post supports the middle, which becomes a central support for two secondary trusses, and the two points supported by the secondary posts BB, become in turn supports for four tertiary trusses CC, and so on. The stresses in the primary truss are worked out as in paragraph 113. The stresses for secondary and tertiary trusses are worked out in the same way, taking $\frac{1}{2}$ the load on the bridge for the secondaries and $\frac{1}{4}$ for the tertiaries. The details of fastenings are shown in Fig. 220.

120. The Howe Truss (Fig. 226). This useful form consists of two parallel chords, usually continuous built-up beams, divided by posts in tension into equal panels, each of which has diagonals in compression. The upper chord is in compression, the lower in tension. Each chord is made up of three or more parallel timbers of uniform size, with lengths adapted to properly distribute the splices. The timbers are separated by the diameter of the largest rods so that the later may pass through the spaces. The main braces are one less in number than the pieces in the chord and abut, top and bottom, against angle blocks of metal or hard wood, triangular in section and extending entirely across the chord. Against these blocks the counter braces, one less in number than the main braces, also abut. The vertical rods of each post are equal in number to the main braces. The relative positions of members at the panel points are shown in Figs. 227 and 228. In permanent structures a cast-iron angle block is generally used. The ends of struts abut squarely against the ends of the block and are kept in place by tightening up the nuts on the rods. Iron angle blocks are formed to hold the braces in place even if slightly loose. When wooden blocks are used, cleats should be nailed on or dowels inserted in the ends of the braces for the same purpose. The timbers of the Howe truss are all square-sawn and have no mortises or tenons.

121. The stresses in a chord of a Howe truss are a maximum at the center and when the truss is loaded throughout its length. This maximum stress = the total load on the bridge \times span in ft. \div 16 times height of truss in ft.

The chord stress in the end panels will not exceed $\frac{1}{4}$ the load on the bridge unless the length of the panel is greater than its height, which should never be the case. Between these lower and higher limits the chord stresses vary, but not by equal increments. The change is more rapid near the ends and less so toward the middle. For wooden trusses, convenience in framing requires that all chord pieces have one dimension the same, and it is not customary to make more than one change in the aggregate chord sections. This is done by bolting extra timbers on each side of the lower chord over its middle third.

122. The stresses in the braces are greatest at the ends and least in the middle. The maximum stress in the end brace is $\frac{1}{4}$ the load on the bridge divided by the length of the post and multiplied by the length of the brace. It will not exceed $\frac{1}{3}$ of the total load on the bridge, unless the panel height is less than the panel length, which should never be permitted. The maximum stress in the middle brace will not exceed $\frac{1}{2}$ the total load on one panel of the bridge, divided by the length of the post and multiplied by the length of the brace. Between these limits the stresses in the braces vary uniformly.

123. The stresses in verticals are greatest at the ends and least in the middle. The maximum stress in an end rod will not exceed $\frac{1}{4}$ of the total load on the bridge. The maximum stress in a middle rod will not exceed $\frac{3}{4}$ of the total load on one panel. Between these limits the stresses in verticals vary uniformly.

The stresses in counter braces, commonly called counters, depend upon the ratio of live to dead load per unit of length, and the distribution of the live load on the bridge. With the live load uniformly distributed over the entire length, there are no stresses in the counters. For the bridge partially loaded, the maximum stresses in counters are in the center panels and diminish rapidly toward the ends.

Fig. 226

Fig. 227

Fig. 228

Fig. 229

Fig. 230

The assumption that the maximum uniformly distributed live load will not exceed the maximum uniformly distributed dead load per unit of length is safe for military truss bridges of 75 to 100 ft., or 6, 8, and 10 panels in length. Under this assumption, the 6-panel truss needs no counters.

The 8-panel truss requires counters in the panels adjacent to the center of $\frac{1}{4}$ the strength of the main diagonals in the same panels. No other counters are required.

The 10-panel truss requires counters in the same panels of $\frac{1}{2}$ the strength of the main diagonals. No other counters are required.

For a ratio of live to dead loads of 2 to 1 the 6-panel truss requires counters in the middle panels of $\frac{1}{2}$ the strength of the corresponding main diagonals; the 8-panel truss requires counters in the same panels of $\frac{2}{3}$ the strength of the main diagonals, and the 10-panel truss requires counters in the same panels of equal strength with the main diagonals.

For ratios greater than 2 to 1, and especially for rapidly moving live loads, the center counters should be equal to the main diagonals, and counters of half the size should be placed in the next panels toward the ends.

These rules apply principally to trusses in which the inclined members are of metal and for which the areas can be conveniently varied. In the Howe truss, convenience of framing has made it the usual practice to put counters of uniform size in all panels.

124. Dimensions for each of two Howe trusses of a single-track railroad bridge. Authority, Trautwine. Working stress of timber, 800 lbs. per sq. in. Working stress of iron, 12,500 lbs. per sq. in. The middle third of each lower chord must be reinforced by $\frac{1}{6}$ of the cross section given in the table.

TABLE XXVII.

| Clear span. | Rise. | Number of panels. | Upper chord. | | Lower chord. | | End brace. | | Center brace. | | Counter. | | End rod. | | Center rod. | |

| 25 | 6 | 8 | 3 | 5 x 6 | 3 | 5 x 12 | 2 | 5 x 8 | 2 | 5 x 6 | 1 | 5 x 6 | 2 | 1 3/4 | 2 | 1 1/2 |
| 50 | 9 | 9 | 3 | 6 x 9 | 3 | 6 x 14 | 2 | 6 x 9 | 2 | 5 x 8 | 1 | 5 x 8 | 2 | 2 | 2 | 1 3/4 |
| 75 | 12 | 10 | 3 | 6 x 12 | 3 | 6 x 14 | 2 | 6 x 11 | 2 | 6 x 8 | 1 | 6 x 8 | 2 | 2 3/8 | 2 | 1 1/2 |
| 100 | 15 | 11 | 3 | 6 x 14 | 3 | 6 x 16 | 2 | 8 x 12 | 2 | 6 x 10 | 1 | 6 x 10 | 2 | 2 3/4 | 2 | 1 3/4 |
| 125 | 18 | 12 | 4 | 6 x 14 | 4 | 6 x 16 | 2 | 9 x 14 | 2 | 6 x 12 | 1 | 6 x 12 | 2 | 3 1/4 | 2 | 2 |
| 150 | 21 | 13 | 4 | 8 x 14 | 4 | 8 x 18 | 3 | 8 x 14 | 3 | 6 x 10 | 2 | 6 x 10 | 3 | 3 | 3 | 1 1/2 |
| 175 | 24 | 14 | 4 | 10 x 16 | 4 | 10 x 20 | 3 | 8 x 15 | 3 | 8 x 10 | 2 | 8 x 10 | 3 | 3 1/4 | 3 | 1 3/4 |
| 200 | 27 | 15 | 4 | 12 x 16 | 4 | 12 x 20 | 3 | 9 x 16 | 3 | 8 x 14 | 2 | 8 x 14 | 3 | 3 3/4 | 3 | 2 |

The above dimensions will be safe for a double-track highway bridge of the same span, or for a single-track highway bridge of $1\frac{1}{2}$ times the span, the number of panels being increased one-half. Spans greater than 150 ft. should not be attempted in the field unless the difficulty of obtaining an intermediate support is very great.

The end posts and the upper chords and counters of the end panels of the Howe truss are not necessary and are frequently omitted. Fig. 231 shows the details of a 50-ft. truss so designed.

125. The safety of existing bridges may be tested by the rules for maximum stresses given above. Thus:

To determine the safe load on a bridge of two trusses of the dimensions given in the table for 100-ft. span.

Maximum chord stress = load \times span \div 16 times height of truss.

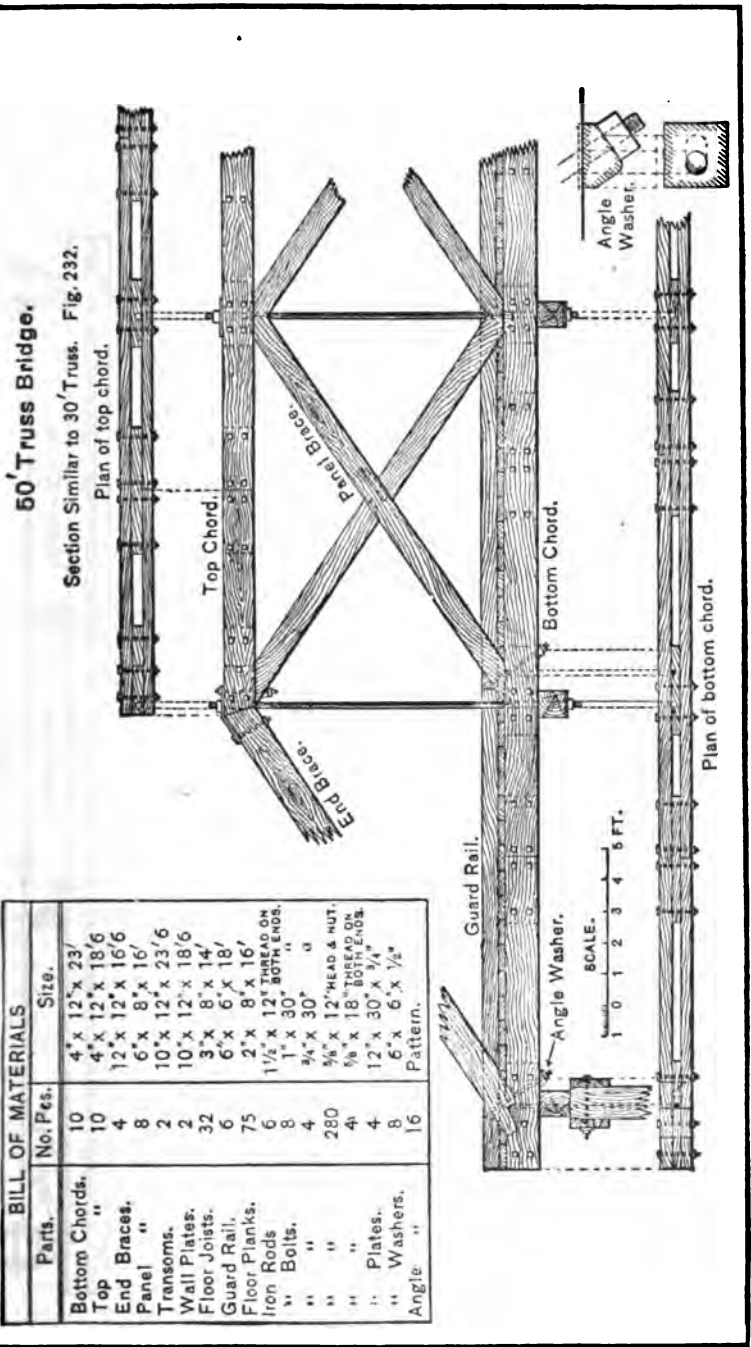

FIG. 231.

FIG. 223.

section of chord at middle = 288 sq. ins. At 800 lbs. per sq. in. the total g stress = 115 tons. Hence, $115 = \frac{\text{load} \times 100}{16 \times 15}$, or load = 276 tons, which by the span gives 2.76 tons load, live and dead, per lin. ft.

End brace, two 8×12 , or two 10×10 , $17\frac{1}{2}$ ft. long, working load, V, 35 tons, divided by length of post, 15 ft. = $2.33 \times$ length of brace, = 44 tons $\times 4$ = 176 tons total load, or 1.76 tons per lin. ft.

The verticals: The area of two rods $2\frac{3}{4}$ ins. diam. = 11.88 sq. ins. At 800 lbs. per sq. in., the total working stress = 74 tons $\times 4$ = 296 tons total load, or 2.96 tons per lin. ft. For a middle post, area of two rods $2\frac{3}{4}$ ins. diam. = 3.53 sq. ins. at 12,500 lbs. = 22.1 tons $\div \frac{3}{4}$ = 28 tons panel load, or 3.08 tons per lin. ft.

The value 1.76 tons for the end brace is the least and is the safe load of the truss. Compute the dead load per ft. and subtract it from 1.76 tons; the remainder will be the safe live load. In this case the safe live load is about 1.2 tons per lin. ft.

Pratt Truss (Figs. 229 and 230). The form and the distribution of materials are the same as the Howe. The disposition of materials in web members is reversed, the verticals being of wood and in compression and the diagonals of metal and in tension. The arrangement at panel points is modified accordingly. The chords are the same as for a Howe truss of the same span, and load.

The Pratt truss is frequently modified by giving its end panels the same form as in the 50-ft. truss, Fig. 231, the end posts, upper chords, and rods of the end panels being suppressed and a brace run from the end of the lower chord to the top of the upper one.

With Howe and Pratt trusses care must be taken not to introduce unnecessary strain by setting up the rods too tight. The upper chord should be made longer than the lower one for each 100 ft. of span; the excess to be divided equally among the panels. This prevents the upper chord becoming shorter than the lower when it is compressed and the lower one stretched under load. The effect when the bridge is light is to give the truss a slight upward camber.

Erection of Trusses. A scaffolding or false work must first be erected to hold the parts of the truss until they are assembled. The false work is ordinarily some form of trestle construction. The bottom chords are laid with their ends in place on the abutments, and leveled. The top chords are then raised on temporary supports, footing on the false work, to stand a few inches above their final ones, so that the web members may be slipped into place. The top chord is then lowered until its weight comes on the braces in the Howe, or the posts in the Pratt truss. The nuts are then turned, working uniformly along the entire truss, until the camber is developed and the middle of the truss rises, leaving its weight wholly on the abutments.

Completion of the Truss. The floor transoms are placed at the panel points. In the Howe truss they may hang by the rods below the lower chord, or rest on the upper chord if a deck bridge.

In the Pratt truss the transoms may be doubled, resting on the bottom or top chords on either side of the panel point and as near together as possible. The system is completed by stringers and planking, as in paragraph 118.

Truss bridges require lateral bracing to withstand wind pressure and vibration. It consists of a horizontal truss connecting the top chords and another connecting the bottom chords. The truss between the loaded ends should be proportioned by the foregoing rules for a load of 300 lbs.

per lin. ft. if a highway or 450 lbs. if a railroad bridge. The truss between the other chords should be proportioned for a load of 150 lbs. per lin. ft. for all bridges.

The lateral trusses may be of the Howe or Pratt type. If the Howe, the braces must be in the same plane, one solid and the other framed into it, like the counters of the queen-post truss. The ends of the braces must be held in place by cleats spiked or bolted to the chords, or if iron angle blocks be used, by flanges cast on their bottom edges.

If the Pratt type be adopted, the ends of the posts must be similarly secured. For the loaded chords the road transoms serve as posts of a Pratt truss, which may be completed by adding the iron ties and without boring the chords. The ends of the transoms are shaped as angle blocks.

Generally the Pratt type will be best for the loaded chords and the Howe for the other lateral.

Unless the main truss is higher than the required head room on the bridge, the roadway must be placed on the upper chords, or else the trusses must be steadied by braces from the floor transoms, made longer and extending outside the trusses for that purpose; Fig. 232.

SPECIAL FORMS.

130. Figs. 233 to 235 show a double bowstring truss which can be constructed of common boards and nails, or even with boards and pins. It does not possess advantages warranting its adoption when materials for standard trusses can be procured with equal convenience.

Lay out the truss by drawing on the ground two arcs of circles corresponding to the inner surfaces of the chords with a radius $2\frac{1}{2}$ times the length of the truss. Along these arcs drive stakes, around which bend the boards and nail securely to each other but not to the stakes. The boards are 1 by 12 ins.; the upper chord has 5 layers, the lower 6. The boards break butts and are nailed about every 4 ins. with 10d. nails; bolts or 6-in. spikes should also be driven through the lower chord at intervals of 6 to 12 ins. Bolts $\frac{1}{2}$ in. diam., set up tight, are the best.

The truss is divided into 10 panels by posts of 2 by 12 in. plank and tie-rods of $1\frac{1}{4}$ in. iron at each panel point. Main and counter braces of 2 by 12 in. plank are used in all the panels except at the ends, which are filled solid for about $4\frac{1}{2}$ ft. The chords are nailed to the blocks and the whole bolted through from top to bottom with 5 or 6 bolts at each end.

It will be found advantageous to cover the boards with a mixture of pitch and tar before they are nailed together to increase friction between them.

TABLE XXVIII.

131. Bill of materials required for two double bowstring plank trusses for each foot of span:

Lumber, 1 by 12 ins., 30 ft. B. M.
 Lumber, 2 by 12 ins., 12 ft. B. M.
 Lumber, 2 by 8 ins., 9 ft. B. M.
 Nails, 10d., 2.5 lbs.
 Nails, 20d., 1 lb.
 Spikes, 6 in., 1 lb.
 Iron rods, $1\frac{1}{4}$ ins. diam., 10 lbs.
 Iron bolts, $\frac{1}{2}$ by 6 ins., 3 lbs.

above quantities are approximate only, but suffice as a basis of estimate. Trusses built as described will carry a live load of 500 lbs. per ft. on a span of 100 ft. and proportionally more for shorter spans.

Roadway can best be carried on the top chord. The transoms should be supported by the posts. The middle one and the two on each side of it may rest on the chord. Those at $\frac{3}{10}$, $\frac{4}{10}$, and $\frac{5}{10}$ of the span from the middle side should be blocked up from the chord, 0.005, 0.010, and 0.018 of the span, respectively. This arrangement gives a camber of $\frac{1}{8}$ of the span. With roadway on top, the trusses must be cross-braced with 2-in. plank as indicated in Fig. 235.

It is necessary to keep the trusses up, as for example to get above high ground the roadway may be carried between or below them. If between, bolt transoms to the posts and extend them beyond the trusses far enough to receive steady braces, Fig. 232. The end transoms may rest on the abutments and the next ones to them on the lower chord. Stretch a line between the ends of the two which rest on the chord, raise this line at the middle post the amount of camber desired, and mark on each intermediate post the point where the line crosses it, which will be the top of the transom on that post.

Supporting the ends of the truss on posts or piers, the roadway may be carried at or below the bottom. The middle transom should be held firmly to the bottom of the chord. The next one on each side will be bolted to the chord through a block 0.006 of the span in thickness. These three transoms should extend beyond the trusses to receive steady braces. The third, and fourth transoms on each side of the middle will be hung below the chord by bolts or lashings, with clear intervals between bottom of chord and top of transom of 0.016, 0.038, and 0.062 of the span, respectively; this arrangement gives a camber of $\frac{1}{8}$ of the span.

Three floor systems described are shown in Fig. 234. If dimension timbers are not to be had for transoms, they may be made by nailing inch boards to the posts. If such timbers are used they must be set with the boards on edge and braced against lateral bending.

The lattice truss, Fig. 236, may be built entirely of 2 or 3 in. planks and pins. The latter will not be used if bolts can be had.

Disposition of material is clearly shown in the drawing. If there are pairs of planks the pairs must be in the position of braces and the single planks of counter braces. The planks are 2 or 3 ins. thick and 9 to 12 ins. wide, depending on the span. They are placed about $2\frac{1}{2}$ ft. apart, measured along the span. Two to four pins or bolts, depending on width of plank, are placed at each intersection. The chords are formed of planks or timbers, with an aggregate section determined by the general rule for trusses, paragraph 121, and pinned or bolted to the upper and lower edges of the lattice as indicated. If the roadway be on the lower chord, its upper edge must be so placed that a transom can pass through the lattice and rest on it.

Lateral bracing may be as described for other trusses, paragraph 129, and is very important, as a chief defect of the lattice truss is its lack of lateral resistance.

The lattice truss may be used for highway bridges up to 150 ft. span with a camber of $\frac{1}{8}$ of the span.

SUSPENSION BRIDGES.

In this type of bridge the roadway is hung to two or more cables and from bank to bank, with their ends attached to fastenings called anchorages. The cables are allowed to sag; the greater the sag the less the

Fig. 233.

Fig. 234.

tension, but the more the vibration. A sag of $\frac{1}{4}$ to $\frac{1}{12}$ the span is the best for field bridges. This fraction will be referred to as the ratio of deflection. The cables are usually passed over elevated supports called towers, to keep their lowest point above the roadway. The parts of the cables between the towers and the anchorages are called backstays. The connection between cables and roadway is by rods called suspenders, ties, or slings. The latter designation will be used. There is a sling at each end of each transom.

The principal features of a suspension bridge are indicated in Fig. 237.

134. In military field operations the suspension bridge is best adapted to light loads or long spans or the two combined. The construction of a suspension bridge for heavy traffic will usually be impracticable with field equipment. When materials for non-floating bridge must be carried with a column, the suspension type is best because it is lightest for a given capacity and its materials are divisible into small portions for transportation.

135. Data for calculating main cables for suspension bridges; authority, Trautwine:

TABLE XXIX

| Deflection in parts of the chord. | Length of main cable between towers in parts of chord. | Tension on all the main cables at either tower in parts of entire suspended weight of bridge and its load. | Tension at the center of all main cables in parts of entire weight. | Angle of direction of cables at piers = A = angle made by cable with horizontal. | Radius = deflection multiplied by— |
|-----------------------------------|--|--|---|--|------------------------------------|
| 1. | 2. | 3. | 4. | 5. | 6. |
| ☆☆ | 1.012 | 1.94 | 1.870 | 14° 55' | 28.625 |
| ☆☆ | 1.013 | 1.82 | 1.740 | 15° 57' | 25.000 |
| ☆☆ | 1.016 | 1.70 | 1.620 | 17° 6' | 21.625 |
| ☆☆ | 1.018 | 1.57 | 1.490 | 18° 33' | 18.500 |
| ☆☆ | 1.022 | 1.46 | 1.370 | 19° 59' | 15.625 |
| ☆☆ | 1.026 | 1.35 | 1.250 | 21° 48' | 13.000 |
| ☆☆ | 1.033 | 1.23 | 1.120 | 23° 58' | 10.625 |
| ☆☆ | 1.041 | 1.12 | 1.000 | 26° 33' | 8.500 |
| ☆☆ | 1.053 | 1.01 | 0.881 | 29° 45' | 6.625 |
| ☆☆ | 1.070 | 0.90 | 0.750 | 33° 41' | 5.000 |
| ☆☆ | 1.098 | 0.80 | 0.625 | 38° 40' | 3.625 |

The above table is based on the assumption that the curve of the main cables is a parabola, which is not strictly correct, though near enough for all practical purposes. For ratios of deflection in the table, the curve is practically the segment of a circle, the radius of which may be taken from the 6th column of the table.

136. Having the span and total live load on the bridge, to determine the total area of the cables, compute the dead load as in paragraph 4; add the live load to it and multiply the sum by the factor in column 3 of the table corresponding to the adopted ratio of deflection. Multiply this result by the factor of safety. The product will be the ultimate strength which all the cables together should have. This divided by the number of cables to be used gives the ultimate tensile strength of each one, and its size and composition may be determined from Table XXX. A lower factor of safety is admissible for wire than for most other materials, as it is very homogeneous in structure.

137. Composition of main cables of suspension bridges; factor of safety $2\frac{1}{2}$; live load 200 lbs. per lin. ft.; dead load 100 lbs. per lin. ft.; ratio of deflection $\frac{1}{4}$:

TABLE XXX.

| Span. | No. of strands of ¾-in. wire rope in main cables. | | Number of parallel steel wires in main cables. | | | | | | |
|--------------|---|--------|--|--------|--------|--------|---------|---------|---------|
| | Iron. | Steel. | No. 6. | No. 7. | No. 8. | No. 9. | No. 10. | No. 11. | No. 12. |
| <i>Feet.</i> | | | | | | | | | |
| 45 | 4 | 2 | 14 | 16 | 20 | 24 | 28 | 34 | 42 |
| 60 | 4 | 2 | 18 | 22 | 24 | 30 | 36 | 46 | 56 |
| 75 | 4 | 2 | 22 | 26 | 32 | 38 | 44 | 56 | 70 |
| 90 | 4 | 2 | 28 | 32 | 38 | 44 | 54 | 70 | 84 |
| 105 | 4 | 4 | 32 | 38 | 44 | 52 | 64 | 80 | 98 |
| 120 | 6 | 4 | 36 | 42 | 50 | 60 | 72 | 90 | 112 |
| 135 | 6 | 4 | 40 | 48 | 56 | 68 | 80 | 100 | 122 |
| 150 | 8 | 4 | 46 | 54 | 62 | 74 | 90 | 112 | 140 |
| 165 | 8 | 4 | 50 | 58 | 68 | 82 | 100 | 124 | 154 |
| 180 | 8 | 4 | 54 | 64 | 76 | 90 | 110 | 136 | 170 |
| 195 | 10 | 6 | 58 | 70 | 80 | 98 | 118 | 146 | 182 |

For any other ratio of deflection less than $\frac{1}{10}$, increase the tabular numbers by $\frac{1}{10}$ for each unit of the denominator above 7. For other loads, greater or less, increase or decrease the tabular numbers pro rata.

Example: How many No. 8 steel wires are required for the main cables of a bridge of 105 ft. span, ratio of deflection $\frac{1}{10}$, and a gross load, live and dead, of 600 lbs. per lin. ft.?

From the table, 105 ft. span, No. 8 steel wire, take 44. Add for change of ratio of deflection from $\frac{1}{10}$ to $\frac{1}{100}$, $\frac{1}{10}$, or $\frac{1}{2}$, making $58\frac{3}{4}$. For change from 300 to 600 lbs. load multiply by 2, making $117\frac{1}{2}$. Take next even number above, 118, which is the number required. If two cables are used, make each of 59 wires.

138. Tension on Backstays. If the cables are free to move on the tops of the towers, the tension on the backstays will always be the same as that on the cables. In this case the towers are stationary and should be massive.

If the cables are fixed to the tops of the towers, the tension on the backstays will be equal to, less than, or greater than the tension on the cable, accordingly as the slope of the backstay at the top of the tower is equal to, less than, or greater than the slope of the cable. It is usually best to make these slopes equal.

139. Stresses on the Towers. When the slopes of cables and backstays are equal, the stresses on each tower will be vertical and equal to the entire weight and load of the clear span.

When these slopes are unequal the pressure on the towers will be oblique. If the slope of the backstay is less than that of the cable, the tower will tend to revolve or slide toward the anchorage, and the pressure on each tower will be less than the weight and load of clear span. If the slope of the backstay is greater than that of the cable, the towers will tend to revolve or slide toward each other, and the stresses in each will be greater than the weight and load of clear span.

When possible, the horizontal distance from the foot of a tower to the corresponding backstay should be $\frac{1}{4}$ of the clear span or greater. In such case the tension on the backstay will not exceed that on the cable, and the pressure on the tower will not exceed the total weight and load of the clear span.

140. Making Cables. Three-quarter in. wire rope weighing 92 lbs. to the 100 ft. can usually be carried in lengths sufficient for practicable suspension spans, and will be the most convenient form.

If ordinary wire must be used, cables can be made by stretching wires, seven

Fig. 237

Fig. 238

Fig. 239

Fig. 240

Fig. 241

Fig. 242

Fig. 244

Fig. 240

is a good number, close together and under equal strain, and binding them together at intervals of a ft. with marline or wire. If short cables are required, time may be saved by making one of two or more times the length and cutting it in pieces.

141. Anchorages. These are of prime importance and must be secure and as rigid as possible. Their character will often be determined by accidents of the site. When the stumps of large trees are available they will usually be chosen. Ledge rock or large bowlders are the best, but require care and some skill in making the fastenings. Heavy staples leaded or wedged into holes drilled into the rock will usually be most convenient. If Portland cement can be had, a grouting will hold the iron firmly after it is set. See also description of deadman, paragraph 49.

142. Towers. Large trees will be used if available; otherwise trestles of timber; see paragraph 64. With high banks it may be feasible to start the cables from the surface of the ground or a short distance above it and provide approaches to a depressed roadway as indicated in Fig. 238. For low banks the roadway must be kept above the grade as in Fig. 239, the backstay carrying it beyond the tower.

The towers must be high enough to bring the supports of the cables called saddles above the level of the roadway at the tower by the desired deflection plus $\frac{1}{16}$ of the span, see paragraph 131.

143. Placing cables may be done by hauling across tops of towers, or by laying out cable from one anchorage to the other and raising the bights to the tops of the towers by shear poles, Fig. 240. The cable should hang in a bridle, Fig. 241. In the former case the cable will usually have to be slushed, which is an inconvenience in the subsequent operations.

The saddle should be a smooth, firm bearing, sufficient to take all the cables side by side. In binding the small cables together to form a larger one, adopt the most compact arrangement, the outside strands as they lie side by side on the saddle generally going into the upper half, and the central ones into the lower half of the complete cable; and note carefully that the arrangement is identical at all points, so that the strands do not ride or cross each other anywhere. The bunching should include the backstays, but need not be carried across the towers, leaving the strands flat on the saddles. Several groupings are illustrated in Fig. 242.

In either method of placing, the cables should be permanently fastened at one end and be connected with the anchorage at the other end by a luff tackle, to be used in adjusting the length. When the adjustment is finished, this end is made permanently fast and the tackle removed.

144. In clear weather the dip of the cables may be determined by direct observation. Fix the elevation of the bottom of the transom at each tower, and above it, a distance equal to $\frac{1}{16}$ of the span, fasten a batten or stretch a line horizontally. Adjust the cable so that its lowest point ranges between the battens or lines.

If wind, fog, or darkness prevents this operation, lay the cables out side by side before they are hoisted up, and put them under as uniform strain as possible. Mark each with a few turns of soft wire, as near the point where it will rest on the saddles as can be computed. The distance between marks on all the cables must be exactly the same. When the cables are in place, adjust them so that these marks coincide, and the deflections will be sufficiently uniform to develop the combined strength of the strands.

145. Lengths of slings depend upon the curve of the main cables and the camber of the roadway. The latter must be liberal in field suspension bridges. The cables will stretch, especially those made of wire rope, and the anchorages

and tower footings will give more or less. One-fiftieth of the span will usually be enough.

The lengths of slings are reckoned from the cable to the lower side of the transoms in a vertical line, Fig. 243. They must be determined in advance and adhered to during construction, regardless of the appearance of the bridge when partially done. When the roadway is completed the distortion will disappear.

From the following table the lengths of slings at intervals of $\frac{1}{100}$ of the span, starting from the middle, may be readily determined.

146. From the line corresponding to the ratio of deflection take out the successive factors and multiply each by the span in ft. The results will be the lengths of slings in ft. at the corresponding points on each side of the middle.

As the length of the middle sling is 0, the middle transom will rest directly on the cable. If transoms are not of same depth, allowance must be made for the difference.

Note especially that these tabular lengths do not include any fastenings. Be sure to add enough for that purpose, but when the fastenings are made see to it that the distance from cable to bottom of transom is precisely the corresponding tabular distance.

In this table allowance is made for a camber of $\frac{1}{100}$ of the span in two straight lines from the ends to the middle.

TABLE XXXI.

| Ratio of deflection. | Distance of sling from center in parts of span. | | | | | | | | |
|----------------------|---|--------|--------|--------|--------|--------|--------|--------|--------|
| | 0.05. | 0.1. | 0.15. | 0.2. | 0.25. | 0.3. | 0.35. | 0.4. | 0.45. |
| $\frac{1}{100}$ | 0.0036 | 0.0107 | 0.0209 | 0.0346 | 0.0516 | 0.0720 | 0.0953 | 0.1267 | 0.1529 |
| $\frac{2}{100}$ | 0.0034 | 0.0097 | 0.0188 | 0.0308 | 0.0456 | 0.0634 | 0.0840 | 0.1074 | 0.1336 |
| $\frac{3}{100}$ | 0.0032 | 0.0090 | 0.0172 | 0.0280 | 0.0412 | 0.0570 | 0.0752 | 0.0960 | 0.1192 |
| $\frac{4}{100}$ | 0.0032 | 0.0084 | 0.0160 | 0.0258 | 0.0377 | 0.0519 | 0.0684 | 0.0871 | 0.1080 |
| $\frac{5}{100}$ | 0.0030 | 0.0080 | 0.0150 | 0.0240 | 0.0350 | 0.0480 | 0.0630 | 0.0800 | 0.0990 |
| $\frac{6}{100}$ | 0.0029 | 0.0076 | 0.0142 | 0.0226 | 0.0327 | 0.0447 | 0.0585 | 0.0742 | 0.0916 |
| $\frac{7}{100}$ | 0.0028 | 0.0073 | 0.0135 | 0.0214 | 0.0308 | 0.0420 | 0.0548 | 0.0693 | 0.0855 |
| $\frac{8}{100}$ | 0.0028 | 0.0071 | 0.0129 | 0.0203 | 0.0292 | 0.0397 | 0.0517 | 0.0652 | 0.0803 |
| $\frac{9}{100}$ | 0.0027 | 0.0069 | 0.0124 | 0.0194 | 0.0278 | 0.0377 | 0.0490 | 0.0617 | 0.0759 |
| $\frac{10}{100}$ | 0.0027 | 0.0067 | 0.0120 | 0.0187 | 0.0267 | 0.0360 | 0.0467 | 0.0587 | 0.0720 |

147. **Form and Strength of Slings.** Wire will usually be the material used. The load on each sling may be taken as the total load, live and dead, divided by the number of slings. It is really somewhat less. Knowing the size of wire on hand, divide the number of wires of that size which are used or would be required for the main cables, Table XXX, by the number of slings. The quotient will be the number of wires of that size which should be in each sling.

The slings may be made single and fastened at top and bottom by loops around cable and transom, or, more conveniently, made of half size and double length, taking a round turn on the cable at the middle, bringing the two ends around the transom in opposite directions and twisting them together on top of it, Fig. 243.

A very useful attachment of wire to wood is made by means of a nail or spike partly driven beside the wire and the head bent over so as to embrace the wire like a staple. A staple, if available, is of course better.

148. **Construction of the Roadway.** A transom will hang in each pair of slings. On the transoms lay longitudinal stringers of number and size deter-

mined by the load, length of bay, and materials available, see paragraph 8. The stringers should be long and should lap 3 ft. or more and be firmly lashed or spiked together; the lap need not be on a transom, but is better near one. On the stringers the planks are placed and spiked down or held by side rails.

Place the first pair of slings on the cables, taking the turns loosely so that they will slide. Sling the first transom so that its bottom shall be the calculated distance from the cable measured along the sling. Fasten two stringers to it and push it out, the slings sliding on the cables, until the transom is in its proper position and the slings vertical. Crimp the turns at the top and place the second pair of slings and transom in the same way. Follow up with stringers and planks.

149. A hand rail should be provided, and a screen on each side of brush or other light materials will be useful.

150. Suspension bridges change their shape vertically and laterally from the live load and from wind pressure. Vertical distortions are referred to as undulations, and lateral ones as oscillations. Undulations result principally from changes in the moving load and to a less extent from the vertical component of wind pressure. Oscillations are caused principally by horizontal wind pressures and in a lesser degree by the moving load. Both must be kept within small limits. Undulations may be reduced by making the hand rail or balustrade fairly high and trussing it lightly, Fig. 244. Also by using deep stringers well lapped and fastened so as to be practically continuous.

Oscillations may be reduced by placing the cables farther apart at the towers and drawing them in at the center. This will affect the length of slings, but not seriously. Also by a lateral truss under the roadway, using the transoms for posts, and adding diagonal ties or braces. See paragraph 129.

Both undulations and oscillations may be controlled by guys attached to the roadway and carried inshore and up and down stream to secure fastenings.

151. **Railway Bridges.** With proper assumptions as to loads the foregoing rules for designing and proportioning the several types of bridges will give safe structures for railway traffic. See also paragraphs 66 and 115, and Table XXVII.

A railroad bridge should not be built on an incline if it can be avoided. The approaches at each end should be straight and nearly level for a distance equal to at least twice the maximum train length.

Foundations must be especially unyielding, as settlement is more troublesome than in other bridges.

For a single-track standard-gauge railway bridge the clear width between trusses or girders should be 14 ft. In double-track bridges the distance from c. to c. of tracks must not be less than 13 ft. No part of the truss may be less than 7 ft. from the c. of the nearest track at a height exceeding 1 ft. above the rail.

The clear head room must be 21 ft. above the base of the rail for a width of 6 ft. over each track.

Stringers are put under the rails and are best made in two or more pieces long enough to span two bays and breaking joints. The pieces are separated about 2 inches by blocks and well bolted together. Ties are placed 18 to 24 ins. c. to c., and every third or fourth one should be spiked to the stringers. A guard rail should be placed along the ends of the ties, and it is better to place under the tie a lighter stringer and bolt the guard rails to it.

PART III.

ROADS.

1. Military road making will, in most cases, be a question of repairing existing roads to make them temporarily passable, the work to be done in the shortest possible time. Labor is likely to be plentiful, though not the most efficient. Machinery and transportation will be scarce. Materials actually on the line or very near it must be used. To decide upon the best plan under such circumstances, and to carry it out most successfully, it will be helpful to have a general knowledge of the conditions which make good roads and those which make bad ones, and of the best methods of converting the latter into the former, or, in other words, of the principles of road construction. These principles are the same for all roads, though the practice resulting from their application may differ in military roads from that considered best for civil roads.

2. The supporting power of cohesive compacted earth, moist but not wet, is sufficient to bear without objectionable indentation the weights on hoofs and wheels which result from ordinary highway traffic. The supporting power of the same earth when thoroughly wet is only about $\frac{1}{10}$ as much, and is not sufficient to carry the weights on hoofs and wheels until the wagons have sunk to their axles and the animals to their bellies, when traffic becomes impossible. Between these extremes lie many gradations of good and bad roads.

3. Civil roads are also rated as bad when the surface, though hard, is rough, as when there are projecting bowlders or ledges of rock crossing the road, or stumps or roots in the way; and also when any of the grades exceed the limit at which a team can pull its own load.

As to roughness, its principal effect is to increase the wear and tear of vehicles and the discomfort of passengers, and to prevent a faster gait than a walk; hence it is of secondary importance for military traffic. As to gradients, it is to be remembered that army transportation is always in trains, so that teams can be doubled when necessary, and also that there is usually an ample supply of labor in reach so that loads can be broken. Within the limits of possible wheel transportation, steep gradients alone may delay military traffic, but can not stop it.

Extensive work for reduction of grades will rarely be worth while so long as the prevailing natural grades do not exceed 3° , and the maximum are short and not steeper than 6° . Rolling country, classed as decidedly rough, will be found within these limits.

For long grades, as in mountain roads, considerable work may be profitably expended in keeping prevailing grades within 2° , with a maximum of not more than 4° on short ones.

4. The paramount question to be dealt with will be the supporting power of the roadbed as affected by water. This supporting power will be a maximum when the soil is sufficiently damp to compact well and yet not wet enough to yield considerably under the pressure. It is not desirable to remove all the moisture from the soil, because if this is done it loses its compacting power, and any particles dislodged from cohesion to adjacent ones remain on the surface in a friable condition, refusing to reunite under pressure until moisture is supplied.

The supporting power of wet earth may be increased in two ways: first, by removing the surplus water and keeping it out, and, second, by introducing

rigid material, or a combination of materials, which will afford a proper bearing surface and so distribute the pressures as to reduce them below the supporting power of the wet soil. The application of methods involving one or both of these principles will constitute the bulk of military road work, whether of construction or repairs.

5. **Drainage.** The water to be disposed of in connection with any road is: that which flows toward the road from adjacent slopes; that which falls on the surface of the roadbed, and that which finds its way beneath the surface, commonly called ground water.

6. **Side Ditches.** Surface water flowing toward the road is intercepted and carried off by ditches along one or both sides of the road, according to the direction from which the surface water comes. If on one side only, the water is carried under the road—across it in some cases—and discharges down the slope, preferably in a gully or natural drainage line.

7. Drainage of the road surface takes care of the water which falls on the roadbed itself, and is effected by making the surface of the roadbed smooth and compact and giving it regular slopes longitudinally or in the direction of the road and laterally or toward the sides. The longitudinal slope is the grade, and the lateral slope is called the crown. The compacting or consolidation of the road surface reduces the rate of absorption of water, and the smooth regular slopes cause the rainfall to run off promptly. Compacted earth absorbs water slowly if the surface is not disturbed. By digging in a beaten road or footpath it will be found, even after a hard rain, that the ground is wet for a slight depth only. The surface stratum when wet seems to form an impervious coating which keeps the rest dry. If the surface is disturbed during the rain, as by traffic, the protection of the surface stratum is lost, and the water penetrates deeper. An earth road in constant use in wet weather will become muddy no matter how much attention is paid to drainage, but with proper drainage a road will not become muddy so soon, nor stay muddy so long, nor will the mud get so deep.

To maintain a road in good condition under traffic in wet weather it must be given a surface the supporting power of which is not diminished by moisture, so that the wetted surface is not disturbed by the traffic. Various kinds of such surfaces are formed artificially, and are called pavements. In addition to their qualities just described they also act in an important way in distributing the pressures from the wheels to the earth foundation. It has been noted that all binding materials lose their efficiency when absolutely free from moisture. As the distributed pressure on the ground surface can be borne by earth carrying more moisture, and as such earth underneath the pavement has a tendency to prevent the latter from becoming too dry, it is readily seen that where a road is covered with pavement it is possible to do harm rather than good by too much underdrainage.

8. The crown of an earth road should be 6 in. for a road of ordinary width. Theoretically the crown should increase with the grade, but this is an unnecessary refinement in practice. The convenience in construction of a fixed crown outweighs any advantages of a variable crown. If the grade is so steep that water flows too far along the road, causing scour in the wheel ruts, it is better to build low ridges across the road at intervals to turn the water to the side than to attempt to produce the same effect by a greater crown. The ridges may be wide and flat, amounting, in fact, to a reversed grade for a few feet, perfectly effective, and yet so gentle as not to materially disturb traffic.

The best distribution of the crown is to give $\frac{3}{8}$ of it to the outside quarters and $\frac{3}{8}$ to the inside quarters of the road. The resulting crown is nearly an arc of a circle. With inexperienced men it may be necessary to use a form for

a crown. Fig. 1 shows its construction. The upright forms a convenient handle, and may be provided with a plummet to level the gauge across the road.

9. Subdrainage is resorted to when it is desirable to lower the surface of the ground water. By the ground-water level, at any point, is meant the depth at which the soil becomes fully saturated. It is the depth at which water will stand in a well or pit. If it is 4 ft. or more below the surface, it will not affect the condition of a road in good soil. Ground water rises in wet and falls in dry weather. It probably rises when the ground is frozen, regardless of the rainfall.

If the ground water comes nearer the surface than 4 ft. its effect may be bad or not, depending upon the character of the soil and the elevation of the road. Generally, however, high ground-water level and poor soil for road making go together.

10. Subdrainage will not often be a feature of military road work, but when it is done it is best accomplished by a tile drain laid on one or both sides of the road under the side ditches, Fig. 3. The tile should be of the bell-and-spigot pattern, laid with open joints, the bell up grade. As water flows along the outside of the pipe as well as on the inside, it should be surrounded by porous, nonerosible material, such as broken stone or gravel.

On military roads substitutes for the tile must often be used. The essential is a continuous conduit into which water may percolate through the sides and along which it may flow with a relatively high velocity. Broken stone, plank, or layers of fascines or brush will do much good. Any form except a pipe or box tends to quickly choke up with fine silt washed into the interstices. This may be partly prevented by interposing a layer of filtering material such as straw, turf, grain sacks, etc., between the material of the drain and the surrounding earth, especially on the top. If turf is used, put the grass side toward the drain.

Side ditches act as subdrains to the extent of their depth. A free outlet is necessary for the efficient operation of subdrains and side ditches.

11. **Importance of Side Ditches.** It is obvious that the side ditches contribute to the improvement of a road in so many ways that they must be of great importance. They assist in every class of drainage and also offer the most convenient source for material to crown and raise the roadbed. Ample side ditching is the consideration of first importance in every road project, except in arid climates or very sandy soil.

12. **Form of Side Ditches.** The best form of side ditch is shown in Fig. 2. Its advantages are that it is favorable for a variable flow of water at relatively uniform velocity; that it does not fill up by caving or from the wash of earth from the road; that if a wagon is run into it accidentally or in an emergency no especial trouble follows, and that it furnishes earth enough to crown the road. This form is suited to a road which has ample width and is on good ground. If these conditions are reversed, the road narrow, and the ground wet, a ditch of the form shown in Fig. 3 will be better. It takes less space and is deeper. It will fill up more rapidly and require more work to keep it open. The form in Fig. 2 can be opened with scrapers. The form in Fig. 3 must be dug with shovels.

13. The slope of side ditches will usually be that of the road, though if the latter is less than 1 in 125, the slope of the bottom of the ditch should be increased by making it shallower at the upper and deeper at the lower end. A long ditch on a steady grade will do its work better if made gradually larger from the upper to the lower end. In all cases, the bottom should have a uniform or increasing grade to the outlet to prevent the formation of pools. Large springs near the road should be tapped below the surface and led into the side ditches.

Fig. 1

Fig. 2

Fig. 3

Fig. 4

very steep hills roads are often badly damaged by the scour of water in the side ditches. To prevent this, the ditches may be roughly or may have weirs of logs and brush or stone built across them at intervals. These dams should not be tight enough to hold any water permanently. Or, the ditch may be stepped, paving the steps at top and bottom, to prevent scour by the overfalls.

Embankments. Raising the surface of a road or carrying it on an embankment produces the same relative effect, so far as saturation of the soil is concerned, as lowering the ground water. Roads may also be carried on embankments to reduce grades. This is especially advantageous when a cut is made at the top of a hill and the material can be placed in the roadbed at the same level so as to raise it materially. The haul is short and down hill, and the movement of the earth accomplishes a double benefit in reducing the grade by grading the road at the top and raising it at the bottom.

When there is no near-by cutting, the material for embankments must be obtained in areas outside of the line. Excavations made for this purpose are called borrow pits. If the material along the roadbed is fit for use, the borrow pits are borrowments of the side ditches. The superior convenience of this arrangement determines its use in many cases when the material is poor. It is indeed true that the material from side ditches cast up on an unimproved road and then surfaced and compacted will not make the road temporarily better than it was before.

Embankments should have a top or crown at least 5 ft. wider than the existing roadway, and should have side slopes not steeper than $1\frac{1}{2}$ to 1, unless the material stands naturally at a steeper slope. An allowance for settlement should be made of about $\frac{1}{10}$ the height. If the embankment is put up in such a way as to be compacted by traffic during its construction, this allowance for settlement may be considerably reduced.

Cuttings. Excavations on the line of the road may be made either to correct extreme elevations and grades or to give a level surface for the roadway. In the former case they are usually called cuts, and in the latter side cuttings. Sometimes cuts and fills, since the material excavated is usually used to make an embankment to carry part of the road, Fig. 4.

The bottom will have a bottom width sufficient for the roadbed and narrow side ditches. The top width will depend on the depth of the cut and slopes of the side slopes. Side slopes in earth will usually be $1\frac{1}{2}$ to 1. In rock they may be steeper; in sand and in some clays they must be flatter. In northern latitudes the slopes are sometimes made with very flat slopes to prevent them from drifting in snow.

In side cuttings the same remarks apply so far as the upper side is concerned.

The embankment may be made, as indicated in Fig. 4, to prevent the material from sliding bodily down the hill. Stepping of the slopes under the fill is a good rule for heavy embankments where there is likely to be a good deal of sliding or slumping against them from above. On ordinary sidehill slopes and with ordinary embankments stepping is not necessary. On very steep and unstable slopes it will be better not to cut at all, but to make the fill on the natural slope with earth brought from a distance. As the embankment in a cut and fill settles, it is best to make it higher at the start than the floor of the cut, and to arrange for all the drainage to go into the side ditch on the uphill side.

If the face of the cut presents two materials, a pervious one above and an impervious below, as sand and clay, it may be necessary to cut a drain in the cut at the junction of the two.

Retaining Walls. This term is here applied only to walls which are built to support made ground, and will include all devices for giving a

vertical face to such ground whether of masonry or not. For military fieldwork, the easiest and quickest will usually be preferred to the best.

A crib of logs or timbers (see Bridges) may be made and filled with earth or stone and filling deposited against it. Such a crib should be half as wide as it is high. For stiff soils the rear wall of the crib may be omitted and the front one held in place by logs running back into the bank, Fig. 5. These logs may be replaced by cables made fast to posts. This construction can best be applied when the cables can be carried back to solid ground, Fig. 6.

Vertical posts with their feet let well into the ground and the tops anchored by either of the above methods may support horizontal planks, which in turn support the fill, Fig. 6. Constructions in timber for this purpose are usually called bulkheads.

Masonry retaining walls should have an average thickness of $\frac{1}{4}$ to $\frac{1}{3}$ their height above the ground, the former for good rubble laid in cement mortar, the latter for dry rubble. The thickness may be the same from top to bottom, or it may be greater at the bottom and less at the top, the average remaining the same. If the wall is high, the latter section should be adopted, as it requires less material for a given height and strength. Dry rubble must be of large stones fairly well fitted together. Whether with or without mortar, it is desirable to avoid through horizontal joints. Some stones should be so placed as to lie partly in two adjacent courses, acting as dowels to prevent the upper part of the wall from sliding along the joint between the two courses. Walls should be built with a batter on the front from $\frac{1}{2}$ to 1 in. to the foot, as they will always move out a little at the top, and, if originally built plumb, will then overhang and look unsafe.

Especial attention must be given to the character of the foundation at the foot of the front face. A trench must be excavated deep enough to get to a firm bearing at this point. The front of this trench should be kept as solid as possible to form a support to the wall against sliding on its base, Fig. 7. If the wall yields to the pressure against it, it will most probably revolve around the toe, and its entire weight will come on the front edge of the foundation trench, which must be able to support the weight or the wall will overturn.

17. Culverts. An inclosed conduit for passing drainage under a road is called a culvert. The distinction between bridges and culverts is vague. Some small bridges are often called culverts, and some large culverts have been called bridges. If the traffic is borne directly on the top or roof of the conduit, it must be designed as a bridge, and may be called a bridge, no matter what its length or height. If a considerable thickness of the roadbed passes over the conduit so that water may stand above it at one end and pass through under pressure, the structure may properly be called a culvert.

18. The area of waterway required can not be determined by any rule. It depends upon the maximum rate of rainfall, the kind of soil, whether rocky, sandy, clayey, etc., and the slope of the surface and its condition, whether cultivated or not, timbered or not, frozen or not, etc.

If the culvert conveys the flow of a side ditch under the road, its capacity should be equal to that of the ditch. The discharging capacities of channels of different forms are to each other as the squares of their areas divided by their surface widths; thus, the area of the side ditch in Fig. 3 is $3\frac{1}{2}$ sq. ft. The area squared = 12.25. The surface width is $2\frac{1}{2}$ ft.; hence the area squared divided by the width = $12.25 \div 2\frac{1}{2} = 4.9$. To find the dimensions of a rectangular conduit of equal capacity, assume the width $1\frac{1}{2}$ ft. Then the area squared divided by $1\frac{1}{2} = 4.9$; hence, the area squared = 7.3, or the area = 2.7; the depth equals the area divided by the width = $2.7 \div 1.5 = 1.8$; hence a conduit of equivalent section will be 1.5 by 1.8 ft.

Required, the size of a circular conduit equivalent to the side ditch. Divide the equivalent number 4.9 by 0.616, and take the cube root of the quotient, which will be the diameter of the circle; thus, $4.9 \div 0.616 = 8$; the cube root of $8 = 2$, which is the diameter of the equivalent circular conduit.

These relations are true only when the water has a good approach to the culvert and free discharge from it, and when the fall of water surface from the upper to the lower end of the culvert is not less than the fall of the ditch in the same length. These conditions can ordinarily be secured in construction. In fact a considerably greater fall can usually be obtained through the culvert than exists in the side ditch, so that areas computed by the rule will usually be in excess.

When the drainage to be handled is that of a natural drainage line, estimate as well as can be done the area and surface width of the maximum cross section of flow, and convert it into the equivalent regular section by the rule. If the conversion gives a size larger than can conveniently be constructed, consider the possibility of giving a greater fall through the culvert. The area of the culvert may be reduced as the square of the slope increases. If twice the fall of the natural flow can be obtained, one-fourth the culvert area will answer.

PART V.

FIELD FORTIFICATION, INCLUDING MINING AND DEMOLITIONS.

1. Fortification is the art of increasing by engineering devices the fighting power of troops occupying a position. These devices have for their object to increase the effect of the fire action of troops protected by the fortifications and their mobility on the field, or to diminish the effect of the fire action of the assailant and his mobility.

2. Field fortification deals with the preparation of such devices of a temporary character for immediate—not permanent—use, in a position which derives its tactical value from the incidents of a pending campaign and which may lose that value at or before the close of the campaign.

3. The principal classes of field fortification devices are:

Those which produce an unobstructed field of fire in front of the line of defense—clearings, demolitions, grading.

Shields or shelters, which protect the defender from the assailant's fire—trenches, galleries, redoubts, blockhouses, etc.

Masks, which conceal the defender from the assailant's view—plantations, embankments, screens, etc.

Obstacles, by which the advance of the assailant is retarded—abatis, slashings, entanglements, etc.

Facilities for communication for the defender—roads, bridges, telegraphs, etc.

Obstructions to communication of the assailant—destruction of bridges, obstruction of roads, obstacles, etc.

Many devices fall into more than one of the above categories.

4. Field fortification may be divided into hasty intrenchments, deliberate intrenchments, and siege works. Hasty intrenchment includes devices resorted to by troops upon a battlefield to increase or prolong their fighting power, usually constructed in the presence of the enemy and in haste. Deliberate intrenchment comprises works constructed by troops not in line of battle, for the protection of depots, lines of communication, supply, or retreat, etc. As they are usually intended to enable a small force to resist a much larger one, they are more carefully designed than hasty intrenchments and have greater defensive strength. Siege works comprise devices used by besiegers and besieged in the attack and defense of strong fortifications, and especially those devices which enable troops to advance under continuous cover.

The lines of division of the three classes are not definite. Some devices may belong to more than one class, and a work begun in one class may be merged into and be completed in another.

5. Cover. Protection from fire or view is usually called cover. Protection from fire is divided into horizontal and overhead cover. Horizontal cover gives protection against direct or horizontal fire. It usually takes the form of a shot-proof barrier, vertical or nearly so. Overhead cover gives protection against indirect or high-angle fire, and against the fragments of shells and shrapnel bursting overhead. It ordinarily takes the form of a shot-proof barrier, horizontal or nearly so. Overhead covers are often referred to as bombproofs or splinter proofs—the latter if they are light, but proof against rifle fire or fragments of shell or shrapnel, the former if they are strong enough to resist the curved and vertical fire of siege guns and mortars. The term

splinter proof is also applied to horizontal cover thick enough only to stop fragments of shell or shrapnel.

6. Profiles. A profile is a section of any cover made by a vertical plane perpendicular to its general direction or practically parallel to the direction of fire against and over it. Fig. 1 is a typical profile on which the names of the component parts are indicated.

In dimensioning a profile the plane of site (supposed horizontal) is taken as the plane of reference. The distances of points of the profile from this plane are stated in feet and fractions—those above with the plus sign and those below with the minus sign. These quantities are inclosed in parentheses and are called references. Generally speaking, the plus quantities relate to embankments, and the minus quantities to excavations. If the site is not horizontal the plane of reference is assumed to pass through a point of the site vertically below the middle point of the interior crest.

7. Command has reference to difference of elevation; a higher point commanding a lower one; the latter commanded by the former. "The command," used without qualification, means the height of parapet, or the elevation of interior crest above plane of site. The degree of command of one point over another may be expressed by the difference of elevation in feet, or, better, by the gradient of the line joining them.

The relief of a parapet is the elevation of the interior crest above the lowest surface immediately in front—the bottom of the ditch, if there is one. With no ditch and a level site, the relief and the height of parapet or command become the same.

The clear height behind the parapet will be referred to as vertical cover. It is the elevation of the interior crest above the bottom of the trench, or above the natural surface if there is no trench.

By the thickness of a parapet is meant the horizontal distance between the tops of the interior and exterior slopes. It is used as a measure of the amount of horizontal cover.

8. The principal conditions which determine the form of a profile of horizontal cover are the following:

The interior slope or breast height should be nearly vertical, and its height must correspond to one of the adopted firing positions, i.e., lying, kneeling, or standing.

The thickness is regulated by the kind of fire against which protection is desired, as rifle, field, or siege artillery, and the range.

The superior slope should have an inclination such that fire over and parallel to it will sweep the ground in front. One-sixth has been adopted as standard.

The exterior slope and the sides of trench and ditch should be as steep as the material of which they consist will stand. The banquette slope, if long, should be cut into steps to facilitate movement over it.

The quantity of trench excavation and of embankment should be nearly equal to minimize labor. This applies only to small parapets in which all the excavation is in a trench. For heavy parapets, labor is saved by making the trench supply the inner part and taking the outer from a ditch.

The command should usually be kept as low as possible, for better concealment. For the same reason all sharp angles and hard lines should be avoided.

The thickness of ordinary earth required to resist penetration at usual battle ranges is 3 ft. for rifle fire, 4 to 6 ft. for field guns, and 15 to 20 ft. for siege guns. It should be remembered that any protection is better than none. Mere concealment from view by a screen wholly inadequate to resist penetration will, for rifle fire especially, greatly reduce the casualties, since the enemy's fire will be less rapid and less accurate if he can not see his target.

Figs. 2 to 10 show profiles of horizontal cover from the skirmisher's trench to a redoubt to resist artillery.

9. Profiles to Resist Rifle Fire. The skirmisher's trench, Fig. 3, gives cover to a man lying down. The height of parapet should not exceed 1 ft. A trench of this profile, $2\frac{1}{2}$ ft. front, can be constructed in soft ground in 20 minutes or less. If under fire, the trench can be constructed by a man lying down. He can mask himself from view in 10 or 12 minutes and can complete the trench in 40 to 45 minutes. A good method of working is to dig a trench 18 ins. wide back to the knees; roll into it and dig 12 ins. wide alongside of it and down to the feet; then roll into the second cut and extend the first one back.

For troops in the main line of resistance the kneeling trench, Fig. 4, is the simplest. The width at bottom is not less than $2\frac{1}{2}$ ft.—preferably 3 ft.—and the relief is 3 ft., the proper height for firing over in the kneeling position. This trench can be constructed in soft ground in 40 to 50 minutes.

The standing trench, Fig. 5, has a bottom width of 3 to $3\frac{1}{2}$ ft. and relief of $4\frac{1}{2}$ ft. This is proper firing height for men of average stature. Short men may gouge out the superior slope a little or throw some earth under their feet. The standing trench can be excavated in soft ground in 2 to $2\frac{1}{2}$ hours. The kneeling trench can be converted into the standing in about $1\frac{1}{2}$ hours.

The standing trench does not give complete cover to men standing erect in it, and the next stage of development is a passageway executed in the rear of the trench not less than 6 ft. below the interior crest. This forms the complete trench, Fig. 6, which can be constructed in soft ground in 4 to $4\frac{1}{2}$ hours, placing all the material in the parapet. The height remaining the same, this extra material all goes to increased thickness, which, if rifle fire only is considered, becomes greater than is necessary. In this case some labor and time may be saved by wasting the excavation from the complete trench in the rear.

Fig. 7 shows the foregoing profiles superposed. Corresponding areas of embankment and excavation are similarly shaded. It is seen that work may proceed progressively from the first to the last, converting each into the next in order without handling any of the material twice.

10. Profiles to Resist Field Guns. The angle of fall of field artillery projectiles at 3,400 yds. range is 11° . The angle of dispersion of shrapnel is 14° , which makes the maximum angle of fall of the bullets 18° or 1 on 3. Bursting charges of high explosives will in the future greatly increase this angle, probably to a degree which will require continuous overhead cover.

A profile to resist shrapnel only is shown in Fig. 8. The thickness is 4 ft. and the relief such that a shrapnel fragment grazing the interior crest with an angle of fall of 1 on 3 will clear the heads of men kneeling or sitting in the trench. This profile may be formed by enlarging the trench and parapet of Fig. 6. It can be executed in soft soil in 4 to $4\frac{1}{2}$ hours. The small area shown in broken shading must be handled a second time.

If liable to be exposed to a prolonged attack of field guns a parapet should be proof against their shells. This requires 9 ft. of ordinary earth, and a suitable profile is shown in Fig. 9. The additional earth is taken from a ditch, and with working parties in ditch and trench this profile can also be executed in 4 to $4\frac{1}{2}$ hours.

11. Special Profiles. The advantages of the normal profiles above described are that they produce a given cover with the least expenditure of time and labor, and that the first protection secured can be utilized as partial cover while enlarging and strengthening it. The disadvantages are that the effective cover is restricted to a narrow zone immediately in rear of the parapet, and that in wet ground or wet weather it is difficult to keep the trench reasonably dry. More complete concealment than is afforded by the normal profile is sometimes very desirable.

The normal profile may be modified in various ways to meet local conditions. The cover may be all in embankment and earth may be taken from a ditch or borrowed at a distance, Fig. 10. In this form the command is equal to the relief and the protection extends to a greater distance in rear. It may be used when the conditions of the site call for more command or the character of the soil precludes a trench. A trench is not feasible in very wet soil, while a ditch, though more difficult to dig, is better when done for mud or water in the bottom.

The cover may be all in excavation, Figs. 11 and 12. This form was used by the Boers, and by the Spanish in front of Santiago. The undercutting was peculiar to the Boer trench. This form may be made completely invisible. It is practicable only when the natural surface has sufficient command and when the ground to be swept is also a general concave; when the soil is stiff but workable, porous and dry to a considerable depth. If there are folds of ground, bushes, woods, or other means of concealing it, the excavated earth may be scattered on the ground; if not, it must be carried away, or thrown into irregular mounds on the rear side, concealed by making them resemble the foreground.

In an inclosed or partially inclosed work for a stubborn defense of the ground, the parapet must be heavy enough to resist siege guns, the relief must be considerable to resist assault, and men on any part of the parade must be screened from view. A profile shown in Fig. 13 results. By preparing the counterscarp as a firing crest a double tier of infantry fire is obtained. Good communication, but easily interrupted, must be provided from the ditch through the parapet to enable the front line to retreat when too hard pressed, Fig. 14.

If the presence of water or hard material makes only shallow excavation practicable, the trench and ditch must be widened. The parapet must be higher by the difference between normal and actual depth of trench, so that more material must be handled and it must be moved farther.

For example, assume a parapet 6 ft. high with a sectional area of 60 sq. ft., to have a vertical cover of 10 ft. This might be dug from a trench 4 ft. deep and 15 ft. wide, or from a trench 10 ft. wide and a ditch 5 ft. wide by 4 ft. deep. In soil which can be dug to 2 ft. deep only, the parapet would have to be 8 ft. high to give 10 ft. vertical cover, and its area for the same horizontal cover would be 95 sq. ft., which would require excavating 2 ft. deep and $47\frac{1}{2}$ ft. wide. The quantity of earth to be handled is greater by more than half and it must be carried, on an average, more than twice the distance.

12. Trenches are classified as firing, communicating, and cover trenches. The latter are used to shelter troops exposed to fire and not in action, as supports and reserves. They differ from firing trenches mainly in requiring no command. Communicating trenches connect firing and cover trenches and offer protected passage between them. Concealment from view is the principal requisite, as the enemy can not afford to sustain a fire on such trenches and the exposure in passing through them is to chance shots only. The important point in cover trenches is safety; it is very bad to have men hit in these trenches. They will be built with overhead cover, when necessary, to secure this condition.

Trenches are sometimes classified also as offensive and defensive, the former adapted to give exit over the parapet for the forward movement, and the latter not so adapted. Skirmisher's and kneeling trenches are offensive; standing and complete trenches are defensive, unless steps are made to facilitate mounting the parapet. Cover trenches will usually be of the same character as the firing trench. If exposed to artillery fire, cover trenches should be roofed if possible. Fig. 15 shows a plan of firing trench, cover trench, and communicating trenches, developed as a result of experience in South Africa. Fig. 16 is a section of a communicating trench. If the enemy's fire is all from one side, but one bank is needed, and all earth should be thrown on the exposed side.

Firing Trench

Fig. 17 is a section of an open cover trench and Fig. 18 of a closed one. This section may also be used for communicating trenches. Fig. 19 indicates an arrangement suitable when the digging is easy and the ground permits the cover trench to be dug close in rear of the firing trench. Fig. 20 shows a disposition to permit the use of a natural depression as a cover trench. Fig. 21 shows a typical form of cover for reserves or supports on a reverse slope.

13. Head cover is the term applied to any horizontal cover which may be provided above the plane of fire. It is obtained by notching or loopholing the top of the parapet so that the bottoms of the notches or loopholes are in the desired plane of fire. The extra height of parapet may be 12 to 18 ins. and the loopholes may be 3 to $3\frac{1}{2}$ ft. center to center.

Head cover is of limited utility. It increases the visibility of the parapet and restricts the field of fire. At close range the loopholes serve as aiming points to steady the enemy's fire and may do more harm than good at longer ranges. This is especially the case if the enemy can see any light through the loophole. He waits for the light to be obscured, when he fires, knowing there is a man's head behind the loophole. A background must be provided or a removable screen arranged so that there will be no difference in the appearance of the loophole whether a man is looking through it or not. Head cover is advantageous only when the conditions of the foreground are such that the enemy can not get close up.

Notches and loopholes, Figs. 22-24, are alike in all respects, except that the latter have a roof or top and the former have not. The bottom, also called floor or sole, is a part of the original superior slope. The sides, sometimes called cheeks, are vertical or nearly so. The plan depends upon local conditions. There is always a narrow part, called the throat, which is just large enough to take the rifle and permit sighting. From the throat the sides diverge at an angle, called the splay, which depends upon the field of fire necessary.

The position of the throat may vary. If on the outside, it is less conspicuous but more easily obstructed by injury to the parapet and more difficult to use, since in changing aim laterally the man must move around a pivot in the plane of the throat. If the material of which the loophole is constructed presents hard surfaces, the throat should be outside, notwithstanding the disadvantages of that position, or else the sides must be stepped as in Fig. 24. In some cases it may be best to adopt a compromise position and put the throat in the middle. Fig. 24. Figs. 25 to 28 show details and dimensions of a loophole of sand bags.

A serviceable form of loophole consists of a pyramidal box of plank with a steel plate spiked across the small end and pierced for fire. Fig. 29 shows a section of such a construction. It is commonly known as the hopper loophole. The plate should be $\frac{3}{8}$ in. thick if of special steel; or $\frac{1}{2}$ in., if ordinary metal. Fig. 30 shows the opening used by the Japanese in Manchuria and Fig. 31 that used by the Russians.

The construction of a notch requires only the introduction of some available rigid material to form the sides; by adding a cover the notch becomes a loophole. Various methods of supporting earth will be described under "Revetments." Where the fire involves a wide lateral and small vertical angle, loopholes may take the form of a long slit. Such a form will result from laying logs or fascines lengthwise on the parapet, supported at intervals by sods or other material, Fig. 33, or small poles covered with earth may be used, Fig. 32.

14. **Overhead Cover.** This usually consists of a raised platform of some kind covered with earth. It is frequently combined with horizontal cover in a single structure, which protects the top and exposed side. The supporting platform will almost always be of wood and may vary from brushwood or light poles to heavy timbers and plank. It is better, especially with brush or poles.

Fig. 31

Fig. 33

to place a layer of sods, grass down, or straw, or grain sacks over before putting on the earth, to prevent the latter from sifting through.

The thickness of overhead cover depends upon the class of fire protection is desired, and is sometimes limited by the vertical space since it must afford headroom beneath, and generally should not be less than the nearest natural or artificial horizontal cover. For splinter proof cover of earth 6 to 8 ins. thick on a support of brush or poles strong enough to hold it up will suffice if the structure is horizontal. If the front is higher than the rear, less thickness is necessary; if the rear is higher than the front, more is required. For bombproofs a minimum thickness of 6 ins. of timber or 12 ins. of earth is necessary against field and siege guns, or 12 ins. of timber or 24 ins. of earth against the howitzers and mortars of a heavy siege train.

In determining the area of overhead cover to be provided, allow 100 sq. ft. per man for occupancy while on duty only, or 12 sq. ft. per man for occupancy not of long duration. For long occupation 18 to 20 sq. ft. per man should be provided.

Figs. 34 to 43 show a variety of the most usual types of overhead cover.

In a work of high command, especially if the earth is scarce and timber plentiful, it may be found that the construction of overhead cover will involve less time and labor than the corresponding work of embankment. In such cases bombproofs should be introduced at suitable points, regardless of the number of men to be sheltered.

15. Trace. In field fortification the term trace usually designates the horizontal projection of the interior crest. If the interior crest were to be a straight line (Reconnaissance), and the traverse plotted on paper or on a map, the line would be the trace. As a general rule the trace of a parapet will follow the line of best natural cover or those which determine the strongest natural cover. In practice, it usually happens that the troops are located with a view to the full advantage of the features of natural strength, and the fortification is thrown up where they are to give them additional protection.

The interior crest should be horizontal, and hence the crest should follow a contour. Generally, a broken line will approach the crest closely enough and will be easier to lay out and construct. If the crest is not straight, the trace should curve also. Angles must be rounded off to make them less conspicuous, and at the beginning and end of a trench the crest should gradually rise and the parapet fall to nothing for better concealment.

The particular contour to be chosen depends upon local conditions. A section or profile of a ridge perpendicular to the general direction of the front is called the topographic crest. The summit of the ridge is called the topographic crest. The crest corresponding to the point M is the one from which all the ground in front is seen and reached by fire and is called the military crest. The sky line is the line in position. From the point G the sky line is at D. From E the sky line is at F.

In locating a line of trench, it is important—

- (a) To avoid a sky line;
- (b) To occupy the military crest or a line in advance of it, and
- (c) To preserve communication under cover with the rear.

If the ridge is steep and is intersected by ravines or covered by a line of trees through which men could move under cover, a position near the crest, as G, Fig. 44, might be better, as a plunging fire, besides being more difficult to deliver, is not so effective as a fire parallel to the crest. The crest line would not be the main line of resistance and would not as a rule be forced. A reserve line should be constructed on the military crest for the purpose of withdrawing the men from the front line under cover when it can no longer be held.

16. Kinds of Trace. Fieldworks are classified by the form of their trace into open, half-closed and closed works. An open work is one affording cover on the side of the enemy's approach only, with no preparation to resist flank or rear, attack. It may consist of a line or of lines disposed in a geometrical figure. A line of trench, like a line of men, depends upon adjacent parts of the line to protect its flanks. Ends of a line retired, as in Fig. 45, give a fire in front of adjacent trenches for flanking support.

Lines of strong profile have a dead space in the ditch or close in front of the parapet which, if the work is to stand assault, must be swept by flank fire. Adjacent works may be made to bear on this ground, or a line may be made self-flanking by giving it the trace shown in Fig. 46. The long lines may be 200 to 300 yds. long or even longer. The short lines should not be less than 12 yds. long and their crests should be held lower than the rest. Lines are always in the class of open works.

The dead space may be avoided by adopting a form of profile called the triangular, shown in Fig. 47. The disadvantages of this profile are the additional labor of construction, the diminished thickness of the upper part of the parapet, and the comparatively slight obstacle to escalade presented by the flatter slope. A flanking fire will usually be preferred to the triangular profile.

17. A redan consists of two lines called faces, *ab* and *ac*, Fig. 48, which make an angle of about 60° . This angle is called the salient; its bisecting line *ad* the capital, and the line *bc* the gorge. The redan is mainly used to secure a flanking fire along a line of parapet or a cross fire on important ground.

The exterior angle at *a* between the faces prolonged is dead space which must be denied to the enemy by obstacles or covered by fire from adjacent works, or the angle may be truncated, as shown by the full line in Fig. 48. Such a disposition is a *pan coupé*. The *pan coupé*, if short, can deliver but a small volume of fire. The truncation may be made by a broken reëntrant line, as shown dotted in the Fig. This form is called a priest cap. A redan is usually open, but may be made a half-closed work by placing obstacles across the gorge.

18. A lunette, Fig. 49, consists of four lines, two of them, *ab* and *ac*, called faces, and the other two, *bd* and *ce*, called flanks. The angles at *b* and *c* are called shoulder angles. The salient, capital, and gorge are as in the redan. The salient angle is at least 120° , which gives an effective fire on every part of the foreground and a good flanking fire as well.

The lunette is the simplest trace adapted for use in an isolated work. It may be open or half closed. In a half-closed work, either redan or lunette, the gorge defense may consist of obstacles or of a low trench, or of the two combined. In any case, a road must be left through it for communication. This road may be closed by a gate or removable barricade, or may be swept by fire from a short trench inside the gorge.

A gorge trench should have a double parapet, the front one serving as a *parados* to protect men in the trench from shots coming from the main line and also as a firing line to command the interior of the lunette in case the enemy gets in over the front. The gorge profile, Fig. 50, is a type.

19. Redoubts are works entirely inclosed by defensible parapets, though the term fort is usually applied to such a work when it has unusual strength, either by reason of its trace or its armament. In the former case a word descriptive of the trace is often added, as star fort, Fig. 51; bastioned fort, Fig. 52.

The inclosed form and the restricted and usually crowded interior space, make redoubts excellent targets for artillery, and they can not be used in situations exposed to such fire unless they can be so arranged that they can not be recognized as redoubts from the enemy's artillery positions. A favorable site is one which commands the ground around it to effective rifle range and is not visible from artillery ranges.

In preparing a defensive position, if sites meeting the foregoing conditions can be found on which redoubts can be built to flank the adjacent trenches, they should by all means be built. Redoubts in good position in rear of a line form valuable supporting points. They also find important application for isolated posts on lines of communication or in other territory when the enemy can not operate in considerable force, and will probably not have artillery. Here invisibility is less necessary, the first requisite being security for the garrison. There must, however, be no higher ground within short range, and hence, in rolling country, such works will usually be placed on hills or ridges. As they are usually to be occupied for some time, care must be taken that a supply of water is available and proper disposition of refuse provided for.

20. The trace of a redoubt will depend upon the size of the garrison to be accommodated, the configuration of the ground, and the probable direction of attack.

The garrison should always consist of one or more units of command. No work should be designed for less than a company. If a larger force than one company is needed, then two companies, and so on. It is quite usual to indicate the size of a redoubt by its garrison, as a one, two or four company redoubt. The garrison assumed, the work should be large enough to give a yard of parapet for not more than two men. The length of parapet is determined first, as the siting of a small work may differ from that of a larger one on the same ground.

The adaptation to the ground consists mainly in the determination of a closed contour having the desired length. Such a contour, generalized by taking out small kinks, will usually be the best location for the parapet.

Men 5 to 10 yds. apart may stand on the contour and hold a tracing tape at the height of the interior crest. By looking over the tape all along, it will be seen whether each part of the parapet will command the ground in front of it. If not, the crest must be advanced or raised at that point until it does. If the command is greater than necessary, the crest may be lowered or retired. Note also whether the longest faces are on the sides of easiest approach. If not, the trace must be modified to produce that result. If possible, the tape should be viewed from a short distance all around the outside, and if it makes any sharp angles on the sky line, they should be softened.

As to details of trace, straight lines are to be preferred to curves as being easier to lay out and construct and giving a better guide to direction of fire. If curves must be introduced, they should have at least 20 yds. radius. All faces should be long enough to give effective volume of fire. Ten yds. will usually be a minimum. A quadrilateral with truncated corners is a good type. If two adjacent faces intersect at an angle of 30° or less, truncation is not necessary. The longest face should bear on the ground from which the strongest attack is to be expected and the entrance will usually be on the opposite side, though if attack from any direction is especially difficult, the entrance should be on that face.

21. Profile. So far as regards the effectiveness of its fire, the command of a redoubt need not be greater than that of a trench on the same ground. A high command will better screen the interior space and offer greater resistance to assault, but will increase the visibility of the work and the labor of building it. The horizontal cover need not, as a rule, be as thick as the adjacent trenches, as the latter will certainly be exposed to deliberate artillery fire and the redoubt, as a rule, will have to resist unaimed and scattering artillery fire only. A necessary feature is a trench deep and wide enough to give complete shelter and free communication.

22. Interior Arrangements. The most important thing is the protection of

protection from flank and reverse fire. When invisibility is not essential, a trench of 6 or 7 ft. is the easiest method of giving interior protection. Exposed overhead cover will be necessary. It need not ordinarily be heavy. A layer of earth on brushwood stiff enough to support it will usually suffice. Long-range fire may be expected from the front only, the overhead cover developed along the front edge of the trench of the front face, in excavation perpendicular to the trench on the flanks, and along the edge of the trench behind the parapet in the gorge.

In the case of possible all-round long-range fire, short galleries should be run out to the rear of all trenches. This development of covered trenches may continue, if necessary, until the entire interior of the redoubt is converted into an underground camp. The parapet trenches and the shelters in them must be well covered, the former by blocks of earth with oblique or crooked passages cut through them, and the latter by splinter-proof partitions of brush and earth.

Figure 50 shows a typical plan, with sections, of a redoubt on level ground, the command of 7 ft. is permissible. (See par. 22a, p. 1248.)

General Considerations. The proper use of shelter trenches for the protection of firing lines is a matter of utmost importance to success. It may be regarded as a principle, established by experience, that a line of men can not remain stationary under fire without cover, natural or artificial. This is true in every phase of action, whether advancing, retreating, or standing on the defense.

Cover at all times is desirable; on the move it may be dispensed with, but it is never absent. In some cases the cover will be partly natural and partly artificial, the former, partial natural cover artificially improved. In a majority of cases, however, conditions of fire efficiency and concealment will require a line to be placed where it could not possibly live without artificial cover. Another principle which may be accepted is, that on the offensive the line must determine the general position of the cover and not the cover the position of the line. The position of the line at any moment of a battle depends on tactical conditions and the progress and incidents of the fight. To prepare trenches in advance, except for defensive occupation, is to attempt to predict the future.

It follows that all troops not in a defensive attitude must prepare their own cover after occupying a line or after they are halted. The importance is paramount of having available for instant use on every firing line the appliances and training to enable the men to get sufficient cover in the shortest possible time. This involves not alone the training of the men to use the tools provided, but also the knowledge and skill of their own officers to locate the trenches to the best advantage. There is no time to wait for instructions or advice from the outside.

The line itself will, as a rule, determine the general position of the cover, and conditions will exercise a great influence on the detailed dispositions of the line. An inferior unit may be advanced or retired to get better command of its field of fire or to find easier digging. It must not be advanced enough to interfere with the fire of adjacent troops on its flanks, nor be retired enough to allow them to interfere with its own fire. Trenches must not be continuous and should not be longer than suffices to contain the men of the firing line. Men should not be crowded together, neither should they be isolated. The best disposition is in self-sustaining groups, advantageously distributed. A trench should be long enough at least to take a company or half-company lengths are, on the whole, the best. A continuous line should be avoided.

In studying the command of the ground from a given line the eye should be directed at the adopted height of parapet, or if the line is adopted, then the necessary height of parapet must be determined in the same way. What

can be seen 1 ft. from the ground will often be very different from what can be seen at 5 ft. When possible, proposed lines of trenches should be examined from the ground over which the enemy must approach, as suggested for redoubts, Par. 20.

It will seldom happen that the entire field of fire to the limit of effective range can be completely swept from any position that can be selected. A position should be sought which reduces the dead spaces to a minimum in number and extent, and, if possible, advanced or auxiliary trenches should be located to sweep them. If the ground is open to 1,000 yards or more, the long or mid range is more important than the short range, for an effective fire on the enemy while he is advancing from 1,200 yds. to 200 yds. range will almost certainly put him out, or, if by any chance he arrives at 200 yds. in condition to keep on, little can be gained by holding him under fire from 200 yds. in, and a retirement is in order. In both cases, the disadvantage of dead space in the close foreground is more apparent than real and the main trenches should not sacrifice command of more distant ground within effective range in order to sweep the foreground. Such dead ground must be commanded at night or in thick weather by trenches detached or in flanking relation.

On the contrary, if an enemy can approach under cover to mid range or less, there will scarcely be time to stop him by fire alone and obstacles are desirable at close range, which must be commanded by fire. The trenches, in such cases, must be advanced to cover the close foreground, and if necessary, another line in a different position established to sweep the more distant ground.

In a rear-guard position, the object is to force the enemy to deploy and to delay him to a certain extent, and then retreat to another position before his advance to close range and before his fire becomes annoying. The command of the foreground is of no consequence, while a safe withdrawal is all-important, and the front slope of a ridge should be avoided. The forward edge of a plateau will do, or, if the plateau is long enough, the rear edge may be occupied. If there is timber on the plateau, its front edge should be the location of the line.

When concealment of the general position is not possible, as in case of a detached post guarding a well-defined and known objective, deception must take its place. The trenches actually occupied must be so arranged as to afford concealment of the individual man, and dummy trenches, purposely made easily visible, may be arranged to draw the enemy's fire. Dummy trenches should have head cover, not only to make them more conspicuous but also to make it more difficult to discover whether they are occupied or not. They are better above and behind the occupied trenches, if the lay of the ground permits. The enemy will observe that fire comes from the direction of the dummies and will conclude that it comes from them. Fire directed on the dummies will pass over the heads of the defenders, a condition preferable to shots falling short, which would be the result of dummies in front of occupied trenches.

When an organization is designated to a particular part of a general line the duty devolves upon its commander to determine what is to be done in strengthening his position and get the work started without delay. He will direct what clearing is to be done or accidents utilized, and where and how the trenches are to be dug. All the working force available should be divided between preparation of the field of fire, working progressively forward, and the construction of cover, working generally from the center of the position toward the ends, and giving first attention to points where

the least work will secure the most and best cover. If work is interrupted by an attack, that which has been done will be of full use.

24. Revetments. A revetment is a covering or facing placed upon an earth slope to enable it to stand at an inclination greater than its natural inclination. Steep interior slopes are easier to fire over, give better cover, and increase the horizontal space available. Some revetments also increase tenacity of slopes and diminish the injury from fire. Revetments are applied to the interior slopes or breast heights of parapets for all of the above reasons and to traverses for all except the first.

The upper parts of revetments which may be struck by shots which have penetrated the cover of earth must not be made of materials of large units or which splinter when struck. The construction of the upper part of a revetment is often referred to as crowning.

25. Sand-bag Revetments. A sand bag is 33 ins. long and 44 ins. wide. In use it is loosely filled with earth or sand, requiring about $\frac{1}{2}$ cub. ft. of earth, and having been placed in position is flattened with a shovel to roughly rectangular form, in which it fills a space about 20 x 13 x 5 ins. The bags weigh about 62 lbs. per 100, and when filled about 65 lbs. each.

A sand-bag revetment is constructed by laying the filled bags as stretchers and headers, or as headers alone. The top row should always be headers. The tied ends of headers and the seams of stretchers should be in the parapet. Sand bags give no splinters and are conveniently used for the entire parapet when necessary. As they are more readily transported than corresponding quantities of any other revetting material, they are of great importance in field fortification. Their perishability is a disadvantage, though in many soils a surface revetted with bags will stand after the bags have lost their strength through decay. Sand bags are so valuable for crowning and repairs, however, that the stock on hand should not be exhausted in original construction if anything else can be had.

Fig. 53 indicates the appearance of a sand-bag revetment as seen from the front and from the end.

Rate of Working. A squad of 6 men, 2 shovels, 1 pick, 1 bag holder, and 2 tiers should, in fairly loose soil, fill 150 bags an hour.

Supposing the bags to be filled from the ditch or trench, with 10 additional men, 6 to carry and 4 to lay, or a squad of 16 men all told, 150 bags per hour can be taken care of, making 75 sq. ft. of revetment.

26. Sod Revetment. A convenient size to cut sods is 18 x 9 x 4 $\frac{1}{2}$ ins. If tough, they may be cut larger, but the length should be twice the breadth. They are laid, grass down, in courses, alternately all headers and all stretchers, the latter double, with broken joints. A bed should be prepared at the proper inclination to receive the bottom course and give it the right pitch. The top course is laid grass up and all headers. If the sods show a tendency to slip, they may be pinned together with wooden pickets.

Sod revetments will not stand quite so steep as sand bags in the same soil. It is usual to allow a 3 to 1 slope for sods. The revetment should be built steeper if the soil is such that it will stand. Fig. 54 shows an elevation and section of a sod revetment.

Four sods, 18 x 9 x 4 ins., laid, make a sq. ft. of revetment, but as there is some wastage, 450 or more sods must be cut for each 100 sq. ft. of surface to be revetted. If the grass is long, it should be mowed before cutting sods.

One man should cut 30 sods per hour, or place the same number. A sod plow will cut as fast as 50 men.

If carrying is done by hand, multiply the number of sods to be moved

Fig. 51

Fig. 52

Fig. 53

Fig. 54

Fig. 55

Fig. 56

Fig. 59

Fig. 57

Fig. 58

Fig. 60

by the average length of carry in yds., and divide the product by the number of carriers. They should work in pairs, carrying 8 between them. If wagons are available, estimate as though moving making 72 sods to the cu. yd. Unloaders will be required, as the sods be dumped, say one man for 300 sods per hour. If ordinary sodding be done, for concealment or to prevent rain wash, use the same ratios ing, hauling, and laying, allowing 8 sods to the sq. yd. laid, or 9 cut.

Brush Work. Brush is used in many forms in revetting. Any kind, but the best is willow, birch, ash, hickory, or hazel. For weaving it be live, and is most pliable when not in leaf. Split bamboo of dimensions, reeds, or similar vegetation, may be considered as a form sh in all revetment constructions.

h for weaving should not be more than an inch in diameter at the That to be used straight may be of larger size. In cutting, brush be assorted in sizes for the various uses and made up in bundles o 60 lbs., the butts in one direction. The range of weights is given vey a general idea of the size of bundles. The determining condition each bundle shall make a gabion, which will soon be determined ork begins. Poles of $2\frac{1}{2}$ in. diam. at the butt or larger are not bundled, piled together. They are used for posts, binders, grillage, and similar es.

amount of labor required to cut brush will vary with its character, or hard or soft, crooked or straight, thick or thin. A rough average e taken at 6 bundles per man per hour. The men work in pairs, one and one sorting, piling, and tying.

carrying by hand, multiply the number of bundles by the carry in and divide by 2,200 for the number of men required. If transporta- by teams, assume 35 bundles to equal 1 yd. and figure as for earth. A fascine is a cylindrical bundle of brush, closely bound. The usual is 18 ft. and the diam. 9 ins. when compressed. Lengths of 9 and 6 ich are sometimes used, are most conveniently obtained by sawing dard fascine into 2 or 3 pieces. The weight of a fascine of partially ed material will average 140 lbs.

ines are made in a cradle which consists of five trestles. A trestle e of two sticks about $6\frac{1}{2}$ ft. long and 3 ins. in diam., driven into the l and lashed at the intersection as shown in Fig. 55. In making a plant the end trestles 16 ft. apart and parallel. Stréck a line from the other over the intersection, place the others 4 ft. apart and lash so that each intersection comes fairly to the line.

ould a fascine, straight pieces of brush, 1 or 2 ins. at the butt, are , the butts projecting at the end 1 ft. beyond the trestle. Leaves should pped and unruly branches cut off, or partially cut through, so that ill lie close. The larger straighter brush should be laid on the out- butts alternating in direction, and smaller stuff in the center. The l object is to so dispose the brush as to make the fascine of uniform strength, and stiffness from end to end.

n the cradle is nearly filled, the fascine is compressed or choked by scine choker, Fig. 56, which consists of 2 bars 4 ft. long, joined ins. from the ends by a chain 4 ft. long. The chain is marked at 14 ch way from the middle by inserting a ring or special link. To use, en standing on opposite sides pass the chain under the brush, place ort ends of the handles on top and pass the bars, short end first, to each other. They then bear down on the long ends until the

marks on the chain come together. Chokers may be improvised from sticks and rope or wire.

Binding will be done with a double turn of wire or tarred rope. It should be done in 12 places, 18 ins. apart, the end binders 3 ins. outside the end trestles. To bind a fascine will require 66 ft. of wire.

Improvised binders may be made from rods of live brush; hickory or hazel is the best. Place the butt under the foot and twist the rod to partially separate the fibers and make it flexible. A rod so prepared is called a withe. To use a withe, make a half turn and twist at the smaller end, Fig. 57; pass the withe around the brush and the large end through the eye. Draw taut and double the large end back, taking 2 half-hitches over its own standing part, Fig. 58.

When the fascine is choked and bound, saw the ends off square, 9 ins. outside the end binders. After a cradle is made, 4 men can make 1 fascine per hour, with wire binding. Withes require 1 man more.

A fascine revetment is made by placing the fascines as shown in Fig. 59. The use of headers and anchors is absolutely necessary in loose soils only, but they greatly strengthen the revetment in any case. A fascine revetment must always be crowned with sods or bags.

29. In all brush weaving the following terms have been adopted and are convenient to use:

Randing. Weaving a single rod in and out between pickets.

Slewing. Weaving two or more rods together in the same way.

Pairing. Carrying two rods together, crossing each other in and out at each picket.

Wattling. A general term applied to the woven part of brush construction.

30. A hurdle is a basket work made of brushwood. If made in pieces, the usual size is 2 ft. 9 ins. by 6 ft., though the width may be varied so that it will cover the desired height of slope.

A hurdle is made by describing on the ground an arc of a circle of 8 ft. radius and on the arc driving 10 pickets, 8 ins. apart, covering 6 ft. out to out, Fig. 60. Brush is then woven in and out and well compacted. The concave side of a hurdle should be placed next the earth. It warps less than if made flat.

In weaving the hurdle, begin randing at the middle space at the bottom. Reaching the end, twist the rod as described for a withe, but at one point only, bend it around the end picket and work back. Start a second rod before the first one is quite out, slewing the two for a short distance. Hammer the wattling down snug on the pickets with a block of wood and continue until the top is reached. It improves the hurdle to finish the edges with two selected rods paired, Fig. 61. A pairing may be introduced in the middle, if desired, to give the hurdle extra endurance if it is to be used as a pavement or floor. If the hurdle is not to be used at once, or if it is to be transported, it must be sewed. The sewing is done with wire, twine, or withes at each end and in the middle, with stitches about 6 ins. long, as shown in Fig. 61. About 40 ft. of wire is required to sew one hurdle. No. 14 is about the right size, and a coil of 100 lbs. will sew 40 hurdles. Three men should make a hurdle in 2 hours. 2 wattling and the third preparing the rods.

31. **Continuous Hurdle.** If conditions permit the revetment to be built in place, the hurdle is made continuous for considerable lengths. The pickets may be larger; they are driven farther apart, 12 or 18 ins., and the brush may be heavier. The construction is more rapid. The pickets are driven with a little more slant than is intended and must be anchored to the parapet.

of poles with wire attached at intervals of 2 or 3 pickets will answer. Wires should be made fast to the pickets after the wattling is done. This will interfere with the weaving if fastened sooner. Two men should be able to make 4 yds. of continuous hurdle of ordinary height in one hour.

Brush Revetment. Pickets may be set as above described and the brush laid inside of them without weaving, being held in place by bringing the brush up with it. In this case the anchors must be fastened before the weaving begins. The wires are not much in the way in this operation.

Gabion Making. A gabion is a cylindrical basket with open ends, made of brush woven on pickets or stakes as described for hurdles. The usual size is 2 ft. outside diam. and 2 ft. 9 ins. height of wattling. On account of the sharp curvature somewhat better brush is required for gabions than will do for hurdles.

The gabion form, Fig. 62, is of wood, 21 ins. diam., with equidistant notches around the circumference, equal in number to the number of pickets to be used, usually 8 to 14, less if the brush is large and stiff, more if it is small and pliable. The notches should be of such depth that the pickets will fit tight to 1 in. outside the circle. The pickets should be $1\frac{1}{4}$ to $1\frac{3}{4}$ ins. long, 3 ft. 6 ins. long and sharpened, half at the small and half at the large end.

To make a gabion, the form is placed on the ground, level or nearly so, and the pickets are driven vertically in the notches, large and small ends alternately. The form is then raised a foot and held by placing a log or board around outside the pickets, tightened with a rack stick, Fig. 63. The log is randed or slewed from the form up. The form is then dropped and the gabion inverted and the wattling completed. If the brush is uniform, and pliable, pairing will make a better wattling than randing. For immediate use, the gabion must be sewed as described for hurdles, the same quantity of wire being required.

A gabion, when wattled and sewed, is completed by cutting off the tops of the pickets 1 in. from the web, the bottom 3 ins., the latter sharpened by cutting, and driving a carrying picket through the middle of its length a little on side of the axis. See that the middle of this picket is smooth. Two men should make a gabion in an hour.

Gabions may be made without the forms, but the work is slower and not so good. The circle is struck on the ground and the pickets driven at the proper points. The weaving is done from the ground up and the entire work of one man is required to keep the pickets in proper position.

If brush is scarce, gabions may be made with 6 ins. of wattling at each end, the middle left open. In filling, the open part may be lined with straw, brush cuttings, or grain sacks, to keep the earth from running out.

Gabion Revetment. The use of gabions in revetments is illustrated in Fig. 65. If more than two tiers are used, the separating fascines should be anchored back. Gabion revetments should be crowned with sods or bags. The advantages of the gabion revetment are very great. It can be put in place without extra labor and faster and with less exposure than any other method. It is self-supporting and gives cover from view and partial cover from fire quicker than any other form.

Several forms of gabions of other material than brush have been used, wire, iron and iron and paper hoops are some of them. The iron splinters are heavy, and has not given satisfaction. If any special materials are used the method of using them will, in view of the foregoing explanation, be obvious.

Timber or Pole Revetment. Poles too large for use in any other way

Fig. 61

Fig. 62

Fig. 63

Fig. 64

Fig. 65

Fig. 66

Fig. 67

be cut to length and stood on end to form a revetment. The lower should be in a small trench and have a waling piece in front of them. must also be a waling piece or cap at or near the top, anchored back. 6 shows this form.

Miscellaneous Revetments. Any receptacles for earth which will make a compact pile, as boxes, baskets, oil or other cans, may be used for revetment. Barrels may be used for gabions. Canvas stretched behind is well thought of in a foreign service. If the soil will make adobe, sun-dried bricks, an excellent revetment may be made of them, but it will not stand wet weather.

Execution of Fieldworks. Tracing is the operation of marking on the ground the lines which determine the horizontal limits of cutting and embankment. Profiling is the operation of indicating the actual positions of such lines and slopes as are necessary to determine the proper sectional dimensions of trench, ditch, and parapet.

Tracing and profiling are not independent operations. The trace depends upon the profile and the profile upon the trace. They will be considered separately under one title. For shelter trenches the profile is standardized, and the proper parapet results from the excavation of the necessary trench. The trace may be roughly determined as circumstances permit. The alignment of a line of skirmishers will do, if nothing better is possible. Heavy fortifications will not often be built under fire, but if they are, the same rules must be followed. For such works, executed deliberately, the following plan may be followed:

The first step is to mark on the ground the projection of the interior crest, sometimes called the firing crest. It may be marked continuously by running a line or by scratching the surface with a pick, or at intervals of 5 feet by small pegs set to a line or ranged in.

The second step is to determine the command or height of the interior crest above the natural ground at as many points as the variation of the ground may make necessary. The thickness of the parapet having been determined, the area of the parapet section and its ruling dimensions result.

The third step is to complete the profile by determining the depth and width of trench and of the ditch if there is to be one.

The fourth step is to mark on the ground, parallel to the interior crest at proper distances from it, the edges of ditch and trench and the exterior crest. This marking is best done with pegs at 5 ft. interval or such other distance as may be allotted for each man's task.

The fifth step is to indicate the actual position of interior and exterior crest by setting up stakes of sufficient height to mark on each the height of the crest line.

The third of the foregoing steps is the only one which presents any difficulty. Table I gives areas of parapet sections for certain heights or commands, s , h , and thickness of parapet, t , on the supposition that the ground is level, the exterior slope and the interior or breast height slopes, each 1 on 1, and the superior slope 1 on 6. The assumed breast height slope gives a surplus of earth, increasing with the height. For low parapets it is material; for high ones it supplies earth for a banquette. If the site is to the front, increase the area by the percentage for the corresponding slope at the right of the table. If the slope is to the rear, decrease the area by the same percentages. Having the area of the parapet, the dimensions of the trench, or of the trench and ditch together, must be taken as to give at least an equal area, and preferably, not much more. If $h + s$ is not more than 8 ft., the entire parapet can be built from a

trench at a single cast. If $h + s$ is greater than 8 ft. and 16 ft., the entire parapet can be built from a trench and cast. If $h + s$ is greater than 16 ft., some of the material ported or rehandled, no matter where it is obtained, though any case will be less if both trench and ditch are dug than if is relied upon. Time also is saved by working from both because the labor is reduced, but principally because more employed simultaneously.

38. Working parties should be made up, so far as possible, in organizations. A battalion should be ordered to send one, two, or a regiment, one or two battalions; and a brigade, one or two.

The party is divided into two or more reliefs, and here a system of keeping organizations intact applies. If a regiment is to be in reliefs, each should consist of an entire battalion. This should be so even if it makes reliefs of somewhat unequal strength. The number of privates should be $\frac{1}{2}$ more than the number of men that are employed simultaneously.

Reliefs are regulated by work rather than by time. The work to be done by each relief must be plainly indicated and the noncommissioned officers of each organization are responsible to do the quantity of work assigned to them. As soon as any organization has completed its work, it should be dismissed.

39. To place a relief on the work, the organizations approach the tools in column of files, rifles slung, pass between the tools, shovels on the right and picks on the left. Engineer passes pile hand tools to the men as they pass, each man taking a shovel in his right hand and a pick in his left. The corporal or squad leader goes himself alongside the rear file of his squad and one of the files and the other a shovel.

Proceeding in suitable formation to one flank of the line to be worked, if in column of files, the head of the column parallel to a line in rear of the rear cutting line, the column forms in line at 10 ft. intervals, the corporal and the rear file of each squad taking post in rear of the squad. The interval is most conveniently maintained by having the men extend the arms horizontally as they pass. Each organization is assigned to a particular part of the work to do to it and deploys independently of the rest. If the line of work should be furnished to direct the head of each column to its place, its deployment is to begin. At night guides must always be placed.

As the men are posted, each lays his shovel 5 ft. behind him, parallel to it, and drives his pick into the ground on the line of his task. Rifles and equipment are removed and placed to the rear, butts of guns to the front. The corporal or squad leader and the rear file of the squad take their places in rear of their respective organizations and their equipments in the line with the rest. The corporal acts as foreman of the squad during the work and number 8 is put in when necessary to expedite the work of the squad in the place of a man who is obliged to fall out for any cause.

40. Tasks. The capacity of the average untrained man in digging does not much exceed 80 cu. ft. for easy soil; 60 cu. ft. for medium soil, and 40 cu. ft. for hard soil. He will do $\frac{3}{8}$ of this in the first two hours, and the other $\frac{3}{8}$ in another two hours, making an hourly average of $\frac{3}{16}$ of the task for the first, and $\frac{3}{16}$ for the second hours. In addition to the fact that he works but a little of

in the second 2 hours, four hours' work will leave him unfit for fighting or marching, while after two hours' work he should be able to do either. The quantity of work assigned to each relief should be that which can probably be done in 2 hours, and the relief is required to finish it and no more, whether it takes less or more time. For the first work, the soil is apt to be loose and the lift is less, so that a slightly greater task should be given to the first relief than to the second. Assuming men at 5 ft. intervals and neglecting fractions, the number of hours' work required to throw up a parapet is the section of the parapet in sq. ft. divided by 5 for easy, 4 for medium, and $2\frac{1}{2}$ for hard soil.

Determination of Task. The length over which each man works is settled when the intervals are assigned for the deployment. The individual task is the width and depth of excavation, which, carried over this length, will make the volume corresponding to 2 hours' fair average work. When either width or depth is determined, or assumed, the other results.

The task of the relief is defined when the width and depth of cut are stated or shown on a profile. As a rule, the lines dividing tasks should be horizontal or nearly so.

41. Double Gangs. When men are plenty, tools scarce, or time presses, a task may be completed in about $\frac{2}{3}$ of the ordinary time by detailing two men at each set of tools. In this case the organizations march to the tools in columns of twos, the right file taking shovels and the left file picks. The two gangs change off at frequent intervals and the men work as rapidly as possible.

42. Changing Reliefs. Each man of the first relief, as he completes his task, cleans the tools and lays them down as at first. The relief is then moved to the rear, the men resume their arms and equipments, and are formed in column and march off. As soon as they are out of the cut the succeeding relief may enter at one end and form line to the flank, each man taking his place at the first set of tools he comes to.

43. Example. Let it be required to design and construct 100 ft. of the front parapet of an inclosed work to resist siege guns at long range, sited on ground sloping 1 on 12 to the front, soil easy, materials procurable for reveting and cover, and 9 hours' time available.

Command. Determine by trial the least height above the ground along the crest at which the foreground can be seen and swept by fire, Par. 20. This is the command or height of parapet. Assume it for this case at 6 ft.

Thickness and Relief of Parapet. As the severest fire is that of siege guns at long range, the minimum thickness for such guns will answer. Assume it at 10 ft. The long-range fire will have a high angle of fall, which calls for good interior relief or vertical cover and ample overhead cover.

The area of parapet for 6-ft. height, 10-ft. thickness, is, from Table I, 78 sq. ft. Add for 1 on 12 slope 8%, giving 85.1 sq. ft., or, for convenience, 85 sq. ft. This divided by 5, the factor for easy soil, gives 17 hours' work from one side; but as $h + s = 16$ ft., the work should be done from both sides, and $8\frac{1}{2}$ hours are required for a single relief, or a trifle under 6 hours for double reliefs. The time limit of 9 hours permits a single relief.

Overhead Cover. One hundred feet of parapet will be defended by 65 men, for whom 12 sq. ft. per man of overhead cover should be provided, or 7.8 sq. ft. per linear ft. of crest. This being too much, assume 6 sq. ft. per ft. of crest, giving cover for 50 men. This gives 6 ft. as the width of the cover. Cover for the remaining 15 men must be provided in rear of the trench. The cover along the parapet may be on the front edge of the ditch. As there will be a banquette $1\frac{1}{2}$ ft. above ground level, this may

be continued to the rear to form the overhead cover. Allowing $1\frac{1}{2}$ ft. for thickness of earth and brush and $4\frac{1}{2}$ ft. headroom, the floor of the shelter will be at (-4.5) ft. and the bottom of the trench may be at (-6) ft., giving 12 ft. total vertical cover. The area of the profile under the cover will be $4\frac{1}{2} \times 6 = 27$ sq. ft. The part of the trench in rear of the cover should be 3 ft. wide at the bottom, or say 4 ft. wide at mid-depth. At 6 ft. depth its area will be 24 sq. ft., which, added to the 27 ft. deduced above, gives 51 sq. ft. total trench area, leaving 34 sq. ft. for the ditch, which may be assumed at $9\frac{1}{2}$ ft. top width and 4 ft. deep. The profile which results from these assumptions and deductions is shown in Fig. 67.

Four reliefs should be provided. Thirty per cent. of the digging may be assigned to the first relief, 25 per cent. each to the second and third, and 20 per cent. to the fourth, which will work in the trench only, and will have to build the overhead cover and rehandle its earth. Lines which apportion the tasks as indicated are shown on the profile. The first relief in the trench would be ordered to dig $9\frac{1}{2}$ ft. wide on top and $1\frac{1}{2}$ ft. deep. The first in the ditch $1\frac{1}{3}$ ft. deep, etc.

The revetment will be of gabions. If they have not been made beforehand they and the fascines should be on the ground within 3 hrs. and the brush and poles for splinter proofs should be on the ground within 5 hrs. after work begins. Fifty gabions and 6 fascines are required. Assume that they are made 600 yds. from the work and carried by hand. To make and deliver 50 of them in 3 hrs. would require 3 men to cut brush, 50 men to make, and $17 \times 600 \div 2,200 = 5$ men to carry, a total gabion party of 58 men. To make and deliver the 6 fascines in 3 hrs. will require 2 men to cut brush, 8 men to make, using 2 cradles, and 5 men to carry, a total of 13 men for the fascine party, or $58 + 13 = 71$ for the brush. The same party can cut and carry the brush for the overhead cover between the third and fifth hours. A company would likely be assigned to this work.

The total force required to construct the parapet in less than 9 hrs. will be—

| | |
|--|---------|
| Excavation and embankment, 4 reliefs of 40 men each..... | 160 men |
| Revetment and cover, 1 relief of | 71 men |

| | |
|-------------|---------|
| Total | 231 men |
|-------------|---------|

44. Traverses. The protected area in rear of a parapet as determined for a shot grazing and perpendicular to the crest, is reduced for a grazing shot with the same angle of fall coming at an angle to the crest. If a straight shot will clear a man's head at a certain distance back, oblique shots with the same angle of fall will clear a man at 90% of that distance for an angle of 26° with the perpendicular; 85% for 32° , and 80% for 37° . At 37° the distance is decreasing at the rate of 1% for each deg. For enfilade and reverse fire the parapet gives no cover at all.

To secure sufficient protection against very oblique, enfilade, or reverse fire, masks must be introduced to intercept such shots before they fall below the plane of desired protection. Such masks are called traverses. To those which are designed to intercept reverse fire, and which are mainly parallel to the parapet which they shelter, the name *parados* is given. The word *traverse* usually indicates a mask making an angle with the parapet which it protects and joined to it. Traverses may be of any available horizontal or overhead cover, but are usually topped with earth. They are revetted to make them take as little space along the parapet as possible, except that between guns there is sometimes room for earthen traverses with sloping sides. As the

can not be reached by fire, it need only form a support for the often a good place to provide magazine or shelter space.

Between Traverses. The effective distance is the interval between of one traverse and the adjacent face of the next. If the crests of traverses are at the same elevation as the crest of the parapet, a distance of 0.43 of the width of protected area, for direct fire gives 90% of that width; 0.52, 85%, and 0.6, 80%.

Traverses of the traverses are raised above the crest of the parapet, the distance between traverses may be increased by the excess height multiplied by the assumed angle of fall, without reducing the width of the protection, Fig. 71. Fig. 72 shows a plan and side elevation of a raised traverse with reference to its connection with the parapet. The full lines show the position when the crest of the traverse ends at the interior crest, and the dotted lines indicate the arrangement when the crest of the traverse is beyond the interior crest. Care must be taken that raised traverses make the position conspicuous. Traverses must be at least as long as the width of protection they are to give, and should be somewhat longer. **of Traverses.** The cross section of a traverse should be as nearly rectangular as possible. The vertical sides give the maximum thickness with minimum space, and the flat top gives a crest on each face and increases the protection by half the thickness, Fig. 69. If exposed on one side only the arrangement in Fig. 70 is suitable.

A traverse may be used as a firing parapet by providing a banquette or parapet of proper height.

of Traverses. A trench may be traversed by making an offset to the trench as shown in Fig. 73, and throwing up a bank of earth on the block side of the trench. Fig. 74 shows a form of double traversing. The long high traverses give protection to men not firing, and the short traverses give increased protection to the more exposed space near the interior crest. For high traverses the object should be to get a support up to the height where exposure is less with the least time and labor. If the structure can be made of planks much the better. An elevated platform of planks, supporting a layer of earth, revetted with sods or sand bags, will make a good traverse. If sods are the only material available, the entire traverse will be revetted, and Fig. 69. Below the plane of fire, any revetment may be used; above, the revetment which have been described for crowning a parapet revetment may be employed.

Stockades. A stockade is an improvised bullet-proof wall or screen, adapted to defense by rifle fire. As compared with a parapet, the advantages of a stockade are that it combines obstacle and parapet, gives a large and ample interior space, and the labor of construction increases very little with the height. The disadvantages are the uncertainty of protection of suitable material, the labor of construction, which is greater than for a parapet, except for considerable heights, and that most forms of stockades afford no cover, and the best of them only temporary cover, and are very costly.

Construction. The simplest form consists of a closed barricade of timbers and reinforced by earth, Fig. 76. The inner embankment forms the parapet. The outer one fills the dead angle at the foot of the wall and affords protection against artillery fire. It makes a stockade easier to construct if the slope is steep and the tops of the timbers properly prepared by driving spikes or stringing barbed wire, the effect in that direction is greatly increased.

A row of timbers affords too little protection unless they are squared

Fig. 68

Fig. 79

Fig. 80

at pains taken to keep close joints. A double row, Fig. 79, or if the logs good size and workable, an arrangement of half timbers, Fig. 80, gives some cover with much less labor. Loopholes may be formed as indicated. They must be high enough so that the enemy can not fire through when he comes to close quarters. Six feet above the ground is considered high enough.

A single row of timbers may be used as the front of two thin walls, the space between to be filled with earth or broken stone, Fig. 75, or both may be alike, and of brush, plank, fascines, or sheet iron, Fig. 78. The filling should be 2 ft. thick; stone filling 6 to 16 ins. In all such constructions the two walls must be tied together at frequent intervals to resist the pressure of the filling. Wire is a very convenient material for such use. If T rails are available, an excellent stockade may be made as shown in Fig. 81.

A blockhouse is a room or small building with bullet-proof walls, fire-proof and fireproof roof, loopholed for infantry, often for machine guns, and sometimes for light quick-firing guns. The walls may take any form described for stockades, or may be of masonry. The roof will usually be of tin or sheet iron. If exposed to plunging fire, the roof may take the form of light overhead cover, and to promote the comfort of the men during long occupancy an ordinary roof may be placed over the front or it may be covered with canvas, or thatched, or made to turn water in a practicable manner. Figs. 82 to 85 and 89 show types of blockhouses. In Fig. 85 the house provides 2 tiers of fire.

Extensive use was made of blockhouses by the British in South Africa. At important points, were of masonry, presenting no unusual features. The greater number were of double skins of corrugated iron, filled in with broken stone. The first built were about 10 x 15 ft. in plan, the skins on separate frames or supports 2 ft. apart. Then an octagonal form was introduced with both skins on the same frame, leaving but a narrow space between them. A difficulty experienced with this form was that a striking opposite a timber of the frame would penetrate the entire structure, as it would encounter no stone. A construction permitting stone to be placed behind each timber in the path of a shot passing through it was introduced, but was complicated and difficult. The final and most satisfactory design was circular in plan. A corrugated-iron drum 13½ ft. in diam. and 11 ins. high was set on level ground and a parapet of stone, 3 ft. at bottom and 2 ft. at top, was built around it on the outside. On this was placed a shield consisting of an inner drum of corrugated iron 13 ft. in diam. and an outer one 16 ft. in diam., each 2 ft. 3 ins. high, and at uniform distance by spacing blocks at the top.

Loopholes, 12 in number, of sheet iron of the double-hopper type, with 6 ins. high by 3 ins. wide, were placed in the shield, the bottoms resting 6 ins. from the floor. The space between the skins of the shield was filled with closely packed broken stone. It was found necessary to provide a lining of stone under the loopholes to replace settlement. An octagonal cap rested on top of the shield and was bolted to the spacing blocks, its sides extended to complete a square on which a pitch roof was placed. A canvas roof, supported by a pole, like a conical tent was used in some cases.

A small opening on one side, large enough for a man to crawl through, was provided by an iron door under the outer drum of the shield. There was also a movable barrier of the same construction as the shield, which stood across the opening in the drum of the parapet.

Fig. 82

Fig. 83

Fig. 84

Fig. 86

Fig. 85

Fig. 87

Fig. 88

Fig. 89

trench $4\frac{1}{2}$ ft. deep was dug 2 to 5 yds. outside the blockhouse and a tangle of logs was constructed outside the trench. Such blockhouses are sometimes built at the rate of 6 a day by a party of 30 men. Nearly all of these were erected, most of them in a single month.

Flanking Defenses. Dead angles in front of a defensive structure may be covered longitudinally or parallel to the firing crest to prevent their being used as a rallying place by the assailants. Such fire is usually directed along the crest from one of the flanks and is called flanking fire. The structures for this purpose are called flank defenses.

A *bonaparte* or *tambour* is a small, low, stockaded inclosure or blockhouse used to fire along a dead angle. If it can be placed at the intersection of dead angles, it may sweep both. At the foot of a wall a stockade open to the top may be used, if its floor must be at ground level, which will be the case on rock or marsh, though a weatherproof cover will generally be used, Fig. 87. If the floor can be sunk below the ground level, a bullet-proof roof is necessary, Fig. 88. In a ditch, the structure should be sunk so that the roof will be below ground level and the top should be of overhead height. It must not extend entirely across the ditch, or if it does, or nearly so, it must be obstructed so that it can not be used as an approach.

There must be communication through and under the parapet or wall, so that the garrison in the *tambour* can escape into the interior at the last.

A ditch may also be flanked by a counterscarp gallery, which is a bomb-chamber formed behind or outside of the counterscarp at the salient of the ditch, Fig. 86. The side toward the ditch is stockaded and loopholed along the ditch. The entrance must be on the ditch side and protected from fire. The garrison of a counterscarp gallery will usually have communication with the interior of the work.

Obstacles are designed to protect the works from surprise and to break up the momentum of attack by breaking up the enemy's formation and exposing him under the accurate fire of the defense. They should be invisible from the direction of approach, should be difficult to destroy, and should have no screen or cover to the enemy.

Obstacles may be in front of or on the line of defense. In the former case they should be 50 to 100 yds. in front of the firing crest. If on the line they are in the ditch, if there is one, or are employed to close intervals between the flanks or enfiladed by adjacent works.

An *abatis* consists of trees lying parallel to each other with the branches pointing in the general direction of approach and interlaced. All leaves and twigs should be removed and the stiff ends of branches pointed.

If the *abatis* is on open ground is most conveniently made of branches about 15 ft. long. The branches are staked or tied down and the butts anchored by driving them with earth. Barbed wire may be interlaced among the branches. Five rows are placed, the branches of one extending over the trunks of the others, one in front, so as to make the *abatis* 5 ft. high and as wide as the ditch. It is better to place the *abatis* in a natural depression or a ditch, for concealment and protection from fire. If exposed to artillery, an *abatis* should be protected either as above or else by raising a glacis in front of it. Fig. 90 shows a typical form of *abatis*. An *abatis* formed by felling trees in front of the enemy, leaving the butt hanging to the stump, the branches prepared as before, is called a *slashing*, Fig. 91. It gives too much cover, and can be well flanked.

A palisade is a man-tight fence of posts. Round poles 4 to 6 ins. in diameter at the large end are best. If the sticks run 5 to 8 ins., they may be used. If defended from the rear, palisades give some shelter from fire and

Fig. 82

Fig. 83

gs should be made as large as possible without letting men through. d from the flank, they may be closer, say 3 to 4 ins. apart. The l be pointed. A strand or two of barbed wire run along the top and each post is a valuable addition.

ng is best made up in panels of 6 or 8 ft. length, connected by a ee, preferably of plank, otherwise of split stuff. If the tops are wales should be used, both underground. If the tops are connected one will do.

s should be planned to incline slightly to the front. As little earth disturbed in digging as possible, and one side of the trench should n the desired plane of the palisade. If stones can be had to fit he posts and the top of the trench, they will increase the stiffness ucture and save time in ramming, or a small log may be laid in along the outside of the posts. Figs. 92 and 93 show the construc- placing of palisades.

aise is a palisade horizontal, or nearly so, projecting from the scarp rscarp. A modern and better form consists of supports at 3 or 4 l, connected by barbed wire, forming a horizontal wire fence, Fig. 94. veaux de frise are obstacles of the form shown in Fig. 95. They y made in sections of manageable length chained together at the ey are most useful in closing roads or other narrow passages, as e quickly opened for friendly troops. The lances may be of iron wood and rectangular instead of round; the axial beam may be composite. Figs. 96 and 97 show methods of constructing cheveaux ith dimension stuff.

ormidable obstacle against cavalry consists of railroad ties planted ls of 10 ft. with the tops $4\frac{1}{2}$ ft. above the ground, and connected of rails spiked securely to each, Fig. 98. The rail ends should be by fish plates and bolted, with the ends of the bolts riveted down ds.

and 100 show forms of heavy obstacles employed in Manchuria by ans and Japanese, respectively. The former is composed of timber ade in rear and carried out at night. The latter appears to have ted in place.

ire entanglement is composed of stakes driven in the ground and by wire, barbed is the best, passing horizontally or diagonally, or e stakes are roughly in rectangular or quincunx order, but slight ies, both of position and height, should be introduced.

high entanglement the stakes average 4 ft. from the ground, and g is horizontal and diagonal, Fig. 101.

y wire entanglement has stakes averaging 18 ins. above the ground ire is horizontal only. This form is especially effective if concealed rass. In both kinds the wires should be wound around the stakes ed and passed loosely from one stake to the next. When two or es cross they should be tied together. Barbed wire is more diffi- ing but better when done. The most practicable form results from f barbed wire for the horizontal strands and smooth wire for the

the most generally useful of all obstacles because of the rapidity action, the difficulty of removal, the comparatively slight injury from ire, and its independence of local material supplies.

nd Materials. One man can make 10 sq. yds. of low and 3 sq. yds. ntanglement per hour. The low form requires 10 ft. of wire per d the high 30 ft. No. 14 is a suitable size. The smooth wire runs

58.9 ft. to the lb. A 100-lb. coil will make 600 sq. yds. of low or 200 sq. yds. of high entanglement. If barbed wire is used, the weight will be about $2\frac{1}{2}$ times as much.

56. Wire Fence. An ordinary barbed-wire fence is a considerable obstacle if well swept by fire. It becomes more formidable if a ditch is dug on one or both sides to obstruct the passage of wheels after the fence has been cut. The fence is much more difficult to get through if provided with an apron on one or both sides, inclined at an angle of about 45° , as indicated in Figs. 102 and 103. This form was much used in South Africa for connecting lines between blockhouses. When used in this way the lines of fence may be 300 to 600 yds. long, in plan like a worm fence, with the blockhouses at the reëntrant angles. Fixed rests for rifles, giving them the proper aim to enfilade the fence, were prepared at the blockhouses for use at night.

Such a fence may be arranged in many ways to give an automatic alarm either mechanically or electrically. The mechanical forms mostly depend on one or more single wires which are smooth, and are tightly stretched through staples on the posts which hold them loosely, permitting them to slip when cut and drop a counterweight at the blockhouse, which in falling explodes a cap or pulls the trigger of a rifle.

57. Military pits or trous de loup are excavations in the shape of an inverted cone or pyramid, with a pointed stake in the bottom. They should not be so deep as to afford cover to the skirmisher. Two and one-half feet or less is a suitable depth. Fig. 104 shows a plan and section of such pits.

They are usually dug in 3 or 5 rows and the earth thrown to the front to form a glacis. The rear row is dug first and then the next in front, and so on, so that no earth is cast over the finished pits.

An excellent arrangement is to dig the pits in a checkerboard plan, leaving alternate squares and placing a stake in each of them to form a wire entanglement, Fig. 105. One man can make 5 pits on a 2-hour relief.

58. Miscellaneous Barricades. Anything rigid in form and movable may be used to give cover from view and fire and to obstruct the advance of an assailant. Boxes, bales and sacks of goods, furniture, books, etc., have been so used. The principles above stated for other obstacles should be followed, so far as the character of the materials will permit. The rest ingenuity must supply. Such devices are usually called barricades and are useful in blocking the streets of towns and cities.

59. Inundations. Backing up the water of a stream so that it overflows a considerable area forms a good obstacle even though of fordable depth. If shallow, the difficulty of fording may be increased by irregular holes or ditches dug before the water comes up or by driving stakes or making entanglements. Fords have frequently been obstructed by ordinary harrows laid on the bottom with the teeth up.

The unusual natural conditions necessary to a successful inundation and the extent and character of the work required to construct the dams make this defense of exceptional use. It may be attempted with advantage when the drainage of a considerable flat area passes through a restricted opening, as a natural gorge, a culvert, or a bridge.

Open cribs filled with stones, or tighter ones filled with gravel or earth (see Bridges, 71), may form the basis of the obstruction to the flow of water. The usual method of tightening cracks or spaces between cribs is by throwing in earth or alternate layers of straw, hay, grass, earth, or sacks of clay. Unless the flow is enough to allow considerable leakage, the operation will not be practicable with field resources. A continuous construction, shown in section in Fig. 106, is frequently employed. The ends of the dam must

be carried well into the earth to prevent the water from cutting around them.

When the local conditions permit water to be run into the ditch of a parapet it should always be done.

60. Accidental cover includes accidents of the terrain not of natural origin, which can be used to advantage as cover from view and fire. Such are walls and other inclosures, buildings, cuttings, embankments, etc.

All these require preparation to better subserve their purpose. The application of the foregoing principles to such conditions is sufficiently indicated by the illustrations. The preparation has mainly to do with the defensive adaptation of the cover by providing for fire from it.

Fig. 107 shows the preparation of a wall less than 4 ft. high, for a single tier of fire. Fig. 108, the same for a wall 6 ft. high. Fig. 109, the same for a wall 7 ft. high. Fig. 110, a wall 9 ft. high for two tiers of fire, one standing and one lying. Fig. 111, the same for one tier standing and one kneeling.

Fig. 112 shows the treatment of a hedge which screens the parapet from view, holds the exterior slope at a steep pitch, and forms an excellent head cover.

Fig. 113 shows the best method of preparing a low embankment and Fig. 114 a high one.

Fig. 115 shows three methods of treating a railroad cut; one by a tier of fire on the lower side, another by a tier of fire on the upper side, and the third by a firing crest on the track. Retreat from the first and advance from the second are obstructed by the cut itself. Both may be used, the fire of the rear line covering the retreat of the front one. Care must be taken that the rear line can not shoot into the forward one.

61. Buildings if exposed to artillery are untenable, but against rifle fire are made defensible by barricading all windows and doors, except one for ingress and egress on the most sheltered side, and providing loopholes.

Barricades for doors and windows may be solid materials, such as timber, iron, brick, stone, of stockade construction, Par. 45, or of hollow articles of any kind which will form receptacles to retain earth or other bullet-proof filling. Articles of furniture, trunks, baskets, and barrels may be mentioned (see also Revetments). Bags are useful here as everywhere.

A house of stone or brick will give some protection from fire. A wooden house gives protection from view only, unless time suffices to stockade the walls. Care must be taken not to exclude too much light. Openings in partitions should be enlarged and additional ones made to give the freest possible communication. Hatches should be cut through the floors and roof to give free escape of smoke and gases.

Loopholing is done as already explained, Par. 13. The loopholes should not, as a rule, be less than 4 ft. apart in the same tier. They should be arranged to concentrate fire in front of doors or accessible windows. Doors should be further strengthened by barricades across the spaces into which they open.

If bay windows or other projections are available, they may be utilized for flanking fire. The loopholes for them may well be near the ground, so that a tier for other fire can be placed above them.

As soon as the barricades and necessary banquettes are finished all other combustible material should be removed and a supply of earth and water for fire fighting should be placed at convenient points. Stores and ammunition are also brought in and disposed of in suitable places. A space as

secure as possible from fire should be set apart and prepared as a hospital; and latrines must also be arranged for.

The defensive preparation will depend much on whether the house is to stand an actual assault, or only to afford an advantageous cover for fire upon the enemy while approaching. This should be determined and announced when the order to occupy the house is given. If the building is to be held to the last, a good flanking defense must be arranged and the interior walls must be loopholed and arrangements made to quickly barricade interior openings, so that a fighting retreat may be made from room to room.

In addition to tambours and caponieres, par. 47, flanking by vertical fire may be accomplished, as shown in Fig. 116. Such a construction is called a machicoulis gallery. Fire from such a gallery is not very effective and will usually not be worth the trouble of preparing for it. Hand grenades, small enough to be pushed through the loopholes, will be equally effective.

62. While the defensive preparation of the building is in progress the adjacent ground must be cleared of all obstructions to fire and such obstacles as are possible constructed. Good obstacles make flank defense much less necessary, except for houses to be held as long as possible regardless of losses.

63. Groups of buildings, such as villages, may be made the cover for a very stubborn defense. A number of them, sufficient to accommodate the desired garrison, of most substantial construction and so situated as to flank each other, are selected and treated as above described. The rest must be torn down or burned to clear the ground.

64. **General Considerations.** The foregoing paragraphs involve the general supposition that the best is attainable. In actual service this will not often be the case. War does not usually permit sandpapering and polishing. The main thing is to get some substantial result and get it quickly. The military engineer, considering projects for field fortification, must reckon with four imperative limitations—lack of time, lack of men, lack of tools, and lack of materials. Each of these tends to defeat his object of doing the very best thing and compels him to work out a scheme which goes as far in that direction as his limitations permit. The best is to be kept in view always to steady the aim even if it can not be reached.

The first move should be to take account of stock by finding out what time is allowed, what force is available, what tools are on hand, and what materials can be procured. The relative quantities and numbers hereinbefore given are to be considered as minima. Every effort should be made to get at least that number, and by all means get more if possible, especially of men. The more men the easier the work of each and the better condition all will be in when the work is finished. Manual labor for soldiers in the field is a necessary evil at best and should always be minimized.

Knowing from the time, force, tools, and materials to be had what can be done in the aggregate, lay out a scheme within the limits, following such of the preceding principles as are fundamental and slighting as much as may be necessary those which are secondary only. An incomplete or emergency scheme leaves some risk uncovered. Decide which is the least probable risk and economize time and labor in that direction.

65. **Sieges.** The attack by regular approaches of a strongly fortified place involves mainly the principles and devices previously discussed, but their employment is under conditions so different from those resulting from the contact of two mobile forces as to require separate treatment. What follows is not a complete presentation of the subject of sieges, but only of

features as are concerned with engineering duties on the side of the
 differences referred to are principally:
 of heavier caliber will be encountered.
 the terrain being well known to the defense, all fire will be more
 late.
 high-angle fire will be extensively employed, and angles of fall 30° and
 er must be expected.
 the trench work must be executed under close fire and must gain ground
 front. A variation either way from its proper direction will lose ground
 se expose the trench to enfilade, so that accurate tracing is of great
 tance.
 the same time these conditions of sieges are more alike in different times
 places than those of operations with mobile forces, and the best ways of
 some things can be stated for sieges with more confidence than in
 case of ordinary fieldworks.
 The first step toward the reduction of a fortress is to cut off communi-
 of the occupants with the outside world. This is done by a rapid
 ment of a relatively small force followed by reinforcements sufficient
 old a line entirely around the place and beyond the range of its artil-
 say 2½ to 3 miles from its main lines of defense. This line is called
 line of investment, and the belt of territory immediately outside of it
 ied by the investing force is called the zone of investment. Whether
 line must be occupied continuously will depend upon its nature. As
 must be actually occupied or commanded as could be used by the
 yed for exit or entrance. The line of investment is divided into sec-
 preferably so chosen that a unit of command can be assigned to

 Troops assigned to a section of the zone of investment begin at once
 connoiter it and put it in the best possible state of defense. Artificial
 incidental features are prepared and strengthened, intrenchments thrown
 here required, communications made and improved through and be-
 sections, and telegraph and telephone lines established around the
 and to headquarters. Every means must be utilized to gain knowledge
 the ground inside the zone. The time which must elapse before the
 material can be brought up will permit a great deal of such work to
 ne.
 The real attack or systematic approach is pushed inward from a few
 only of the zone of investment, usually one or two. The side on
 these approaches are to be made will be determined by the follow-
 nditions:
 The best communication with the base.
 The best terrain for battery positions and approaches under natural

 The most favorable ground for construction and operation of siege
 ys.
 The easiest digging.
 The most important consequences of success.
 first condition will usually be controlling, unless one of the others
 ibitory. If the zone of investment is favorable and ample siege rail-
 quipment is available, the attack may be conducted from points some-
 removed from the main terminus of the supply line.
 The main defensive line of an important fortress will consist of a series
 ched forts. To breach such a line one fort at least, more often two,

must be taken, and during the operation the fire of the one on each side must be kept down. If two forts are to be reduced, the siege will consist of artillery work against four and trench work against the middle two of these.

When the front of attack is decided, the main engineer park is located, out of reach of the defenders' artillery, convenient to the front selected and to the main supply line, and connected with the latter by good communications. Here is assembled all the siege material pertaining to engineering operations as fast as it arrives, to be sorted and arranged in convenient shape for selection and forwarding to the front as required.

Sites for the main siege batteries are next selected, at moderately long range from the forts, 2,500 to 4,000 yds., and for intermediate parks near them to contain materials for the construction, repair, and supply of the batteries. These sites are connected by a belt railroad immediately in their rear, and the belt line is connected with the main park at one or more places.

70. The complete investing force must be heavily reinforced, ordinarily about doubled, before siege operations on any considerable scale are undertaken. The additional force will be concentrated along the front of attack, mainly toward its center. This and the investing force along the front of operations are sometimes called siege troops, and the remainder of the investing force distinguished as investing troops. The siege force should consist of infantry, engineers, and artillery in the proportion approximate of 83%, 5%, and 12%, respectively, with the proper contingent of the Signal and Hospital Corps, and supernumerary engineer and ordnance officers. The total attacking force will range from $2\frac{1}{2}$ to 4 times the strength of the garrison.

71. The siege artillery will probably be disposed in batteries of 4 pieces or less, dispersed as much as concentration of fire will permit, and sited when possible on the reverse slopes of ridges or hills, or behind timber, and will employ indirect fire almost exclusively.

Though batteries are invisible, the high-angle fire of the defense will reach them, as the enemy's artillery will systematically search all reverse slopes within range, and the effect of shells must be localized by artificial cover. An emplacement for each gun will be best. A light parapet across the front and on the sides will answer. A 4 to 1 slope is the most convenient inclination of ground. Fig. 118 shows a typical emplacement for such a slope. Ample bombproof cover for men and reserve ammunition should be provided, preferably on the flanks. Fig. 117 shows half plans of two types used by the Japanese.

On level ground the platforms may be laid on the natural surface, the guns surrounded by a splinter-proof wall, as Fig. 78, in which case rooms of sufficient size may be walled off between the guns to form service magazines. The floors of the magazines may be depressed sufficiently to permit a weatherproof roof to be thrown over the ammunition, below the crest of the wall. The drainage of the roof must be intercepted before it runs into the pit.

72. **First Parallel.** When the siege batteries have brought the artillery fire of the defense under control the first attempt to gain ground to the front is made by opening a trench generally parallel to the line of investment and, if possible, within 1,200 yds. of the enemy's main line. During the day the outposts are advanced to or beyond the proposed line, to permit it to be reconnoitered and its bearings noted. At night the attack is pushed

strongly and the enemy driven in as far as possible for the greater of the working parties.

Tracing. As soon as it is dark enough for concealment the tracing is begun. Each party consists of one engineer officer, one noncommissioned officer, and a private for each 50 yds. of line to be traced. The outfit consists of tracing tape, pegs, mallets, and measuring rods. The tracing tape is of white cotton, 50 yds. long, $\frac{3}{4}$ in. wide, and marked at 5-ft. intervals by weaving or printing. It is provided with a loop at each end to be fastened to a stake or to another tape. The officer must provide himself with a compass and means of reading it by artificial light (Reconnaissance). There should be a tracing party for each 800 yds. of line, at least, and it will be better, as the time spent in tracing is lost for digging. It will be most advantageous if the tracing can be put through during the twilight, when it is still light enough to see the ground and read the compass, but too dark for the defenders to see the parties. The parties are paraded, ordered up, and moved up as close as possible before dark.

The officer, provided with a description of his initial point and the bearing of the course of the line from it, proceeds to it, his party following in file. Having identified the initial point, the officer stations a sapper facing him in the direction of the line, and taking the end of his tape, he runs along the line to be traced, followed by the remainder of the party. When the tape is nearly run out the sapper checks it, and, as the end is reached, sets a stake between his heels and puts the loop of the tape over it. The officer stations the second sapper at the front end of the first tape, facing him in the direction of the line, and proceeds as before. When the second tape is run out the second sapper sets his peg and puts the loop of both tapes over it. The operation is continued until all the tapes are down. The officer returns to the rendezvous of the working party and conducts the tracing of the line. Each sapper lies down at his peg, facing the initial point, and upon the arrival of the working party assists in the extension along the line.

If the fire of the defense is not sufficiently under control, it will be necessary to have the outposts begin the first parallel by digging pits, or trenches, of such lengths, which can afterwards be extended to a connection.

Approaches or zigzag trenches must be traced and dug on the same line as the first parallel, connecting it with cover in the rear. There should be at least three such approaches—at right, left, and center.

A typical trace of such an approach is shown in Fig. 119. The branches of the approach, AB, BC, etc., must have a direction such that when prolonged they pass outside of the extreme point on the corresponding flank from which the defense can bring fire to bear. A leg will usually be not more than 100 ft. long.

The tracing of approaches for simultaneous digging differs in detail but not in principle from that of the parallel already described. It is more difficult because the line is broken, and greater accuracy is required. Each tracing party consists of an extra man for each angle. The tape is run continuously, and, at each angle is passed, the extra marker stationed there cuts the tape 9 ft. from the angle on the back course, makes the long end fast to a peg at the angle and stretches the short end in prolongation of the forward course, Fig. 120, to mark the direction of a return carried across the end of the back course to protect it from enfilade. The return may be from 10 to 20 yds. long. The approach may be prolonged from this short end of tape without further tracing. The approaches so traced are dug simultaneously over their entire length the same as the parallel.

74. The digging of approaches under fire differs from ordinary trench work in that it is done progressively from one end and with the men reasonably protected from fire while doing it. Tracing is dispensed with. Approaches are usually called saps, the operation of digging them sapping, and the skilled men sappers. The end at which digging is in progress is called the saphead.

So long as the legs can be given the direction described in Par. 73, cover is needed on the end and one side only. This form is called single sap. A single sap gaining ground to the left is called a left-handed, and to the right a right-handed, sap. The shovelers work right-handed in a left-handed sap, and the reverse.

When the saphead is very close to the enemy's line, such direction can not be given, and cover is required on the end and both sides. This form is called double sap.

Single Sap. A party of one noncommissioned officer and 8 sappers in two reliefs works at the saphead. The two leading sappers, Nos. 1 and 2, excavate a trench $4\frac{1}{2}$ ft. deep and just wide enough to work in, throwing the earth to the front or exposed side. They are protected in front, or on the end of the trench, by a pile of half-filled sand bags, 50 or 60 in number, piled so as to make a parapet 2 ft. high. The sand bags should be smeared with mud so as to show the color of the soil. No. 1, kneeling or crouching, undercuts the end breast a few inches and brings down the earth. He steps back and No. 2 takes his place and shovels the loose earth out. No. 1 returns, throws forward as many sand bags as may be necessary to gain ground, using a fork or rolling them over with his hands. He then undercuts again and the operation is repeated. Nos. 3 and 4 widen the trench 2 ft. and raise the parapet, also forming a berm 12 to 13 ins. wide.

The rate of advance of a sap is only 2 to 4 ft. an hour. When half a yard has been gained, Nos. 1 and 2 exchange places and when a yard is gained the other relief comes in. At each change of reliefs the men who were Nos. 3 and 4 on the last tour take 1 and 2. Casualties are made up from the waiting relief. Generally, unless reduced to less than 4 men, the detachment must work without reënforcement until the regular change of trench reliefs.

A working party of infantry, 25 ft. in rear of the sappers, widens the trench to 10 ft. Fig. 121 shows a plan and sections of a single sap, and Fig. 121 gives a perspective view of a left-handed single sap in progress.

Double Sap. Two parties work parallel to each other, Nos. 1 and 2 leaving a 4-ft. tongue between them, which is taken out by Nos. 3 and 4. No widening party is required. Fig. 122 shows a plan and sections of a double sap.

To prevent enfilade the direction of the trench is changed at right angles as soon as the plunging fire becomes too annoying. After going 25 to 30 ft. laterally, the trench turns again to the front, and after having advanced sufficiently to form a traverse, turns again to the right until it reaches the original line, when it resumes the main direction. Fig. 124 shows the plan of such a sap. It is called a traversed sap.

75. Second Parallel. The first infantry position established, a second one well advanced is the next objective. It is called the second parallel and should be 500 or 600 yds. from the enemy's works, or about midway in front of the first parallel. It will envelop only the work selected for attack and will thus be shorter than the first. The second parallel, and the approaches to it from the first, may be established in a night, like the first parallel and its approaches, though this will be the exception. With an

Fig. 124

alert defense the advance from first to second parallel must be by sap. When the heads of the saps are abreast of each other and on the desired line they may be turned toward each other and run to a connection, forming the second parallel, though, if possible, the work should be expedited by extending parties for simultaneous work.

76. Third Parallel. This will be about half way from the second parallel to the enemy's works and will in most cases be the position of assault, though sometimes 4th and even 5th parallels have been found necessary. At this close range attention is necessary to guard the sapheads, which can be done by machine guns and rifle fire from the second parallel. As the saps advance the returns may be lengthened and turned so as to form demi-parallels. This will enable a stronger guarding force to be kept under shelter and well advanced to repulse sorties or to take the offensive if opportunity offers.

77. The foregoing description of siege works embodies principles but not complete practice; the latter is greatly affected by accidents of ground. Fig. 125 is a general view of the trenches actually constructed by the Japanese in the attack on Fort Kuropatkin. Especially interesting is the traversing of the ravine or gully on the left, which then became a good approach. Such ravines were characteristic of the terrain around Port Arthur, and much work of this kind was done by the besiegers. Sometimes the traverses were only planks laid across from bank to bank with sand bags on top, allowing passage under them. The distances between the traverses and the height of the sand-bag protection were so regulated that a shot grazing one could not pass under the next.

MINING.

78. Military mining will be here considered to include only the operations incident to forming communications or chambers completely underground; to placing in such chambers charges of explosives and to firing such charges.

Other uses of explosives in engineering operations are more commonly classed as blasting and will be considered under demolitions. Blasting also includes the use of explosives in forming the underground spaces in the process of mining.

Underground communications are classed according to their directions as galleries, which are horizontal or nearly so, and shafts, which are vertical or nearly so.

Galleries are classed according to their size as great or grand galleries, which are 6 ft. high by 7 ft. wide; common galleries, 6 ft. by 3½ ft.; half galleries, 4½ ft. by 3 ft.; branches, 3½ ft. by 2½ ft., and small branches, 2½ ft. by 2 ft. When the formation of the ground permits, earth augers may be used, forming bores or drill holes.

Shafts may be drill holes or wells, or may range in size from the smallest in which a man can work, say 3 by 3 ft., to any size which may be required, seldom more than 6 by 10 ft.

The dimensions of galleries and shafts are determined by the use to be made of them, their length, and the minimum space in which men can work. If troops or guns are to be passed through galleries they must be made large enough for that purpose. Grand and common galleries will usually meet these requirements. Galleries used only to reach the proper point to place the explosives are made of the size which is most rapidly driven and can be sufficiently ventilated. This is usually the half gallery in which men can work without too much constraint, through which the excavated earth can be transported by efficient methods, and in which reasonable ventilation can be maintained by simple means.

inches or small branches may be used when near the objective points. They are rapidly driven for short distances, 20 ft. or so, but when longer distances are required, difficulties of digging, earth disposal, and ventilation become too great. If the soil permits the use of augers, bores will usually be employed for the purpose.

The quantity of explosive placed at any point is called a charge. The chamber prepared for the reception of the charge is called the mine chamber or simply the chamber.

The primary requisites of subterranean excavations are accuracy of location, prevention of caving, ventilation, drainage, and lighting.

The restricted space usually requires not only that men shall work in confined positions, but also that special tools be provided of smaller size than those used for open earth work. A special tool called the push pick, shown in Fig. 126, is very convenient in soft earth. Picks and shovels for underground work are similar in form to standard tools, but are smaller, and have shorter handles.

Accuracy of direction may be secured in sufficient degree by refined application of methods described in Reconnaissance. The principal characteristic of underground surveying is the absence of daylight. All targets must be luminous, and readings of instruments may be made by artificial light. As a rule, the less light there is in the gallery, other than the target and reading lights, the better.

The best target is a light of medium strength behind a narrow slit, and is easily improvised. A convenient form is shown in Fig. 127. The slit is V-shaped in form and adjustable by rotating the two sides about their hinges, so that the maximum width can be adjusted to the intercept of the target at various distances, as shown in Figs. 128 and 129. A sheet of white paper or cloth behind the light will enable the observer to work much more easily.

In large galleries a transit may be used, and in smaller ones a plane table and magnetic compass. The box compass can not be sighted and read with sufficient accuracy for this work. Compass courses can not be relied upon, as the needle is subject to abnormal fluctuation when used underground. Any change of direction the back azimuth and azimuth must be carefully read and the angle between them used to determine the change. The box used for reading a compass should be nonmagnetic and nonelectric. If not so, must be held in exactly the same position during both readings. A ranging device may be improvised as shown in Fig. 127. The edges of the box should be straight and parallel to each other and to the line of sight.

The box resting on a smooth board or paper nearly level is pointed at back and forward targets in succession, a pencil being drawn along one edge in each position. The angle between the pencil lines is measured with a protractor.

The slope of an inclined gallery is maintained by the use of a field level. Various forms may be improvised by the use of a level tube or plumb line. A convenient form is shown in Fig. 130. The two pieces having been pivoted together, as shown, are given a series of suitable angles of inclination, and in setting a small hole is bored through both pieces, forming two series of holes, as indicated. To reproduce any setting spread the pieces until the corresponding holes fall together and put a closely fitting pin through both. The longer piece is placed on the inclined line of the gallery, usually on two consecutive frames, for which its length is adapted. On the shorter piece may be placed an ordinary carpenter's or other level, or a level tube may be set in the piece itself if convenient.

The greatest accuracy need not be maintained during the construction of galleries, though carelessness must be avoided. When the immediate vicinity of the chamber or other objective point is reached the entire line must be checked as accurately as possible, and the length and direction of the branch or drill hole necessary to reach the objective point must be determined. The digging having been substantially completed, the galleries may be kept clear of men to facilitate work when this final survey is made.

81. The first step in any mining operation will be to locate the objective point with respect to the point of departure by the best practicable measurements above the ground, preferably intersections with a transit from a carefully measured base. This position should be plotted on a good map. If no obstructions are suspected, a straight line from the point of departure to the objective should be adopted for the gallery, and its length and azimuth determined. A profile of the ground along the line of the gallery permits determination of the proper slope or slopes.

The transfer of the azimuth underground will depend on whether the gallery starts from a shaft, Fig. 134, from a reverse slope, Fig. 131, or, if not very deep, from a level with a descending branch, Fig. 132. In the second and third cases, which will be the rule in military mining, the azimuth may be established in the gallery by a transit or compass used in the ordinary way. In the case of a shaft, which will be the exception, the azimuth must be established across the top or mouth and transferred to the bottom by means of plumb lines, Fig. 134. The plumb lines should be fine wires, the bobs true and heavy, suspended in water if necessary to steady them, and the marking should be done by scratches on the heads of nails or tacks. During construction the alignment may be kept by a line stretched along the gallery and the elevations by the field level.

Changes of direction, if necessary, are most conveniently measured in the gallery by means of a bevel made above ground to the proper angle, Fig. 133. In checking, the angles should be determined by a careful geometrical construction in the gallery, or measured with an instrument.

In case an unexpected deviation is necessary, as to avoid an obstacle, it may be made to suit the conditions found and afterward measured and plotted on the chart. The necessary change to be made after the obstacle is passed, in order to direct the gallery again on the objective, will be determined from the chart and the proper bevel made and sent into the gallery with instructions to make that change to right or left at a stated distance from the last angle.

82. Gradients are determined by the field level. Points at which changes of slopes are to be made must be determined from the chart and the necessary data sent in, showing the point where the change is to be made and designating both old and new slopes. In checking, gradients should be determined with clinometer or transit, sighting from one horizontal angle to the next, if it can be done, otherwise taking as few sights as possible.

83. Prevention of caving is accomplished by linings. In very firm soil it is sometimes practicable to drive small shafts and galleries short distances without lining them; but if they are to stand for any length of time there is always danger of their caving in, and especially so if the neighboring soil is shaken by the explosion of projectiles or mines. When it is considered safe to use them, unlined shafts should be elliptical in plan, and the roofs of the galleries should be pointed arches. As a rule, however, both shafts and galleries should be lined. Those which are permanent in their character, as the main galleries of the countermines of a permanent work, are lined with masonry. Galleries constructed during a siege are lined with

wood. Wooden linings are of two general types, known as cases, and frames and sheeting.

Cases, Fig. 135, are of plank, 6 to 9 ins. wide and not less than $1\frac{1}{2}$ ins. thick, as a rule. They are formed as shown in the figure. The two pieces with tenons are called stanchions and are placed vertically. The top is called a cap sill and the bottom a ground sill.

In grand galleries the tenons at the top of the stanchions are usually shorter than the thickness of the cap sill, and those at the bottom, as well as the mortises in the ground sill, are omitted. The stanchions are kept from collapsing by blocks nailed to the ground sills. These blocks are 2 ins. thick and wide enough (about 9 ins.) to guide the wheels of a gun carriage and prevent the hub striking the stanchions, Fig. 138.

In cases for smaller galleries also the tenons are sometimes omitted at the bottom of the stanchions, the mortises in the ground sills cut an inch or two deeper, and the stanchions kept from collapsing by keys driven in the mortises, Fig. 137.

Frames and Sheetting. Frames are made of scantling, as shown in Figs. 139 and 140 for shafts, and 141 for galleries. Pieces of the latter are named as for cases. Sheetting is of plank, sawed to the desired length and beveled at one end. Sheetting should ordinarily be 1 ft. longer than the distances c. to c. between frames. Frame distance is generally 4 ft. and the length of sheetting 5 ft. Round stuff may be used for frames and also for sheetting, though the latter is not easy. The middle of each cap and ground sill, both in frames and cases, is marked by a saw cut or otherwise.

For galleries of moderate size, in good soil, lining with cases is more rapid and gives a smooth interior. Cases require uniform and fairly good lumber, which may not be obtainable. Frames and sheetting can be used for all sizes of galleries and in all soils and can be improvised from materials at hand.

The cases of branches and small branches are sometimes made very strong, with a view to resist rupture by the explosion of neighboring mines. Four-inch planks, or even thicker, have been used in certain circumstances.

84. The following table gives the dimensions, in inches, usually adopted for the pieces of cases, frames, and sheetting, for galleries of different sizes:

| | Cases. | | | Frames and sheetting. | | | |
|----------------------|---------------------|---------------------|---------------------|-----------------------|------------|-----------|---------------------|
| | Ground sill. | Stanchion. | Cap sill. | Ground sill. | Stanchion. | Cap sill. | Sheetting. |
| | Inches. | Inches. | Inches. | Inches. | Inches. | Inches. | Inches. |
| Great galleries..... | 3 | 4 | 5 | 6 x 4 | 6 x 6 | 6 x 9 | 2 |
| Common galleries.... | 2 | 2 | 2 | 6 x 3 | 6 x 6 | 6 x 8 | $1\frac{1}{2}$ |
| Half galleries..... | 2 | 2 | 2 | 5 x 3 | 5 x 5 | 5 x 7 | $1\frac{1}{2}$ |
| Branches..... | $1\frac{1}{2}$ or 2 | $1\frac{1}{2}$ or 2 | $1\frac{1}{2}$ or 2 | 4 x 3 | 4 x 4 | 4 x 5 | 1 or $1\frac{1}{2}$ |
| Small branches..... | 1 to 2 | 1 to 2 | 1 to 2 | 3 x 3 | 3 x 3 | 3 x 4 | 1 |

85. In sinking a shaft with frames and sheetting, the size and position having been fixed, the top frame, distinguished from the others by projections at each end of each piece, Fig. 140, is laid down and staked in place, with the scores on the end pieces accurately in the desired azimuth. The excavation of the shaft is then begun, making it enough larger than the top frame to take the sheetting all around. Usually the first interval can be dug without driving the sheetting. It is undercut so that at the level of the second frame it will be larger in each direction than at the top by twice the thickness of the sheetting. Gage rods cut to the length and width of

the excavation and plainly marked at the middle points should be provided. The inconvenience of working under the top frame may be avoided by marking the sides carefully and digging the first interval before setting the top frame.

When the shaft is deep enough the second frame is put in place and nailed together; the notches in the ends of the side pieces turned upward and those of the end pieces downward. The top and second frame are connected by nailing to them four battens of proper length (two on each side), Fig. 142, which suspend the second from the top frame at the established interval. The second frame is placed vertically below the top frame by using the plumb line and the scores in the frames.

The sheeting is inserted outside the top frame, beveled end first, bevel outside, and pushed down until its top is flush with the top frame. The lower end of the sheeting is held out from the lower frame by suitable wedges, and the excavation of the second interval is commenced.

In ordinary soil the sides of the shaft will now require support. Sheeting is therefore introduced and pushed down as the excavation proceeds, Fig. 143; the wedges previously placed being driven down as the sheeting is inserted.

If the pressure of the earth becomes great enough to spring the sheeting planks inward, an auxiliary frame is introduced. This is a frame similar to the shaft frames, but from 4 to 6 ins. larger in outside dimensions, Fig. 143a. The sheeting rests directly against the outside of this frame, and is thus held out far enough to allow the third frame to be placed and the wedges to be inserted as before. The auxiliary frame is then removed and used in the next interval.

Successive frames are placed in the same manner, Fig. 142, until the one directly over the gallery is reached. Care is taken to place this frame at exactly the right height, and the shaft is then continued to the required depth. A frame is placed at the bottom with its top at the level of the floor of the gallery, and the sheeting is allowed to rest directly against the outside of this frame. When the soil will allow it, the sheeting is omitted wholly or in part over the portion of the shaft which is to form the gallery entrance.

86. Precautions. In sinking shafts especial care must be taken to make the excavation no larger than is required for placing the lining, since if a vacant space is left outside the lining the sides of the shaft may give way through its entire height and fall against the lining with a blow which will crush it in. This has often been the cause of fatal accidents both in shafts and galleries.

87. Partly lined shafts, i.e., those in which the sheeting planks are separated from each other by greater or less intervals, should only be used for small depths and when they are expected to stand for a very short time. They are a constant menace to the miners, owing to the danger of their caving in, and in a much greater degree to the probability of stones, etc., falling from the unprotected parts and seriously injuring or killing the men at the bottom.

88. Driving a Gallery With Frames and Sheeting. If from a shaft, the direction of the gallery has already been marked by the scores on the shaft frames; but it must be verified by plumb lines, and two small pickets driven on the line of its axis, which is located exactly by small nails, one driven in the head of each picket.

Two gage rods are prepared, giving the extreme height and breadth of the excavation, i.e., the height of the frame plus two thicknesses of top

Fig. 141

Fig. 142

Fig. 143

Fig. 143a

Fig. 145

Fig. 144

Fig. 146

Fig. 147

sheeting, and the breadth of the frame plus four thicknesses of side sheeting. The middle of each gage rod is also plainly marked.

A gallery frame is set up against the side of the shaft, Fig. 142, its ground sill flush with the bottom frame of the shaft; or its stanchions may rest upon the shaft frame as a ground sill. This frame is carefully located and fastened in position with battens and braces. If the shaft sheeting on that side has been omitted, which can usually be done, the top gallery sheeting is started on top of the cap sill and driven until held in place by the earth. It is given the proper upward pitch by a scantling laid across the outer ends and held down by fastening to or under the shaft frame. The side sheeting is started in the same way against the outer faces of the stanchions and given an outward slant by bracing the outer ends slightly away from the sides of the shaft. Earth is now excavated and the sheeting advanced all around, keeping the front ends in solid earth far enough to hold them steady.

In this way the gallery is advanced one gallery interval, usually about 4 ft., when a second frame is placed. Its position is verified by the score marks; for direction, by a line; for grade, by a spirit, mason's, or field level, and for verticality, by a plumb line. It is then secured in place by nailing battens to it and the preceding frame. Wedges are inserted between the frame and the sheeting and the gallery is continued by the same methods. When the sheeting is advanced only by hard driving, the frames are slightly inclined to the rear at first and are afterwards driven forward until vertical.

89. If, while advancing the sheeting, the pressure upon it becomes so great as to spring it, a false frame, Fig. 144, must be used.

This consists of a cap sill, ground sill, and two stanchions, connected by mortises and tenons. The stanchions have tenons and the sills mortises at each end. The cap sill is usually rounded on top and, for facility in setting up and removing, its mortises are longer than the width of the tenons. The latter are held in place by wedges when the frame is in position, Fig. 145. The false frame is usually made of the same height as the common frames and, when side sheeting is used, wider by twice the thickness of this sheeting. When side sheeting is not used, its outside width may be equal to the clear width of the gallery.

In using the frame, Fig. 144, the ground sill is first placed accurately in position at a half interval in advance, the stanchions are set up, and the cap sill placed upon them and wedged. The whole frame is then raised about 2 inches by folding wedges placed under each end of the ground sill, and is secured by battens. The sheeting will now rest directly upon the cap sill and stanchions and have enough inclination to clear the next frame by its own thickness, as is required. The next frame is then set up, the wedges driven under the sheeting, and the false frame removed, which is easily done, owing to its construction.

If the gallery is not started from a shaft, a steep working face must be obtained and the first frame set up and braced, in correct position with respect to the center line marked on the ground. The subsequent operations are as above described, except that means must be provided to hold the rear ends of sheeting to give them the necessary upward and outward slant, or else a false frame used.

If it has been necessary in sinking the shaft to drive the sheeting on the side from which the gallery is to be broken out, the gallery frame is set as before and the sheeting behind it driven down until it barely engages the bottom edge of the cap sill of the gallery frame. The top gallery sheeting is then inserted and partly driven as before. The shaft sheeting outside

the gallery stanchions is then cut away and the side gallery sheeting started. The middle plank of the shaft sheeting is prized down with a bar engaged under the cap sill until free at the top, when it is pulled outward and removed. Excavation proceeds through the gap thus made, and as the other planks come free they are removed. If the earth runs too free at any stage of the operation it can be checked by short horizontal stop plank, placed against or inside the sheeting or inside the gallery frame after all sheeting has been removed.

90. To continue the gallery in such soil a shield, Fig. 146, may be used to prevent the earth in front and above from caving into the gallery. When the excavation at top of gallery has advanced as far as it is safe to go without causing the caving to extend beyond the top sheeting, a piece of plank a foot wide and in length equal to the width of the gallery is placed directly under the top sheeting and against the face of the excavation and is held in place by braces at its ends secured to the gallery lining. The earth is excavated until a second plank of the shield can be placed in the same way as before under the first one. This is continued until the entire face is covered. The top and side sheeting are then driven forward and the top plank of the shield is removed and replaced in advance, after which each plank is removed and replaced in succession, as above described.

91. **Partly Lined Galleries.** In very firm soil side sheeting may be omitted entirely, and in that less firm the side planks need not be in contact. When the side sheeting is omitted the width of excavation may be reduced to the clear width of the gallery and the stanchions be let into the side wall flush with its surface. In this case the ground sills are frequently omitted, the stanchions resting upon wooden blocks, stones, or directly upon the earth.

To save material, the planks of the top sheeting are sometimes more or less separated also. This can only be recommended when rapid and temporary work is required with limited materials, and in these cases the earth between the planks should be supported by packing of sticks, brush, etc.

92. **Inclined Galleries.** If the gallery, instead of being horizontal, is ascending, Fig. 147, or descending, Fig. 148, the proper slope is obtained by the use of a field level or a mason's level properly marked or set for the slope.

Position of Frames. In driving descending galleries better progress will be made and less material used if the frames are set at right angles to the axis of the gallery, Fig. 148, and this is the usual custom. In driving ascending galleries this is impracticable and the frames are set vertically, Fig. 147. In all other respects inclined galleries are driven in the same manner as horizontal ones.

93. **Change of Slope.** To pass from a horizontal to an ascending gallery, Fig. 147, it is only necessary to give the top sheeting the proper angle by holding down its back end with a piece of scantling placed across the gallery for that purpose; and, to give the side sheeting the proper inclination, cutting trenches in the bottom of the gallery for the lower pieces, if necessary.

In passing from a horizontal to a descending gallery, Fig. 148, the roof may be carried forward horizontally, and the floor given the desired pitch by increasing the height of the consecutive frames, until enough headroom is obtained to allow the top sheeting for the descending gallery to be inserted at the proper height and in the new direction. The frame at this point is made with a cap sill (upon which the sheeting rests directly), and a second crosspiece below it, serving as a cap sill for the descending gallery. From this point forward the frames may be set perpendicular to the axis of the gallery, as previously stated.

If the descending gallery is very steep and the horizontal pressure of the

soil great, it may be necessary to strengthen the stanchions of the last two or three vertical frames by crosspieces near their upper ends.

94. In changing direction horizontally with frames and sheeting, if the soil will stand for a distance of one frame interval, or even less, it is only necessary to place one or more frames at an angle until the necessary change is secured. The sheeting on the outside is placed by running the forward end past the frame and then inserting the rear end behind the last bay of sheeting.

If the sides require constant support, the outer one may be continued in the old direction until the wedge left is thick enough to permit the sheeting to be driven in the new direction. A short bay may be put in to reduce the amount of work to be done, Fig. 151. Frames with extra-long caps and sills are required and the last one used is given an extra stanchion on the outside to take the sheeting in the new direction.

For abrupt changes of direction in large galleries it is customary to drive in the original direction entirely past the turning point and then break out a gallery in the new direction. A gallery starting out from the side of another is called a return, and is rectangular or oblique, according to the angle made by its axis with that of the original gallery, which is called the gallery of departure.

That the return may be broken out, the interval between the frames of the gallery of departure at this point must be such as to admit between the stanchions a frame and the side sheeting of the return, Fig. 155. This part of the gallery of departure is called a landing and its floor is made horizontal.

If the return is oblique, Fig. 156, its width measured along the gallery of departure will be determined by an oblique section, and may be so great that the strength of the lining of the gallery of departure will not allow the necessary length of landing. In this case a short rectangular return is first broken out from the side of the gallery of departure, and the new gallery is broken out from the side of this return, Fig. 157. The latter method diminishes the length of the landing when the change of direction is less than 45° .

The floor of a return is started at the level of the floor of its landing. In firm soils which will stand for a short time without support the first frame may be set up entirely outside the gallery of departure, Figs. 156 and 157, and may be of the same height in clear as this gallery. When the soil is bad, however, and side sheeting is required in the gallery of departure, the first frame of the return must be set up against this sheeting in the interval between the stanchions of the landing, Fig. 155. This makes the clear height of the return at this frame less than that of the gallery of departure by a little more than the thickness of the sheeting. When the first frame of the return is set against the sheeting of the gallery of departure it may be pulled or cut away to permit excavation, beginning in either case with the top plank.

The first frame of an oblique return should be so set that the sides of the stanchions will be parallel to the side walls of the return, thus giving a good bearing to the side sheeting.

In very bad soil the first few frames of a return must be firmly braced, to resist the backward thrust of the earth, by battens connecting them together and by struts across the gallery of departure. The latter are removed when the return is sufficiently advanced.

95. In sinking a shaft with cases, Fig. 149, a case of the required size is put together and accurately placed upon the site of the shaft, whose dimensions are marked upon the ground outside it. The case is then removed and the earth excavated to the depth of the case, which is placed in the excavation with its top flush with the surface of the ground. Its position is carefully verified and it is secured in position by packing earth around it. The excavation is

then continued for the depth of another case, which is put in place as follows:

One end piece is placed in position, the tenons of the two sides are inserted in the mortises at its ends, and the side pieces are pushed back into position; a pocket-shaped excavation is made with a push pick beyond the end of one of the side pieces and running back 3 or 4 ins. into the side wall; the remaining end piece is inserted in this cavity far enough to allow the mortise at its other end to slip over its corresponding tenon; it is then drawn back and the tenons at both ends fitted into their mortises. The notches cut in the sides of the pieces allow them to be easily handled.

The next case is placed in the same way, care being taken not to excavate two consecutive pockets at the same corner. It is well to fill up these pockets by stuffing in sods from below before placing the next case.

When the sides of the case are tenoned at one end only and secured by wedges at the other they are easily placed in position without cutting out behind them.

Upon reaching the level of the top of the gallery, the pieces on the gallery side of the shaft are omitted if the ground is firm, but if it needs support these pieces are put in place and secured by cleats or braces, but the tenons are not inserted in the mortises. In firm soil the cases may be placed at intervals, Fig. 150.

96. Driving a Gallery With Cases. This is practicable only when the soil is somewhat firm. In breaking out from a shaft, a frame is first placed inside the shaft to support the ends of the shaft cases resting against the pieces which are to be removed. The latter pieces are then taken out and grooves are cut in the earth for the ground sill, stanchions, and cap sill of the gallery, and these are put in place in a manner entirely analogous to that described for sinking a shaft. This case is set flush with the inside of the shaft and supports the side pieces, whose tenons rest upon its stanchions. The projecting earth is then cut away and grooves are cut for the next case, which is placed in position and the excavation continued as before, Fig. 152.

If the gallery is not started from a shaft, a vertical face is obtained and the cases are placed as above described.

When the earth shows a tendency to cave, which it frequently will in great galleries, the cap sill must be put in position and supported while the miner excavates the grooves for the ground sill and stanchions, for which purpose two crutches are used. A crutch, Fig. 153, consists of an upright piece of timber carrying a cross-piece, whose length is equal to the width of two cases. The upright piece rests upon the ground sill of the cases already placed and is raised to the proper height by wedges. The part of the crosspiece which projects in advance is made 2 ins. higher than the rear part, to support the cap sill somewhat above its final level, so as to allow the tenons of the stanchions to be easily inserted. The rear part of the crosspiece is attached to the upright by an iron rod or short chain. The use of the crutch is illustrated in Fig. 154. When the case is set and adjusted to position the crutches are taken down by removing the wedges, and are replaced under the next cap sill.

In very firm soil shafts and galleries are frequently driven with cases not in juxtaposition, but separated by greater or less intervals. Pieces of planks (which may be parts of cases) placed vertically and resting against the sides and ends of the cases in shafts, or horizontally and resting upon the cap sills in galleries and somewhat separated from each other, may be used to support the earth between the cases. The same remarks apply to this construction as to the similar one sometimes used when mining with frames and sheeting.

97. Change of Direction in Galleries Lined With Cases. Slight changes in direction in a horizontal plane can be easily and gradually made by setting each

Ventilation. A gallery can not be driven more than 60 ft. without artificial ventilation. The only possible way of ventilating a gallery with a single opening is to force fresh air into the working breast, which may be done through a duct of wood or metal, or through a canvas or other hose. A fan or blower, worked by hand or power, is among the essential items of a gallery outfit. For excavations of moderate extent, a portable forge will serve as a convenient ventilating device. If a gallery passes under surface cover, a hole made through the roof and breaking the surface under protection of the cover may be used to promote ventilation.

In a system of galleries, having two or more outlets, air may be exhausted from one and drawn in through the other. Screens or doors may be arranged to compel the desired distribution of fresh air. Vacuum operation will never be as satisfactory as plenum. If there is considerable difference of level, as in a steep or rapidly ascending gallery, a fire built at or near the upper outlet will create a current throughout.

In urgent cases a man may enter and even work in a gallery which can not be ventilated, by providing him with a mask covering the nose and mouth and supplying fresh air through a hose or from a reservoir of compressed air carried with him.

Drainage. Much water is not likely to be encountered in military mining, but what there is must be taken care of, or it will collect at the lowest point and flood the mine. If water shows itself or is suspected, dead-level lines must be avoided, and all slopes should fall toward a point or points where the water can be disposed of. If the mine has a level outlet, nothing is required except to so regulate the slopes that all water will run to the mouth. If the mine is entered by a shaft, a pit or sump must be formed at the bottom of which water can collect and from which it can be raised to the surface by pumping or bailing. A slope of 1% will usually suffice for drainage if the floor of the gallery is sloped laterally and a fairly smooth gutter formed along one side.

If an interior low point can not be avoided, a sump must be made there where the water carried out in buckets or forced out with a pump. For low lifts, a hand pump, or, for less, a very efficient form of hand pump for drainage purposes is shown in Fig. 159. A very good pump may be made as shown in Fig. 160. The materials required are wood, leather, cotton cord, rivets, tacks, and nails. The pump will lift several feet without difficulty in addition to the usual suction. It requires copious priming unless the sucker can be made to reach the water at the lowest point of its stroke. It is usually worked with a spring handle. See Fig. 161.

The mine chamber should be nearly cubical or a cylinder with length equal to diameter. If it is to stand for some time before loading, or if large size, its sides and top must be supported by a lining. The chamber should frequently no more than so much of the end of a gallery, branch, or drill hole as is necessary to contain the charge.

Figs. 164 and 165 show typical forms of earth augers; the former used by turning and the latter by turning. Each must be withdrawn when full, to break up the earth.

Explosive. A satisfactory explosive for the purposes of military engineering must be—

Stable as to its constitution and characteristics for a long period.

Unaffected by ordinary variations of temperature and moisture.

Insensitive to shocks of handling, transportation, projectiles, and neighboring explosions.

Not too difficult of detonation.

(5) Quick enough to give good results when not confined and slow enough to give good results when confined.

(6) Convenient in form and consistency for packing and loading and for making up charges of different weights.

The third and fourth of the above requirements are antagonistic and must be compromised.

These conditions point to a high explosive of medium strength, of granular or plastic consistency, put up in waterproof cylindrical cartridges of standard size and length. A number of explosives meeting these requirements fairly well are on the market. No one of them is so distinctly superior as to warrant its adoption to the exclusion of the rest, and the one most easily procured at the time and place of need will probably be used.

Dynamites consist of a granular base, usually called dope in the trade, partly saturated with nitroglycerin. Dynamites are classed according to the percentage by weight of the nitroglycerin contained, as 75% dynamite, 60% dynamite, and so on. The grades No. 1, No. 2, and No. 3, often used, refer to 75, 50, and 25% dynamites, respectively. The dope may be an inert substance having no function except as a vehicle for the glycerin, or it may be, and usually is, a combustible substance contributing to the chemical reaction and improving the strength and character of the explosion. Dopes of this kind are usually nitrates of sodium or potassium. All American dynamites are of this class.

At extremes of temperature, high or low, an exudation of free nitroglycerin is likely to occur, making the dynamite extremely sensitive and dangerous. This danger increases with the degree of saturation. Dynamites higher than 60% will probably not be suitable for military purposes on this account. The tendency to exudation is greater when cartridges stand on end, and care should be taken to keep them on the side in storage and transportation. Dynamite freezes in moderately cold weather, and if no exudation has taken place becomes comparatively free from danger of explosion by concussion and is considered perfectly safe to handle. It is very difficult to explode when frozen, has less strength, and is not considered fit to use in that condition. In the frozen state dynamite is easily exploded by heat, and the operation of thawing, if carelessly conducted, is one of great danger, a large majority of accidents with dynamite occurring from this cause. It should never be taken near a fire or very hot metal, but should be thawed in a mild, diffused heat, acting for considerable time. The cartridge must never be placed on end to thaw out. Packing in fresh manure or inclosing in a chamber with cans of hot water, is the safest method of thawing dynamite. Plenty of time must be given. A cartridge soft on the outside may be frozen in the middle. None of the dynamites are fit for use as a military explosive in a cold climate.

Dynamite is a substance of the consistency of brown sugar. It should not be greasy to the touch, nor should there be any oily appearance of the packages. It is apt to cause a severe headache when touched with the hand. It is usually packed in paraffined paper cartridges, an inch or more in diameter and of varying lengths. A very common size is $1\frac{1}{4}$ ins. diam. by 8 ins. long, containing about $\frac{1}{10}$ of a pound.

Gelatins. These compounds are formed by the action of nitroglycerin on gun cotton. They are unstable and become supersensitive and highly dangerous when frozen.

Picric Powders. These consist of pure picric acid, or that acid combined with a nonmetallic base. They are nonsensitive to shock, unaffected by heat

Fig. 158

Fig. 166

Fig. 167

and cold, and in some forms by water, can be produced in a granular form or fused into solid shapes. Their characteristic color is a yellowish, sulphur tinge, and if pulverized they have a strong tendency to escape from their packages and discolor everything around them, men included. Nevertheless, the most successful military explosives thus far introduced belong in this class; for example, the French melinite, the English lyddite, the Austrian ecrasite, the Japanese shimose, and others.

Combinations of picric acid with metallic bases, especially lead, iron, and potassium, or with oxides or nitrates of these metals, are dangerously sensitive. Premature explosions have resulted from handling iron shells loaded with picric acid. A special neutral coating is now used to prevent contact of the acid and the metal. Litharge is very apt to produce an explosion if it comes in contact with picric acid. Red or white lead must not be used in or around any receptacles of picric acid.

Jovite, an American powder of this class, seems to come as near meeting all military requirements as any explosive now known. It is unaffected by heat, cold, concussion, or water. The gases of explosion are less deleterious than those of dynamite and produce no headaches. A recent authority on explosives says:

"Jovite has been tested by the ablest explosive experts and has never proved unsafe or unreliable. It would seem to fulfill all the requirements of an ideal explosive."

Jovite may be had of strengths equal to 20, 40, and 60% dynamite.

Gun cotton has been extensively used in military operations and has some advantages. It is not considerably used commercially, and would probably have to be manufactured when wanted. When dry it is apt to deteriorate from the presence of free nitric acid, which it is very difficult to completely remove in manufacture. When wet, gun cotton is perfectly safe, but can be fired only by a primer of dry gun cotton or other high explosive. Attention is required to keep the wet stock saturated, and the additional weight of water has to be transported. The dry cotton must be kept perfectly dry and separate from the wet. It is difficult to fuse gun cotton unless holes are left in the cartridge to receive the cap.

Ammonal, an explosive recently introduced, is a mixture of ammonium nitrate and powdered metallic aluminum. It is one of the most powerful explosives known, and has, in a high degree, many of the most important requisites for military use. If produced commercially, and further experience with it does not develop objections now unknown, it promises to be one of the most satisfactory powders which can be found. In priming ammonal especial care is necessary to see that the paraffin coating of the cap is intact.

A class known as Sprengle explosives consists of separate constituents, each nonexplosive, which are combined at the moment of use. The most common is rack-a-rock, which consists of chlorate of potash, a dry crystalline substance, and nitrobenzol, a liquid. The chlorate is in linen tubes, which are dipped into the liquid when ready to be loaded. This explosive has been extensively used for military purposes in the Philippines and has given good satisfaction. The dipping requires but a few seconds, after which the excess liquid is allowed to drain back into the containing vessel, about 15 minutes being required for this part of the operation. The cartridges may be had of any length and diameter desired.

103. The following is a list of well-known commercial powders suitable, with the conditions and restrictions heretofore given, for use in military mining:

| Dynamites. | Per cent. | Dynamites. | Per cent. |
|----------------------------|-----------|------------------------|-----------|
| Ætna powders, No. 1..... | 65 | Atlas powders, B..... | 50 |
| Ætna powders, No. 2XX..... | 50 | Atlas powders, C+..... | 45 |
| Ætna powders, No. 2..... | 40 | Atlas powders, C..... | 40 |
| Atlas powders, A..... | 75 | Dualin..... | 40 |
| Atlas powders, B+..... | 60 | Forcite, No. 1..... | 70 |

| Dynamites. | Per cent. | Miscellaneous. | Per cent. |
|--------------------------|-----------|------------------|-----------|
| Forcite, No. 2..... | 50 | Jovite..... | 60 |
| Giant powder, No. 1..... | 75 | Jovite..... | 40 |
| Giant powder, No. 2..... | 40 | Rack-a-rock..... | 40 |
| Hecla, IXX..... | 75 | | |
| Hercules, IXX..... | 75 | | |
| Rendrock..... | 40 | | |

104. Care and Handling of High Explosives. Such powders as have been described as suitable for use in military engineering operations are, when in sound condition, less liable to accidental explosion than gunpowder. It is the more disastrous result of a premature explosion, rather than the greater probability of its occurrence, that has caused high explosives to be regarded as especially dangerous. The following precautions should always be taken:

Gun cotton should be kept saturated with 30 per cent of its weight of water. If not hermetically sealed, the packages should be examined once a month or oftener and resaturated. The cotton required for primers must be stored dry and kept free from moisture. The cakes may be dipped in melted paraffin. The dry cotton must be kept well apart from any other explosives and from caps. If dry primers are not at hand, wet cakes must be dried at a temperature not exceeding 120° F.

All other powders should be stored in a cool, dry, shaded, and well ventilated space. The main supply must be well removed from the working points.

Avoid any unnecessary accumulation of powder at any other place than the magazine provided for it, and especially do not allow any powder to be stored near where caps are stored or where primers are made up.

Keep fire away from the powder, and the powder away from the fire.

Do not use hard-metal tools in manipulating cartridges. Copper is the only metal that should be used. Wood is better.

Keep cartridges free from sand or other gritty substance.

Do not bend, strike, or heat a cap or primer. See that the paraffin coating of every cap is free from cracks or holes. The copper must be completely protected from contact with powder. Redip if necessary, keeping the paraffin in a water bath and only warm enough to flow freely.

Be careful not to allow a pull to come on the wires or fuses attached to a cap.

The exploder should not be connected to the leads, nor a fuse lighted until everything is ready for firing, warning has been given, and time allowed for everyone to get to a safe distance. As a rule, the exploder should be used or the fuse lighted under the personal supervision of the responsible officer.

105. Firing Devices. The powders which will be used are all of the class which can be fired by detonation only. The detonating compound in general use is fulminate of mercury, and all methods of firing involve the explosion of a small quantity of fulminate inclosed in a cap or fuse and placed in the charge. The fulminate is easily ignited and very violent, which qualities have determined its use. It is unstable, corrosive, spoiled by moisture, and highly sensitive to shock and friction. Except strength, it possesses no characteristic

which does not tend to unfit it for military purposes. It is used as a matter of necessity.

Caps and fuses must be carefully handled, must not be assembled in considerable quantities, and must be kept away from the explosive.

106. Bickford or safety fuse is used to ignite the fulminate when electricity is not available. It consists of a powder thread wrapped with a waterproof tape, a double wrapping or double tape preferred. This fuse may be used in wet holes, but for under-water use it should have a continuous rubber coating.

Time fuse burns at an average rate of 3 ft. per minute, but the rate is not regular, and when time is important the rate of burning should be tested.

Instantaneous fuse burns at a rate of 120 ft. per second. The taping of this fuse is in a different color from the time fuse and it is also covered with a netting of coarse thread, making it easily distinguishable by sight and touch, so that there can be no excuse for mistaking one fuse for the other, day or night.

When it is necessary to splice different pieces of fuse of either kind, the ends to be joined should be cut obliquely, as indicated in Fig. 168. Care must be taken that the powder at the end of the cut does not fall out. The cut ends are placed carefully in juxtaposition, and before closing a few grains of powder should be dropped in and compressed between them. The splice is completed by wrapping with rubber tape if available, otherwise with any material at hand which will keep the ends in contact in their proper position. It is obvious that this splice must be completely protected from strain.

When a line of fuse is to be branched into two, the same principles are followed, the double splice being connected, as indicated in Fig. 169, and the same precautions taken in making up.

107. For firing by electricity a magneto-electric machine is used, the one most commonly employed being a Laflin & Rand Exploder, No. 3. Its exterior appearance is shown in Fig. 170. The handle A is raised to its full height and depressed as forcibly as can be done with the hand. By a rack and pinion it gives rotation to an armature revolving in a magnetic field. At the end of the stroke, when the armature has its maximum velocity of rotation, the handle closes a contact which shunts the current through the leads connected at the binding points b b. The case is 13 by 8 by 5½ ins. and the weight 18 lbs. Its rated capacity is 12 fuses, but not more than 6 should usually be connected. The lead wires should be insulated, though it is not absolutely necessary, as fuses have been fired through naked lead wires in fresh water. If short of insulated wire, put all that there is into one of the leads and make the other entirely of bare wire. The wire should be of copper, not less than 18 gauge for a distance of 500 ft. For firings through a greater distance, especially if more than one fuse is in the circuit, the leads should be larger or should be doubled for part of the way.

108. Caps or detonators are of two forms, adapted for firing with powder fuse, Fig. 171, or by electricity, Fig. 172. In both forms the fulminate, usually mixed in proportion of 10 parts to 1 by weight with nitrate or chlorate of potassium to reduce its corrosive action, is contained in a copper capsule. In the first form it is held in place by a wad of shellac, collodion, or paper, and the end is left open for the insertion of the fuse. The latter is cut off square, care being taken that the powder at the end does not sift out, and the cut end is inserted in the cap and pressed down snugly on the fulminate. A twisting motion which might scrape the fulminate must be avoided. The case is then crimped around the fuse with a special tool, and the cap is ready for use.

In the electrical cap, which is commonly called a fuse, the fulminate is held in place by a block of sulphur, or sometimes of wood, which fills the end

of the case and also holds in place the terminals and the bridge of fine platinum wire which is embedded in the fulminate, the heating of which by the current causes the ignition. The lead wires are 30 ins. to several feet in length, as may be ordered. In quarrying, wires are usually made long enough to come out of the drill hole so that no joints are to be made in the hole. In the ordinary form of cap the case is then crimped around the fuse with a special tool, and the cap is ready for use; in the "Daniels Safety Waterproof Blasting Cap" the upper end of the cap is expanded to a diameter $\frac{1}{8}$ in. greater than the lower, and a rubber sleeve is inserted therein. The expanded portion is slotted, and after the fuse has been inserted into the cap a special slip ring or sleeve is slipped down onto the cap comprising the rubber sleeve and making the joint water-tight. Caps and fuses are usually rated as follows:

| | Weight of charge in grams. | Weight of charge in grains. |
|--------------------|-------------------------------|--------------------------------|
| No. 3 or 3 X | 0.54 | 8.33 |
| No. 4 or 4 X | 0.65 | 10.03 |
| No. 5 or 5 X | 0.80 | 12.34 |
| No. 6 or 6 X | 1.00 | 15.43 |
| No. 7 or 7 X | 1.50 | 23.15 |
| No. 8 or 8 X | 2.00 | 30.86 |

The strength of the cap makes a difference in the force of the explosion. This is greater for low-grade powders. For 40% dynamite, explosion by a 5 X cap is 15% stronger than by a 3 X. For 60% dynamite, the difference is only 6%. The same result follows from a loss of strength in the same cap. A 5 X cap may by deterioration become of the same strength as a 3 X and will then produce an explosion so much the less effective. It is very important to prevent deterioration of caps and also to know whether they have deteriorated or not. Caps stored in a damp place deteriorate rapidly. With less than 0.25% of moisture the caps will not explode dynamite, though they may still explode themselves. To secure the maximum effect from high explosives, nothing less than a No. 6 cap or fuse should be used.

Caps may be tested by exploding them in a confined space and noting the report and the effect on the shell. A cap in full strength will tear the copper shell into minute pieces, while a deteriorated cap will tear it into larger pieces.

109. Simultaneous Ignitions. When a total blast is divided into a number of charges, it is important that all should go at the same instant. This will not be easy with time fuse, and that method will not be used unless absolutely necessary. If it is used, certain precautions must be observed to avoid total failure. The fuse must be so laid that the total length from the firing point to each charge will be the same. It will be better to use time fuse to a common point near the charge, and instantaneous fuse from there on. Figs. 173 and 174 show typical arrangements. The fuse need not be in straight lines, but must be laid out so that sparks from the burning end can not reach any part in front of it. Though not absolutely necessary with instantaneous fuse, it is well worth while to make different lines as nearly equal in length as possible.

In simultaneous ignitions by electricity, the fuses are connected in series; that is to say, they are all placed in the same circuit, Fig. 175. A lead from the firing apparatus is connected to one wire of a fuse on one flank. The other wire of this fuse is connected to a wire of the next fuse, and so on, until the last fuse is reached, the second wire of which is connected back by a lead to the firing point.

Figs. 178 and 179 show methods of jointing wires; the former, for temporary use, as a lead to a fuse wire; the latter, for more permanent use. The ends of

the wires must always be brightened by scraping with a knife or otherwise. To insulate, wrap with rubber tape, lapping well onto the covering in both directions.

110. Priming. The cap is inserted in a cartridge, usually called a primer. Whenever reference is made herein to use of explosives in or near water it is to be understood that under all circumstances the cap and primer must be kept perfectly dry. If but one primer is used, it should be placed near the center of the charge when the size and shape of the charge permit it to go in that position. If the cartridges are placed in a drill hole, as in rock blasting and some demolitions, the primer is put in last with the cap end down. The cap may be inserted as shown in Figs. 176 and 177. Fig. 176 applies to caps fired by train fuse and no other method may be used with such caps. The projection of about $\frac{1}{8}$ to $\frac{1}{4}$ inch of the cap case above the surface of the powder is to prevent the latter from taking fire from the sparks of the fuse and burning partially before the fuse goes, which, should it occur, will reduce the force of the explosion, or may cause complete failure.

Primers must be prepared at a safe distance from the charge and from the store of caps and should be placed as short a time as possible before firing.

111. Misfires. In case of a misfire there is risk in approaching the holes for several minutes, if electric firing is used, and for several hours in case of firing by fuse. Rules to this effect are laid down where safety to human life is a paramount consideration. They should be recognized in military operations to the extent which circumstances permit. There is also danger in attempting to reprime a charge, especially if tamping must be removed. The danger is reduced by care and by avoiding hard-metal tools and appliances; if possible, the tamping should be removed with wooden tools. In any case, leave a few inches of tamping above the charge undisturbed, then place several sticks of powder and a primer on top of the first charge and fire again. When conditions permit, it is better practice not to attempt repriming, but to place a new charge in a position to do all or a part of the work of the first charge.

The causes of misfires are various. With electricity, if none of the charges explode, the cause is probably due to overloading the machine, or a short circuit in the leads, or a complete break. An effectual, but less probable, cause is deterioration of all the primers. If part of the charges fire and others do not, the cause will probably be found to be either a defective cap, due to moisture or a broken bridge, or a short circuit in the fuse wires, which prevents current going through one fuse but not the others; or the sensitiveness of the caps may not be uniform, and there may be one or more so sensitive that they explode and break the circuit before the bridges of the others have become heated to the point of ignition.

112. Loading. The charge should fill the chamber as nearly as practicable. If drill holes are used, they should be just large enough to permit a cartridge to slip down without jamming. In quarrying, cartridges are frequently slit open before they are placed in the hole, so that with a slight pressure of the tamping rod, they spread and fill the hole completely. When large charges of free running powder are to be used, such as dynamite, jovite, and rack-a-rock, the cartridges may be opened and the contents put in bulk into another receptacle. As a rule, however, such charges will be made up by bunching sticks or strings of cartridges, par 123, and tying them together. The making up, and every possible detail of preparation, should be done above ground, leaving as little to do in the mine as possible. Charges must not be made up into sizes or weights which can not be conveniently carried through the galleries and placed in the chamber.

The charging should be personally directed by the responsible officer, and if

but one person can get at the charge at a time, he should place the powder himself. Such illumination as may be necessary must be provided by closed lights, with effective precautions against fire. When the primer is placed in the middle of a bulky charge, the wires or fuse must be led out through the powder. Only instantaneous fuse can be so used. If time fuse must be used, place the primer in the middle of one side of the charge so arranged that it must go before any sparks from the fuse can set fire to the powder.

When electric firing is used, the wires of each fuse should be twisted together at the ends to prevent the possibility of a chance current going through the fuse and for identification for connecting to each other and to the leads. Care must be taken that at no stage of the loading or tamping is a strain brought on any fuse or fuse wires, or any injury done to their coverings.

113. Tamping is less important for high explosives than for gunpowder, since the former do a fair proportion of their work without tamping, while the latter does practically none. Light tamping is desirable, however, and may consist of the excavated earth replaced in the communication next to the chamber to a distance of 6 to 10 ft. The use of high explosives facilitates tamping, because so many charges can be placed in drill holes, which are easily tamped.

For drill holes in rock which will hold it, water is the best possible tamping, otherwise sand or stone dust may be used. If the hole points upward, the top should be covered with a board or thick brush to stop the tamping which is blown out like a projectile. If neighboring ground can not be cleared for firing, the entire surface of the probable crater should be masked by brush or timbers piled upon it, and weighted down if necessary.

114. **Effects of Explosion.** It may be assumed as sufficiently exact for present purposes that charges of the same explosive develop total energies directly proportional to their weights. This energy is exerted in all directions in compression of the surrounding medium. The distance at which this disturbance remains sufficient to destroy galleries is called the radius of rupture, R. R. The surface joining the ends of these radii is called the surface of rupture. If the charge is large enough, further relief of pressure is afforded by the bodily displacement of a part of the surrounding medium on the side which presents the shortest distance from the charge to the surface. The relief of pressure on one side shortens all radii of rupture which have a component in that direction, but does not appreciably affect those which have no such component. Hence, when material is displaced the surface of rupture is ellipsoidal; when no material is displaced it is spherical. Fig. 163 illustrates in a very general way the supposed relations of craters and radii of rupture. It is not based on exact data.

The space left by this bodily displacement of material is called a crater. The determination of the crater which a particular charge in a particular place will produce, or of what charge must be put in that place to produce the given crater, or where a given charge must be placed to produce a desired crater, are problems constantly arising in military mining.

Fig. 162 shows a cross section of a typical crater in earth. The position of the charge is indicated; AB is the surface of the ground; CD is the line of least resistance, commonly designated L. L. R. or, in formulas, l ; DE is the crater radius, and CE the radius of explosion. All the elements of the crater are reckoned with respect to the position of the charge and the opening of the original ground surface. This opening for level ground is circular in form and is approximately the intersection of the spheroid of rupture by the ground surface.

Craters are designated as one-lined, two-lined, etc., accordingly as the diam. is once, twice, or three times the L. L. R. A two-lined crater is also called a

common mine; less than two-lined, undercharged; and more than two-lined, overcharged. A mine which does not break the surface is called a camouflet.

When a crater is formed, the part of the total work of the charge represented in crater effects is assumed to be proportional to the volume of earth actually moved. As a part is thrown vertically upward and falls back loosely into place, Fig. 162, the hole actually left does not represent the earth moved. The total volume moved is assumed, from many experiments, to be represented by the frustum of a cone, shown in section in Fig. 162, having the crater opening for its larger base, a circle of the diam. L. L. R. for its smaller base and L. L. R. for its height. For each cubic yard of volume of such a frustum a certain weight of explosive is allowed and it is thus that the corresponding weight of charge is ascertained. The unit weight is the quantity of powder required to throw out one cubic yard. It has been experimentally determined for gunpowder and is deduced for other explosives from their corresponding intensities.

The crater volume, or volume of the conical frustum, Fig. 162, may, for any given ratio of height and crater radius, be expressed by the cube of the height, L. L. R., multiplied by a numerical constant, and hence the weight of explosive required to produce a crater of corresponding proportions may also be expressed by t^3 multiplied by a constant. The constant varies with the character of the material, as well as with the proportions of crater.

115. Table II gives constants for various classes of materials and for craters from 1 to 6 line, the former practically a camouflet and the latter the largest that can be depended upon for results. The table also gives constants from which the R. R. may be determined.

The weight of charge may be determined from Table II. It is to be noted that the user of this table must exercise his judgment in classing the soil under the headings given, so that it can not be said that the table gives charges absolutely. If the mine is important, powder not scarce, and no information has been obtained from actual firings in the soil, the tabular charges should be increased 10% for large quantities and 50% for small ones. It is to be remembered that while if more powder than necessary is used the excess may be said to be wasted, if less than the proper amount is used not only is the total quantity used wasted, but the time and labor spent in getting it into place are also wasted and the opportunity to gain advantage by successful firing is lost. In all uses of explosives in mining the maxim for the first charge should be, do not spare the powder. On the other hand, every charge fired should be carefully observed, and whenever it is obvious that more powder than necessary has been used advantage should be taken of the experience gained to economize powder in future firings. The worst mistake that can be made is having the first charge too small.

116. **Land Mines.** This term is applied to mines or groups of mines usually formed by excavation from the surface and designed to be exploded at the moment the enemy is over them. Such mines are usually employed in front of defensive positions and in connection with visible obstacles. It is not permissible to plant such mines in any ground which is not obviously prepared for defense. Any person who ventures on space so prepared does so at his peril, but if there is a road or path open to passage through such ground mines must not be placed therein, or in a place where the explosion would injure persons occupying the road. If any defensive works or recognized obstacles are thrown across the road, indicating that it is closed to traffic, the road may be mined to a reasonable distance in front of them.

The charges are placed deep enough only to avoid artillery projectiles. If no artillery fire is to be expected they may be placed just under the surface. If a bore hole is sufficient the charge is placed at the bottom and the hole well

tamped. If an open pit is dug the mine chamber should be in firm ground at one side and the hole back-filled and well rammed.

The depth fixed, the charge may be adjusted to give a 2 or 3 line crater. The mines may be in one or more rows. Two rows, 30 to 40 yds. apart, are a good arrangement. The intervals between mines in a row should be such that the craters will nearly but not quite join. The positions of the mines should be concealed as completely as possible and further sophisticated by disturbing the ground slightly at points where there are no mines and so situated as to suggest a systematic arrangement.

A fougasse is a land mine in which the volume of the crater is artificially prepared to increase its range and effect. Fig. 166 shows the form which has been most used. The earth excavated must be piled around the pit, as shown, and well tamped, to prevent the charge blowing out behind the stones. It is not necessary to under-cut the bank as shown in the section. If the soil will not stand it may be thrown out to its natural angle and back-filled and tamped against the stones. A charge of 25 lbs. should scatter a cu. yd. of stones over an area 200 x 100 yds.

This form is difficult to conceal and very easily destroyed by the enemy's fire. Another form, with the axis vertical, is shown in Fig. 167. It is possible to conceal it by sprinkling earth over it, and an automatic firing device may be used with it, which is not practicable with the inclined form.

117. The igniting means may be instantaneous fuse or electricity. Fuses or wires should be laid in trenches 1 to 3 ft. deep. Mines are classed with respect to the method of firing as judgment and automatic. Judgment mines are controlled from a firing point and can be fired only at the will of the operator. Automatic mines are arranged to be fired by the disturbance of some apparatus in or near them. Automatic and judgment firing are often combined for the same mines. If firing by cap, the automatic firing device takes the form of a mechanical trigger, which may be operated by the pressure of feet on the ground over it, or by the pulling of a wire stretched along the line at such height as to be tripped by the feet. With electric firing this device is called a circuit closer, and the actuating force operates to close a contact which completes a metallic circuit from the battery to the fuse.

Planting and operation of land mines will ordinarily be the work of technical troops supplied with approved apparatus.

118. Mine Tactics. In siege operations mining is done at close quarters, and is, or should be, opposed by countermining by the enemy. There is then a double purpose in view; to reach the original objective by placing the charge where intended and firing it, and while so doing to detect and circumvent any attempt of the enemy to interfere, or to prosecute any enterprise of his own.

The only information of neighboring operations which is obtainable results from the sound of working carried through the earth. In compact soil an ordinary blow of a pick can be heard at a distance of 40 ft. and the most careful working is audible to a distance of 20 ft. Other sounds, such as rumbling of trucks and especially tamping, can be heard farther. These distances vary with the character of the soil and the skill of the listener. When more than one gallery is driven they should be parallel and not farther apart than twice the range of hearing, so that an enemy's gallery penetrating between them will be heard from one or both. Returns may be run out from the extreme galleries to detect the sound of working on the flanks. Such galleries are called listeners. They should not be large.

Efforts must be made to detect the enemy's working and to avoid, so far as possible, giving him like information. At occasional and irregular intervals all work should cease, all extraneous sounds be cut off, and men with quick

and trained hearing should listen for sounds of working and estimate the distance and direction. A map of the galleries should be kept, and whenever two headings are approaching, listening should be done in them and the estimates made by the men compared with the measurements on the map as a check on the range of hearing. Accuracy of perception of the sounds may be tested by tapping messages across.

When hostile parties have approached within destructive range of each other the one who fires first is the winner, but the nearer he is, or the longer he holds his fire, the more complete the victory. Each party will be on the alert to discover when the other party is getting ready to fire, and hence the greatest care must be taken to sophisticate the sounds connected with loading. Digging should continue at some point near the end, and all movements of trucks or other operations which make a noise should be continued not less frequently and certainly not more frequently than during the digging. Especially should tamping be cautiously done. The most probable mistake is premature firing, and it should be impressed upon all concerned that it is better to come into actual collision with the enemy's miners than to fire prematurely.

Galleries are much more vulnerable to a side than an end attack. If the enemy's heading can be located, an attempt should be made to get a position on one side of his gallery. The best position is nearly abreast of the end, a little in rear, so that if he is still digging a considerable length of his gallery will be destroyed, or if he is loading or loaded his mine will be exploded.

For long galleries the difficulties of ventilation and earth disposal may make it advisable to take a new departure. The heads of galleries are brought on a line, or nearly so, branches run forward from each so as to end at intervals of $1\frac{1}{2}$ times the depth below the surface, charged for common mines and fired simultaneously. An elongated crater is produced, which becomes a lodgment for new galleries as well as an advanced parallel in any system of surface approaches. The old galleries are reopened to form rear communications. It has frequently happened that entire underground operations have been directed to the single purpose of forming such an advanced trench in a position which could not be reached on the surface.

It will rarely be possible to get close enough to do serious damage with a camouflet, though in some cases it might be advantageous to avoid breaking ground at the surface. The maximum camouflet charge— $\frac{1}{4}$ to $\frac{1}{8}$ of common mines—gives an H. R. R. somewhat less than the L. R. R., which will usually be not more than 15 ft., while a 6-line crater has an H. R. R. of 5 times L. R. R. As countermining will usually result in a crater, consideration must be given to its situation with respect to the surface work, so that it will be an advantage if possible and certainly not a detriment.

DEMOLITIONS.

119. Military demolitions have for their purpose to destroy or make un-serviceable any object in the theater of war the preservation of which would be unfavorable to the army or favorable to the enemy, excepting always objects neutralized by international convention or the laws of war.

The principal objects of demolition may be divided in two general classes, viz.: Natural or artificial objects having no intrinsic or permanent value, such as accidents of ground and structures of purely military character; and

Natural or artificial objects having intrinsic or permanent value, or adapted to useful purposes in time of peace, such as buildings and communications.

Demolition is permissible only under a military necessity. For the first class of objects above the military necessity is obvious, since the destruction is aimed directly and exclusively at the enemy's fighting efficiency.

For the second class, the destruction affects others besides the armed enemy, and for this class the existence of a military necessity justifying demolition can not be presumed but must be determined at the moment, and the amount and character of destruction or disablement explicitly ordered by competent authority.

Demolitions of a local character, which have no effect elsewhere, may be made on the order of the immediate commander, as may also demolitions of a more serious character, but which are necessary to the safety of a local force. For example, a small force in retreat may interrupt a bridge to avoid capture, but the destruction should go no farther than is necessary to produce the result immediately desired by detaining the pursuers long enough to enable the pursued to make their escape. Demolitions which are intended to, or in their ultimate consequences may, affect a larger force or a greater territory, must be ordered by the commanding general of an army or other force operating independently. In case of doubt, orders should be sought from the highest accessible commander. An officer upon whom work of demolition is devolved should, if not provided with proper orders, ask for them.

120. Methods Employed. Demolitions may be made by fire, by mechanical means, or by explosives. Fire is the only recourse when absolute destruction is necessary, as in case of food supplies, munitions of war, structural materials, etc. Soluble matter, as gunpowder, sugar, salt, etc., might be destroyed in water, but this method is laborious. Burning is equally effective and much easier. For quick results with slow-burning materials a quantity of highly combustible stuff must be collected. A small fire gains headway very slowly and much time is lost. Care must be taken that the fire does not spread to objects not intended to be destroyed.

121. Demolition by mechanical means is too simple to require, and too varied to permit, detailed description. Reference is made to a few cases in which the best method may not be obvious.

Abatis is difficult to destroy. If the trees are dry, time suffices, and concealment is not essential, fire is best; otherwise, if working from the front, cut up and carry away enough trees to make a passage through. If working from the rear, loosen the fastenings of the butts and haul away bodily with ropes.

Wire entanglements must be cut with nippers, the more and shorter the pieces the better. Wire may be cut with an ax or machete if a block of wood is held behind it as an anvil. Trous de loup are leveled by shoveling the walls into the pits, or bridged with planks, fascines, or other materials.

Palisades and stockades may be cut down with axes or saws, or the earth may be dug away from one side and the logs pulled over.

Railroads. Operations may be directed against rolling stock, bridges, culverts, tunnels or track, or accessories, such as water stations, telegraphs.

Locomotives are temporarily disabled by removing valves or other small vital parts; permanently, by building a fire in a dry boiler or by detonating a charge of explosive in the boiler. In haste, piston or connecting rods, links, etc., may be destroyed by explosives, or a hole may be blown in the bottom of the tender tank. Cars may be burned or wrecked by collisions or derailment. The best places are in deep cuts or tunnels. A head-on collision in a tunnel will put it out of use for some time.

Wooden bridges may be burned or small ones may be pried off their seats by levers or dragged off with tackle.

Track may be destroyed by taking it up, burning the ties, heating the rails on the fires and twisting them with bars through the bolt holes, with a chain and lever, or a hook and lever, Fig. 167a. Twisting is much better than bend-

ing, as twisted rails must be rerolled before they can be used. The rail should be hot for the greater part of its length, so as to take a long twist. A quick track demolition requiring considerable time to repair, but not injuring the track material, may be made by loosening the ties over a stretch of track, taking off the end fish plates, putting a line of men along one side, two men to each tie, and turning the track over bodily. This plan works best on a high embankment.

Telegraph lines are temporarily disabled by breaks, in which the wires are cut, grounds, in which the wires are connected to the ground, and crosses, in which a metallic connection is made between the wires. A ground may be made by connecting a wire to the rail or to a bar or plate of metal in damp earth. Copper is best. A connection with water or gas pipe forms a ground. All faults should be carefully concealed from view, so as to prolong the time necessary to locate them. If a raid is made on a telegraph office, remove the instruments, bare and brighten the ends of all wires, and tie them together with a wrapping of brightened copper wire. Incoming and outgoing wires should be tied separately.

To destroy a telegraph line cut down and burn poles, cut and tangle wires, and break insulators.

122. Demolition With Explosives. Handling, priming, and firing explosives for demolition purposes are done as already described in pars. 104 to 113. Bickford fuse will be generally used in such work. Simultaneous ignition at long distances from the firing point should not be attempted unless a battery and electric fuses are available. In such cases the charges should be so arranged that the plan will not fail even though all charges do not go off at once. Proper charges and the best way to place them will be indicated for the most frequent and important uses.

123. Weight of Explosives. All calculations of weights of charges are based on the use of an explosive equal in strength to a 50% dynamite. A stick will be understood to mean a cylindrical cartridge $1\frac{1}{4} \times 8$ ins., which will weigh approximately 0.6 lb. A chain will be understood to mean a number of such sticks end to end, in close contact, and is taken at 1 lb. per running ft. The cartridges of a string will usually be attached to a rope or pole. When two or more strings of cartridges are to be used they may be lashed to the same support. In all the following formulas C represents the charge of 50% dynamite, or its equal in strength, in lbs.; d, the diam. in ft.; B, the breadth of the section to be ruptured, and T and t the thickness in ft. and ins., respectively.

124. Timber. A charge of $\frac{1}{2}$ lb. per sq. ft. of sectional area, placed in holes in the same cross section, will cut off trees and round or squared timbers of usual proportions. The holes should be tamped with clay behind the cartridges. One 2, 3, and 4 sticks, Figs. 180 to 182, will cut off trees or poles 13, 19, 23, and 27 ins. diam., respectively. The center of the charge should be at the center of the section. If the holes meet, one primer at the middle will do. If they do not meet, as will usually happen in large trees, a fuse for each hole is required and simultaneous ignition. If firing must be done with time fuse, it may be well to charge and fire one hole, then bore another in the soundest part remaining, charge and fire it, and so on, until the tree falls.

A round timber not over 12 ins. diam. may be cut by a chain completely encircling it in the same plane. It must set snug against the wood and should be fired with primers on both sides.

Such a charge fired 3 ft. under water will cut any pile or trestle leg likely to be encountered. Close contact is not so necessary under water, and it is convenient to lash the charge to a wire ring or to a band or hoop and slip it down.

For squared timbers the charge is placed in one or more holes parallel to one face. The direction will depend on the dimensions of the timber as compared with the length of a stick. The holes should not go entirely through and should be somewhat deeper than the stick is long to allow of tamping. Broadly speaking, the hole should be bored in the direction of the dimension which is nearest 12 ins. for whole sticks or in the direction which is nearest 8 ins. and charged with $\frac{1}{2}$ sticks.

It may be necessary to cut bridge timbers when there is not time to bore. The charge required is 4 lbs. per sq. ft. of section, and may be placed as a chain around, if square or nearly so, or if the piece is thin as compared with its width, across one long side.

Stockades and stockaded walls or palisades are destroyed by strings of cartridges covering so much of their length as it may be necessary to break down. The cartridges can not be got close to the wood except in the case of square timbers, and more powder is required than the actual cross section of wood calls for. Besides, it may not be known what the construction of the stockade is or what strength it may have from braces or other reinforcement.

The charge is best placed along the foot of the wall and should be tamped, especially in the intervals between timbers. So far as its flexibility suffices, the string should be bent to fit the contour of the logs as snugly as possible.

If the demolition is deliberate and the structure can be examined, 1 or 2 strings well placed and tamped will throw down a single wall or one side of a double wall. If the work is to be done under fire, determine the minimum length of breach actually required and place and fire a charge of 4 strings tamped as well as conditions permit.

125. Masonry. For ordinary walls, the charge per running foot varies with the square of the thickness, or $C = 0.85 T^2$. The charge should be laid in chains along the foot of the wall, Fig. 183. If a tamping equal in thickness to the wall is placed, Fig. 184, the charge may be reduced $\frac{1}{4}$. If beside the tamping a groove is cut to hold the charge, Fig. 184, the weight of the powder may be reduced $\frac{1}{2}$.

The following table shows the number of chains required to throw down walls of usual thickness:

| Thickness of wall. | Number of chains required. | | |
|-----------------------|----------------------------|---------|------------------------|
| | Not tamped. | Tamped. | Grooved and tamped. |
| <i>Inches.</i> | | | |
| 13 | 1 | 1 | 1 |
| 18 | 2 | 2 | 1 |
| 22 | 3 | 2 | 2 |
| 26 | 4 | 3 | 2 |

The walls of a house may be blown down with charges taken from the above table. It is sufficient to charge the walls between windows only, preferably inside and with tamping. In haste, one or more charges of 50 lbs. in a central position will demolish the house.

Retaining walls and bridge abutments should be charged at the back and low down. A trench is opened the full width of the back, or a shaft may be sunk and a gallery driven along the back. The charge is tamped with part of the excavated material. In case of a retaining wall it may be found easier to mine under it and place the charge from the front.

When a retaining wall supports a road both may be demolished by a common mine placed as indicated in Fig. 187, L. L. R. being taken at $\frac{1}{4}$ the width of roadway.

Locks should be attacked at the miter sills, the lower first. Start the gates

open slightly and place a concentrated charge between them and the upper edge of the sill.

126. Masonry Bridges. A single arch is best attacked by charging across the extrados at the haunches, or across the crown, Fig. 185. The charge should be $\frac{1}{2}$ more than for a wall of the same thickness. Both methods require digging, and if the spandrel filling is of masonry, the former is scarcely practicable. Both methods also interrupt traffic on the bridge which it may be important to use until the last moment. A thin arch may be broken by a heavy charge exploded on the roadway at the crown. It should be tamped by throwing a mound of earth over it. The charge should be not less than T^2 lbs. per running ft., T reckoned from surface of roadway to soffit of arch.

The charge may be placed in a trough and suspended under the crown. The sides of the trough should make 60° angle. Planks 12 ins. wide will make a trough to hold 36 chains of $1\frac{1}{4}$ cartridges or 36 lbs. to the running ft. If the number to be used will not completely fill the trough, earth must be placed in the bottom so that the top tier of the cartridges will project slightly above the edges of the boards. The trough must not be allowed to sag away from the arch at the middle. If necessary, truss it up, Figs. 216-219, Bridges.

Primers should be placed 3 or 4 ft. apart in the middle chain of the top tier and the wires or fuse led out through notches in the sides.

A bridge of more than one arch is usually most easily attacked at the piers. The destruction of one pier throws down two arches. The charge should be placed where the pier is the thinnest and should extend across one face. If possible, a groove should be cut in the pier, Fig. 186, or irregular voids made by prizing out stones from the same course. This lessens T , partially tamps the charge, and furnishes a convenient support, which must otherwise be provided in the shape of a shelf, trough, or other device.

127. Metals. As soft steel so greatly predominates in structural work, statements under this head will relate to that metal.

All charges will be external, as drilling or boring is not practicable. The standard formula is $C = 2.5 Bt^2$, in which C = the charge in lbs., B the width of the section in ft., and t its thickness in ins. The charge must extend entirely across the plate or sheet.

The following table gives the charges necessary to cut through a plate 1 ft. wide and of the thickness given. It is computed from the above formula for 50% dynamite.

| Thickness of plate. | Charge of 50 per cent. dynamite. | Thickness of plate. | Charge of 50 per cent. dynamite. |
|------------------------|--|------------------------|--|
| <i>Inches.</i> | <i>Pounds.</i> | <i>Inches.</i> | <i>Pounds.</i> |
| $\frac{1}{4}$ | 0.16 | $1\frac{1}{4}$ | 3.90 |
| $\frac{1}{2}$ | 0.62 | $1\frac{1}{2}$ | 5.62 |
| $\frac{3}{4}$ | 1.40 | 2 | 10.00 |
| 1 | 2.5 | 3 | 23.50 |

A single chain will cut a plate up to $\frac{5}{8}$ in. thick. Two, 3, and 4 chains will cut plates of $\frac{3}{8}$, $1\frac{1}{8}$, and $1\frac{1}{4}$ ins. thickness, respectively. The charge must be held snugly against the plate by a piece of plank, lashed or wedged, and whenever possible, must be tamped. For structural shapes figure the width as the sum of web and flange widths, and the thickness as the area of cross section in sq. ins., divided by this sum.

The charge should be in three parts—one on the web and one on each flange. For channels, angles, and Z bars, the entire charge may be on contiguous surfaces, Figs. 188 to 190, and one primer will suffice. For I beams

the flange charges should be on the outside and three primers are needed. See Fig. 191.

As one chain will cut up to $\frac{3}{8}$ in. thickness, and 2 chains up to $\frac{1}{2}$ in. choice will usually lie between the two, as few pieces of structural steel can be found with greater thickness than $\frac{3}{8}$ in.

For lattice girders, diagonals, and posts, all the longitudinal members should be cut. For plate girders, Fig. 192, the web and both flanges should be cut. If short of powder, cut the lower flange and lower part of the web. For box girder, Fig. 193, figure all four sides as plates. If powder is scarce cut the top. For a beam girder, Fig. 194, figure the flange charge for the minimum thickness of beam—flange and plate.

128. Cutting Bridges. Wooden trusses are best cut near the middle of the lower chord. Steel trusses and girders, if a complete fall is desired, should have every member cut on the same cross section. Continuous girder trusses must be cut near the end of the shore spans opposite the abutments as at CC, Fig. 195.

Metal girders and trusses are better cut near the abutments, where the sections of chords and flanges are smaller. Where members meet or cross at panel points, etc., it is usually possible to place charges in a more convenient acute angle and then tamp by throwing earth upon them. The effect of a charge in such a situation is always greater than if placed against the side of a single member, and, unless the panel points are of very massive construction, and so complicated as to make the effect of the charge uncertain, it is better to choose them as the location for cutting, remembering that a complete rupture of the entire cross section of the bridge is the object. Panel points and intersections will be selected so as to attain this object with the smallest number of charges. Figs. 196 to 199 show locations of charges for trusses of different form which meet this condition.

A cantilever bridge should be cut over the towers, with especial care to the complete rupture of the top chords.

Wire cables of suspension bridges are difficult to cut. The best place for work is between the cable and the top of the tower, near the saddle. There are no reliable data as to charges required. A French formula gives $C = 0.21 t^3$ in which t is the diameter of the cable in inches. Assuming the cable to be a plate with a thickness and width which is equal to d , the plate formula becomes $C = 0.21 t^3$. Assuming the cable to be equivalent to a plate of width equal to its circumference and thickness equal to its radius, the formula becomes $C = 0.16 t^3$. It is probable that the last formula will give a charge which will weaken the cable at least, so that it will part under dead load. For a cable of eyebars the charge is computed as for plate and placed between the bars.

129. Railroads. To interrupt traffic rails may be cut and frogs and switch parts of switches broken. A stick fastened against the web of a rail will cut. 70 lbs. will cut a gap in it about a foot long; if the charge is tamped, a rail may be cut. Such a cut may be made to produce derailments, for other purposes two charges should be fired on opposite sides and a foot apart, which will blow out a piece and distort the ends.

A stick in the groove of a frog and covered with ballast will wreck a frog. A stick between two rails, as, for example, a track and a guard rail or the main line and switch rail, will cut both. In such a situation tamping is easy and should always be done.

130. Rock Blasting. For maximum effect, it is desirable to get the charge as elongated as possible at right angles to the L. L. R. It is easier done when the mass of rock presents two surfaces, as a top and bottom. See Fig. 200, when the holes can be drilled vertically from the top with the L.

measured to the side face, called in quarrying the breast. When the rock presents an inclined face, which is the most usual case, a vertical line is secured and maintained by successive rows of holes, increasing in length as shown in Fig. 201.

A wide range of conditions of hardness and stratification does not permit fixed rules for number and location of charges. In stratified rock of uniform hardness the depth of hole, d , Fig. 200, may be $1\frac{1}{2}$ times the L. L. R. distance; the holes in the row may be at a distance, l , from each other. For granite rocks l must be $\frac{1}{2} d$ or even less. The depth of tamping, v , should not be less than $1\frac{1}{2}$ times the length of charge, h , and h should be more than $\frac{1}{2} d$. If the length of charge—the weight of which may be found from Table II—is more than $\frac{1}{2} d$, the holes should be closer together in the row, or the distance from the face diminished, or both.

When there is but one face, as in tunnel work, the holes should be drilled at an angle, Fig. 202. The harder the rock the greater should this angle be, within the limits of convenience in drilling. Figs. 203 and 204 show the disposition of drill holes in the face of elliptical and rectangular tunnels of small size. The black dots are the positions of the holes in the breast; the dotted lines show the direction and length. The central group should be fired first. These are called breaking-in shots and produce a concave surface which facilitates the throwing out of rock by the remaining shots.

Tunnel work is necessarily progressive. The first loading may be made according to the rules already given. The effect is to be carefully noted, and the number, direction, and depth of holes, and weight of charges so modified as to produce the desired results.

If the stratification is very pronounced, amounting to fissures, drill holes should be driven wholly in one layer, not lying in or crossing a fissure.

131. Ice can be removed by blasting if there is a current to carry the blocks away and clear water near to receive them. The connection with the shore should first be broken. Small charges rather close together are necessary; on the surface covered with earth if the ice is thin, in drill holes if very thick. This work will be progressive, and charges, distances, etc., should be determined by trial better than from any rule.

TABLE I.—AREAS IN SQ. FT. OF PARAPET SECTIONS FOR CERTAIN HEIGHTS AND

| Height of parapet in feet = h | Horizontal width of superior slope in feet = s . | | | | | | | |
|---------------------------------------|--|----------------|-------|-------|--------|--------|--------|--------|
| | 2 | $2\frac{1}{2}$ | 3 | 4 | 5 | 6 | 10 | 12 |
| 2 | 7.04 | 7.69 | 8.35 | 9.52 | 10.55 | 11.44 | 13.60 | |
| 3 | 13.70 | 14.78 | 15.84 | 17.84 | 19.70 | 21.62 | 26.90 | 28.88 |
| 4 | 22.36 | 23.86 | 25.33 | 28.16 | 30.85 | 33.40 | 42.20 | 45.84 |
| $4\frac{1}{2}$ | 27.44 | 29.15 | 30.82 | 34.27 | 37.17 | 40.14 | 50.60 | 55.07 |
| 5 | 33.02 | 34.93 | 36.82 | 40.48 | 44.00 | 47.38 | 59.50 | 64.80 |
| 6 | 45.78 | 48.41 | 50.51 | 54.80 | 59.15 | 63.36 | 78.80 | 85.76 |
| 7 | | | | | 76.30 | 81.34 | 100.10 | 108.72 |
| 9 | | | | | 116.60 | 123.30 | 148.70 | 160.64 |
| 11 | | | | | | | 205.30 | 226.50 |
| 13 | | | | | | | 269.90 | 288.48 |

For inclined sites add if slope is to the front, or subtract if to the rear.

TABLE II.—CONSTANTS FOR DETERMINING CHARGES AND RADIUS OF RUPTURE OF MINES.

| Kind of material. | Camouflet, 1-line. | Under- charged, 1½-line. | Common, 2-line. | Overcharged. | | | |
|---|-----------------------|--------------------------------|--------------------|--------------|---------|---------|---------|
| | | | | 3-line. | 4-line. | 5-line. | 6-line. |
| Light earth..... | 0.005 | 0.012 | 0.027 | 0.081 | 0.185 | 0.351 | 0.594 |
| Common earth..... | 0.006 | 0.015 | 0.033 | 0.094 | 0.229 | 0.433 | 0.733 |
| Hard sand..... | 0.007 | 0.019 | 0.042 | 0.126 | 0.288 | 0.546 | 0.924 |
| Hardpan..... | 0.008 | 0.023 | 0.050 | 0.150 | 0.343 | 0.650 | 1.100 |
| Ordinary brick masonry..... | 0.010 | 0.026 | 0.057 | 0.161 | 0.391 | 0.741 | 1.254 |
| Medium rock or good <i>new</i> brickwork..... | 0.013 | 0.034 | 0.075 | 0.225 | 0.514 | 0.975 | 1.650 |
| Best <i>old</i> brickwork..... | 0.014 | 0.038 | 0.083 | 0.250 | 0.569 | 1.079 | 1.826 |
| Radius rupture {Horizontal..... | 1.0 | 1.4 | 1.7 | 2.5 | 3.4 | 4.0 | 5.0 |
| {Vertical..... | 1.0 | 1.0 | 1.1 | 1.2 | 1.7 | 2.0 | 2.5 |

These numbers to be multiplied
by *l* for charges of 50 per cent.
dynamite in pounds.

These numbers to be multiplied by
l for radius in feet.

These numbers to be multiplied
by p for charges of 50 per cent.
dynamite in pounds.

These numbers to be multiplied by
 t for radius in feet.

For gun cotton or 75 per cent. dynamite, reduce charges found from above table 40 per cent. For ammonal, reduce 50 per cent.

ADDENDUM, 1907.

22a. Figs. 205 and 206 show an infantry redoubt recently built at Fort Kan., for test purposes. It embodies some of the latest approved features of such works.

There is a tendency to limit the use of redoubts to the strengthening of points. In other situations their depth must be restricted as much as possible so that the redoubt resembles a trench of unusual strength. Overhead cover will always be an important feature.

ADDENDA, 1909.

9a. Certain changes in the consensus of military experts in the matter of profiles of infantry trenches must be noted. These changes rest upon principles which have been stated in former editions but have not heretofore been embodied in typical profiles.

Foremost among them is the increasing weight given to concealment from view and the sacrifices of other desirable conditions which are thought justified to secure or preserve such concealment. There is also to be considered the greater depression angle of lines of vision made possible by balloon reconnaissance.

Of the principal conditions set forth in paragraph 8, only the second and fourth appear to require modification. When the parapet is not seen from view it can be seen more clearly and at greater distance if it presents a marked difference in the inclination of its planes. For this reason it is thought that the exterior slope, instead of being made "as steep as the nature of which it consists will stand," would better be as flat as the supply of material and the labor of placing it will permit, and the superior and exterior slopes should either be merged or make a small angle with each other, and in the latter case should be joined by a curve.

As the new profiles are characterized by lower and wider parapets, the minimum thickness to resist penetration will seldom be a controlling factor.

An ample elbow rest is now considered very desirable. A foot wide and one foot deep are generally accepted dimensions, but when the trench is of such a depth each soldier may be allowed to adapt the elbow rest in front of him to his individual requirements.

9b. The importance of overhead cover is more generally recognized than formerly. In actual trench construction it is not so difficult as it would appear. The lightest possible cover is better than none. Among the first things to be considered by an officer who becomes responsible for intrenching a line of troops are the kind and quantity of material for overhead cover which is in reach and how it can best be utilized. Fig. 212 shows the general features of a trench cover simpler than the forms heretofore proposed in this manual.

9c. It is noted by our observers of the Manchurian war that the lying trench was seldom if ever used. The lying trench still appears to be the best form to obtain slight cover under hot fire with a minimum of casualties not only because it involves less digging, but also because the men are less exposed while digging and are partially protected from the beginning of the work. The use of the lying trench may yet be advisable for our Army. It is premature to relegate this form to oblivion. Normally, the first objective will be a simple standing trench. Lying and sitting forms will be used only when a standing trench is so difficult of construction as to be impracticable. However, the principles of the construction of the lighter forms and their conversion into stronger forms should not be lost sight of.

Fig. 205

Fig. 206

When a natural screen is available and the fire not too annoying, the profile in Fig. 207 will give good cover in a short time. When no screen is available and the command is under fire, or likely to be so, Fig. 208 is probably the best form.

The type profiles shown are those which represent proper solutions of the problem under average conditions. If actual conditions are exceptional, exceptions should be accounted for in the profile. Thus the existence of a screen of grass might determine a profile which is a compromise between Fig. 207 and 208, the exact arrangement depending on the height of the grass, a slight rise of ground in front calling for a higher command might result in the adoption of a profile based on Fig. 209, but with a higher parapet and a lower trench, utilizing in the parapet part or all of the volume of earth which would "be wasted" in Fig. 211. Type or average condition profiles having parapets of 1 to 2½ feet, increasing by steps of one-half foot, are shown in Figs. 208 to 214. Taking the earth from the entire width of trench and distributing it over the entire width of parapet in the easiest and most natural manner should produce nearly the desired profile. With the interior crest of proper height and the base of parapet of proper width, a general slope from the crest to the outer line of the base, a little full or convex upward in the front or higher half and a little slack or concave upward in the front or lower half will give an excellent profile. The elbow rest only requires especial attention. This may be formed as the parapet goes up or may be cut after the parapet is finished, according to conditions and the preference of the builders. The elbow rest, while most desirable, is not essential, and if under fire or if the earth does not stand well it may be omitted and an interior slope formed as in the older profiles.

1. When the distance between firing and cover trenches is sufficient, the communicating trench may be given a zigzag trace somewhat as in Fig. 119, with the returns or extensions at the angles perpendicular to the general direction of the trench or approximately bisecting the angle between the trench legs. Counting from the firing trench, the first of these returns may be set apart as a rear, the second as a dressing station, and the third as a firing station.

2. The simplest redoubt is an infantry trench inclosing the area selected, with communicating trenches, as described in 12a, ante, joining the front face of the trench to the firing trench and the rear face or gorge which corresponds to the cover trench. All the instructions for siting in paragraph 20 apply except that it is not worth while to make any sacrifices to secure straight lines, and a profile giving surplus earth should be used, which surplus should be thrown to the rear to obtain some cover against reverse fire; this especially applies to the returns for dressing stations, etc., as in case of an attack from the rear the functions of the various parts are reversed; that is, the cover trench becomes the firing trench, the firing trench the cover trench, etc.

PART VI.

ANIMAL TRANSPORTATION.

1. Animal transportation for the Engineer service is divided into wheel and pack transportation. In wheel transportation, the wagon is the unit, and each animal can haul, on a conservative estimate, 1,200 lbs. gross or 700 lbs. net load. In pack transportation, the animal is the unit, and each can carry, on a conservative estimate, 300 lbs. gross or 225 lbs. net load. A given quantity of freight carried on packs will require three times as many animals as would be necessary to carry it on wheels. The larger number of animals means a proportionate increase of the forage to be provided and in the labor of feeding, shoeing, etc. If, however, the country and season are favorable for grazing, the pack mule will get on without any forage, while the draft mule cannot. Other disadvantages of pack service are that packages must be limited in size and weight much more closely than for wagons; long articles, as tent poles, can not conveniently be carried except by special construction, and loading and unloading of pack cargoes is an expert service which must be performed by a few trained men, while loading of wagons is work in which all can participate.

The great advantage of pack transportation is its mobility, and this consideration is often paramount. A good pack train, well handled, can make 2 miles to 1 of the best wagon trains on good roads and more on bad ones, and can besides go where there are no roads at all and where the country is so rough that roads could hardly be made and wagons could not pass them if they were made.

Wagon transportation should be used unless the country is impracticable or the rate of march too rapid for wheels. The permanent pack trains should be limited to the probable requirements of rapidly moving columns, and those the baggage, etc., should be kept down to an absolute minimum. Where great difficulties of wagon transportation are foreseen, the draft mules should be broken to pack service and enough aparejos carried in the train so that in case the wagons must be abandoned, $\frac{1}{4}$ to $\frac{1}{2}$ of the loads may be placed on the mules and the march continued. The combination of harness and pack saddle which naturally suggests itself in this connection, is not practical. Such a combination would make a very poor harness and a worse pack saddle.

Mules were used interchangeably for draft and pack service on the Mexican boundary survey, and pack mules were put into harness in the China campaign.

2. The mule is the standard draft and pack animal of the United States Engineer service. He can best be described and understood by noting his points of difference from the horse, which he resembles so closely that it has not been found necessary to devote books to him particularly. The points of difference in conformation are mainly larger, thicker head, longer ears and smaller feet, larger girth, shorter legs, and longer body. The relative disposition of bones and their angles are the same as for the horse. Fig. 1 shows the skeleton and the names of the bones most likely to be the seat of injuries or diseases. Fig. 2 shows the mule's exterior conformation and the names of the regions into which it is divided.

Where extensive bogs are found, as in some parts of Alaska, horses are used for pack service, selection and breeding being conducted with a view to the maximum size of foot.

the mule is tougher and hardier than the horse, less subject to disease or inflammation from slight injuries, and usually yields more readily to treatment. He is nearly exempt from some common diseases of the horse, and especially from colds. In the field, colic and kicks or other contusions, are his principal troubles. When injured he does not exhibit lameness as quickly as a horse, and on this account needs more careful watching.

Selection of Mules. The cross between a jack and a mare is that most valuable and is the best. Of these, experience seems to indicate that mules resembling the sire—that is, small or medium sized, with strong markings, large ears, and small feet—are hardier, while those resembling the mare, good-sized, smaller ears, larger feet, and no jack markings, are likely to show less endurance. Color does not seem to give any indication of constitution or disposition except as above noted. Good mules will be found in all colors. Mules for immediate use should not be taken under 4 years old. A mule sound and healthy at 4 years should, with proper care and treatment, last until he is 18. There need be no distinction as to sex. Some experienced men prefer mares. Male mules are said to stand sea voyages better than males. Very large mules are not desirable.

A mule should be judged as to his age, strength, endurance, and disposition. Indications of age are not very precise as to exact years, but are clear enough to answer the question whether the mule is too young or too old for service. At 4 years, which should be the minimum age, 4 of the 6 incisors in each jaw are permanent, and the others, the end ones, are temporary or milk teeth. The difference is plain, as the milk teeth are white and smaller than the others and are smooth outside and grooved inside while the permanent teeth are grooved outside and smooth inside. In mules, the tushes also appear at this age, smooth, straight, and pointed, Fig. 3. At 5 years, the remaining milk teeth are replaced by permanent ones, which latter, however, have no inside wall, Fig. 4. At 6 years, these teeth have the inside wall. At 7 years, the ends of the incisors show wear and the tushes begin to appear blunted, Fig. 5. From this stage on, the age is a matter of judgment, based on the amount of wear on the incisors and tushes, and the angle of the incisors, which is obtuse in young mules and gradually changes to acute in very old ones, Fig. 6. Other indications of age in the mule are the temples, full in the young and sunken in the old, and the wrinkles above the eyes, and gray hairs, both of which increase in number as the animal grows older.

The indications of strength are, the size and build of the animal, especially his legs. The fore legs should be set well apart at the shoulders and about equally wide at the feet and should appear straight when looked at from any direction. The hind legs should also set well apart and be parallel, and appear straight when looked at from behind. The angle of the pastern should be such that the middle line of the leg prolonged to the ground will just touch the heel when the animal is standing squarely and naturally on a smooth level surface.

The indications of endurance are principally the breadth and shape of the chest and the girth, both of which show the lung power on which endurance depends. The chest should be broad and muscular, and especially the breastbone should not be prominent. Looking at the animal from the side, the chest should appear to project distinctly in front of the fore legs. The girth, measured 6 to 9 ins. in rear of the fore legs, should not be less than $1\frac{1}{4}$ times the height of the animal.

For indications of disposition look to the head and eye; the latter is especially a good index. Avoid mules with extra long heads; also those with hollow, fishy faces. The eyes should be set well apart and stand out prominently.

Fig. 3, 4 years

Fig. 4, 5 years.

Fig. 5, 7 years.

Fig. 6, very old.

Fig. 9

Fig. 7

Fig. 8

Mule shoe, not fitted.

Eyes close together or sunken show a mean disposition. A good mule has a soft, kindly look in his eye which is difficult to describe but is easily recognized. The ears should be mobile, and in young animals constantly moving; one pointing forward and one back is a good sign; laying both ears clear back when approached is a bad sign; but animals at rest and undisturbed frequently lay the ears back.

4. Feeding. The ration for the mule is 9 lbs. of oats or corn and 14 lbs. of hay, the latter the same as for the horse, the former $\frac{1}{4}$ less. Bran when issued is in lieu of grain, pound for pound. One hundred pounds of straw per month is allowed for bedding, or the same amount of hay if straw can not be had. The smaller grain ration is determined by the smaller average size of the mule and does not mean that he is a lighter eater than the horse or that he can do the same work with less nutrition. The ration is right for the average mule at average work. If he is extra large or is worked beyond this limit, he must have more grain or its equivalent in other food, or he will fall off in condition.

While the mule is less particular about his food than the horse, and will keep himself alive when a horse would starve, it is none the less important that his food should be clean and sound. He is particularly sensitive to sudden changes of diet even when the old food and the new is each good of its kind. Changes from grain to grass and the reverse, or from one kind of grain to another, should be made gradually. In addition to a proper quantity of food, the animal must have time to eat it. All of the hay and more than half of the grain should be fed at night, and the morning feed should be given at least an hour before hitching up. Pack mules frequently have the entire ration at night and are not fed at all in the morning. In the field, the mules can be fed at the picket line by putting a layer of hay along the line, making a hollow or nest in front of each mule and pouring the grain into it. When no hay is fed and the ground is not dry and clean, lay down sacks on which to place the grain. Animals must be watched while feeding to prevent stealing from each other and waste by scattering grain or trampling it into the dirt.

Mules which are nearly exhausted or pumped out after a hard march will sometimes refuse to eat. Their food should be taken away and offered to them later, after they are rested a little, when they will usually take it.

Bran moistened with water to the consistency of brown sugar should be given occasionally, and always if there are signs of constipation. It may be given alone or mixed with a part ration of grain. It must be freshly mixed to make sure that it is not in the least sour. This and a little fresh grass when it can be had are sufficient usually to keep the bowels right. Purgatives should not be given except under the advice of a veterinarian or when constipation persists in spite of the simple remedies suggested. An ounce of nitrate of potash, or, if this can not be had, about a pint of wood ashes mixed with the bran mash, will slightly increase its laxative effect. Common salt has the same effect.

5. Salt. Mules require a certain amount of salt, of which they are the best judges. The allowance is 2 oz. per week for each animal, which may be increased to 12 oz. per month, in the discretion of the commanding officer. In a corral, lumps of rock salt may be kept in boxes from which the mules will lick as much as they need. If glanders should make its appearance anywhere in the vicinity, the use of these boxes should be discontinued and salt fed to the animals separately. This is best done in the bran mash. On the march salt must be fed in the same way. If the mules are found licking each other or the harness, or gnawing wagons or mangers, it is an indication of lack of salt.

6. If the mules are herded for grazing at night, there should be a bell horse

keep them from straggling. The bell horse should be hobbled but not tethered if it can be avoided. There should also be a herd guard on duty. The animals are habitually trained to follow a bell horse, but draft mules are not. Horses have a peculiar fascination for the mule, and if one is turned into a trail with a bunch of mules for 2 or 3 days, they will follow him anywhere and can not be induced to leave him. If a pack train is short of grain, the bell horse should have a full ration, since he can not graze along the line of march and the pack mules can and do.

In open country a white or gray bell horse will make it possible to locate a pack train at a much greater distance. This may or may not be desirable, according to circumstances. This remark applies also to white or gray mules.

Water. A mule requires from 4 to 6 gallons of water a day, depending on the season and his work. In an arid climate 2 or 3 times as much may be required. In an emergency, he may be worked with what he will drink at the watering a day, but whenever possible he should be watered two or three times a day. In corrals there should be, except in freezing weather, a constant supply so that the animals can drink whenever they desire to do so. It is important that the water be pure and wholesome as for any other animal. In fact, the mule is rather particular about his drinking water. In every herd, the animals will refuse water which others drink and which appears to be clean. No pains should be spared to find water which these animals will drink. If the mules have had enough water at night they often will not drink before starting in the morning. In such case every effort must be made to get water at the end of the first hour's march. Especial attention is required on this point, as the watering of draft mules on the road generally involves unhitching teams or carrying the water in buckets, either of which operations causes trouble and delay and is likely to be neglected. In crossing a stream with a pack bottom, if the mules are thirsty they should be watered before driving in; otherwise they may stop to drink and mire themselves or the wagon. A stream entered at the end of a march should usually be crossed before going to camp.

Diseases and Treatment. The normal condition of a mule is indicated by a pulse of 34 to 38 per minute, and a temperature of 99 degrees. The pulse should best be taken inside the lower jaw or inside the fore leg just above the hock. Temperature is taken by a clinical thermometer inserted in the rectum for five minutes. Disease is almost always accompanied by an increase of temperature or pulse, or both. The pulse may run to 100 per minute or even higher. A strong, full pulse of normal rate is a very good indication of freedom from disease or injury. The temperature in some diseases runs from 107 to 109 degrees. In taking either temperature or pulse, avoid exciting or worrying the animal. The normal rate of respiration when at rest is 12 per minute. Apart from accidents, which will be frequent, and contagion, which will be frequent, sick mules in the field will usually be the result of some neglect, as overfeeding, watering, policing, or shoeing; or of abuse or overexertion. It is much easier and better to keep mules well by proper attention and treatment than to cure them when sick.

The diseases and injuries described below include those most likely to be encountered in field service, those in which effective treatment can be given by men who are not skilled veterinarians, and those in which prompt action is necessary to prevent contagion.

Administration of Medicines. Liquid medicines are given as a drench. Put the liquid into a long-necked bottle without a shoulder, and see that there are no sharp edges or projections about the mouth or neck. Raise the animal's head until the mouth is higher than the throat. Insert the neck of the bottle

in the side of the mouth between the incisors and the molars. Point it toward the throat and allow the medicine to run out slowly and with intermission, if necessary.

Powders without disagreeable taste or odor may be dissolved in water and sprinkled on the feed or put into the drinking water.

Balls to contain dry medicines may be made by the addition of honey, sirup, or soap, using oil meal if necessary for required consistency. They should be about 2 ins. long and $\frac{3}{4}$ in. in diameter, freshly made, and inclosed in tissue paper or gelatine capsules.

The mixture may be given a sticky consistency and placed on the tongue with a paddle or spoon. This form is called an electuary.

ADDENDUM, 1907.

8a. War Department Circular 9, series of 1907, provides that the mallein treatment as a preventive against generalized incipient glanders shall be administered quarterly in the United States and oftener in tropical countries.

The Quartermaster's Department supplies the mallein.

9. The following table of veterinary supplies is sufficient for ordinary requirements of field treatment:

| Articles. | Designation. | Quantity for 100 animals. | Quantity for 200 animals. | Quantity for 300 animals. |
|---|--------------|---------------------------|---------------------------|---------------------------|
| Acid, boracic..... | oz. | 4 | 6 | 8 |
| Acid, carbolic..... | oz. | 16 | 20 | 24 |
| Aconite, fluid extract..... | oz. | 1 | 2 | 3 |
| Alcohol, grain..... | gals.. | 1 | 2 | 3 |
| Aloes..... | oz. | 20 | 24 | 32 |
| Alum..... | lbs.... | $\frac{1}{2}$ | $\frac{1}{2}$ | 1 |
| Camphor, gum..... | lbs.... | 1 | $1\frac{1}{2}$ | 2 |
| Calomel..... | oz. | 2 | 4 | 6 |
| Cosmoline..... | lbs.... | 4 | 8 | 12 |
| Creolin..... | lbs.... | 2 | 4 | 6 |
| Flaxseed meal..... | lts.... | 25 | 30 | 40 |
| Ginger, powdered..... | lbs.... | 1 | 2 | 3 |
| Glycerin..... | lbs.... | 1 | 2 | 3 |
| Iodoform..... | oz. | 4 | 6 | 8 |
| Iron, chloride, tincture..... | oz. | 8 | 12 | 16 |
| Lead, acetate..... | lbs.... | 1 | 2 | 3 |
| Needles, surgeon's, asstd..... | doz.... | $\frac{1}{2}$ | $\frac{3}{4}$ | 1 |
| Oil, linseed, raw..... | gals.... | 2 | 3 | 4 |
| Oil of turpentine..... | gals.... | 1 | $1\frac{1}{2}$ | 2 |
| Opium, tincture..... | lbs.... | 2 | 3 | 4 |
| Potassium, nitrate..... | lbs.... | 3 | 4 | 6 |
| Sulphur, powdered..... | lbs.... | 1 | 1 | 2 |
| Sweet spirits of niter..... | lbs.... | 4 | 8 | 12 |
| Tar, pine..... | lbs.... | 1 | 2 | 3 |
| Witch-hazel, distilled..... | qts.... | 2 | 4 | 6 |
| Zinc, sulphate..... | lbs.... | 1 | 2 | 3 |
| Absorbent cotton..... | lbs.... | 2 | 3 | 4 |
| Antiseptic gauze..... | pkgs.... | 2 | 2 | 3 |
| Bandages, red flannel, 4 ins. wide, 4 yds. long..... | doz.... | 2 | 3 | 4 |
| Bandages, white cotton, 4 ins. wide, 4 yds. long..... | doz.... | 4 | 6 | 8 |
| Oakum..... | lbs.... | 10 | 15 | 20 |
| Plaster, adhesive, 2 ins. wide, 10 yds. long..... | rolls.... | 1 | 1 | 2 |
| Silk for ligatures, ordinary..... | oz. | $\frac{1}{2}$ | $\frac{1}{2}$ | $\frac{3}{4}$ |
| Silk for ligatures, heavy-braided..... | oz. | 1 | 2 | 3 |
| Soap, white castile..... | lbs.... | 10 | 15 | 20 |
| Sponges, surgeon's..... | lbs.... | 1 | 2 | 3 |

Standard veterinary prescriptions:

One lb. fluid = 16 oz. = 1 pt.

One dram solid or fluid = $\frac{1}{8}$ oz.

Standard silver dollar weighs $\frac{7}{16}$ apothecary's oz., or $\frac{7}{16}$ avoirdupois.

By giving liberal measure it may be used as an ounce weight.

A 5-cent nickel may be used for a dram weight. If well worn it will be slightly right; if new, take scant measure. A balance can always be improvised.

Antiseptic or sterilizing dressings for external use only (Nos. 2 and 3 may be used on eyes, nose, and mouth):

Creolin 1 part, water 40 parts.

Carbolic acid 1 part, water 40 parts.

Boracic acid 1 part, water 20 parts.

Iodoform, dry, necessary quantity sprinkled on wound.

Boracic acid, dry, necessary quantity sprinkled on wound.

Sulphate of zinc 1 oz., acetate of lead 1 oz., water 1 qt. This is the well-known white lotion. A dram of carbolic acid may be added if a strong antiseptic is needed.

OINTMENTS.

Iodoform 1 part, cosmoline 6 parts.

Boracic acid 1 part, cosmoline 6 parts.

Carbolic acid 1 part, glycerin 6 parts.

Sulphur (if powdered) 2 drams, cosmoline 1 oz.

LINIMENTS.

To relieve pain. Witch-hazel 2 oz., spirits of camphor 2 oz., laudanum 1 dr.

Stimulating. Turpentine 2 oz., spirits of ammonia 2 oz., linseed oil 1 pt.

Spirits of camphor 2 oz., spirits of ammonia 2 oz., turpentine $1\frac{1}{2}$ oz., ether 1 pt.

Soap liniment. Castile soap 6 oz., spirits of ammonia 6 oz., spirits of camphor 2 oz., alcohol and linseed oil each 1 pt.

MISCELLANEOUS.

Purge. Aloes 6 drams, calomel $\frac{1}{2}$ dram, ginger 2 drams.

To stimulate the kidneys. Sweet spirits of niter 1 oz., water 1 pt.

Founder powder. Nitrate of potash 4 oz., gentian 4 drams.

Tonic. Gentian 2 drams, ginger 2 drams, flaxseed meal $\frac{1}{2}$ dram.

Colic. Sweet spirits of niter 1 to 2 oz., laudanum 1 to 4 oz., ginger 2 drams.

To dress saddle and harness galls and to harden the skin. Alcohol 1 pt., water 1 pt. If the skin is abraded, mix with white of eggs to a paste and apply a thick coating.

Constipation. Put the mule on a laxative diet, bran mash, grass or hay. Salt also has a slightly laxative effect.

Diarrhoea. Usually results from too laxative diet or exposure. Put the animal on dry feed without salt and keep dry and warm. Do not work more than necessary. In aggravated cases give $\frac{1}{2}$ pint of raw linseed oil or 1 dram powdered opium.

Spasmodic Colic. The animal appears to be in distress, looks around at its legs, paws, kicks at its belly, attempts to evacuate the bowels and to pass

urine. Pulse and respiration accelerated. The attacks are intermittent and between them the animal returns to apparently normal condition.

Give a drench of 1 pt. of raw linseed oil, and prescription No. 19. If the animal has not been overfed and the case is light, 1 dram of powdered ginger mixed in water will do. Give ample room to move about.

Flatulent Colic. More serious and less frequent than the former; pain apparently less severe but continuous; animal unsteady on its legs; extremities cold; excessive distention of abdomen.

Give No. 19 full strength, repeating at hour intervals until relieved. In severe cases it is necessary to puncture the animal to relieve the distention. The puncture is made in the right flank in the space bounded by the backbone, the hip bone, and the last rib, and at the point of greatest distention. The puncture is made with the trocar directed downward and inward. Leave the cannula in the opening temporarily. This operation should be done by a veterinarian or farrier.

Poll Evil. An abscess on top of the head immediately behind the ears. Troublesome mainly from its unfavorable situation for treatment. Keep bowels open and reduce inflammation by applications of cold water. After pus has formed, open clear to the bottom so that pus can readily run out from the lowest part. Poultice and keep open until discharge of pus has entirely stopped. Use antiseptic dressings Nos. 1, 2, or 6.

Strangles. An inflammation of the glands of the throat and neck, resulting in the formation of an abscess. Good care and soft food, varied as much as possible to stimulate the appetite, are all that is required until the tumor heads, when it should be freely opened and drained until it is free of pus.

Glanders. A yellowish, sticky discharge from the nose, with ulcers inside the nostrils, at first distinct, then with ragged edges and finally confluent; enlargement and hardening of one or both glands below the jaws; staring coat; difficult respiration; extreme debility and profuse perspiration on the slightest exertion; fetid odor from nostrils in advanced cases. The disease is contagious and incurable. As soon as suspected, the animal must be isolated, and when the disease is recognized, he should be killed and burned or deeply buried. All grooming and other implements used about the animal should be destroyed and his surroundings thoroughly disinfected. Attendants should use great care to avoid contagion in handling suspected cases. The hands should be free from cracks or sores, and after touching the animal, should be well washed, with a little carbolic acid in the water. See p. 1258.

Farcy. A different and milder manifestation of the same poison as in glanders. Ulcers appear on head, body, or legs; they are commonly called farcy buds or buttons. When the legs are affected, they swell, and the buds are usually below the knees or hocks, oftenest in a line down the front of the fore leg, beginning at top and running to the bottom. In the early stage, the buds are hard lumps beneath the skin. Later they enlarge and suppurate through the skin. Before this condition is reached, the animal should be killed.

Surra. A disease resembling glanders, prevalent in the Philippine Islands. It is probably a wound disease, caused by contact of the infectious agent with a wounded surface, either skin or mucous membrane. At first loss of appetite, constipation, fever and thirst; later a dropsical swelling, usually beginning around the belly and immediately or quickly extending to legs and feet, with rapid and extreme emaciation. Sometimes the submaxillary glands are involved, with discharge from the nose resembling that of glan-

ders. A very characteristic symptom is dragging the hind feet in walking. The disease runs from 3 to 4 weeks and sometimes longer. No remedy is as yet known. Isolate as soon as suspected, and, when the diagnosis is certain, destroy the animal and burn or bury the carcass.

Isolation hospitals and corrals should be half a mile from other corrals. No nonisolated animals should be allowed to approach them even to bring visitors or supplies, which should be conveyed by other means.

All animals should be carefully examined and all abrasions of skin or mucous membrane should be protected from biting insects by local applications.

Suspected and sick animals should be protected from biting insects, especially flies, by screens, smudges, or washes, and carcasses should be similarly protected until burned or buried.

All possible efforts should be made to exterminate biting insects and rats.

Where surra is or has been prevalent allow no grazing and avoid all green forage, especially from marshy or overflowed ground. The disease is more prevalent in wet places and wet weather.

Mange. Small pustules form on the skin, usually beginning at the roots of mane and tail. The discharges form a crust under which the hair loosens and falls out. The disease is contagious and animals affected must be isolated and usual precautions taken. Cleanse the affected parts thoroughly with soap and water and dress with No. 2. If the skin is affected over a large surface, only a part of it should be gone over with the carbolic solution each day, to avoid carbolic-acid poisoning. It is better in such cases to substitute No. 1, which may be used with impunity.

Scratches. An inflamed condition of the skin of the heel with crusts giving a watery discharge. Caused by exposure to wet and cold, sometimes by trimming the fetlocks. Keep the parts dry and clean. Wash, if at all, with warm water and castile soap and dry thoroughly after washing. If the skin is unbroken, use fresh lard and vaseline; dust with powdered alum twice a day. If the skin is cracked, use No. 10. A dry place for the animal to stand is necessary to a cure.

Thrush. A disease of the frog, usually behind, accompanied by an offensive discharge. It results from uncleanness. Keep the frog clean and dry; pare away ragged parts and open the cracks to facilitate discharge; dust with calomel and dress with iodoform or pine tar.

Laminitis or Founder. An acute inflammation of the processes which connect the wall of the hoof with the coffin bone. More common in the front feet; very painful and causes extreme lameness and stiffness with much heat in the foot. Overexertion, indigestion, and watering when heated are most frequent causes. The animal can scarcely be induced to move and tries to take the weight off the toes by standing on the heels, or, if the fore feet only are affected, by drawing the hind feet forward under the body.

Give laxative diet and plenty of water, remove the shoes, and give the animal a soft footing which will throw as much weight as possible on the sole and frog. In the field a good plan is to make a slight depression in the ground, fill it with water, and let the mule stand with his fore feet in the mud. Give No. 17.

Lockjaw. Induced by pricking the foot with rusty iron, or by punctured wounds. The disease is caused by a microbe which thrives in rich soils, as of highly cultivated gardens, and in the tropics. Common in the Philippine Islands as a result of punctured wounds.

There is difficulty in swallowing and rigidity of the limbs; ears erect and to the front; nostrils dilated; legs spread apart, and tail persistently held

erect. General muscular rigidity; obstinate constipation and torpidity of the liver. The climax usually comes in 3 or 4 days.

Search for the exciting cause, and if found to be a wound of any kind, treat it. Give a strong purgative, and 2 to 3 drams solid extract of belladonna three times a day. Give liquid food—gruels—and have clean water in reach of the animal at all times. Give rest and quiet in a darkened stall. During convalescence give laxative nutritious food and tonics, as No. 18.

Rope Burns. Abrasion of the skin under the fetlock by rubbing against a rope. Very frequent, especially with mules not accustomed to being tethered or picketed. If not severe, cleanse with soap and apply ointments 7, 8, or 9, or tar, or any kind of clean grease. For severe cases, use the same treatment and bandage.

Pricking the Foot. This may result from picking up a nail or from one improperly driven in the shoe. If the point of injury can not be seen, locate it by pressure. The mule will flinch when the sore spot is touched. If suppuration has not set in, clean the part, treat it with antiseptic, and stop the orifice with a plug of sterilized material. If pus has formed, a free exit for it must be provided and maintained. It may be necessary to cut away a considerable amount of horn to do this.

A puncture of the frog is managed in a similar way.

Wounds and Bruises. The prime requisites of treatment are the arrest of hemorrhage (tinct. iron, hot or cold water, pressure, if arterial); removal of foreign objects if possible; cleansing and sterilizing the wound (antiseptics 1, 2, or 6 may be used); replacement of parts in proper relative position by stitches or bandages, and a provision for the discharge of pus from the bottom of the wound. In some cases the greatest possible freedom from motion is desirable.

The healing of wounds in mules is almost always by suppuration. Before the tissues unite they assume a granular appearance. This granulation should begin at the deepest part and progress regularly outward. If granulation appears first near the outside, care must be taken to preserve a channel by which the pus may discharge freely from below. A tube, or a string of tow or other clean fibrous material dipped in melted wax or paraffin, will answer. This can be withdrawn when the wound is dressed, the accumulated pus pressed out, and the string replaced.

Spring Tonic. If mules are sluggish in early spring, lose their appetites, and are slow in shedding out, their condition may be improved by giving a small quantity of saltpeter in soft feed once a week for a month or so. If nothing else can be had, give a teaspoonful of powdered sulphur and a half pint of wood ashes.

11. Shoeing. A mule's feet are designed to carry his weight partly on the lower edge of the outer wall and partly on the sole and frog, Fig. 7. The pressure of the frog on the ground gives a better foothold and besides causes a lateral pressure on the inside of the wall which resists the natural tendency of the hoof to contract. The wall is constantly growing, and on a soft elastic footing it wears away at a rate equal to its growth and is always of the right length to take its share of the load. On a harder footing, such as is presented by most roads, the wall wears faster than it grows, and is constantly shortening, letting the sole down so that it carries too much of the load and lameness results. To prevent this, shoeing is resorted to. But when shoes are on, there is no wear of the walls, which grow longer and raise the sole and frog, removing the internal pressure from the wall and allowing it to contract and cause lameness. The art of good shoeing consists in providing a metal armor for the lower edge of the wall with the

ible interference with any other part of the foot, or with the natural functions of wall, sole, and frog. If the sole and frog have received daily care there will be no excuse for the shoer to touch either of them with any tool. If the bottom of the foot is foul, the shoer may clean it always with a scraping, never with a cutting, tool. Cutting the sole and frog is the business of the veterinarian or farrier, not the shoer.

Shoes are supplied in several sizes. Numbers 2 to 5 will answer all ordinary requirements. The No. 2 shoe is $3\frac{3}{4}$ ins. wide by $5\frac{3}{8}$ ins. long, No. 3 is $4\frac{1}{4}$ ins. wide by 7 ins. long; all are $\frac{1}{2}$ in. thick, and are provided with 4 holes on a side. The top surface of the shoe is slightly beveled outside $\frac{1}{8}$ in. higher than the inside. The nail holes on each side are connected on the bottom of the shoe by a countersunk groove. Shoes are packed in kegs of 100 lbs. each. A keg of No. 2 contains 100 shoes; of No. 3, 85 shoes; of No. 4, 72 shoes, and of No. 5, 60 shoes, Fig. 8. Nails used with the above sizes of shoes are Nos. 5, 6, 7, and 8. No. 5 nails are $2\frac{1}{2}$ ins. long; No. 6, $2\frac{3}{4}$ ins.; No. 7, $2\frac{1}{4}$ ins., and No. 8, $2\frac{1}{2}$ ins. The heads of the nails are beveled on the outside; the inside of the nail is a plane. Nails are supplied in kegs of 100 lbs. No. 5 nails run 190 to the lb.; No. 6, 180; No. 7, 100, and No. 8, 80, Fig. 9.

A shoe should be carefully removed by cutting off the clinches and pulling the nails singly. Starting the shoe and prying it off, bringing the shoe down with it, is dangerous. The bottom of the wall should then be leveled with the sole at the toe and left a little longer at the heel. The shoe wears a little under the shoe and will rarely require much cutting. A rasp is used to cross level the bottom of the wall, which should be done, so that the mule will stand square on the shoe. The shoe should be fitted accurately, so that its outer edge will follow the circle of the hoof all around. The fit must be made close enough so that the clinching of the sides of the wall will be necessary to complete it. The shoe is then applied hot for a moment, and the high points indicated by the rasp are worked down. The shoe should then be applied hot long enough to sear the lower surface of the wall, but no longer. It should be cooled and nailed on. In nailing, begin with the front or toe nails and work them in their order to the rear. After all are driven, cut off the clinches near the hoof, rasp the clinches thin enough to turn easily, but do not rasp cut the horn. Turn the clinches down snug, but do not try to force them into the hoof, nor use a file on them to smooth up.

Treatment of Vicious Mules. Ordinary cases can be handled by lifting the foot with a strap or rope. Take hold of the pastern and be sure the rope can not slide so far as to cause a burn. For a hind foot, draw the rope between the legs or to a collar; for a fore foot, bend sharply at the knee and strap the pastern to the upper leg. For bad cases in the hind foot, lay the mule and shoe him while down. For the shop, construct a stall of stout timbers in which he can be tied in every direction by ropes, or canvas bands. Twitches on the ears should never be used. If necessary to control the animal, put a twitch on the nose.

Normal Power. The capacity of an animal to exert a tractive effort varies with speed and time increase. As a basis, it may be assumed that an average draft mule can pull on a level 80 lbs. at $2\frac{1}{2}$ miles an hour for 10 hours a day, or in other words, can pull 80 lbs. over 25 miles of average grade every day. If a pull of 160 lbs. is required, it can be made over 10 miles a day only, the lesser distance being covered by a slower gait and rests, or as is usually the case, partly by each. An animal can exert 5 times the normal pull for a few minutes at a time, and 5 times

for a few seconds, provided in each case the demand is not repeated too frequently.

The load which can be hauled on any pull depends mainly on the kind and condition of the road and a little on the wagon, especially as to width of tire and size of wheels. For the standard army wagon and on a level average dirt road in good condition, the load corresponding to 80 lbs. standard pull may be taken at 1,000 lbs. per animal. Of this, 300 lbs. will be wagon, leaving 700 lbs. net freight. Any reduction of this load to lessen the pull must come out of the 700 lbs. To reduce the pull to 40 lbs., 500 lbs. must be taken from the freight, leaving 200 lbs. only to be hauled. This 200 lbs. pulled over 25 miles would equal 5,000 lbs. pulled over 1 mile, while if the full load of 700 lbs. is hauled over $12\frac{1}{2}$ miles, which can be done with the same effort, the result equals $700 \times 12\frac{1}{2} = 8,750$ lbs. hauled 1 mile. If the length of the march is fixed, the animals can be relieved only by reducing the pull; otherwise it is better to relieve them by shortening the march.

On hilly roads there is no traction on the down grades and an increased gait is usually taken without appreciable extra exertion. This saves time which may be spent in rests, allowing greater effort on the up grades. Up to 8% grade, the load can be retained by reducing the distance. Up to 3% grade, the distance can be maintained by reducing the pull. Above 8%, both pull and distance must be reduced. The reduction of pull may be accomplished by removing part of the freight, by doubling up teams, or by putting men on drag ropes.

The foregoing is based on the supposition that the animals have the full ration every day and remain in as good condition as when they started. In emergencies they can do more work than indicated, but will go off in condition and some will give out entirely. In campaign, animals are overworked as a rule, and finish in very poor condition. This is necessary because adequate transportation is rarely available and what there is must be worked at a killing rate. When marches are intermittent, mules may be pushed, since what they lose in 2 or 3 days' overwork can be made up by a week's rest with good care, and they will be fit when again required.

The following are the weights and normal loads of some army wagons:

| | Weight. | Maximum net load. | Gross load. |
|--------------------------|----------------------|----------------------|----------------------|
| | <i>Pounds.</i> | <i>Pounds.</i> | <i>Pounds.</i> |
| Army six..... | 1,950 | 4,000 | 5,950 |
| Escort..... | 1,500 | 3,000 | 4,500 |
| Ambulance..... | 1,450 | | |
| Dougherty..... | 1,375 | | |
| Engineer tool wagon..... | 2,200 to 2,600 | 2,500 | 4,700 to 5,100 |
| Pontoon tool wagon..... | 1,700 | 2,100 | 3,800 |
| Bridge train, light..... | 1,750 | 1,856 to 2,060 | 3,606 to 3,810 |
| Bridge train, heavy..... | 1,750 to 2,200 | 2,280 to 2,900 | 4,030 to 5,100 |

Harness. The harness supplied for heavy draft is of three kinds, known as army wagon harness, 4-mule ambulance and wagon harness, and ambulance harness. The first is distinguished by the absence of a saddle; by

, which is of flat leather unstitched, and its traces, which are throughout and pass through leather pipes to prevent chafing. The distinguished by its traces, which are of leather to the breech-chain extensions. The third has all leather traces. The second, the and wagon harness, is most suitable for engineer transport-

le teams are driven with a jerk line, the driver riding the near. 10. Four-mule teams in the bridge train are driven in the. All other 4-mule teams are driven with lines from a seat on Fig. 11. The 6-mule harness includes a riding saddle, jerk line, jockey stick, and blacksnake whip. A set of 4-mule harness pair of wheel lines, a pair of lead lines, a whipstock, and lash. ing of the harness is very important. The bridle should be, the crownpiece and throatlatch not too tight; the brow band place; the cheek pieces so adjusted that the bit will hang in just clear of the angle of the lips, not far from it and not touch- ally not drawing it up into wrinkles. The bit should be of the for the width of the jaw. Less damage will be done, however, oo long than if too short. If the bit tends to irritate the mule's e ends, relief may be given by putting a large leather washer bit inside the ring. The blinds must be so adjusted as not to elashes.

the collar requires close attention. If it is too small, it will ind; if too large, it is likely to make the shoulders sore. When on and adjusted, there should be room to insert the open a the bottom of the collar and the windpipe, and not much more. d always be buckled when off the mules. A collar which is e, but not the right shape, can be improved by soaking it in utting it on wet. A day's work in the rain will produce the The under surface of the collar should be kept clean and soft. pe it, but rub or wash it clean. The same remark applies to f the harness which touches the mule's skin. Cleaning the out- erness is good for the harness only; cleaning the inside is good e and harness. The driver should be provided with two or more f sheepskin with thongs attached. If the skin is abraded by the of these pads may be lashed to the underside, one on each ore, and will afford relief until the march is over and regular a be applied. The hames should be so adjusted to fit the collar ut pinching it out of shape.

harness, hang a set on a pole or line; wet a sponge in clean water, ly over the harness until the dirt is softened. Rinse the sponge d renew the water as often as necessary. Next rub the sponge ess soap until a good lather is formed. Give the harness a ating of it and continue the rubbing until all dirt is removed. necessary to use a thin piece of wood to get some spots clean. rness is clean, rub up a very thick lather and coat the leather it, allowing it to dry without rubbing. After the lather has d and the leather is dry, dip a small, clean sponge in harness touch the harness lightly, rubbing just enough to spread the ly.

ner is very hard, after cleaning as above, take a pint of neat's- a teaspoonful of lampblack to each single set. Mix thoroughly glossy appearance is produced and apply an even coat with a , rubbing it well in. In cold weather warm the oil enough to

Fig. 10, Six-mule jerk-line and ponton wagon.

Fig. 11, Four-mule team and escort wagon.

make it flow freely, but do not let it get hot. After thoroughly dry, apply harness dressing as above described.

Harness should be looked over carefully every day. If stitches are broken, leather worn or cut, or any metal parts cracked or broken, have the defect remedied at once. If stitches are taken, be careful not to leave knots on the inner surface of the harness. Fasten at beginning and end by drop stitches. In the field, provide supports for the harness and keep it off the ground when not in use.

13. List of materials and spare parts required for repair of harness in the field, with quantities for 100 sets:

| | |
|--|--------------------------------|
| Bits, wagon bridle | 6 |
| Buckles, roller, japanned, $\frac{3}{4}$, $\frac{7}{8}$, 1, $1\frac{1}{4}$, $1\frac{1}{2}$ ins. | 1 doz. each |
| Buckles, trace, $1\frac{3}{4}$ ins. | 1 doz. |
| Chains, trace | 1 doz. |
| Clips, hame | $\frac{1}{2}$ doz. |
| Ink, edge | 1 pt. |
| Harness dressing | 2 gals. |
| Hames, hook, high top, 19, 20, and 21 ins. | 2 prs. each |
| Lampblack | $\frac{1}{4}$ lb. |
| Leather, bridle | 3 sides |
| Leather, lace | 1 side |
| Leather, harness | 6 sides |
| Loops, halter, $1\frac{1}{4}$ ins. | 2 doz. |
| Open links, No. 2 iron, 10 per foot | 50 |
| Oil, neat's foot | 10 gals. |
| Rings, No. 2, $1\frac{3}{4}$ and 2 ins. | 2 doz. each |
| Rings, breeching, No. 3, $3\frac{1}{2}$ and 4 ins. | 2 doz. each |
| Rings, D, $1\frac{1}{2}$ ins. | 1 doz. |
| Rings, line, $1\frac{3}{4}$ ins. | 2 doz. |
| Rivets and burrs, copper, No. 12, $\frac{1}{4}$ and $\frac{3}{8}$ in., No. 8, $\frac{1}{2}$ and $\frac{5}{8}$ in. | 1 lb. each |
| Slides, breast, $1\frac{1}{2}$ ins. | 1 doz. |
| Snap, harness, $\frac{7}{8}$ and 1 in. | 2 doz. each |
| Snap, harness, $1\frac{1}{4}$ and $1\frac{1}{2}$ ins. | 1 doz. each |
| Soap, harness | 100 lbs. |
| Sponges, coarse | 5 lbs. |
| Squares, halter, $1\frac{1}{2} \times 1\frac{1}{4}$ ins. | 3 doz. |
| Tacks, 4, 8, and 12 oz. | $\frac{1}{2}$ doz. papers each |
| Thread, shoe, Barbour's Nos. 3 and 10, white | 1 lb. each |
| Toggles, trace | 6 doz. |
| Wax, saddler's, black, spring, summer, or winter | 1 lb. |

14. **Wagons.** For general freighting, the wagons in use in the United States service are the army six, weighing 1,950 lbs., and carrying 4,000 lbs., with a 6-mule jerk-line team, and the escort, Fig. 11, weighing 1,500 lbs., and carrying 3,000 lbs., with a 4-line team. The army wagon complete includes a fifth-chain with stretcher, 6 wagon bows, ridgepole, wagon cover, double-tree, and 2 singletrees, an extra kingbolt and 2 extra singletrees, feed box, and brake. An escort wagon complete includes a feed box, 6 wagon bows, ridgepole, 1 double and 2 singletrees, axle wrench, tar pot, extra kingbolt, 2 extra nuts for axle, a lead bar with stretcher chains and singletrees attached, and a brake.

The bridge equipage is carried on two types of wagons, the ponton wagon,

Fig. 10, weighing 2,200 lbs., and carrying 2,900 lbs., and the chess wagon, weighing 1,750 lbs., and carrying 2,300 to 2,700 lbs. The ponton wagon is used for the wooden ponton. The chess wagon is used for all other bridge loads.

To keep a wagon in order it is only necessary to keep all nuts tightened, the wheels greased, and to wash the mud off when opportunity offers. Four to 6 lbs. of axle grease per wagon per month will be ample. In dry sand, wagons in constant service should be greased daily. On hard roads they should be greased every 40 to 50 miles. Always clean off the old grease before putting on the new. In washing, use as much water and as little rubbing as possible.

The following spare parts and extras should be carried on each army six and escort wagon:

| | |
|--|---------------------|
| 1 ax. | 2 cans axle grease. |
| 2 extra axle nuts. | 1 lantern. |
| 1 galvanized-iron bucket. | 3 open links. |
| 1 horse brush. | 1 pole, extra. |
| 1 currycomb. | 1 reach, extra. |
| 1 pick. | 2 singletrees. |
| 150 ft. rope, $\frac{1}{2}$ in. or $\frac{3}{4}$ in. | 1 wrench. |
| 1 doubletree. | Coil of stove wire. |

A similar list should be carried for the bridge wagons, but preferably in supply wagons, not on the wagons themselves. For the latter, spare wheels should also be carried.

15. Pack Saddles. The adopted pack saddle is of the Spanish type, and is commonly called by its Spanish name, aparejo, Fig. 12. Its principal parts are the body, the cover, the cincha, and the crupper. These parts have subdivisions, which are less important. The accessories added to the above to make the aparejo complete are the corona, the blanket, the lash rope with its cincha, the sling ropes, the lair ropes, and the mantas or pack covers.

The body of the aparejo consists of 2 pieces of heavy leather 24 ins. wide by 58, 60, or 62 ins. long, sewed together at the edges and across the middle of the length, forming 2 pouches, into which moss or hay is stuffed to form pads fitting the contour of the animal on either side of the backbone. In the American form, the pads are given a peculiar elastic stiffness by means of ribs of wood or metal extending from a saddle piece at the top of each pouch to a boot piece at the bottom. These ribs are stiffer at the front and more flexible at the back, varying uniformly between. They convert each pad into an elastic lever, by which the pull of the cincha on the bottom acts to raise the aparejo and its load from the backbone, while the stuffing distributes the load uniformly over a large space on the ribs. The stuffing is introduced through a hand-hole in the middle of the underside of each pad, through which it is always accessible, and the finest art of the packer consists in fitting the pads to the shape of the particular animal which is to carry the aparejo, and keeping them so regardless of changes in the animal's condition by shifting, removing, or renewing the stuffing. If a bunch rises on the animal, it can be worked down by taking out stuffing immediately over it so as to take off the pressure at that point. Determine the proper point by wetting the top of the bunch and laying the aparejo on the mule. Aparejos and mules are numbered and the same pack is always on the same mule.

Fig. 12, Aparejo.

Fig. 13, Rigging.

The function of the crupper is not what would naturally be expected. If the aparejo is properly set up and fitted there will be no tendency to move back or forward. The crupper is in reality a steadying lever to keep the aparejo from rocking fore and aft as the mule travels. For this purpose, the dock piece is large, smooth, and soft, and the crupper is wide, stiff, and firmly laced to the body. The crupper is adjustable in length, and must be accurately fitted so that when the aparejo is in its proper place the dock piece will ride between tail and dock without pressing on either.

The cover is permanently attached to the body and may be considered a part of it.

The cincha is of heavy canvas, doubled, and 10 ins. wide. It is long enough to reach from the near boot under the mule and around the aparejo to a little beyond the middle. The ends are connected by the latigo, or cincha strap.

The corona is a pad usually of several thicknesses of blanket, with a num-

ber or design which identifies the pack. It is important that the corona shall not be separated from its aparejo.

Off the mules, the aparejos are placed in a row on the ground or on skids, standing on their boots, Fig. 13. The cincha, folded with the latigo inside, rests on the aparejo. The crupper is turned so that the dock piece rests on the cincha. The corona is placed on top of all. Canvas covers are stretched over the line of aparejos and tied down. The line of aparejos so arranged is usually referred to as the rigging.

Each packer is provided with a blind. The mules are trained to stand perfectly still when blinded, and if it is necessary to move a mule even by a step, the blind should be lifted.

To place the aparejo on the mule the corona is first put smoothly on, followed by the blanket folded to 6 thicknesses. The aparejo is then put on slightly in rear of its place. The crupper is turned, the dock piece adjusted, the aparejo settled to its place, and the cincha unfolded, placed, and tightened. Never put on or adjust a pack with the mule's head uphill.

16. Loads are divided into side packs and top packs. Side packs should be of approximately equal weight and size. A keg of paint on one side

and an equal weight of oakum on the other do not make a proper load. Side packs should not be longer than 30 ins., wider than 20 ins., nor deeper than 12 ins. If the side packs do not fill out a load, the rest is placed between them as a top pack. Articles which by their size or shape are not suitable for side packs are carried on top. The center of gravity of the entire load should be below the top of the saddle, and the lower the better. For miscellaneous cargoes, the freight is made up into side and top packs, each wrapped in a manta, or canvas cover, and tied, or laired up with lair ropes. If a pack contains articles of different weights, place the heaviest at the bottom. The side packs are slung across the aparejo by the sling ropes and lashed on with the lash rope and cincha in the form of the diamond hitch. Such a load must remain unbroken until the end of the march.

Engineer tools, materials, and supplies, which may be needed for use during the march, are carried in leather pouches, Figs. 14, 16, or pairs of wooden boxes, Figs. 15, 17, 18, and 19. These are secured to the aparejo without

lashing, and may be opened and the required articles taken out and replaced without disturbing the load.

17. Care and Preservation. All parts of the rigging should be kept clean and the leather parts soft and pliable. The materials and methods given for harness may be adapted.

18. In taking off lashed packs, the lash rope is removed; its cincha laid on the ground at the middle of the line to be occupied. The lash rope is coiled down on the cincha and its end stretched out 10 ft. to one side. The sling rope is then unfastened, the packs dropped from the aparejo and laid on the lash rope lengthwise with the cincha. The sling rope is coiled on the packs, and the end of the lash rope brought up on top. The cincha of the second pack is laid down on one side of the first and parallel to it at 2 ft. distance, but with the end of the lash rope on the opposite side. The packs, etc., are placed on it as described. The third pack is placed on the other side of the middle one, and so on until all are down in a line. After all cargoes are off, the aparejos are removed. Cargoes are also covered with pieces of canvas called cargo covers. Mantas may be used if there are spare ones.

19. Marches. A draft mule is rested by a halt; a pack mule is not unless

unloaded. Wagon trains should start early and make frequent halts. These should be of two classes, longer ones at regular time intervals, and shorter ones of a minute or two after every unusually hard pull. The length and interval of the longer halts will depend upon the time and distance to be made.

As a rule, if a mule has made one dead pull, he will not try to pull again on the same load in the same place. When it is evident that the team must stop, the driver should stop it before it is stalled; otherwise, in most cases, he can not get another pull out of the team. A very slight change of conditions will often encourage stalled mules to pull again. Cases have been reported in which reversing the near and off mules had the desired effect. A little visible assistance, as a few men on dragropes, has an excellent effect. Most mules on a hard pull will not go into the collar gradually as a horse does, but will throw themselves forward, and if the load does not move, will immediately fall back. It is difficult to get a steady lay-down pull out of a team of mules in which every animal is doing his best at the same moment. A team of two mules on a hard pull will often *seesaw* on the doubletrees without pulling as much as either could alone. It is better to have stop chains on the doubletrees, leaving only enough slack to prevent one mule from shirking.

It may be quicker, in case of great obstacles, to unload wagons and take them to pieces and carry over, than to attempt to haul over. A portage may also be made when otherwise the train could not advance at all.

A pack train should be allowed to make its march without halts except for water, if it can be done. They may start later or get in earlier, according to circumstances. If the column is of great length, no relief can be given them in this way, and they must halt with the rest.

When going into bivouac or camp, the company and headquarters ration and baggage wagons are conducted at once to the sites of their respective kitchens. If a bivouac, they remain there all night, unless in the presence of the enemy; if a camp, they are unloaded, and join the rest of the train in park.

The train is parked in line, preferably to leeward of the camp, and on ground which does not drain toward it. The picket line will be stretched parallel to the wagon line and preferably in front of it, though always on dry, gently sloping ground, if it can be found. The best site is along a ridge with the ground sloping both ways from the line. The mules stand on both sides, and there should be 3 yds. of line for each 4 mules. If the 4-mule wagons are 3 yds. apart in park and the 6-mule wagons $4\frac{1}{2}$ yds. apart, tongue to tongue, each team at the picket line may stand in front of its own wagon, which is a very convenient arrangement.

Picket lines are of two kinds, ground and high. A ground line is stretched on the ground, attached at its ends and at intervals of about 30 yds. to stakes or some other form of holdfast. A 1-in.-diam. rope of sufficient length should be carried for the purpose, but, if necessary, a ground line may be made up of picket or lash ropes. A high line is stretched on trees or stakes set in the ground. If stakes are used, they should be at least 8 ft. long, set 3 ft. in the ground. At $4\frac{1}{2}$ ft. from the ground, holes should be bored large enough to take the line. From each end post the line should run obliquely to the ground and be attached to a holdfast. A high line for temporary use may be obtained by running every fifth wagon to the front and stretching the line across them. The end wagons should be loaded ones, and all must have the brakes set. Picket lines will be stretched with tackle if any is at hand; otherwise, by the following method: Attach the rope at

one end and lead it through all the supports or fastenings; about 15 ft. from the other end make a bowline in the rope, pass the end around or through the end fastening, and back through the bowline. By hauling on the end of the rope the necessary strain may be set on the line, the bowline acting as a single block. The end stakes of a high line should incline outward slightly.

The picket line should be ditched if it is to be used for some time, and if rain threatens it should be ditched even for a bivouac. The only exception is when the line is on a ridge and the ground slopes from it in both directions. Open a ditch on the high side about 3 yds. from the line. If the ground slopes along the line, the ditch will be parallel to it, and will have an outlet at the lower end; otherwise, the ditch must be farther uphill at the middle, and will have an outlet at each end. This drainage should be kept in mind in locating the line.

20. Stable Duties. The prime requisites in stabling mules are free circulation of air without drafts, equable temperature, dryness, and cleanliness. Grain is fed at reveille by the stable orderlies. When the animals have finished eating, those to be used are harnessed and hitched up. The rest are turned into the corral or tied at the picket line. The stable police then fork all clean and dry bedding to the head of the stall and work the rest of the manure into piles ready for loading. The manure wagon is driven down the aisle and loaded. The hay is then distributed to the mangers and the additional bedding is procured and spread. The aisle may then be washed with hose and brooms if the air is dry; if damp, do not wash, but sweep up with stable brooms. The evening feed is put in the mangers at afternoon stables.

Mules of the same team should stand together, and their harness should be hung on racks in rear of their stalls. It is much better to have harness covers to keep off dust.

Grooming is quite as important to the mule as to the horse, but he does not get so much of it, and in the nature of things he can not. He should be groomed every day, if it can possibly be done. When coming in from a long muddy march, the wet mud should be wiped off with a wisp of straw before it dries and hardens. If the animal will not stand, tie up a hind foot as described in shoeing. Always tie up the foot on the side opposite to that which is to be groomed.

21. Shipping Mules by Rail. The cars furnished may be either:

The palace stock car, length 36 to 40 ft., capacity 16 to 20 head; each animal in a separate stall, with a compartment for attendants, or

The improved stock car, length 36 ft.; capacity 20 to 24 head, with facilities for feeding and watering in car, or

The ordinary stock car, length 30 to 34 ft., capacity 16 to 20 head, with no appliances of any kind.

Before loading, examine the car carefully to see that the floors are not rotten or broken; that the sides are secure, and that there are no projecting nails or splinters on the inside. The car should be cleaned and the floor covered with sand or sawdust. Hay or straw should never be allowed in a stock car on account of the danger from fire. The man in charge should be provided with a lantern, bucket, and hatchet. The latter is to be used to cut away part of a board in case an animal gets his hoof through the side of the car.

Except in very hot weather, pack the animals snugly in the car, as they will ride better than if loosely packed. If an animal falls down in the car it will be almost impossible for it to get up without assistance. The attendant

should enter the car at the end and crawl along the side nearest the animal's head until he is reached. Take him by the halter and raise his head. With this assistance he will probably get up. For loading, use the railroad platform or the loading ramp found at railroad stations, or make a ramp well supported, with strong sides, and with cleats on the floor to prevent slipping. Lanyards should be attached to each side of the floor near the middle and made fast to truss rods or door fittings of the car to prevent the ramp from sliding off the doorsill.

If lumber is not at hand, a ramp may be made of poles and brush, supported on trestles and floored like a bridge (see Bridges). As a last resort, throw up a ramp of earth, reaching as near as possible to the side of the car, and bridge the gap with the car door.

For loading with improvised facilities, always try to get the car into a shallow cut.

Lead the animals up the ramp and into the car and take off the halter straps, but not the halters. If the mules are shy of the ramp, a little hay thrown on it will make them less timid. Very obstinate cases can be handled by passing a rope around the haunches and having a few men pull on each end. The first animal is led to one end of the car and the second to the other end, leaving the middle for the last ones loaded. The animals face opposite sides of the car alternately. Each one led in must be held until the next one is in place. Load quietly and avoid exciting the animals either by haste or by unnecessary delay. It may occasionally be necessary to blind-fold an animal before he can be led in. Animals in transit should be fed and watered once a day at least, or twice if opportunity offers. If closely packed in ordinary cars, they should be unloaded and exercised once in 48 hours and given 6 hours' rest.

22. Shipping Animals by Sea. Ships must be especially fitted up and equipped for this service. Free ventilation and cleanliness are of the utmost importance. Air ports should be large and numerous and wind sails must be set up in every hatch to each deck. If there are dead spaces, special air shafts must be built to supply them. If there is machinery on board, forced ventilation should be employed. Animals do best on deck except in very heavy weather, and should never be put below the water line. Stalls are built in double rows lengthwise of the ship, facing each other, with a 4-ft. aisle between. There should be a passageway athwartships at each end of each compartment, and if the vessel is wide enough, the outside rows of stalls should be 3 ft. from the sides of the ship.

Stanchions 6 x 6 ins. are set up, 30 ins. c. to c. lengthwise, and 6 ft. 6 ins. c. to c. athwartships between the posts of the same stall. The stanchions are well secured at top and lightly to the deck. Before setting up, the stanchions are mortised for the side boards as shown in Figs. 20 and 21. The stanchions should be further stayed near the tops by ties in both directions, fastened to or firmly butting against the framework of the vessel. The ties should run straight, disregarding the curve and sheer of decks. A false floor of 2-in. plank, 8 to 12 ins. wide, is spiked or bolted to the deck, the planks running lengthwise of the stalls, with $\frac{3}{4}$ -in. space between them. If the ship is to be used for this purpose for a considerable time, the floor should be double, with tar paper between the courses. The floor is cut closely around the feet of the stanchions. Hard-wood cleats are placed across the stall and fastened to the false floor with screws. In spiking down the false floor, the nails should be so driven that their heads will be covered by these cleats. Larger cleats are laid lengthwise, from foot to rear posts. The stall partitions are of 2-in. plank, smoothly planed, Fig. 22, inserted in the mortises

Fig. 24

Fig. 25

Fig. 26

in the stanchions, and the rear ends are closed by haunch pieces. These are shaped as shown in section in Fig. 23, and are fastened by lag screws to a plank bolted to the rear posts. The haunch piece is adjustable in height, Fig. 24, and should be placed so that its bottom edge will catch the mule 2 ins. above the hock. The front is best closed by a heavy canvas band 8 ins. wide, with reinforced edges, a spreading stick at each end and a grommet in each corner for lashing it to the front posts. A light strap over the neck will keep this band in place like a breast collar and the lashings may be left slack enough to permit the mule to sway and ride easier. Projecting nails must be avoided, edges and corners smoothed and rounded, knot holes trimmed out and splinters removed, and all parts which the mule can reach with his teeth should be sheathed with metal or wrapped with wire.

For deck stalls the posts are capped to form supports for a roof of 2-in. stuff, which should be covered with tar paper. The stalls must also be strongly cross-braced. This is best done by inserting diagonals between the posts of every fifth or sixth partition. The entire structure must be thoroughly strapped or tied down to the deck.

Under no circumstances should any stock be loaded until the ship is ready to sail, completely equipped, supplied, and manned.

Watering is easily done by buckets filled from a hose, the nozzle of which is carried along the aisle. The nozzle should have a cock to enable the flow to be controlled at the end. The supply should not be less than 10 gals. per mule per day. If condensers are used, there should be several days' supply in fresh-water tanks to provide against a breakdown of the machinery or the use of water not thoroughly cooled.

Feeding is best done on the false floor in front of the stalls. Cleats may be nailed down to form shallow boxes to hold the grain in place. In heavy weather it may be better to use nosebags. Grain should be fed early in the morning. None should be given the first day out. The second day a half ration should be fed and increased by small quantities if found necessary to keep the animals in condition. Bran mashes with salt should be fed once a week. After feeding the deck should be thoroughly cleaned and such disinfectants as are to be used should be applied. Then the hay should be fed.

It is better to leave one vacant stall in each tier. Remove the side boards and shift the next animal into the vacant stall. Clean his stall thoroughly and shift the second animal into it, and so on.

In loading and unloading the animals should be led up and down ramps and gangways if possible. If they are to be transferred to or from lighters, or dropped into the water to swim ashore, a sling or flying stall must be used. After landing, animals should be corraled with the shortest possible march and should be allowed to rest 3 or 4 days under conditions which permit gradual increase of activity.

The sling should be 5 ft. long and 2 ft. wide, of heavy canvas, reinforced at the edges by a 2-in. binding of the same. A hem is made at each end to take a 2-in. spreader. A loop of $1\frac{1}{4}$ -in. rope is attached to each end, around the sticks, one 9 ins. long and the other 3 ft. long, measured from the middle of the sticks to the middle of the loop when stretched. The long loop has a heavy iron ring, 3 ins. inside diam. fixed at its middle point. Breast and haunch ropes $\frac{3}{4}$ in. diam. are sewed across the canvas 3 ins. from the sticks and on the outside of the sling. They should be 9 ft. long each way from the center of the sling. The sling is placed under the mule's barrel, the end of the long loop passed through the short one and the hook of the hoisting block engaged in the ring. The small ropes are passed around the

shoulders and haunches and tied. The animal should be lifted from his feet quickly and set down gradually.

The flying stall is a stoutly framed box open at the top and high enough to prevent the mule jumping out. The inside should be smooth, 6 ft. 6 ins. long and 30 ins. wide. The ends should be hinged at the bottom to open outward, with heavy latches at top arranged to be operated by lines from a distance. The floor should have several cleats running from side to side. At each corner a $\frac{1}{2}$ -in. rod should run from bottom to top, terminating in a heavy eye or ring. To the rings slings should be fastened converging to the center, where they are joined together to take the hook of the fall. The slings should be kept apart by spreaders high enough to clear the mule's head to prevent a cross strain on the sides. Guys should be provided to control the stall in raising and lowering to prevent its striking the edges of hatches.

For a short voyage and work immediately on landing, animals may be shipped with shoes on. In this case shoes should be recently set. For long voyages, shoes should be removed.

Animals should not be shipped in high condition. If not worked up to the time of embarking, give exercise and reduce feed.

23. Accountability for Public Animals. A descriptive book of public animals will be kept with the records of every officer responsible for such animals. It will contain a description of every animal received and transferred, showing the kind, name, age, size, color, marks, brands, or other peculiarities of each; how and when acquired, and, if disposed of, in what manner; the name of his rider and driver, and the use to which applied.

A complete descriptive list of each animal will be made at the time of purchase and will accompany him wherever he may be transferred.

When public animals are issued or transferred, the person in charge will be provided with full and accurate descriptive lists, which he will deliver to the receiving officer, by whom they will be entered in his descriptive book of public animals.

Public animals shall, on the day received, be branded with the letters "U S" on the left fore shoulder, the letters to be 2 ins. in height.

Public animals will be assigned to their riders or drivers, who will not exchange or surrender them to the use of any other person without the permission of the company commander, quartermaster, or other officer responsible

A MANUAL FOR COURTS-MARTIAL

**COURTS OF INQUIRY AND OF OTHER
PROCEDURE UNDER MILITARY LAW**

**REVISED IN THE JUDGE ADVOCATE GENERAL'S OFFICE
AND PUBLISHED BY AUTHORITY OF THE SECRETARY OF WAR**

War Department,
Office of the Chief of Staff,
Washington, November 29, 1916.

The Manual for Courts-Martial, Courts of Inquiry, and of other Procedure under Military Law, prepared by direction of the Secretary of War in the Office of the Judge Advocate General for use in the Army of the United States, is approved, and will be published for the information and guidance of all concerned, including all courts-martial in the National Guard of the several States and Territories and the District of Columbia not in the service of the United States, in so far as applicable, under section 102 of the national-defense act, approved June 3, 1916. The provisions of this Manual will be in force and effect on and after March 1, 1917.

By order of the Secretary of War:

H. L. SCOTT,
Major General, Chief of Staff.

The discipline and reputation of the Army are deeply involved in the manner in which military courts are conducted and justice administered. The duties, therefore, that devolve on officers appointed to sit as members of courts-martial are of the most grave and important character. That these duties may be discharged with justice and propriety it is incumbent on all officers to apply themselves diligently to the acquirement of a competent knowledge of military law, to make themselves perfectly acquainted with all orders and regulations, and with the practice of military courts.—Army Regulations, 1835 Article XXXV, paragraph 1.

A MANUAL FOR COURTS-MARTIAL.

CHAPTER I.

MILITARY JURISDICTION.

SECTION I.

SOURCE AND KINDS OF MILITARY JURISDICTION.

1. **Source.** The source of military jurisdiction is the Constitution, the specific provisions relating to it being found in powers granted to Congress, in the authority vested in the President, and in a provision of the fifth amendment.

2. **Kinds.** Military jurisdiction is of four kinds, viz.:

(a) Military government (the law of hostile occupation); that is, military power exercised by a belligerent by virtue of his occupation of an enemy's territory, over such territory and its inhabitants. This belongs to the law of war and therefore to the law of nations. When a conquered territory is ceded to the conqueror, military government continues until civil government is established by the new sovereign.

(b) Martial law at home (or, as a domestic fact); by which is meant military power exercised in time of war, insurrection, or rebellion in parts of the country retaining their allegiance, and over persons and things not ordinarily subjected to it.

(c) Martial law applied to the Army; that is, military power extending in time of war, insurrection, or rebellion over persons in the military service, as to obligations arising out of such emergency and not falling within the domain of military law, nor otherwise regulated by law.

The last two divisions (b) and (c) are applications of the doctrine of necessity to a condition of war. They spring from the right of national self-preservation.

(d) Military law; which is the legal system that regulates the government of the military establishment. It is a branch of the municipal law, and in the United States derives its existence from special constitutional grants of power. It is both written and unwritten. The sources of written military law are the Articles of War enacted by Congress August 29, 1916; other statutory enactments relating to the military service; the Army Regulations; and general and special orders and decisions promulgated by the War Department and by department, post, and other commanders. The unwritten military law is the "custom of war," consisting of customs of service, both in peace and war.

This Manual deals primarily with military law.

SECTION II.

EXERCISE OF MILITARY JURISDICTION.

3. **Military Tribunals.** Military jurisdiction is exercised through the following military tribunals:

(a) Military commissions and provost courts, for the trial of offenders against the laws of war and under martial law.

(b) Courts-martial—general, special, and summary—for the trial of offenders against military law. (A. W. 3.)

[Note 1: The general court-martial has concurrent jurisdiction with military commissions and provost courts to try offenders against the laws of war. (A. W. 12.)]

Note 2: For the authority to appoint courts-martial in the National Guard not in the service of the United States, and the jurisdiction and powers of such courts, see sections 102–108, act of June 3, 1916, 39 Stat., 208, 209; Appendix 2, post.]

(c) Courts of inquiry, for the examination of transactions of or accusations or imputations against officers or soldiers. (A. W. 97.)

[Note: The composition, jurisdiction, procedure, etc., of these tribunals are treated in the succeeding chapters of this Manual.]

SECTION III.

PERSONS SUBJECT TO MILITARY LAW.

4. **Classes Enumerated.** The following persons are subject to the Articles of War (A. W. 2):

[Note: Wherever the following words are used in the Articles of War or this Manual, they are to be construed in the sense indicated below, unless the context shows that a different sense is intended, viz.: (a) The word "officer" shall be construed to refer to a commissioned officer; (b) the word "soldier" shall be construed as including a noncommissioned officer, a private, or any other enlisted man; (c) the word "company" shall be understood as including a troop or battery; and (d) the word "battalion" shall be understood as including a squadron. (A. W. 1.)]

(a) All officers and soldiers belonging to the Regular Army of the United States; all volunteers, from the dates of their muster or acceptance into the military service of the United States; and all other persons lawfully called, drafted, or ordered into, or to duty, or for training in the said service, from the dates they are required by the terms of the call, draft, or order to obey the same.

[Note: (a) Regular Army. The Regular Army of the United States, including the existing organizations, shall consist of sixty-four regiments of Infantry, twenty-five regiments of Cavalry, twenty-one regiments of Field Artillery, a Coast Artillery Corps, the brigade, division, army corps, and army headquarters, with their detachments and troops, a General Staff Corps, an Adjutant General's Department, an Inspector General's Department, a Judge Advocate General's Department, a Quartermaster Corps, a Medical Department, a Corps of Engineers, an Ordnance Department, a Signal Corps, the officers of the Bureau of Insular Affairs, the Militia Bureau, the detached officers, the detached noncommissioned officers, the chaplains, the Regular Army Reserve, all organized as hereinafter provided, and the following as now authorized by law: The officers and enlisted men on the retired list; the additional officers; the professors, the Corps of Cadets, the general army service detachment, and detachments of Cavalry, Field Artillery, and Engineers, and the band of the United States Military Academy; the post noncommissioned staff officers; the recruiting parties, the recruit depot detachments, and unassigned recruits; the service school detachments; the disciplinary guards; the disciplinary organizations; the Indian Scouts; and such other officers and enlisted men as are now or may be hereafter provided for. (Sec. 2, act of June 3, 1916, 39 Stat., 166.)]

(b) Volunteers. The volunteer forces shall be subject to the laws, orders, and regulations governing the Regular Army in so far as such laws, orders,

and regulations are applicable to officers or enlisted men whose permanent retention in the military service, either on the active list or on the retired list, is not contemplated by existing law. (Sec. 4, act of Apr. 25, 1914, 38 Stat., 347.)

(c) National Guard. The National Guard, when called as such into the service of the United States, shall, from the time they are required by the terms of the call to respond thereto, be subject to the laws and regulations governing the Regular Army, so far as such laws and regulations are applicable to officers and enlisted men whose permanent retention in the military service, either on the active list or on the retired list, is not contemplated by existing law. (Sec. 101, act of June 3, 1916, 39 Stat., 208.)

[Note: The militia when called into the service of the United States is also subject to military law. (35 Stat., 399.)]

(d) National Guard when drafted into Federal Service. Members of the National Guard and the National Guard Reserve drafted into the military service of the United States shall, from the date of their draft, stand discharged from the militia, and shall from said date be subject to such laws and regulations for the government of the Army of the United States as may be applicable to members of the Volunteer Army. (Sec. 111, act of June 3, 1916, 39 Stat., 211.)

(e) Officers' Reserve Corps. Any officer who, while holding a commission in the Officers' Reserve Corps, shall be ordered to active service by the Secretary of War shall, from the time he shall be required by the terms of his order to obey the same, be subject to the laws and regulations for the government of the Army of the United States, in so far as they are applicable to officers whose permanent retention in the military service is not contemplated. (Sec. 38, act of June 3, 1916, 39 Stat., 190.)

(f) The Enlisted Reserve Corps. Any enlisted man of the Enlisted Reserve Corps ordered to active service or for purposes of instruction or training shall, from the time he is required by the terms of the order to obey the same, be subject to the laws and regulations for the government of the Army of the United States. (Sec. 55, act of June 3, 1916, 39 Stat., 195.)]

(b) Cadets.

(c) Officers and soldiers of the Marine Corps when detached for service with the armies of the United States by order of the President. (A. W. 2.)

(d) Officers and enlisted men of the Medical Department of the Navy, serving with a body of marines detached for service with the Army in accordance with the provisions of section sixteen hundred and twenty-one of the Revised Statutes, shall, while so serving, be subject to the rules and articles of war prescribed for the government of the Army in the same manner as the officers and men of the Marine Corps while so serving. (Act of Aug. 29, 1916, 39 Stat., 573.)

[Note: (a) Except as provided in (c) and (d) supra or otherwise specifically provided by law, the Articles of War do not apply to any person under the United States naval jurisdiction. (b) An officer or soldier of the Marine Corps detached for service with the Army may be tried by military court-martial for an offense committed against the laws for the government of the naval service prior to his detachment and for an offense committed against the Articles of War he may be tried by a naval court-martial after such detachment ceases. (A. W. 2.)]

(e) All retainers to the camp and all persons accompanying or serving with the armies of the United States without the territorial jurisdiction of the United States, and in time of war all such retainers and persons accompanying or serving with the armies of the United States in the field, both within and without the territorial jurisdiction of the United States though not otherwise subject to the Articles of War.

[Note: In addition to the two classes (a) "retainers to the camp" and (b) "persons serving with the armies of the United States in the field" who were made subject to military jurisdiction by A. W. 60 of the code of 1806 (A. W. 63 of the revision of 1874), A. W. 2 of the code of 1916 includes a third class, viz., (c) "persons accompanying the armies of the United States."]

(f) All persons under sentence adjudged by courts-martial.

(g) Army field clerks.

[Note: Hereafter headquarters clerks shall be known as Army field clerks and shall * * * be subject to the rules and Articles of War. (Sec. 1, act of Aug. 29, 1916, 39 Stat., 625.)]

(h) Field clerks, Quartermaster Corps.

[Note 1: Hereafter not to exceed two hundred clerks, Quartermaster Corps, * * * shall be known as field clerks, Quartermaster Corps, * * * and shall be subject to the rules and Articles of War. (Act of Aug. 29, 1916, 39 Stat., 626.)]

[Note 2: Inmates of the Soldiers' Home (R. S. 4824), the National Home for Disabled Volunteer Soldiers (R. S. 4835), all persons admitted to treatment in the General Hospital at Fort Bayard, New Mexico, while patients in said hospital (act of June 12, 1906, 34 Stat., 255), and all persons admitted to treatment in the Army and Navy General Hospital at Hot Springs, Arkansas, while patients in said hospital (act of Mar. 3, 1909, 35 Stat., 748), are by the statutes cited made subject to the rules and articles for the government of the armies of the United States, but court-martial jurisdiction over them has rarely, if ever, been exercised.]

CHAPTER II.

COURTS-MARTIAL—CLASSIFICATION—COMPOSITION.

SECTION I.

CLASSIFICATION.

5. Kinds. Courts-martial shall be of three kinds (A. W. 3), viz.:

- (a) General courts-martial;
- (b) Special courts-martial; and
- (c) Summary courts-martial.

[Note: The classification of courts-martial adopted by the code of 1916 is identical with that made by the act of March 2, 1913 (37 Stat., 721), which abolished garrison and regimental courts-martial and created special courts-martial.]

SECTION II.

COMPOSITION.

6. Who Competent to Serve. All officers in the military service of the United States, and officers of the Marine Corps when detached for service with the Army by order of the President, shall be competent to serve on courts-martial for the trial of any persons who may lawfully be brought before such courts for trial. (A. W. 4.)

Exceptions. (a) No officer shall be eligible to sit as a member of a general or special court-martial when he is the accuser or a witness for the prosecution (A. W. 8, 9); but when there is only one officer present with a command he shall be the summary court-martial of that command and shall hear and determine cases brought before him. (A. W. 10.) [See Chapter 8, sec. 1, par. 129.]

(b) Chaplains, veterinarians, dental surgeons, and second lieutenants in the

Quartermaster Corps are not in practice detailed as members of courts-martial.

7. Number of Members. Courts-martial shall be composed of the following number of officers (A. W. 5, 6, 7), viz.:

(a) General courts-martial. Any number from 5 to 13, inclusive.

A general court-martial shall not consist of less than 13 officers when that number can be convened without manifest injury to the service. (A. W. 5.) The Articles of War (A. W. 5, 6) governing the number of members which may sit upon a general or a special court-martial are merely directory to the officer appointing the court, and his decision as to the number which can be convened without manifest injury to the service (within the maximum and minimum limits prescribed by law), being a matter submitted to his sound discretion, must be conclusive. (*Martin v. Mott*, 12 Wheaton, 35; see also *Mullan v. U. S.*, 140 U. S., 240.) While a number less than five can not be organized as a general court-martial or proceed with a trial, they may perform such acts as are preliminary to the organization and action of the court. Less than five members may adjourn from day to day, and where five are present and one of them is challenged, the remaining four may determine upon the sufficiency of the objection. A court reduced to four members and thereupon adjourning for an indefinite period does not dissolve itself. The appointing authority may at any time complete it by the addition of a new member or members and order it to reassemble for business (Digest, p. 158, LXXV., B, 3), but if any evidence has been taken before the court is reduced below five, it should be dissolved and a new one ordered.

If for any reason a general court-martial is reduced below five members it will direct the judge advocate to report the facts to the convening authority and wait his orders. The report by the judge advocate will, in all cases, be made through the commanding officer of the post, command, or station where the court is sitting, who will indorse thereon the names of a sufficient number of available officers whom he recommends be detailed on the court to enable it to proceed. More than enough to make a quorum should be recommended where practicable in order to provide for future contingencies, and so far as can be foreseen the officers recommended should not be liable to challenge in any case to be tried. If there be no such officer or officers available, the commanding officer will so state. This report will be made by wire whenever deemed advisable in order to prevent unnecessary delay in trying cases. Similar action will be taken before trial by the judge advocate and commanding officer whenever the former knows or has good reason to believe that the court will be reduced below a quorum at the time of trial. It is the duty of commanding officers to keep in touch with the business before general courts-martial being held within the limits of their commands and from time to time to take the initiative in making recommendations to the appointing authority as to relieving or adding members, changing the judge advocate, or appointing a new court, and as to other matters relating to such courts, so that they may proceed expeditiously and in cooperation with other official business.

(b) Special courts-martial. Any number of officers from three to five, inclusive.

The remarks under ante apply equally to a special court-martial where its membership is reduced below the minimum required by law, except that in the case of special court-martial the report by the judge advocate will be made to the convening authority, who will, without unnecessary delay, detail a sufficient number of qualified officers to enable it to proceed or appoint a new court.

(c) Summary courts-martial. A summary court-martial shall consist of one officer.

8. "Officer" Defined. The word "officer" when used in the Articles of War or this Manual means commissioned officer. (A. W. 1.)

9. "In the Military Service of the United States." (a) An officer suspended from rank should not be detailed to sit as a member of a court-martial during the period of suspension.

(b) A retired officer may be assigned with his consent to active duty upon courts-martial in time of peace (act of Apr. 23, 1904, 33 Stat., 264), and if employed on active duty in time of war in the discretion of the President (sec. 24, act of June 3, 1916, 39 Stat., 183), he is eligible for court-martial duty. At other times he is not available for such duty except that when placed in command of a post under the act of August 29, 1916 (39 Stat., 627), or when assigned to recruiting duty he may act as summary court-martial when he is the only officer present. (See pars. 26 and 27.)

(c) Volunteers become eligible for duty as members of courts-martial from the dates of their muster or acceptance into the military service of the United States (A. W. 2), members of the Officers' Reserve Corps ordered to active service by the Secretary of War (sec. 38, act of June 3, 1916, 39 Stat., 191), and all other officers lawfully called, drafted, or ordered into, or to duty or for training in, the said service, from the date they are required by the terms of the call, draft, or order to obey the same. (A. W. 2.)

10. **Marine Officers.** Marine officers can be detached for duty with the Army only by order of the President (R. S. 1619, 1621), and their eligibility to sit as members of courts-martial to try persons subject to military law continues only during the time they are serving under such order. When any part of the Marine Corps is present with the Army and engaged in a common enterprise with it, without an order of the President detaching it for service with the Army, the case is one of coöperation and not of incorporation, and in such a case no officer of the Marine Corps can exercise command over the Army any more than a naval officer can when some part of the Navy is coöperating with the Army, and the converse is true of Army Officers coöperating with the Marine Corps. (28 Op. Atty. Gen., 15.)

11. **No Distinction between Regulars and Other Forces.** No distinction now exists in the matter of eligibility for court-martial duty among the various classes of officers in the military service of the United States for the trial of any person subject to military law. (Act of Apr. 25, 1914, 38 Stat., 348; A. W. 4.)

12. **Rank of Members.** (a) The order appointing a general or a special court-martial should name the members in order of rank, and they will sit according to rank.

In no case shall an officer, when it can be avoided, be tried by officers inferior to him in rank. (A. W. 16.) This provision (like that in reference to the number of members of a general or special court-martial considered in paragraph 7, ante) is not prohibitory but directory only upon the convening authority. Its effect is to leave to the discretion of that officer, as the conclusive authority and judge, the determination of the question of the rank of the members, with only the general instruction that superiors in rank to the accused shall be selected, so far as the exigencies and interests of the service will permit. (*Mullan v. U. S.*, 140 U. S., 240.)

(b) Rank among officers of the Regular Army, forces drafted or called into the service of the United States, and Volunteers is determined according to the rules laid down in A. W. 119.

13. **Who May be Tried.** (a) For the jurisdiction of general, special, and summary courts-martial as to persons see Chapter IV, Jurisdiction.

(b) In addition to the persons subject to military law enumerated in Chapter I, Section III, ante, the general court-martial also has jurisdiction over any other person who by the law of war is subject to trial by military tribunals. (A. W. 12; see Chap. IV, Jurisdiction.)

CHAPTER III. COURTS-MARTIAL—BY WHOM APPOINTED.

SECTION I.

GENERAL COURTS-MARTIAL.

14. Authorities Enumerated. General courts-martial may be appointed by the following authorities (A. W. 8), viz.:

- (a) The President of the United States.
- (b) The commanding officer of a territorial division.
- (c) The commanding officer of a territorial department.
- (d) The Superintendent of the Military Academy.
- (e) The commanding officer of an army.
- (f) The commanding officer of an army corps.
- (g) The commanding officer of a (tactical) division.
- (h) The commanding officer of a separate brigade.
- (i) The commanding officer of any district or of any force or body of troops, when empowered by the President to do so.

Exceptions. (1) When any of the foregoing commanders is the accuser or the prosecutor of the person or persons to be tried, the court shall be appointed by superior competent authority; (2) the Superintendent of the Military Academy is not empowered to convene a general court-martial for the trial of an officer. (A. W. 12.)

[Note: For the authority to appoint general court-martial in the National Guard not in the service of the United States, see sec. 103 act of June 3, 1916, 39 Stat., 208; Appendix 2, post.]

15. Power of the President to Appoint. In addition to the general statutory authority conferred upon the President by A. W. 8 to appoint general courts-martial he is also empowered to do so by virtue of being Commander in Chief of the Army (Swain v. U. S., 165 U. S., 563) and in the particular case provided for by R. S. 1230.

[Note: When any officer, dismissed by order of the President, makes, in writing, an application for trial, setting forth, under oath, that he has been wrongfully dismissed, the President shall, as soon as the necessities of the service may permit, convene a court-martial to try such officer on the charges on which he shall have been dismissed. And if a court-martial is not so convened within six months from the presentation of such application for trial, or if such court, being convened, does not award dismissal or death as the punishment of such officer, the order of dismissal by the President shall be void. (R. S. 1230.) See also A. W. 118.]

16. Superintendent of the Military Academy. The Superintendent of the Military Academy was authorized by R. S. 1326 to convene general courts-martial for the trial of cadets only; the act of March 2, 1913 (37 Stat., 722), extended this authority to include all persons (except officers) subject to military law under his command. This authority was continued in the Code of 1916. (A. W. 8, 12.)

17. "Accuser" or "Prosecutor." Whether the commander who convened the court is to be regarded as the "accuser or prosecutor" where he has had to do with the preparing and preferring of the charges, is mainly to be determined by his animus in the matter. He may, like any other officer, initiate an investigation of an officer's conduct and formally prefer, as his individual act, charges against such officer; or by reason of a personal interest adverse to the accused he may adopt practically as his own charges initiated by another; in which

cases he is clearly the accuser or prosecutor within the article. On the other hand, it is his duty to determine, when the facts are brought to his knowledge, whether an officer within his command charged with a military offense shall in the interest of discipline and for the good of the service be brought to trial. To this end he may formally refer or revise or cause to be revised and then formally referred, charges preferred against such officer by another; or when the facts of an alleged offense are communicated to him, he may direct a suitable officer, as a member of his staff, or the proper commander of the accused, to investigate the matter, formulate and prefer such charges as the facts may warrant, and having been submitted to him, he may revise and refer them for trial as in other cases; all this he may do in the proper performance of his official duty without becoming the accuser or prosecutor in the case. Of course, he can not be deemed such accuser or prosecutor where he causes charges to be preferred and proceeds to convene the court by direction of the Secretary of War or a competent military superior. (Digest, p. 154, LXXII, I, 1.) It is not essential that the commander who convenes the court-martial for the trial of an officer should sign the charges to make him the "accuser or prosecutor" within the meaning of this article. Nor is the fact that they have been signed by another conclusive on the question whether the convening commander is the actual accuser or prosecutor. The objection that such commander is such, calls in question the legal constitution of the court, and while such objection, if known or believed to exist, should regularly be interposed at or before the arraignment it may be taken during the trial at any stage of the proceedings. If not admitted by the prosecution to exist, the accused is entitled to prove it like any other issue. (For decisions as to when the convening authority is the accuser or prosecutor, see Digest, p. 155, LXXII, I, 1, a; p. 155, LXXII, I, 2; p. 156, LXXII, I, 3, a; p. 156, LXXII, I, 3 a (1).)

18. Power to Appoint an Attribute of Command. As the authority to appoint general courts-martial is an attribute of command, a commanding officer can not delegate to another officer such as his adjutant or any other staff officer or subordinate the authority to appoint a court, detail an additional member, or relieve a member. If the authority to appoint a general court-martial is vested by law in a commanding officer he retains that authority, wherever he may be, so long as he continues to be such commanding officer. In the absence of orders or legislation, personal presence within the territorial limits of his department is not essential to the validity of commands given by a department commander to be executed within the department. Therefore he may appoint a court-martial while absent from his department if he continues to exercise command. But a department commander detached and absent from his command for any considerable period by reason of having received a leave of absence (whether of a formal or informal character), or having been placed upon a distinct and separate duty, is held to be in a status incompatible with a full and legal exercise of such authority and therefore incompetent during such absence to order a general court-martial as department commander, even though no other officer has been assigned or has succeeded to the command of the department. (Digest, p. 153, LXXII, A.)

19. Rank of Appointing Authority. The power of the various commanders enumerated in paragraph 14, *supra*, to appoint general courts-martial is independent of their rank, but no officer other than those enumerated can appoint a general court-martial no matter what his rank may be. An officer who succeeds to any command or duty stands in regard to his duties in the same situation as his predecessor. (A. R. 17.) In the event of the death or disability of the permanent commander of a territorial department, or his temporary absence from the limits of his command, the senior line officer present

and on duty therein will exercise the command of the department, unless otherwise ordered, until relieved by proper authority. (A. R. 196.)

20. Power of Appointing Authority, How Limited. An officer who has power to appoint a court-martial may control its existence, dissolve it, and determine the cases to be referred to it for trial, but he can not control the exercise by the court of powers vested in it by law.

SECTION II.

SPECIAL COURTS-MARTIAL.

21. Authorities Enumerated. Special courts-martial may be appointed by the following authorities (A. W. 9), viz.:

- (a) The commanding officer of a district.
- (b) The commanding officer of a garrison.
- (c) The commanding officer of a fort.
- (d) The commanding officer of a camp.
- (e) The commanding officer of any place other than (a), (b), (c), and (d) where troops are on duty.
- (f) The commanding officer of a brigade.
- (g) The commanding officer of a regiment.
- (h) The commanding officer of a detached battalion.
- (i) The commanding officer of any other detached command.

Exception. When any one of the foregoing commanding officers is the accuser or the prosecutor of the person or persons to be tried, the court shall be appointed by superior authority.

When any superior authority deems it desirable, he may appoint a special court-martial for any part of his command.

[Note: For the authority to appoint special courts-martial in the National Guard not in the service of the United States, see sec. 104, act of June 3, 1916, 39 Stat., 208; Appendix 2, post.]

22. Commanding Officer as "Accuser or Prosecutor." The rules laid down in Section I, paragraph 17, *supra*, for determining when a commander is the accuser or prosecutor apply equally to trials by special courts-martial. When a superior appoints a court because of such disqualification on the part of a subordinate commanding officer, he will specify in the order the names of the person or persons to be tried, and the court will adjourn *sine die* upon the completion of the last case which it is ordered to try.

23. Rank of Appointing Authority. As in the case of general courts-martial, the test of the power to appoint a special court-martial is whether the officer is one of the commanders designated in A. W. 9. Such authority is an incident of his power to command, and is independent of his rank.

24. Commanding Officer as Member. When but two officers in addition to the commanding officer are available for detail on a special court-martial, the commanding officer will not detail himself as a member of such court. In such a case, if superior authority desires to appoint a special court-martial for such command, the commanding officer, if otherwise eligible, may be appointed as a member thereof.

SECTION III.

SUMMARY COURTS-MARTIAL.

25. Authorities Enumerated. Summary courts-martial may be appointed by the following authorities (A. W. 10), viz.:

- (a) The commanding officer of a garrison.
- (b) The commanding officer of a fort.

- (c) The commanding officer of a camp.
- (d) The commanding officer of any other place not enumerated in (a), (b), and (c) where troops are on duty.
- (e) The commanding officer of a regiment.
- (f) The commanding officer of a detached battalion.
- (g) The commanding officer of a detached company.
- (h) The commanding officer of any other detachment not enumerated in (f) and (g).

A summary court-martial may in any case be appointed by superior authority when by the latter deemed desirable.

[Note: For the authority to appoint summary courts-martial in the National Guard not in the service of the United States, see sec. 105, act of June 3, 1916, 39 Stat., 208; Appendix 2, post.]

26. When More Than One Officer Present. When more than one officer is present the summary court-martial will be appointed from staff officers or available line officers junior to the commanding officer. The commanding officer will not in such cases designate himself as the summary court-martial. The senior officer on duty at a recruiting station is a "commanding officer" in the sense of the last preceding sentence when there is another officer present at the same station, even though the latter may be serving at an auxiliary or branch station. (Bul. 46, War Dept., Oct. 24, 1914.)

27. When but One Officer Present. When but one officer is present with a command he shall be the summary court-martial of that command and shall hear and determine cases brought before him. (A. W. 10.) In such a case, no order appointing the court will be issued, but the officer will enter on the record that he is the "only officer present with the command." (As to retired officers, see par. 9, b).

28. "Detachment" Defined. A battalion or other unit is "detached" when isolated or removed from the immediate disciplinary control of a superior of the same branch of the service in such a manner as to make its commander primarily the one to be looked to by superior authority as the officer responsible for the administration of the discipline of the enlisted men composing the same. The term is used in a disciplinary sense, and is not necessarily limited to what constitutes detachment in a physical or tactical sense. The commanding officers of such units as field signal battalions, aero squadrons, field bakeries, and ammunition, engineer, or sanitary trains, if their respective commands are independent, except in so far as they constitute parts of a division, and if their commanders are responsible directly to the division commander for the maintenance of discipline in those commands, are competent to appoint summary courts for the same, subject to the power of the division commander to appoint summary courts for all subordinate organizations and detachments under his command if by him deemed advisable.

So likewise the various service schools, such as the Mounted Service School at Fort Riley, though they may be located within the immediate limits of higher commands, constitute "detachments" within the meaning of A. W. 10, and the commandants thereof have power to appoint summary courts-martial for the trial of enlisted men connected with such schools, subject to the right of the commanding officer of the garrison or fort to appoint such courts when by him deemed desirable. (Bul. 13, War Dept., 1913, p. 7.)

29. Power of Brigade Commanders. A brigade commander is responsible for the instruction, tactical efficiency and preparedness for war service of his brigade. (A. R. 194.) If the brigade is serving at one garrison or post he has, by virtue of his power as such garrison or post commander, authority to retain within himself the appointing power of all summary courts within his command,

but if he does not exercise the authority which is vested in him by statute he allows the appointing power, including the power of review, to pass to regimental (and detachment) commanders. (Digest, p. 580, XVI, E, 7.) If the brigade is acting as a tactical unit in the field, he may as superior authority appoint summary courts-martial for his command whenever he deems it desirable, but such authority will ordinarily be exercised by the regimental commanders.

SECTION IV.

JUDGE ADVOCATE.

30. Power to Appoint. For each general or special court-martial the authority appointing the court shall appoint a judge advocate, and for each general court-martial one or more assistant judge advocates when necessary. (A. W. 11.)

31. Duties of Judge Advocate and Assistant Judge Advocates. For discussion of the duties of the judge advocate and his assistants see Chapter VII, Sections II and III.

CHAPTER IV.

COURTS-MARTIAL—JURISDICTION.

SECTION I.

JURISDICTION IN GENERAL.

32. Jurisdiction Defined. The jurisdiction of a court-martial is its power to try and determine cases legally referred to it and, in case of a finding of guilty, to award a punishment for the offense within its prescribed limits. Being courts of special and limited jurisdiction their organization, powers, and mode of procedure must conform to all the statutory provisions relating to their jurisdiction. (For the source and kinds of military jurisdiction and persons subject to military law see Chap. I, Secs. I and III.)

33. Courts-martial Not Part of Federal Judicial System. While courts-martial have no part of the jurisdiction set apart under the article of the Constitution which relates to the judicial power of the United States, they have an equally certain constitutional source. They are established under the constitutional power of Congress to make rules for the government and regulation of the land forces of the United States, and are recognized in the provisions of the fifth amendment expressly exempting "cases arising in the land and naval forces" from the requirement as to presentment and indictment by grand jury. They are tribunals appointed by military orders issued under authority of law. The power to appoint them, as well as the power to act upon their proceedings, is vested by law in certain commanding officers. Their jurisdiction is entirely criminal. They have no power to adjudge damage for personal injuries or private wrongs, nor to collect private debts. Their judgments upon subjects within their limited jurisdiction, when duly approved or confirmed, are as legal and valid as those of any other tribunal. No appeal can be taken from them, nor can they be set aside or reviewed by the courts of the United States, nor of any State, but United States courts may, on writ of habeas corpus, inquire into the legality of detention of a person held by military authority, at any time, either before or during trial or while serving sentence, and will order him discharged if it appears to the satisfaction of the court that any of the statutory requirements conferring jurisdiction have not been fulfilled. Their sentences have in themselves no legal

effect until they have received the approval or confirmation of the proper commanding officer. With such approval or confirmation, however, their sentences become operative and are as effective as the sentences of civil courts having criminal jurisdiction, and are entitled to the same legal consideration.

34. Conditions Necessary to Show Jurisdiction. The jurisdiction of every court-martial, and hence the validity of each of its judgments, is conditioned upon these indispensable requisites:

- (a) That it was convened by an officer empowered by statute to appoint it.
- (b) That the persons who sat upon the court were legally competent to do so.
- (c) That the court thus constituted was invested by the acts of Congress with power to try the person and the offense charged.
- (d) That its sentence was in accordance with law.

"Persons, then, belonging to the Army and the Navy are not subject to illegal or irresponsible courts-martial, when the law for convening them and directing their proceedings of organization and for trial have been disregarded. In such cases, everything which may be done is void—not voidable, but void; and civil courts have never failed, upon a proper suit, to give a party redress, who has been injured by a void process or void judgment. * * * When we speak of proceedings in a cause, or for the organization of the court and for trials, we do not mean mere irregularity in practice on the trial, or any mistaken rulings in respect to evidence or law, but a disregard of the essentials required by the statute under which the court has been convened to try and to punish an offender for an imputed violation of the law." (*Dynes v. Hoover*, 61 U. S., 81; see also *Deming v. McClaughry*, 113 Fed. Rep., 650; *McClaghry v. Deming*, 186 U. S., 63; *Mullan v. United States*, 140 U. S., 240; *Ex parte Tucker*, 212 Fed. Rep., 569; and *A. W. 37.*)

35. Procedure When Military and Civil Jurisdiction Concurrent. Courts-martial have exclusive jurisdiction to try persons subject to military law for all purely military crimes and offenses; they have concurrent jurisdiction with the proper civil courts to try such persons for civil crimes and offenses denounced and punished under A. W. 92, 93, 94, and 96. (For limitation as to the crimes of murder and rape, see A. W. 92.) In accordance with a principle of comity as between the civil and military tribunals in cases of concurrent jurisdiction the jurisdiction which first attaches in a particular case is entitled to proceed to its termination. This is, however, not an inflexible rule and need not govern the action of the military authorities in the case of an accused person demanded by the civil authorities to answer for an offense which is primarily one against the civil community.

When any person subject to military law, except (a) one who is held by the military authorities to answer, or (b) who is awaiting trial, or (c) result of trial, or (d) who is undergoing sentence for a crime or offense punishable by the Articles of War, is accused of a crime or offense committed within the geographical limits of the States of the Union and the District of Columbia, and punishable by the laws of the land, the commanding officer is required, except in time of war, upon application duly made, to use his utmost endeavor to deliver over such accused person to the civil authorities; or to aid the officers of justice in apprehending and securing him, in order that he may be brought to trial. Any commanding officer who upon such application refuses or willfully neglects, except in time of war, to deliver over such accused person to the civil authorities or to aid the officers of justice in apprehending and securing him shall be dismissed from the service or suffer such other punishment as a court-martial may direct.

When, under the provisions of this article, delivery is made to the civil authorities of an offender undergoing sentence of a court-martial, such delivery,

if followed by conviction, shall be held to interrupt the execution of the sentence of the court-martial, and the offender shall be returned to military custody, after having answered to the civil authorities for his offense, for the completion of the said court-martial sentence. (A. W. 74.) When offenses against the peace and good order of civil communities are committed by persons subject to military law, the proper military authorities will be prompt in the preferring of charges and the arraignment of offenders, having due regard for arrangements existing for the purpose of securing between the authorities of the two jurisdictions, civil and military, mutual aid and coöperation in the administration of justice. In such cases, if, after charges are preferred, the officer competent to order trial by the proper court-martial deems it inadvisable to bring the case to trial, he will hold the offender and forward the charges, with his views thereon, to The Adjutant General of the Army.

36. Can Not be Divested by Act of Accused. A court-martial having once duly assumed jurisdiction of a case, can not, by any wrongful act of the accused, be ousted of its authority or discharged from its duty to proceed fully to try and determine according to law and its oath. Thus the fact that, after arraignment and during the trial, the accused has escaped from military custody, furnishes no ground for not proceeding to a finding, and, in the event of conviction, to a sentence, in the case; and the court may and should find and sentence as in any other case. During such absence it is proper for his counsel to continue to represent him in all respects as though present.

37. Not Territorial. Military jurisdiction is not territorial. It extends as to persons legally subject to it to offenses committed by them in any place whatsoever, whether within or beyond the territorial jurisdiction of the United States.

38. When Terminated—Rule Stated. The jurisdiction of courts-martial over officers, cadets, and soldiers ordinarily ends when they become separated from the service. The following are, however, exceptions to this general rule:

(a) If any person, being guilty of any of the offenses of fraud, embezzlement, etc., against the United States, while in the military service of the United States, receives his discharge or is dismissed from the service, he shall continue to be liable to be arrested and held for trial and sentence by a court-martial in the same manner and to the same extent as if he had not received such discharge nor been dismissed. (A. W. 94.)

(b) When any officer, dismissed by order of the President, makes, in writing, an application for trial, setting forth, under oath, that he has been wrongfully dismissed, the President shall, as soon as the necessities of the service may permit, convene a court-martial to try such officer on the charges on which he shall have been dismissed, and if a court-martial is not so convened within six months from the date of making of such application for trial, or if such court, being convened, does not award dismissal or death as the punishment of such officer, the order of dismissal by the President shall be void. (R. S. 1230.)

[Note: In time of peace no officer shall be dismissed except in pursuance of the sentence of a court-martial or in mitigation thereof. (A. W. 118.)]

(c) All persons under sentence adjudged by courts-martial remain subject to military law while under such sentence. (A. W. 2.)

(d) Where a soldier obtains his discharge by fraud, the discharge may be canceled and the soldier arrested and returned to military control. He may also be required to serve out his enlistment and may be tried for his fraud. (Digest, p. 457, XVI, A. 3.)

(e) An honorable discharge releases from the particular contract and term of enlistment to which it relates, and does not therefore relieve the soldier from the consequences of a desertion committed during a prior enlistment. (Digest, p. 462, XXII, A.) A dishonorable discharge does not relate to any particular

contract or term of enlistment; it is a discharge from the military service as a punishment—a complete expulsion from the Army—and covers all unexpired enlistments. A soldier thus dishonorably discharged can not be made amenable for a desertion or other military offense committed under a prior enlistment except as provided in A. W. 94. Nor would a subsequent enlistment after such dishonorable discharge operate to revive the amenability of the soldier for such offenses. (Digest, p. 462, XXII, B.)

[Note: For an offense committed prior to the expiration of his term of enlistment, a soldier may be held in the service and tried after the expiration of his term. So, also, a soldier may be tried for offenses committed while making good time lost through desertion, through absence without leave, through disease or injury, the result of his own misconduct, etc., under A. W. 107.]

SECTION II.

JURISDICTION OF GENERAL COURTS-MARTIAL.

39. Persons and Offenses. General courts-martial have power (A. W. 12) to try—

- (a) Any person subject to military law, for
- (b) Any crime or offense made punishable by the Articles of War.

[Note: No officer shall be brought to trial before a general court-martial appointed by the Superintendent of the Military Academy. (A. W. 12.)]

In addition they have power to try—

- (c) Any person other than (a) above, who by the law of war is subject to trial by military tribunals, for
- (d) Any crime or offense in violation of the law of war.

40. Limits of Punishment—Exception. Punishment upon conviction is discretionary with a general court-martial, except—

- (a) When mandatory under the law, or
- (b) When limited by order of the President under A. W. 45; in addition,
- (c) The death penalty can be imposed only when specifically authorized.

[Note: The death penalty is mandatory in the case of spies (A. W. 82); dismissal is mandatory for conduct unbecoming an officer and gentleman (A. W. 95); either death or imprisonment for life is mandatory for murder and rape (A. W. 92); punishment is mandatory in part and discretionary in part for false muster (A. W. 56), false returns (A. W. 57), officer drunk on duty in time of war (A. W. 85), and personal interest in the sale of provisions. (A. W. 87.) For limits of punishment fixed by the President under A. W. 45, see Chapter XIII, post, Punishments.]

SECTION III.

JURISDICTION OF SPECIAL COURTS-MARTIAL.

41. Persons and Offenses. Special courts-martial shall have power (A. W. 13) to try—

- (1) Any person subject to military law, except—
 - (a) An officer;
 - (b) Any person subject to military law belonging to a class or classes excepted by the President, for
- (2) Any crime or offense (not capital) made punishable by the Articles of War.

[Note: Cadets and soldiers holding a certificate of eligibility for promotion are excepted from the jurisdiction of Special Courts-martial.]

The following are capital crimes and offenses under the Articles of War, viz.:

(1) Peace offenses. (a) Assaulting or disobeying a superior officer (A. W. 64); (b) mutiny or sedition (A. W. 66); (c) failure to suppress mutiny or sedition (A. W. 67).

(2) War offenses. (a) Desertion (A. W. 58); (b) advising or aiding another to desert (A. W. 59); (c) misbehavior before the enemy (A. W. 75); (d) subordinates compelling commander to surrender (A. W. 76); (e) improper use of countersign (A. W. 77); (f) forcing a safeguard (A. W. 78); (g) relieving, corresponding with, or aiding the enemy (A. W. 81); (h) spies (A. W. 82); (i) misbehavior of sentinel (A. W. 86).

42. Limits of Punishment. A special court-martial shall not have power to adjudge—

- (a) Dishonorable discharge, nor
- (b) Confinement in excess of six months, nor
- (c) Forfeiture of more than six months' pay.

[Note: (a) Reduction to the ranks in the case of noncommissioned officers and (b) reduction in classification in the cases of first-class privates are within the limits of the punishing power of special courts-martial. (Act of Mar. 2, 1913, 37 Stat., 722.)]

SECTION IV.

JURISDICTION OF SUMMARY COURTS-MARTIAL.

43. Persons and Offenses. Summary courts-martial shall have power (A. W. 14) to try—

- (1) Any person subject to military law, except—
 - (a) An officer;
 - (b) A cadet;
 - (c) A soldier holding the privilege of a certificate of eligibility to promotion;
 - (d) A noncommissioned officer who objects thereto (without the authority of the officer competent to bring him to trial before a general court-martial);
 - (e) Any person belonging to a class or classes excepted from the jurisdiction of summary courts-martial by the President.

(2) Any crime or offense (not capital) made punishable by the Articles of War.

[Note: For list of capital crimes under the Articles of War see Sec. III, par. 41, *supra*.]

44. Limits of Punishment. A summary court-martial shall not have power to adjudge—

- (a) Dishonorable discharge,
- (b) Confinement in excess of three months, nor
- (c) Forfeiture of more than three months' pay.

Exception. When the summary court officer is also the commanding officer, no sentence of such summary court-martial adjudging confinement at hard labor or forfeiture of pay, or both, for a period in excess of one month shall be carried into execution until the same shall have been approved by superior authority. (A. W. 14.)

[Note: (a) Reduction to the ranks in the case of noncommissioned officers and (b) reduction in classification in the cases of first-class privates are within the limits of the punishing power of summary courts-martial. (Act of Mar. 2, 1913, 37 Stat., 723.)]

SECTION V.

JURISDICTION OF OTHER MILITARY TRIBUNALS.

45. When Concurrent with Courts-martial. The provisions of the Articles of War conferring jurisdiction upon courts-martial shall not be construed as depriving military commissions, provost courts, or other military tribunals of concurrent jurisdiction in respect to offenders or offenses that by the law of war may be lawfully triable by such military commissions, provost courts, or other military tribunals. (A. W. 15.)

CHAPTER V.

COURTS-MARTIAL—PROCEDURE PRIOR TO TRIAL.

SECTION I.

ARREST AND CONFINEMENT.

46. Arrest or Confinement of Accused Persons. (a) An officer charged with crime or with a serious offense under the articles of war shall be placed in arrest by the commanding officer, and in exceptional cases an officer so charged may be placed in confinement by the same authority.

(b) A soldier charged with crime or with a serious offense under the articles of war shall be placed in confinement, and when charged with a minor offense he may be placed in arrest.

(c) Any other person subject to military law charged with crime or with a serious offense under the articles of war shall be placed in confinement or in arrest, as circumstances may require; and when charged with a minor offense such person may be placed in arrest. Any person placed in arrest under the provisions of this article (A. W. 69) shall thereby be restricted to his barracks, quarters, or tent, unless such limits shall be enlarged by proper authority. Any officer who breaks his arrest or who escapes from confinement before he is set at liberty by proper authority shall be dismissed from the service or suffer such other punishment as a court-martial may direct; and any other person subject to military law who escapes from confinement or who breaks his arrest before he is set at liberty by proper authority shall be punished as a court-martial may direct. (A. W. 69.)

[Note: A failure to place a person subject to military law in arrest or confinement or the disregard of any custom or formality connected therewith does not affect the jurisdiction of a court.]

47. Who May Order Arrests. (a) Only commanding officers have power to place officers in arrest, except as provided in A. W. 68.

[Note: The "commanding officer" thus authorized is the commander of the regiment, separate company, detachment, post, department, etc., in which the officer is serving. Digest, p. 481, I, D. 1.]

(b) A judge advocate of a court-martial has no authority to place in arrest an officer or soldier about to be tried by the court, or to compel the attendance of the accused before the court by requiring a noncommissioned officer to bring him, or otherwise. These are duties which devolve upon the convening authority or upon the post commander or other proper officer in whose custody or command the accused is at the time. (Digest, p. 498, IV, B, 5.)

(c) A court-martial has no control over the nature of the arrest or other status of restraint of a prisoner except as regards his personal freedom in its presence. It cannot place an accused person in arrest or confinement nor can

the court, even with a view to facilitate his defense, interfere to cause a close arrest to be enlarged. The officer in command is alone responsible for the prisoners in his charge. (Davis, p. 62.)

48. Arrest, How Executed. An officer is placed in arrest by his commanding officer in person or through another officer, by a verbal or written order or communication, advising him that he is placed in arrest, or will consider himself in arrest, or words to that effect.

49. Status of Officer in Arrest. An officer in arrest can not exercise command of any kind. He will not wear a sword nor visit officially his commanding or other superior officer, unless directed to do so. His applications and requests of every nature will be made in writing. (A. R. 926.)

50. Arrest of Officer Without Preferring Charges. Officers will not be placed in arrest for light offenses. For these the censure of the commanding officer will generally answer the purpose of discipline. Whenever a commanding officer places an officer in arrest without preferring charges, he will make a written report of his action to the brigade or Coast Artillery district commander, stating the cause. The brigade or Coast Artillery district commander, if he thinks the occasion requires, will call on the officer arrested for any explanation he may desire to make, and take such other action within his authority as he may think necessary, forwarding the papers, with his recommendation, to the department commander, who will, in case a trial is not deemed advisable, forward the papers to The Adjutant General of the Army for file with the officer's record, or for further action. In the case of officers belonging to organizations not attached or belonging to a brigade or Coast Artillery district, the report will be sent directly to the officer exercising general court-martial jurisdiction. (A. R. 924.)

51. Arrest of Medical Officer. In ordinary cases where inconvenience to the service would result from it, a medical officer will not be placed in arrest until the court-martial for his trial convenes. (A. R. 925.)

52. Arrest and Confinement of Soldiers. Except as provided in A. W. 68, or when restraint is necessary, no soldier will be confined without the order of an officer, who shall previously inquire into his offense (A. R. 930); it is proper, however, for a company commander to delegate to noncommissioned officers of his company the power to place enlisted men in arrest as a means of restraint at the instant when restraint is necessary, but such action must be reported to the company commander at once. (Digest, p. 481, I, E, 1.)

53. Status of Noncommissioned Officer in Arrest. Noncommissioned officers will not be confined in company with privates if it can be avoided. When placed in arrest, they will not be required to perform any duty in which they may be called upon to exercise authority or control over others, and when placed in confinement, they will not be sent out to work.

54. Abuse of Authority to Arrest. The fact that cases of officers put in arrest "at remote military posts or stations" are excepted from the application of A. W. 70 does not authorize an abuse of the power of arrest in these cases. And where, in such a case, an arrest, considering the facilities of communication with the department headquarters and other circumstances, is in fact unreasonably protracted without trial the officer is entitled to be released from arrest upon a proper application submitted for the purpose. (Digest, p. 152, LXXI, C.) Though an officer, in whose case the provisions of A. W. 70 in regard to service of charges and trial have not been complied with, is entitled to be released from arrest, he is not authorized to release himself therefrom. If he be not released in accordance with the article he should apply for his discharge from arrest, through the proper channels, to the authority by whose order the arrest was imposed, or other proper superior. (Digest, p. 153, LXXI, D.)

When an officer is placed in arrest in the operation of A. W. 69 and subsequently tried he is not entitled to be released from arrest, as a right, until the proper reviewing authority has acted on the record of his case. (Digest, p. 152, LXV, C.)

55. Refusal to Receive and Keep Prisoners. No provost marshal or commander of a guard shall refuse to receive or keep any prisoner committed to his charge by an officer belonging to the forces of the United States, provided the officer committing shall, at the time, deliver an account in writing, signed by himself, of the crime or offense charged against the prisoner. Any officer or soldier so refusing shall be punished as a court-martial may direct. (A. W. 71.)

[Note: A. W. 72 requires every commander of a guard to submit a report in writing to his commanding officer within twenty-four hours after the confinement of a prisoner (or as soon as he is relieved from his guard) showing (a) the name of such prisoner, (b) the offense charged against him, and (c) the name of the officer committing him. Such report is ordinarily contained in the "Guard report" and presented to the commanding officer by the old officer of the day at guard mounting. For duty of commanding officers to surrender prisoners to civil authorities, see par. 35.]

56. Placing Prisoners in Irons. Prisoners will not be placed in irons except in the extraordinary case of a prisoner who, in the judgment of the commanding officer, is a desperate or dangerous character, in which case report of action and the circumstances will be immediately made to the department or tactical division commander. When a prisoner is removed from irons a report of that action will be made to the department or tactical division commander. A prisoner may be shackled or handcuffed while being transported from one post to another or from a post to a penitentiary, when, in the judgment of the officer in charge, the escape of the prisoner can not otherwise be prevented. (A. R. 935.)

57. Releasing Prisoner Without Proper Authority. Any person subject to military law, who, without proper authority, releases any prisoner duly committed to his charge, or who, through neglect or design, suffers any prisoner so committed to escape, shall be punished as a court-martial may direct. (A. W. 73.)

SECTION II.

ARREST OF DESERTERS BY CIVIL AUTHORITIES.

58. Authority for Apprehension. It shall be lawful for any civil officer having authority under the laws of the United States, or of any State, Territory, District, or possession of the United States, to arrest offenders, summarily to arrest a deserter from the military service of the United States and deliver him into the custody of the military authorities of the United States. (A. W. 106.)

59. Authority of Citizens Other Than Peace Officers to Arrest Deserters. The statute conferring authority upon civil officers to apprehend and deliver deserters (A. W. 106) should not be construed as taking away the authority for their apprehension by a citizen under an order or direction of a military officer, but the legislation should be treated as providing an additional means of securing the arrest of deserters by conferring authority upon civil officers to apprehend them without military orders—leaving the former method still legal. The offer of reward for the apprehension and delivery of a deserter, coupled with the act of Congress which provides for the payment of such a reward, is considered sufficient authority for the arrest of the deserter by a citizen. (C-17327-A, July 20, 1909.)

60. Minority of Deserter. The right of the United States to arrest and bring to trial a deserter is paramount to any right of control over him by a parent on the ground of his minority. (See Digest, p. 401, III, G; *In re Cosenow*, 37 Fed. Rep., 668; *In re Kaufman*, 41 Fed. Rep., 876; and compare *In re Grimley*, 137 U. S., 147, and in *In re Morrissey*, 137 U. S., 157.)

CHAPTER VI. COURTS-MARTIAL—PROCEDURE PRIOR TO TRIAL. CONTINUED.

SECTION I.

PREPARATION OF CHARGES.

61. Definitions. A charge corresponds to a civil indictment. It consists of two parts—the technical “charge,” which should designate the alleged crime or offense as a violation of a particular article of war or other statute, and the “specification,” which sets forth the facts constituting the same. The requisite of a charge is that it shall be laid under the proper article of war or other statute; of a specification, that it shall set forth in simple and concise language facts sufficient to constitute the particular offense and in such manner as to enable a person of common understanding to know what is intended. The general term “charges,” in the sense that the word “charge” is used in the first sentence of this paragraph, includes any number of technical charges and their specifications.

[Note: For forms for charges, see Appendix 4.]

62. Who May Initiate Charges.—Military charges, though commonly originating with military persons, may be initiated by civilians. Indeed, it is but performing a public duty for a civilian who becomes cognizant of a serious offense committed by an officer or a soldier to bring it to the attention of the proper commander. A charge may likewise originate with an enlisted man. But by the usage of the service all military charges should be formally preferred by—that is, authenticated by the signature of—a commissioned officer. Charges proceeding from a person outside the Army and based upon testimony not in the possession or knowledge of the military authorities, should, in general, be required to be sustained by affidavits or other reliable evidence, as a condition to their being adopted. (Digest, p. 482, II, B.)

63. Who May Prefer Charges. Any officer may prefer charges. An officer is not disqualified from preferring charges by the fact that he is himself under charges or in arrest. (Digest, p. 483, II, C.)

64. Signing Charges. The officer preferring charges will sign his name following the last specification, adding his rank and organization in the Army.

The signing of charges, like orders, with the name of an officer, adding “by order of” his commander, is unusual and not to be recommended. (Digest, p. 487, II, D, 12, a.) The signature of the officer preferring charges forms no part of the charges themselves, but such signature will nevertheless be copied into the record of trial by a general or special court-martial, in order that it may affirmatively appear whether the officer preferring the charges (who is *prima facie* the accuser) sat as a member of the court. (See A. W. 8, 9.)

65. Accumulation of Charges. It may sometimes be expedient, where the offenses are slight in themselves and it is deemed desirable to exhibit a continued course of conduct, to wait, before preferring charges, till a series of similar acts have been committed, provided the period be not unreasonably prolonged;

but, in general, charges should be preferred and brought to trial immediately or presently upon the commission of the offenses. Anything like an accumulation or saving up of charges, through a hostile animus on the part of the accuser, is discountenanced by the sentiment of the service. (Digest, p. 490, II, F, 2.)

66. Duplication of Charges. The duplication of charges for the same act or omission will be avoided except when, by reason of lack of definite information as to available evidence, it may be necessary to charge the same act or omission as constituting two or more distinct offenses. When the same act or omission in its different aspects is charged as constituting two or more offenses, the court, even though it arrives at a finding of guilty in respect of two or more specifications, should impose punishment only with reference to the act or omission in its most important aspect, and if this rule be not observed by the court the reviewing authority should take the necessary action. Thus a soldier should not be punished for disorderly conduct and for assault, when the disorderly conduct consisted in making the assault. And so, a person subject to military law should not be charged under A. W. 61 for failure to report for a routine duty at a time included in a period for which he is charged with absence without leave under the same article; otherwise, when the duty is not a routine duty. Routine duties are those that are regularly scheduled, such as reveille, retreat, stables, fatigue, schools, drills, and parades, but do not include practice marches or other previously specially appointed and important exercises, of which the accused is chargeable with notice.

67. Consolidation of Charges. Ordinarily all the charges against the accused should be consolidated into one set of charges, and one trial had upon the consolidated set instead of having two or more trials, one upon each set. To avoid taking up unnecessarily the time of a court with minor offenses, where charges are preferred for serious offenses, there should not be joined with them charges for minor derelictions, unless the latter serve to explain the circumstances surrounding the serious charges. For instance, charges for desertion should not ordinarily be joined with charges for losing through neglect Government property of small value; nor should charges for willful disobedience of the orders of a commissioned officer ordinarily be joined with charges for an absence from a routine duty.

68. Refusal to Submit to Medical Treatment. An officer or soldier may be charged for refusing to submit to a surgical operation or medical treatment at the hands of the military authorities if it is designed to restore or increase his fitness for service, and is without risk of life.

A soldier who refuses to submit to a surgical operation that the attending surgeon certifies is without risk to his life and is necessary for the removal of a disability that prevents the full performance of any or all military duties that properly can be required of him will, for such refusal, be brought to trial by general court-martial; but if in any such case the attending surgeon is in doubt as to whether the proposed operation involves risk to life, the soldier will not be brought to trial but will be discharged on surgeon's certificate of disability. (G. O. 43, War Dept., 1906.)

69. Joint Charges. Where two or more persons jointly and in pursuance of a common intent commit a crime or offense which can be committed by a combination of persons acting in concert, they may be separately charged and tried for such crime or offense or may be jointly charged and jointly tried. The actual presence of all of the accused persons at the actual commission of the offense is not necessary, for all who take part in the enterprise are equally guilty, though they may be absent from the place of actual commission of the offense with which they are charged. The fact that justice may require that different degrees of punishment be awarded to the different parties con-

stitutes no objection to such a joint prosecution. The mere fact of their committing the same offense together and at the same time, although material as going to show concert, does not necessarily establish it. Thus the fact that several soldiers have absented themselves together without leave will not, in the absence of evidence indicating a concert of action, justify their being arraigned together on a joint charge, for they may merely have been availing themselves of the same convenient opportunity of leaving. Nor is desertion, unless in execution of a conspiracy, chargeable as a joint offense. (Digest, p. 484, II, D, 7.) In joint charges the form of the charge does not differ from that in other charges. The form of specification will read as follows:

In that Private ———, Company ———, ——— Infantry; Private ———, Company ———, ——— Infantry; and Private ———, Company ———, ——— Infantry, acting jointly, and in pursuance of a common intent, did [here allege the offense in the language prescribed where the offense is committed by only one person.]

The right of challenge may, of course, be exercised by each of the accused.

[Note: In cases of joint trials, the judge advocate will, in case a stenographer is employed, have one carbon copy of the proceedings made for each of the accused requesting the same.]

70. Charges Not to be Preferred upon Uncorroborated Confession. Charges should not be preferred for an offense unless there is some evidence other than the confession of the accused that the offense has been committed. This applies particularly in cases of fraudulent enlistment. The mere confession by the accused that he had prior service, or was under a certain disability at the time he enlisted, and concealed that fact, should not be made the basis for charges unless there is something confirming the confession. Charges should not be preferred in such cases until corroborating evidence that the offense was committed has been secured, or that, the existence of such evidence being ascertained, the necessary steps to obtain it have been taken. (See par. 225.)

71. Charges for Private Indebtedness. The military authorities will not attempt to discipline officers and soldiers for failure to pay disputed private indebtedness or claims—that is, indebtedness or a claim where, in the opinion of the military authorities, there is a genuine dispute as to the facts or law—nor will the military authorities attempt to decide such disputed indebtedness or claims. If the indebtedness is disputed the creditor should resort to the civil courts to establish the liability. If, in the opinion of the military authorities, the facts and law are undisputed and there appears to the military authorities to be a private indebtedness, and the officer or soldier does not claim to have a legal or equitable set-off or counterclaim to urge against it, an officer may be brought to trial if his failure is considered to be a violation of A. W. 95 or A. W. 96, and a soldier may be tried if his failure is considered to be a violation of A. W. 96, but no action will be taken by the military authorities to enforce payment. If an officer or soldier by his conduct in incurring the indebtedness or by his attitude toward it or his creditor thereafter reflect discredit upon the service to which he belongs, he should be brought to trial for his misconduct. If the facts and law, in the opinion of the military authorities, are undisputed and there appears to the military authorities to be no indebtedness, the department will take no further action. Where a soldier was largely indebted and failed to pay his indebtedness and the commanding officer denied the soldier all pass privileges until the indebtedness was paid, it was held that such action on the part of the commanding officer constituted an attempt to enforce payment of the indebtedness and was contrary to the policy of the War Department and such action should be revoked. (Digest, p. 878, IV.)

72. Numbering Charges and Specifications. Where there are several specific-

cations under one article, the usual procedure is to place them all under one charge, rather than to make several charges with one specification under each. Where there are several specifications under one charge they will be consecutively numbered, and where there are several charges, the charges will be consecutively numbered.

73. Additional Charges. New and separate charges which are preferred after others have been preferred are known in military law as "additional charges." Such charges may relate to past transactions which were not known by or brought to the attention of the officer framing or ordering the original charges at the time they were preferred; or they may, as is more frequent, arise from acts of the accused subsequent to his arrest or confinement on the original charges. Thus, if after charges have been preferred he commits a "breach of arrest," an additional charge will properly be preferred in the case, and should be designated as an "additional" charge. Charges of this character do not require a separate trial, but may and preferably should be tried by the same court that tries the original charges, and at the same time subject to the limitation regarding service of charges contained in A. W. 70. If practicable to consolidate the two sets of charges this should be done, otherwise the second set will be denominated "additional" charges. The accused must, however, be arraigned on the additional charges before the court is sworn to try the original charges. After the court has been duly sworn to try the original charges "additional" charges can not be tried with the original ones, but must be separately tried. (See Winthrop, pp. 225, 226.)

74. Rules to be Observed in Pleading. (a) **Statement of Charge.** The charge should be limited to a statement of the article violated, as "Violation of the 58th article of war," or "Violation of the 85th article of war." Common law and statutory crimes, not specified in the Articles of War, over which courts-martial have jurisdiction, should, if not capital, be charged under A. W. 96.

(b) **Statement of Specification.** The specification need not possess the technical nicety of an indictment. In general a bald statement of the facts in simple and concise language, and in such a manner as to enable a person of common understanding to know what is intended, is sufficient, provided the offense itself be distinctly and accurately described. More specifically, (1) the name, rank, title, and organization of the accused person, if he belongs to the Army of the United States, should be stated, or if he is a civilian he should be so described that it appears he is a person subject to military law, or by statute or the law of war, is subject to trial by military tribunals; (2) the facts that constitute the offense charged will be set out briefly but clearly, together with the place and time of commission. Care should be taken that all the elements of the offense as denounced in the article of war or other statute are set forth. The specification must be appropriate to the charge. (See Winthrop, p. 189, and authorities there cited.)

(c) **Alternative Pleading.** A specification should not allege two offenses in the alternative. For example, an offense under A. W. 84 can not be charged by the words, "did sell or through neglect lose." If, as the result of an investigation, there is doubt whether the property has been sold or lost, both offenses may be charged under separate specifications. Care will be taken in every case where an article of war includes two or more offenses to see that each specification alleges but a single offense. (See Digest, p. 487, II, D, 11, d.)

(d) **Evidence Not to be Pleaded.** It is not good pleading in alleging an offense to state the circumstances or evidence proving or tending to prove it, such as the acts, occurrences, and matters of description, which should properly form part of the testimony of witnesses; but there is no objection to

stating very briefly in the specification the immediate result or effect of the act charged as a circumstance of description illustrating the character and extent of the offense committed. For instance, in charging a striking or doing of violence to a superior officer under A. W. 64, it is allowable, in a case where the assault was fatal, to add in the specification, "thereby causing his death," as indicating the measure of violence employed. (Digest, p. 488, II, D, 14, a.)

(e) Specific Articles, When Used. When a crime or offense is specifically provided for in an article of war, the charge will be laid under that article and not under the general article, i.e., under A. W. 96. This rule is particularly to be observed when the crime or offense falls under an article which prescribes a fixed punishment. (See, however, A. W. 37.)

[Note: In charging offenses against cadets for violation of regulations of the Military Academy, the offense, if covered by a specific article applicable to cadets, will be laid under that article (G. O. 64, War Dept., 1906), otherwise it will be laid under the general article.]

(f) Forms for Charges. The forms for charges and specifications set forth in Appendix 4 cover most of the offenses that are tried by military courts and covered in the maximum-punishment order. These forms may be followed, in the cases to which they apply, but they are not mandatory.

(g) Time and Place. The allegations of the time and place of the commission of an offense should be stated as accurately as possible, but where the act or acts charged extend over a considerable period of time it may be necessary to cover such period in the allegation. Thus allegations of "from March to September, 1887," and "from May to October, 1888," have been countenanced in a case in which the accused was charged with the neglect of a duty that required continuous performance. (Digest, p. 486, II, D, 10, b.) So, also it is proper to allege that an offense was committed while "en route" between certain points. (Digest, p. 486, II, D, 9, b.) So where the exact time or place of the commission of the offense is not known it is frequently preferable to allege it as having occurred "on or about" a certain date or time, or "at or near" a certain locality, rather than to aver it as committed on a particular day or between two specified days or at a particular place. There is no defined construction to be placed upon the words "on or about" as used in the allegation of time in a specification. The phrase can not be said to cover any precise number of days or latitude in time. It is ordinarily used in military pleading for the purpose of indicating some period, as nearly as can be ascertained and set forth, at or during which the offenses charged are believed to have been committed—in cases where the exact day can not well be named. And the same is to be said as to the use of the words "at or near" in connection with the averment of place. (Digest, p. 485, II, D, 9, a.) If the specification alleges the offense to have been committed "on" a certain date or "at" a certain place, the court in its findings may, by exceptions and substitutions, find another date or place if the evidence supports such amendments, provided the new date or place is sufficiently near the one alleged that an injustice is not done the accused. In preparing several specifications under one charge, the time and place of the alleged offense will be given in each specification.

(h) Christian Name. The Christian name of an accused should be used in preparing charges, but where there are one or more middle names they may be indicated by the initials only. In the case of a person in the military service the name used in the charges should correspond to that borne by the accused on the muster rolls or the Army register.

(i) Charging under "Alias." If the accused is known by two names, as where a soldier enlists under a name different from that under which he was known in his prior enlistment, both the heading of the charge and the speci-

cation will describe him under his true name and also under his assumed name as an alias.

(j) General Prisoners. In charging a general prisoner with an offense, the form of the charge will not be changed but the specification will read as follows:

In that General Prisoner A—— B—— did [here allege the offense in the language prescribed when it is committed by an officer or soldier].

It is not necessary to allege in the specification that the general prisoner was formerly a soldier, was tried by a general court-martial, and sentenced to dishonorable discharge and a term of confinement, and that he committed the offense while serving such confinement. The words "general prisoner" necessarily import such facts.

[Note: General prisoners are persons sentenced to dismissal or dishonorable discharge and to terms of confinement at military posts or elsewhere.]

(k) Change of Rank. Where the rank of the accused has changed since the commission of an offense, the specification will read as follows:

In that Private A—— B——, Company ——, —— Infantry, then sergeant, Company ——, —— Infantry, did, etc.

(l) Written Papers and Oral Statements. A specification in alleging the violation of an order which has been given in writing, or of any written obligation—as an oath of allegiance, parole, etc.—should preferably set forth the writing verbatim, or at least state fully its substance, and then clearly specify the act or acts which constitute its alleged violation. Oral statements should be alleged in as nearly the exact words as possible, but should always be qualified by the words "or words to that effect," or some similar expression, since proof will generally vary as to some word or words, particularly if some time has elapsed since the incident. A similar rule obtains in cases involving insubordinate or disrespectful language.

(m) Scandalous and Disgraceful Offenses. In framing charges it is permissible, under the custom of the service, after alleging the facts in the specification, to add, "This to the scandal and disgrace of the military service." This form of charge is appropriate in cases of particularly disgraceful conduct occurring in the presence of a number of persons, particularly civilians, or in uniform, or otherwise resulting in publicity.

(n) Desertion Followed by Fraudulent Enlistment. Enlistment by a soldier in desertion is fraudulent. Such soldier should be charged with desertion under A. W. 58, and with fraudulent enlistment under A. W. 54. (Cir. 28, War Dept., 1908.) A fraudulent enlistment is no defense to a charge of desertion but is proof of such desertion, for a soldier can not be excused from repudiating a pending contract by substituting another in its place. In such a case the status of desertion remains, notwithstanding the deserter's presence in the military service under a fraudulent enlistment, until he surrenders as a deserter or is apprehended as such. For a single desertion followed by a fraudulent enlistment, but one specification for desertion will be preferred, in addition to the specification for fraudulent enlistment.

[Note: A. W. 29 constitutes a rule of evidence and is not a punitive article.]

(o) Larceny and Sale of Public Property. In cases of larceny of property (not described in A. W. 94) where the accused has sold the stolen property, the charges should not include specifications alleging the sale except where the same has been made to an innocent party and constitutes such a fraud upon the purchaser as to warrant the preferment of a specification based upon such fraud. Proof of a subsequent sale of stolen property goes to show intent to steal, and, therefore, evidence of such sale should be introduced to support charges of larceny, wherever available. Larceny and sale of United States property in violation of A. W. 94 should each be charged in separate specifications, since that article denounces both offenses.

(p) Wording of Statute to be Followed. Wherever practicable the exact words of the articles of war will be followed. A person under the influence of intoxicating liquor which incapacitates him mentally or physically for the proper performance of duty is "drunk." Therefore, under A. W. 85 the word "drunk" will be used. So in charging other offenses involving drunkenness no other word or phrase will be used as a substitute for "drunk." Under such charges the court should not in its findings substitute such phrases as "under the influence of intoxicating liquor" and "intoxicated" for "drunk."

SECTION II.

ACTION UPON CHARGES.

75. Submission of Charges. All charges for trial by court-martial will be prepared in triplicate, using the prescribed charge sheet as a first sheet and using such additional sheets of ordinary paper as are required. They will be accompanied—

(a) Except when trial is to be had by summary court, by a brief statement of the substance of all material testimony expected from each material witness, both those for the prosecution and those for the defense, together with all available and necessary information as to any other actual or probable testimony or evidence in the case; and

(b) In the case of a soldier, by properly authenticated evidence of convictions, if any, of an offense or offenses committed by him during his current enlistment and within one year next preceding the date of the alleged commission by him of any offenses set forth in the charges.

They will be forwarded by the officer preferring them to the officer immediately exercising summary court-martial jurisdiction over the command to which the accused belongs, and will by him and by each superior commander into whose hands they may come either be referred to a court-martial within his jurisdiction for trial, forwarded to the next superior authority exercising court-martial jurisdiction over the command to which the accused belongs or pertains, or otherwise disposed of as circumstances may appear to require.

76. Investigation of Charges. If the officer immediately exercising summary court-martial jurisdiction over the command to which the accused belongs or pertains decides to forward the charges to superior authority he will, before so doing, either carefully investigate them himself or will cause an officer other than the officer preferring the charges to investigate them carefully and to report to him, orally or otherwise, the result of such investigation. The officer investigating the charges will afford to the accused an opportunity to make any statement, offer any evidence, or present any matter in extenuation that he may desire to have considered in connection with the accusation against him. (See par. 225 (b), p. 1351.) If the accused desires to submit nothing, the indorsement will so state. In his indorsement forwarding the charges to superior authority the commanding officer will include:

(a) The name of the officer who investigated the charges;

(b) The opinion of both such officer and himself as to whether the several charges can be sustained;

(c) The substance of such material statement, if any, as the accused may have voluntarily made in connection with the case during the investigation thereof;

(d) A summary of the extenuating circumstances, if any, connected with the case;

(e) His recommendation of action to be taken.

77. Prompt Action Required. No person put in arrest shall be continued in confinement more than eight days, or until such time as a court-martial can be assembled. When any person is put in arrest for the purpose of trial, except at remote military posts or stations, the officer by whose order he is arrested shall see that a copy of the charges on which he is to be tried is served upon him within eight days after his arrest, and that he is brought to trial within ten days thereafter, unless the necessities of the service prevent such trial; and then he shall be brought to trial within thirty days after the expiration of said ten days. If a copy of the charges be not served, or the arrested person be not brought to trial, as herein required, the arrest shall cease. But persons released from arrest, under the provisions of A. W. 70, may be tried whenever the exigencies of the service shall permit, within twelve months after such release from arrest. (A. W. 70.)

78. Determination of Proper Trial Court. When an officer who exercises court-martial jurisdiction receives charges against an enlisted man it is his duty to consider whether they shall be tried by general, special, or summary court-martial. He should not withhold charges from trial by special or summary court solely for the reason that the maximum limit of punishment is beyond the jurisdiction of such courts to impose. On the other hand, he should not refer to a special or summary court-martial offenses which by reason of their inherent gravity or of the circumstances surrounding their commission merit greater formality of trial or more condign punishment than is found in the procedure or jurisdiction of such courts. No fixed rule can be laid down and the matter must be decided by the careful consideration of commanders subject to the limitations that while, in a proper case, desertion may be tried before a special court, felonies and crimes involving moral turpitude should not be, and capital crimes can not be, tried by special or summary courts-martial. (A. W. 18, 14. For list of capital crimes and offenses see Chap. IV, Sec. III.)

79. Disposition of Copies of Charges. (a) When trial is to be had by summary court the charges will be completed as the record of trial, a copy thereof will be completed as a copy of the summary court record for the company or other commander, and the other copy will, with the least practicable delay after action has been taken on the sentence, be completed and transmitted as the required report of trial to the officer exercising general court-martial jurisdiction over the command, there to be filed in the office of the judge advocate for a period of two years, at the end of which time it may be destroyed.

(b) When trial is to be had by special or general court-martial the charges and one copy thereof will be referred to the trial judge advocate, the copy to be furnished by him to the accused or his counsel, and the other copy will be used for record purposes in the office of the officer appointing the trial court, the top fold of this copy of the charge sheet, in case of trial by general court-martial, being detached at the proper time and forwarded with the record of trial to the Judge Advocate General of the Army.

80. Service of Charges Upon Accused. In order that the accused may have sufficient time to prepare for his defense it is provided by A. W. 70 that in time of peace no person shall, against his objection, be brought to trial before a general court-martial within a period of five days subsequent to the service of charges upon him.

CHAPTER VII. COURTS-MARTIAL—ORGANIZATION.

SECTION I.

THE MEMBERS.

81. Place of Meeting—Duties of Members. The authority appointing a general or special court-martial designates the place for holding the court, hour of meeting, the members of the court, and the judge advocate. A general or special court-martial assembles at its first session in accordance with the order convening it; thereafter, according to adjournment. Courts will be assembled at posts or stations where trial will be attended with the least expense. A member stationed at the place where the court sits is liable to duty with his command during adjournment from day to day. Subject to any instructions that may be given by the authority that appoints the court, the court will determine the hours of holding its sessions.

82. Uniform. For regulations regarding uniform to be worn by members of courts-martial, the judge advocate, the accused and witnesses, see Regulations for the Uniform of the United States Army. In any case of doubt (as where the court consists of members but recently mustered into the service), the president of the court will designate the uniform in the notice sent to members notifying them of the place and hour of meeting of the first session.

83. Seating of Court. When the court is ready to proceed it is called to order by the president. Members will be seated according to rank, alternately to the right and left of the president. The judge advocate, the accused, and his counsel are seated so as to be most easily seen and heard by all the members of the court. The reporter should be seated near the judge advocate.

84. Roll Call. At the beginning of each session the judge advocate verifies the presence or absence of the members of the court by calling each officer's name or by informally noting his presence or absence. This verification is noted in the record. (See Appendices 6, 7 for record of general and special courts-martial.) When the accused and his counsel appear before the court for the first time the judge advocate will announce their names to the court.

[Note: For number necessary to constitute a quorum of a general or special court-martial and the procedure to be taken when the number is reduced below five, see par. 7.]

85. Absence of Member. A member of a court-martial who knows, or has reason to believe, that he will, for a proper reason, be absent from a session of the court, will inform the judge advocate accordingly. When a member of a court-martial is absent from a session thereof, the judge advocate will cause that fact, together with the reason for such absence if known to him, to be shown in the record of proceedings. If the reason for such absence is not known to the judge advocate, he will cause the record to show the member as absent, cause unknown. In any event, the appointing authority will take such action, if any, relative to such absence as he may deem proper.

86. Decorum to be Observed. Trials before courts-martial will be conducted with the decorum observed in civil courts. The conduct of members should accordingly be dignified and attentive. Reading of newspapers or other evidence of inattention by members of a court-martial during its sessions constitutes a neglect of duty to the prejudice of good order and military discipline. It is the duty of the president of the court to admonish against such inattention, and charges may be preferred against a member who does not heed the

admonition. A court-martial has no power to punish its members, but a member is liable to charges and trial for improper conduct as for any other offense against military discipline. Improper words used by a member should be taken down in writing and any disorderly conduct reported to the appointing authority. During the reading of the order appointing the court and the arraignment the judge advocate, the accused, and his counsel will stand; while the court and the judge advocate are being sworn all persons concerned with the trial, including any spectators present, will stand; when the reporter, an interpreter, or a witness is being sworn he and the judge advocate will stand; and when the judge advocate, the accused, or his counsel addresses the court, he will rise. (For punishment for contempts, see Chapter X, Sec. I, par. 173.)

87. Control of Court Over Accused. A court-martial has no control over the nature of the arrest or other status of restraint of a prisoner except as regards his personal freedom in its presence. For the relation between a court-martial and the accused during trial as regards arrest, see Chapter V, Section I.

88. Accused Not to be Tried in Irons. The accused should not be brought before the court in irons, unless there are good reasons to believe that he will attempt to escape or to conduct himself in a violent manner, but the fact that a prisoner has been tried in irons can not in any case affect the validity of the proceedings.

89. Duties of the President. A president of the court will not be announced. The officer senior in rank present will act as such. The president does not by virtue of being such exercise command of any kind. He is in no sense the commanding officer of the court, and can not by virtue of being president give an order to a member. As the organ of the court he gives the directions necessary to the regular and proper conduct of the proceedings; but a failure to comply with a direction given by him, while it may constitute a neglect to the prejudice of good order and military discipline, can not properly be charged as a violation of the sixty-fourth article of war. (Digest, p. 508, VI, G, 3.) Neither the court nor the president is authorized to place the judge advocate in arrest. Only the proper commanding officer can impose an arrest. It is the duty of the commanding officer to secure the attendance of the accused before the court. (Digest, p. 509, VII, C, 2; id., VII, C, 3.) The president is the presiding officer of the court, and as such is the organ of the court to maintain order and conduct its business. In addition, he has the duties and privileges of other members. He has an equal vote with other members in deciding all questions, including challenges, findings, sentences, acquittal, and adjournments. He speaks and acts for the court in every instance where a rule of action has been prescribed by law, regulations, or its own resolution, and has no authority to open or close the court or make a ruling upon the admissibility of evidence, the competency of witnesses, or method of procedure without the acquiescence of the court or by custom of the service. He administers the oath to the judge advocate and authenticates by his signature all acts, orders, and proceedings of the court requiring it. (See Winthrop, p. 249.) It is his duty to take the proper steps to insure prompt trial and disposition of all charges referred for trial and to keep the court advised thereof.

[Note: For duty of the president to explain to the accused the effect of a plea of guilty, see Chap. IX, Sec. II, "Pleas to the general issue."]

90. Voting. Members of a general or special court-martial, in giving their votes, shall begin with the junior in rank. (A. W. 31.) In all deliberations, including those on challenges, findings, sentence, acquittal, and adjournments, the law secures the absolute equality of the members, the president having no greater rights in such matters than any other member. A tie vote on the findings is a vote of "not guilty"; a tie vote on a proposed sentence or on a

challenge or any objection or motion is a vote in the negative. The sentence is not adopted and the challenge, objection, or motion is not sustained. When the offense charged includes a minor offense, voting shall first be had upon the major offense.

All convictions and sentences (other than those involving death), whether by general or special court-martial, may be determined by a majority of the members present. (A. W. 43.) Refusal to vote on any question arising during the proceedings constitutes a neglect to the prejudice of good order and military discipline punishable under A. W. 96. (For voting on findings and sentence, see Chap. XII, Sec. II.)

91. Closed Sessions. Members take an oath not to disclose or discover the vote or opinion of any particular member of the court-martial. (See A. W. 19.) In order to avoid disclosing or discovering such vote or opinion the court is closed while voting upon any question. When the court is closed all persons (including the judge advocate) withdraw. In important cases, where delay would ensue due to the number of spectators present, the court itself may withdraw to another room prepared for the purpose for deliberating in closed session. It is not necessary, however, for the court to go into closed session in every case requiring action, where such action would be unanimous and business can properly be transacted without disclosing the vote or opinion of any member. Thus, on a request by the judge advocate or the accused for a short recess, it is proper for the president to announce "without objection, the request will be granted," or words to that effect. Similarly, if the accused objects to a member because he preferred the charges and is the accuser and the member admits the fact, he may be excused without going into closed session. Care will be taken in such cases that no votes are taken in open session. If any member believes the matter should be passed upon in closed session, it is proper for him to move that the court be closed, whereupon the president will announce that the court will be cleared.

92. Sitting with Closed Doors. A court-martial is authorized, in its discretion, to sit with doors closed to the public. Except, however, when temporarily closed for deliberation, courts-martial in this country are almost invariably open to the public during a trial. But in a particular case where the offenses charged were of a scandalous nature, it was recommended that the court be directed to sit with doors closed to the public. (Digest, p. 516, IX, C.)

93. Change in Membership. Although it is undesirable to change the membership of a court during a trial it is within the discretion of the appointing officer in a proper case, to relieve members or appoint new members. The promotion of a member during the trial of a case does not affect his competency as a member. He should sit according to his changed rank. The rule is that no member who has been absent during the taking of evidence shall thereafter take part in the trial; but the nonobservance of this rule shall not be construed as invalidating the proceedings of courts-martial if no objection is made, and the court permits the member to sit. The rule, however, should be complied with when practicable. Especially should a member who has been absent during an important part of the proceedings not be permitted to resume his seat. Where a member who has been absent is permitted to resume his seat, or a new member is added after the trial of the case has begun, all proceedings and evidence during his absence should be read over to him in open court before the case proceeds further and the record should show this fact; but in proceedings in revision the presence of any member who did not vote on the findings and sentence will invalidate the proceedings in revision.

SECTION II.

THE JUDGE ADVOCATE.

94. Selection. The prompt, speedy, and thorough trial of a court-martial case is principally dependent upon the judge advocate. He will, accordingly, be carefully selected. Where it can be avoided, no officer will be detailed as judge advocate of a general court-martial until he has had experience as a member or as an assistant judge advocate of a court.

95. General Duties. The judge advocate of a general or special court-martial shall prosecute in the name of the United States, and shall, under the direction of the court, prepare the record of its proceedings. (A. W. 17.) Before the court assembles the judge advocate will obtain a suitable room for the court, see that it is in order, procure the requisite stationery, summon necessary witnesses, make a preliminary examination of the latter, and, as far as possible, systematize his plans for conducting the case. During the trial he executes all orders of the court; reads the appointing order and any modifying orders to the accused; swears the members of the court, the reporter, interpreter, and all witnesses; arraigns the accused; examines witnesses; keeps or superintends under the direction of the court, the keeping of a complete and accurate record of the proceedings; and affixes his signature to each day's proceedings. Whenever the court adjourns to meet at the call of the president; the judge advocate will notify the members of the time designated by the president for reassembling. In conjunction with the president of the court, he authenticates the record by his signature and, at the end of the trial, transmits the same to the reviewing authority. In case the record can not be authenticated by the judge advocate by reason of his death, disability, or absence, it shall be signed by the president and an assistant judge advocate, if any; and if there be no assistant judge advocate, or in case of his death, disability or absence, then by the president and one other member of the court. (A. W. 33.)

96. Duty Toward Accused. Should the accused, for any reason, not be represented by counsel, the judge advocate shall, from time to time throughout the proceedings, advise him of his legal rights. (A. W. 17.) He should—

- (a) Acquaint the prisoner with the accusations against him;
- (b) Inform him of his right to have counsel;
- (c) Inform him of his right to testify in his own behalf; and
- (d) Inform him of his right to have a copy of the charges.

He may ask a prisoner how he intends to plead, but he should in no case try to induce him to plead guilty, or leave him to infer that if he does so his punishment will be lighter. (Winthrop, p. 293.) When the accused determines to plead guilty the judge advocate should advise him of his right to introduce evidence in explanation of his offense, and should assist him in securing it. During the trial he will see that the accused has full opportunity to interpose such pleas and make such defense as may best bring out the facts, the merits, or the extenuating circumstances of his case. In so far as such action may be taken without prejudice to the rights of the accused, any advice given him by the judge advocate should be given or repeated in open court and noted upon the record.

97. Examination of Charges. The judge advocate will note and report to the convening authority any irregularity in the order convening the court and see that the charges are technically and correctly drawn. He may ordinarily correct obvious mistakes of form, or slight errors in names, dates, amounts, etc., but he will not, without the authority of the convening officer, make substantial amendments in the allegations, or—least of all—reject or withdraw a charge or specification or substitute a new and distinct charge for one trans-

mitted to him for trial by the proper superior. (Digest, p. 496, IV, B, 1.) It is the duty of the president as well as the judge advocate of every court-martial to examine carefully the indorsement on the charges when referred for trial in order that an accused may not be brought to trial before the wrong court.

98. Whole Truth to be Presented. Throughout the trial the judge advocate should do his utmost to present the whole truth of the matter in question. He should oppose every attempt to suppress facts or to distort them, to the end that the evidence may so exhibit the case that the court may render impartial justice.

99. Legal Adviser of the Court. While the court is in open session the judge advocate should respectfully call the attention of the court to any apparent illegalities in its action, and to any apparent irregularities in its proceedings. He should act as legal adviser of the court so far as to give his opinion upon any point of law arising during the trial, when it is asked for by the court, but not otherwise. (See, however, par. 197, p. 1339.) When his legal advice or assistance is required it will be obtained in open court. In case the accused desires to plead guilty the judge advocate will, whenever necessary, invite the attention of the president of the court to the fact that the effect of such plea must be explained to him. (See Chap. IX, Sec. II, "Pleas to the general issue.")

100. Freedom in Conducting Case. The judge advocate should be left free by the court to introduce his evidence in such order as he sees fit, and in general to bring cases to trial in such order as he deems expedient. (Winthrop, pp. 281-283.) But while it is not the province of the court to direct or control the judge advocate in his prosecution of the case, it is responsible for the thorough investigation of the case, and need not content itself with the evidence brought out by the prosecution and defense. It is proper for the court as a body or for any member to ask questions of a witness if it is believed the examination already submitted has failed fully to develop the case. Usually such questions are not asked until after the prosecution and defense have fully completed their examination of the witness. The court may direct that the judge advocate recall a witness, secure the attendance of a particular witness, or that he introduce evidence on a particular point. It is the duty of the court to take such action if it believes that thereby the facts in the case will be more clearly presented.

101. Closed Sessions. Whenever a general or special court-martial shall sit in closed session, the judge advocate and the assistant judge advocate, if any, shall withdraw; and when their legal advice or their assistance in referring to the recorded evidence is required, it shall be obtained in open court and in the presence of the accused and of his counsel if there be any. (A. W. 30.) If through mistake or inadvertence the judge advocate should be present during the whole or a part of a closed session of the court, such irregularity is, subject to the provisions of A. W. 37, ground for a disapproval of the proceedings by the reviewing authority, but it does not deprive the court of jurisdiction and courts of the United States do not interfere in such a case to release a prisoner by writ of habeas corpus. (Ex parte Tucker, 212 Fed. Rep., 569; see also A. W. 37.)

102. Accuser or Prosecutor. The judge advocate is not challengeable; but in case of personal interest in the trial or of personal hostility toward the accused he should apply to the convening authority to be relieved.

103. Expediting Trials. Charges to be tried by a general or special court-martial are referred to the judge advocate of the court. It is his duty to bring them to trial promptly. In most cases tried by court-martial the facts are few and simple, and the witnesses are officers or soldiers stationed at the

post where the trial is had. Usually the members of the court, judge advocate, and accused and his counsel are stationed at the same post. In such cases the preliminary investigation, reference for trial, and the trial should take place promptly. If the other official duties of the judge advocate and counsel do not leave time to prepare cases properly and to bring them to trial promptly the president will advise the commanding officer with a view to their being relieved from other duties.

104. Weekly Reports. On Saturday of each week each judge advocate of a general court-martial will report, through the president of the court and the commanding officer, to the appointing authority, a list of charges on hand, showing the date of receipt of each; and if any case has been in the hands of the judge advocate for one week or more and the record of trial has not been forwarded to the convening authority, the report will include a statement of the reasons for the delay. No record need be made of this report by the president of the court or the commanding officer.

105. Detail of Orderly. The commanding officer will detail, when necessary, suitable soldiers as clerks or orderlies to assist the judge advocate of a general or special court-martial or military commission, or the recorder of a court of inquiry.

SECTION III.

ASSISTANT JUDGE ADVOCATE.

106. Appointment. The authority appointing a general court-martial shall appoint one or more assistant judge advocates when necessary. (A. W. 11.) An assistant judge advocate of a general court-martial shall be competent to perform any duty devolved by law, regulation, or the custom of the service upon the judge advocate of the court. (A. W. 116.)

107. Duties. An assistant judge advocate will perform such duties in connection with the trial as the judge advocate may designate. Ordinarily he will be expected to relieve the judge advocate of minor details, such as arranging for a place of meeting of the court, stationery, and messenger service, stenographers and interpreters, subpoenaing witnesses, and notifying the court of the place and hour of meeting. During trial he will be expected to see that witnesses are on hand when needed, that all details of procedure are observed and the record accurately kept. He may also be intrusted by the judge advocate with the investigation before trial and proof during trial of any special phase of the charges, or he may, where the judge advocate is otherwise engaged, take charge of the complete trial of a case. (See also A. W. 33.) While the judge advocate and assistant judge advocate will ordinarily be present during trial, if their duties require the presence of either of them elsewhere, he may be excused by the court; but the fact of his withdrawal or absence, the reason therefor, and his return to the court will be noted in the record. (See form for record of a general court-martial, Appendix 6.)

Wherever in this Manual the judge advocate of a general court-martial is mentioned, the term will be understood to include assistant judge advocates, if any, unless the context shows clearly that a different sense is intended.

SECTION IV.

COUNSEL.

108. Appointment. The accused shall have the right to be represented before a general or special court-martial by counsel of his own selection, for his defense, if such counsel be reasonably available. (A. W. 17.) Civilian counsel

will not be provided at the expense of the Government. (Digest, p. 506, V, G, 5.) Should the accused request the appointment as his counsel of an officer stationed at the station where the court sits, and such officer be not a member of the court, the commanding officer will appoint such officer as counsel if he is reasonably available. Should the commanding officer decide that the officer desired by the accused is not reasonably available, the accused may appeal to the officer appointing the court, whose decision shall be final. If the counsel desired by the accused is not under the control of the commanding officer where the trial is held, application for counsel will be submitted by the accused in writing to the appointing authority, whose decision as to whether the officer desired is "reasonably available" is final. Officers of the Judge Advocate General's Department are not available for appointment as counsel for the defense in trials by courts-martial.

109. Duty of Officer as Counsel. An officer acting as counsel before a general or special court-martial should perform such duties as usually devolve upon the counsel for a defendant before civil courts in criminal cases. He should guard the interests of the accused by all honorable and legitimate means known to the law, but should not obstruct the proceedings with frivolous and manifestly useless objections or discussions.

110. Right to Interview the Accused. An accused, even if in close arrest, will be allowed to have such interviews with his counsel, military or civil, as may be required in order to prepare his defense. Counsel will also be permitted to have interviews with any other person who may be a witness for the accused, or whose knowledge of facts may be useful to the accused in preparing for trial.

111. Witnesses, How Questioned During Trial. If the judge advocate personally prepares the record the counsel will be required to reduce his questions and arguments to writing; but if the court has a stenographic reporter, the counsel will be allowed to question witnesses and address the court orally.

SECTION V.

REPORTER.

112. Employment. Under such regulations as the Secretary of War may from time to time prescribe, the president of a court-martial or military commission, or a court of inquiry, shall have power to appoint a reporter, who shall record the proceedings of and testimony taken before such court or commission and may set down the same, in the first instance, in shorthand. (A. W. 115.) Reporters will be employed only when authorized by the appointing authority. They will not be authorized for special courts-martial, except when the appointing authority directs that the testimony be reduced to writing.

[Note: For form of oath for reporter see par. 135.]

113. Compensation—Decisions. The reporter shall be paid at the following rates of compensation by the Quartermaster Corps on vouchers certified to be correct by the judge advocate or recorder:

(a) For each case not to exceed \$1 an hour for time actually spent in court during the trial or hearing, except when the court or commission sits less than three hours during the first day, when the allowance for such day shall be \$3. Time will be reckoned to the nearest half of an hour.

(b) Fifteen cents for each 100 words for transcribing notes and making that portion of the original record which is typewritten; but no allowance shall be made for the first carbon copy of that portion of the record which is typewritten or for original papers which are appended as exhibits.

(c) Ten cents for each 100 words for copying papers material to the inquiry, and 2 cents for each 100 words for each carbon copy of the same, when ordered by the court or commission for its use.

(d) Two cents for each 100 words for the second and each additional carbon copy of the record when authorized by the convening authority.

(e) Except for such part of the journey as may be covered by Government transportation, mileage at the rate authorized for a civilian witness not in Government employ and \$3 a day for expenses when the judge advocate or recorder keeps him, at his own expense, away from his usual place of employment for twenty-four hours or more, on public business referred to the court or commission, shall be allowed the reporter for himself, and, when ordered by the court or commission, for each necessary assistant.

(f) When a stenographic reporter is authorized for a special court-martial only one copy of the proceedings will be required, and for transcribing notes and making that part of the record of a trial by special court-martial which is typewritten, the reporter, other than an enlisted man, shall receive 13 cents for each 100 words.

[Note: The following decisions regarding compensation of reporters will be observed in preparing vouchers:

(a) The payment to a reporter of \$3 for each case completed by him is not authorized when more than one case is disposed of in one day, each case requiring less than three hours in which to be completed, but simply guarantees the reporter at least \$3 for each day that the court or commission sits when a new case is taken up for that day. (Cir. 81, War Dept., 1908.)

(b) In determining the period for which a reporter is entitled to the allowance of \$3 a day for expenses when kept away from his usual place of employment time should be counted from the date on which he is required to leave his usual place of business by the terms of his employment to the date of his return thereto, provided there be no unnecessary delay in the travel to and from the place where the court meets. (Par. 1244, Manual Q. M. Corps, 1916.)

(c) The fact that a reporter returns each night to his home does not preclude the view that he was kept away from his place of business for 24 hours. He is not, however, entitled to mileage for such journeys unless the sessions of the court are held on nonconsecutive days. (Op. J. A. G., Sept. 7, 1910.)

(d) A reporter serving two separate courts-martial on the same day is entitled to have his allowances (except mileage) computed separately for each court. (Op. J. A. G., Oct. 13, 1910.)

(e) A reporter duly employed, but who, after arrival at court, performs no service, owing to adjournment, is entitled to mileage, \$3 for constructive service, and also to the additional \$3 if kept away from place of business for 24 hours. (Op. J. A. G., Feb. 18, 1911; June 4, 1914.)

(f) The abbreviations "Q.," standing for the word question, and "A.," standing for the word answer, and all dates as "25th" and "1914" will each be counted as one word. Punctuation marks will not be counted as a word. It is not necessary for the judge advocate to count the actual number of words on every page to justify him in certifying the account of the reporter. He may ascertain the total number of words by counting the words on a sufficient number of pages to enable him to ascertain a fair average of the number of words on a page and then ascertain the total by multiplying this average by the number of pages. (Op. J. A. G., Oct. 22, 1909; Feb. 8, 1915.)]

114. **Disposition of Vouchers.** The original voucher for payment of the reporter will be properly completed and certified by the judge advocate and

will be sent for payment to the nearest disbursing quartermaster. A carbon copy of the voucher will be forwarded with the record for the information of the appointing authority.

[Note: For form of voucher for payment of reporter, see Appendix 18.]

115. Detail of Soldier. A soldier may be detailed to serve as a stenographic reporter for general courts-martial, courts of inquiry, and military commissions, and while so serving shall receive extra pay at the rate of not exceeding five cents for each one hundred words taken in shorthand and transcribed, such extra pay to be met from the annual appropriation for expenses of courts-martial. (Act of Aug. 25, 1912, 37 Stat., 575.) Such detail will be made only when a reporter is authorized by the appointing authority.

116. Time Limit for Completing Record. The judge advocate or recorder shall require the reporter to furnish the typewritten record of the proceedings of each session of the court or commission (together with one carbon copy of the same) not later than twenty-four hours after the adjournment of that session. The complete record will be finished, indexed, bound, and ready for authentication not later than forty-eight hours after the completion of its action by the court or commission on the merits of the case or hearing.

117. Carbon Copies of the Record. Whenever a record of a trial of general court-martial is to be typewritten by a reporter, the judge advocate will inform the accused of his right to demand a copy of the record, and will require of him a statement as to whether or not he desires a copy. If the answer be in the affirmative the judge advocate will cause the reporter to prepare a carbon copy; this copy will be turned over to the accused, and the judge advocate will note on the index sheet of the record, "Carbon copy of record of trial furnished the accused." (See form for record of general court-martial, Appendix 6.)

In joint trials a sufficient number of carbon copies should be prepared to enable one to be furnished each accused if required.

118. Extra Compensation for Clerical Duties. No person in the military or civil service of the Government can lawfully receive extra compensation for clerical duties performed for a military court except as provided in paragraph 115, *supra*. (A. R. 987.)

SECTION VI.

INTERPRETER.

119. Employment and Pay. Under such regulations as the Secretary of War may from time to time prescribe, the president of a court-martial or military commission, or court of inquiry, or a summary court, may appoint an interpreter, who shall interpret for the court or commission. (A. W. 115.) Interpreters may be employed whenever necessary without application to the appointing authority. They will be allowed the pay and allowances of civilian witnesses, which will be paid by the Quartermaster Corps on vouchers certified by the judge advocate or recorder.

[Note: For oath of interpreter see par. 136.]

CHAPTER VIII. COURTS-MARTIAL—ORGANIZATION.

SECTION I.

CHALLENGES.

120. Occasion For. The composition of the court-martial having been made known to the accused by the reading of the appointing order, together with any orders which have operated to modify the composition of the court as originally constituted, he is asked by the judge advocate whether he objects to being tried by any member present named in the order and modifying orders. If his reply be in the negative, the court and judge advocate are sworn; if, on the other hand, the accused has objection to a member, he exercises his right in this respect by challenging, in turn, each member to whom he objects. Members of a general or special court-martial may be challenged by the accused, but only for cause stated to the court. The court shall determine the relevancy and validity thereof, and shall not receive a challenge to more than one member at a time. (A. W. 18.) Neither a summary court officer nor the judge advocate of a general or special court-martial is subject to challenge. (Digest, p. 502, IV, N; Davis, p. 85, n. 3.)

[Note: The various classes of challenges recognized at common law have been practically reduced in courts-martial practice to two, viz., (1) principal challenges, or those where the member must be excused upon proof of the ground for challenges as alleged; (2) for favor, where the court must decide whether the facts proved constitute cause to excuse the member.]

121. Grounds for Challenge. (a) Principal Challenges. In the following cases a member will be excused when challenged upon proof of the fact as alleged:

(1) That he sat as a member of a court of inquiry which investigated the charges.

(2) That he has personally investigated the charges and expressed an opinion thereon, or that he has formed a positive and definite opinion as to the guilt or innocence of the accused.

(3) That he is the accuser.

(4) That he will be a witness for the prosecution.

(5) That (upon a rehearing of the case) he sat as a member on the former trial.

(6) That, in the case of the trial of an officer, the member will be promoted by the dismissal of the accused.

(7) That he is related by blood or marriage to the accused.

(8) That he has a declared enmity against the accused.

(b) Challenges for Favor. Where prejudice, hostility, bias, or intimate personal friendship are alleged it is for the court, after hearing the grounds for challenging stated and the reply, if any, of the challenged member, as well as any other evidence presented, to determine whether the grounds stated and proved or admitted are sufficient in fact to disqualify a challenged member.

122. Challenge of New Member. Where new members join or are added to the court after its organization the order detailing such new members should be read to the accused and he should be given full opportunity to challenge. The record will show affirmatively that the right has been accorded the accused to challenge every member of the court.

123. Challenge by Judge Advocate. There is no statutory authority for a

challenge by the judge advocate, but under the custom of the service after the accused has fully exercised his right of challenge the judge advocate may also challenge for cause in the same manner as the accused. (Digest, p. 502, IV, O.)

124. Member Can Not Challenge. There is no authority of law or custom of the service for a member of a court-martial to challenge another member, but where one member has knowledge of the fact that another is the accuser in the case or will be a witness for the prosecution he will bring the fact to the attention of the court in order that proper action may be taken. (See par. 129, below.)

125. Procedure Upon Challenges. A positive declaration by a member challenged on the ground of prejudice or interest that he is not prejudiced against the accused nor interested in the case is ordinarily satisfactory to the accused, and, in the absence of material evidence in support of the objection, will justify the court in overruling it. If, however, the statement is unsatisfactory, or the member makes no response, the accused may offer testimony in support of his challenge or may subject the challenged member to an examination under oath as to his competency as a member. In such a case the judge advocate administers the oath to the challenged member. The accused and other witnesses may be cross-examined, witnesses may be introduced in rebuttal by the judge advocate and arguments may be made. The whole proceedings will, in the case of a general court-martial, appear in the record. During the deliberation of the court the challenged member will withdraw. If but four members remain they may pass upon the challenge. (See Chap. II, Sec. II.)

[Note: For form of oath to be administered to a challenged member see par. 137.]

126. Member Disqualified But Not Challenged. In the absence of a challenge the court of itself can not excuse a member from sitting on the trial of a case, but a member not challenged, who thinks himself disqualified for reasons other than those indicated in paragraph 129, below, may announce in open court his supposed disqualification, in order that he may be challenged; or he may apply to the appointing authority to be relieved.

127. Waiver of Objection. The rule is that challenges should be made before the arraignment, and if an objection to the competency of a member was known at that time and not made, it will be considered as waived; but if the cause of a member's incompetency was not known at the time of arraignment or did not arise until later, the court will entertain a challenge based on such cause, at any stage of the proceedings.

128. Liberality Required. Courts should be liberal in passing upon challenges, but they will not entertain an objection that is not specific, and they should be reluctant to sustain one upon the mere assertion of the accused, except where it is admitted by the challenged member.

129. Member as Accuser or Witness for the Prosecution. No officer shall be eligible to sit as a member of a general or special court-martial when he is the accuser or a witness for the prosecution. (A. W. 8, 9.) After the accused is brought before the court, preferably before the court is sworn, any member thereof who is or believes himself to be the accuser in the case will formally announce that fact to the court, whereupon he will be excused. When the accused, his counsel, the judge advocate, or any member of the court, at any time before the finding, shall have reason to believe that any member thereof is the accuser in the case, or may be called as a witness for the prosecution, such belief shall be communicated to the court, and, if the court, after hearing the facts, find that such member is the accuser or is to be called as a witness for the prosecution, he shall be excused. If at any stage of the proceedings prior to the findings any member of the court be called as a witness for the

prosecution, he shall, before qualifying as a witness, be excused from further duty as a member.

130. Member Signing Charges—When Accuser. Whether or not an officer is the accuser in a particular case is a question of fact. If, notwithstanding his ineligibility, he does sit as a member of a general or special court-martial, the proceedings are necessarily invalid. (A. W. 8, 9; Op. J. A. G., Oct. 11, 1913; id., Nov. 13, 1913, Bull. 38, War Dept., 1913, p. 6.) An officer may be ordered by superior authority to prefer and sign a charge. The action of the officer preferring and signing the charge may be purely ministerial and represent no conviction whatever on his part that an offense has been committed, or that if an offense has been committed it was committed by the person charged. In such a case the accuser is not, in fact, the officer signing the charge, but the officer who directs the preparation and signing of the charge. The former is, therefore, not within the prohibition of the statute. The officer who has signed the charge in a particular case is, however, *prima facie*, the accuser in that case, and therefore ineligible to sit as a member of the trial court. (Op. J. A. G., Feb. 20, 1914, Bull. 8, War Dept., 1914, p. 6.) If in such a case the court should decide that he is eligible, all the evidence upon which the court reached its decision will, in the case of a general court-martial, be made of record, and in the case of a special court-martial the record will show that evidence touching the eligibility of the officer was heard by the court and the finding arrived at thereon.

131. Member of Court as Witness. (a) For the Prosecution. No officer shall be eligible to sit as a member of a general or a special court-martial who is a witness for the prosecution. (A. W. 8, 9; Bull. 38, War Dept., 1913, p. 6.) In any case where the proceedings of a court are invalidated by reason of the failure to excuse a member who is the accuser or a witness for the prosecution a new trial may be ordered. (Bull. 8, War Dept., 1914, p. 8.)

(b) For the Defense. The fact that a member is a witness for the defense will not necessarily disqualify him to sit as a member of the court, and the fact that such a witness sits throughout the trial as a member of the court will not in any way affect the validity of its proceedings.

(c) When Called by Court. Whether a member called as a witness by the court is to be considered as a witness for the prosecution depends on the character of his testimony, which should be carefully considered before a conclusion is reached that he is not. In any case of doubt he should be excused from further participation in the trial as a member. (Op. J. A. G., Nov. 20, 1913.)

(d) When Accused Pleads Guilty. When a member is a witness to any charge or specification to which the accused pleads guilty and he is not called as a witness for the prosecution to any other charge or specification, he is not disqualified from sitting as a member. (Op. J. A. G., Nov. 19, 1914, Bull. 52, War Dept., 1914, p. 3.)

SECTION II.

OATHS.

132. Oath of Members. (a) The challenges having been disposed of, the judge advocate of a general or special court-martial shall administer to the members of the court, before they proceed upon any trial, the following oath or affirmation (A. W. 19):

You, A. B., do swear (or affirm) that you will well and truly try and determine, according to the evidence, the matter now before you, between the United States of America and the person to be tried, and that you will duly administer justice, without partiality, favor, or affection, according to the

provisions of the rules and articles for the government of the Armies of the United States, and if any doubt should arise, not explained by said articles, then according to your conscience, the best of your understanding, and the custom of war in like cases; and you do further swear (or affirm) that you will not divulge the findings or sentence of the court until they shall be published by the proper authority, except to the judge advocate and assistant judge advocate; neither will you disclose or discover the vote or opinion of any particular member of the court-martial, unless required to give evidence thereof as a witness by a court of justice in due course of law. So help you God.

(b) In case of affirmation the closing sentence of adjuration will be omitted.

(c) When more than one case is tried by the same court, the oath must be administered anew for each case.

(d) The oaths or affirmations prescribed in A. W. 19 for the members, the judge advocate, a witness, and others will always be administered, but in addition there may be such additional ceremony or acts as will make the oath or affirmation binding on the conscience of the person taking it.

(e) For decorum to be observed during the administration of oaths, see Chapter VII, Section I.

133. Oath of Judge Advocate. When the oath or affirmation has been administered to the members of a general or special court-martial, the president of the court shall administer to the judge advocate and to each assistant judge advocate, if any, an oath or affirmation in the following form (A. W. 19):

You, A. B., do swear (or affirm) that you will not divulge the findings or sentence of the court to any but the proper authority until they shall be duly disclosed by the same. So help you God.

134. Oath of Witness. (a) All persons who give evidence before a court-martial shall be examined on oath or affirmation in the following form (A. W. 19), administered by the judge advocate:

You swear (or affirm) that the evidence you shall give in the case now in hearing shall be the truth, the whole truth, and nothing but the truth. So help you God.

(b) If either the judge advocate or assistant judge advocate is to testify, the oath or affirmation will be administered by the other or by the president.

135. Oath of Reporter. (a) Every reporter of the proceedings of a court-martial shall, before entering upon his duties, make oath or affirmation in the following form (A. W. 19), administered by the judge advocate:

You swear (or affirm) that you will faithfully perform the duties of reporter to this court. So help you God.

(b) For authority for hiring reporters, and compensation, see Chapter VII, Section V.

136. Oath of Interpreter. Every interpreter in the trial of any case before a court-martial shall, before entering upon his duties, make oath or affirmation in the following form (A. W. 19), administered by the judge advocate:

You swear (or affirm) that you will truly interpret in the case now in hearing. So help you God.

137. Oath to Test Competency. When a member of a general or special court-martial is challenged and it is desired to question him regarding his eligibility to sit as a member in the trial of a case, the judge advocate will administer to him the following oath:

You swear that you will true answers make to questions touching your competency as a member of the court in this case. So help you God.

138. Oaths for Administrative Purposes. (a) Any officer or clerk of any of the departments lawfully detailed to investigate frauds on, or attempts to defraud, the Government, or any irregularity or misconduct of any officer or

agent of the United States, and any officer of the Army, Navy, Marine Corps, or Revenue-Cutter Service detailed to conduct an investigation, and the recorder, and if there be none the presiding officer, of any military, naval, or Revenue-Cutter Service board appointed for such purpose, shall have authority to administer an oath to any witness attending to testify or depose in the course of such investigation. (R. S. 183, as amended by the act of Feb. 13, 1911, 36 Stat., 898.)

(b) Any judge advocate or acting judge advocate, the president of a general or special court-martial, any summary court-martial, the judge advocate or any assistant judge advocate of a general or special court-martial, the president or the recorder of a court of inquiry or of a military board, any officer designated to take a deposition, any officer detailed to conduct an investigation, and the adjutant of any command shall have power to administer oaths for the purposes of the administration of military justice and for other purposes of military administration; and in foreign places where the Army may be serving shall have the general powers of a notary public or of a consul of the United States in the administration of oaths, the execution and acknowledgment of legal instruments, the attestation of documents, and all other forms of notarial acts to be executed by persons subject to military law. (A. W. 114.)

SECTION III.

CONTINUANCES.

139. Authority For. A court-martial may, for reasonable cause, grant a continuance to either party for such time and as often as may appear to be just. (A. W. 20.) If before the first meeting of the court a continuance is deemed necessary by either party, application therefor should be made to the appointing authority, but if made after assembling the application will be made to the court. When application is made to the court for an extended delay which appears to be well founded, it may be referred to the appointing authority in order that he may determine whether the court should grant it or whether he should dissolve the court.

140. Reason for Application to be Stated. The party desiring a continuance must state the reasons upon which his application is based. When it is desired because of the absence of a witness he should distinctly show that the witness is material, that he has used due diligence to procure the testimony or attendance of the witness, and that he has reasonable ground to believe that he will be able to procure such testimony or attendance within a reasonable time, which time shall be stated.

141. Number of Continuances. The number of continuances which may be granted is not limited, but where extended delays will ensue the court will be justified in exacting proof of due diligence on the part of the party requesting the same, and may even require the reasons to be stated under oath if it has reason to suspect that the intention is merely to delay the proceedings.

SECTION IV.

COMPLETION OF ORGANIZATION.

142. When Accomplished. The court having met, the accused and his counsel having been introduced, the reporter sworn, the convening order read, the right of challenge accorded, and the court and judge advocate sworn, the organization of the court is complete for the trial of the case.

CHAPTER IX.

COURTS-MARTIAL—PROCEDURE DURING TRIAL.

SECTION I.

ARRAIGNMENT.

143. When Made. On the swearing in of the members and the judge advocate, the organization of the court is complete for the trial of the charges in the case then before the court. In each case tried by the court the appointing order must be read anew, a new opportunity to challenge must be given, and the members, judge advocate, reporter, and interpreter must be sworn anew. In each case the proceedings must be complete without reference to any other case.

144. Procedure. The court being organized, and both parties ready to proceed, the judge advocate will read the charges and specifications, separately and in order, to the accused and ask him how he pleads to each. The order pursued, in case of several charges or specifications, will be to arraign on the first, second, etc., specifications to the first charge, then on the first charge, and so on with the rest. The reading of the charges and specifications and the pleas of the accused in answer thereto constitute the arraignment of the accused. In reading the charges the judge advocate will also read the name and rank of the officer preferring them.

[For decorum to be observed during the arraignment see par. 86.]

SECTION II.

PLEAS.

145. Kinds of Pleas. In court-martial procedure the usual pleas are the following: (a) Pleas to the jurisdiction; (b) pleas in abatement; (c) pleas in bar of trial; and (d) pleas to the general issue. The first three mentioned are also known as special pleas. These pleas should be made in the order named. (Dudley, p. 93; Bouvier's Law Dictionary, Rawle, 3d Rev., p. 2603.)

146. Plea to the Jurisdiction. A plea to the jurisdiction denies the right of the court to try the case. The following are grounds for a plea to the jurisdiction of a court:

(a) That it was appointed by an officer who did not have the legal authority to do so (see Chap. III, Courts-martial—By whom appointed);

(b) That it is composed wholly or in part of members not authorized by law to sit upon such court-martial (see Chap. II, Courts-martial—Composition);

(c) That the accused is not subject to its jurisdiction (see Chap. I, Persons subject to military law); or

(d) That it has not legal power to try the offense charged (see Chap. XVII, Punitive articles).

A plea to the jurisdiction, if well grounded and sustained by the court, bars further prosecution before the court. If well grounded and not sustained by the court, the proceedings may be disapproved by the appointing authority, or, even though approved, may be reviewed on writ of habeas corpus by a United States court, which will cause the proceedings to be set aside as illegal and void. Waiver of objection will never avail to confer jurisdiction upon a court not legally possessing it, even though the accused fails to submit a plea to the jurisdiction at the proper time.

147. Plea in Abatement. A plea in abatement is based upon some defect in

the charge or specification and is one that operates merely to delay the trial, such as an error in the name, rank, or organization of the accused or in the allegation as to time and place in the specification. An accused who submits a plea in abatement must show how the error may be amended. When a plea in abatement is sustained, the judge advocate will correct the charge and specification objected to so as to meet the objection, and the trial will proceed on the corrected charges. To enable him to make the correction a continuance may be granted. Matters which might have been objected to by a plea in abatement will be considered as waived by pleading to the general issue.

148. Plea in Bar of Trial. A plea in bar of trial, if sustained, is a substantial and conclusive answer to the charge or specification to which it is addressed. Such a plea may be made on the grounds set forth in pars. 149, 150, and 151.

149. The Statute of Limitations. (1) Definition. Statutes of limitation in criminal law are statutes of which the accused may take advantage and deprive the Government of the power to try and punish him after the lapse of a specific period since the offense was committed. They are enacted to secure the prompt punishment of criminal offenses and with a view to obtain the attendance of the witnesses at the trial while the recollection of the event is still fresh in their minds. In court-martial practice prosecutions are limited both as to time and as to number. (A. W. 39, 40.)

(2) Limitations as to Time. (a) In the following cases there is no limitation as to time upon trial by court-martial (A. W. 39), viz.:

- (1) Desertion committed in time of war;
- (2) Mutiny; or
- (3) Murder.

(b) The period of limitation upon trial and punishment by court-martial shall be three (3) years in the following cases (A. W. 39), viz.:

- (1) Desertion in time of peace;
- (2) Any crime or offense punishable under A. W. 93; or
- (3) Any crime or offense punishable under A. W. 94.

(c) No person subject to military law shall be liable to be tried or punished by a court-martial for any crime or offense not enumerated in paragraph (a) or paragraph (b), supra, committed more than two (2) years before the arraignment of such person (A. W. 39).

(d) Computation of the Period of Limitation. The point at and from which the period of limitation is to begin to run is the date of the commission of the offense. The point at which the period of limitation is to terminate and from which said period is to be reckoned back is the date of arraignment of the accused. There must be excluded in computing this period—

(1) The period of any absence of the accused from the jurisdiction of the United States; and

(2) Any period during which by reason of some manifest impediment the accused shall not have been amenable to military justice.

[Notes: "Manifest impediment" means only such impediments as operate to prevent the court-martial from exercising its jurisdiction, and includes such conditions as being held as a prisoner of war in the hands of the enemy, or being imprisoned under the sentence of a civil court upon conviction of crime (In re Davison, 4 Fed. Rep., 510); but any concealment of the evidence of their guilt or other like fraud on their part while they remain within the jurisdiction of the United States, by which the prosecution is delayed until the time the bar has run, did not deprive them of the benefit of the statute. (14 Op. Atty. Gen., 268.)

The thirty-ninth article of war did not have the effect to authorize trial or punishment for any crime or offense barred by the provisions of law existing at the date of its enactment, August 29, 1916.]

(3) Limitation as to Number of Trials. (a) No person shall be tried a second time for the same offense. (A. W. 40.)

(b) Where a person subject to military law has been once duly convicted or acquitted by a court-martial he has been "tried" in the sense of the article, and can not be tried again, against his will, for the same offense, or for any included offense, and it is immaterial whether the conviction or acquittal has been approved or disapproved.

(c) A person subject to military law has not been "tried" in the sense of A. W. 40 in any of the following cases:

Where the party, after being arraigned or tried before a court which was illegally constituted or composed, or was without jurisdiction, was again brought to trial before a competent tribunal; where the accused, having been arraigned upon and having pleaded to certain charges, was rearraigned upon a new set of charges substituted for the others which were withdrawn; where one of the several distinct charges upon which the accused had been arraigned was withdrawn pending the trial, and the accused, after a trial and finding by the court upon the other charges, was brought to trial anew upon the charge thus withdrawn; where, after proceedings commenced, but discontinued without a finding, the accused was brought to trial anew upon the same charge; where, after having been acquitted or convicted upon a certain charge which did not in fact state the real offense committed, the accused was brought to trial for the same act, but upon a charge setting forth the true offense; where the court was not sworn; where the first court was dissolved because reduced below five members by the casualties of the service pending the trial; where, for any cause, without fault of the prosecution, there was a "mistrial," or the trial first entered upon was terminated, or the court dissolved, at any stage of the proceedings before a final acquittal or conviction. (Digest, p. 167, C, II, B.)

(d) The same acts constituting a crime against the United States can not, after the acquittal or conviction of the accused in a court of competent jurisdiction, be made the basis of a second trial of the accused for that crime in the same or in another court, civil or military, of the same government.

Although the same act when committed in a State might constitute two distinct offenses, one against the United States and the other against the State, for both of which the accused might be tried, that rule does not apply to acts committed in the Philippine Islands. The government of a State does not derive its powers from the United States, while that of the Philippine Islands does owe its existence wholly to the United States.

A soldier in the Army, having been acquitted of the crime of homicide, alleged to have been committed by him in the Philippine Islands, by a military court-martial of competent jurisdiction proceeding under authority of the United States, can not be subsequently tried for the same offense in a civil court exercising authority in that Territory. (Grafton v. U. S., 206 U. S., 333.)

A similar rule applies in Alaska, Hawaii, Porto Rico, The Panama Canal Zone, or any other locality where the civil courts derive their authority from the United States.

(e) There can not be a second trial where the offense is really the same though it may be charged under a different description and under a different article of war. Thus, where the Government elects to try a soldier under A. W. 61 for absence without leave, and the testimony introduced develops the fact that the offense was desertion, the accused, after an acquittal or conviction, can not legally be brought a second time to trial for the same absence charged as desertion. (Digest, p. 169, C, II, D.)

(f) It is not misrepresentation or concealment by an applicant for enlistment, but the procuring of his enlistment by means of misrepresentation or con-

cealment, together with the receipt of pay or allowances, which constitutes the military offense of fraudulent enlistment under A. W. 54. Therefore, where a soldier was tried for and convicted of fraudulent enlistment in procuring his enlistment by means of a misrepresentation or concealment, to try him again for the same enlistment on account of another misrepresentation or concealment subsequently discovered would be a second trial for the same offense. (Digest, p. 169, C, II, E, 1.)

(g) The thirty-ninth article of war does not deprive a court-martial of jurisdiction of an offense after the periods prescribed. The court still has jurisdiction. The article gives the accused a right of exemption from trial if the accused claims the exemption and proves it. In other words, the exemption from trial is a defense that the accused must assert in order to take advantage of it. The defense may be made by entering a plea in bar, or it may be made after a plea of not guilty by introducing evidence showing the facts that entitle him to the exemption.

(h) In each case tried by general court-martial in which, upon the face of the record, it appears that the accused might successfully plead the statute of limitations but in which he has not interposed such plea, it shall be made to appear of record that the president of the court advised the accused of his legal rights in the premises.

150. Pardon. A pardon is an act of the President which exempts the individual on whom it is bestowed from the punishment the law inflicts for a crime he has committed. (See Words and Phrases, vol. 6, p. 5168, and authorities there cited.)

151. Constructive Condonation. Where a deserter has been restored to duty without trial by authority competent to order his trial, this action is regarded as a constructive condonation of the offense and may be pleaded in bar of trial subsequently ordered. (Digest, p. 839, XV, D, 4.)

152. Inadmissible Special Pleas. (a) Former Punishment. The plea of former punishment, i.e., that he has already been adequately punished for his offense by his commanding officer, is not recognized by our military law, and, when made in our military trials, has been properly overruled; but where an accused has, prior to trial, been subjected, on account of his offense, to any physical punishment, or to reduction to the ranks, or to protracted arrest, or to reprimand, or other unusual or unauthorized discipline, he may properly show the fact in evidence on the general issue in mitigation of such sentence as the court, in the event of his conviction, may impose. Except in this form, he can not avail himself of such circumstances upon his trial. (Winthrop, p. 411; 25 Op. Atty. Gen., 623; 28 idem., 622.)

(b) Illegal Enlistment. The accused, upon arraignment, has sometimes pleaded that on account of some illegality in his enlistment, as that he was under age, or that he was enlisted for a shorter period than the law required, etc., he was not amenable to trial. But no such form of special plea is recognized in our law. If the accused, by reason of his invalid enlistment, is not duly or legally in the Army, he should, regularly, offer the facts in evidence under a plea to the jurisdiction, or bring them out under the general issue. (Winthrop, p. 411.)

(c) Release From Arrest. Release from arrest upon the charges and restoration to duty before trial—already noticed as not a ground for a plea of pardon or condonation (except in case of a deserter restored to duty without trial)—is, similarly, no ground for a special plea in bar of trial. (Idem., p. 412.)

(d) Other Forms of Inadmissible Pleas. Such objections (which have been taken in some cases) as that the accused, at the time of the arraignment, is undergoing a sentence of general court-martial, or that, owing to the long delay

in bringing him to trial, he is "unable to disprove the charge or defend himself"; or that his accuser is actuated by malice or is a person of bad character—are, it need hardly be said, not proper subjects for special pleas, however much they may constitute ground for continuance, or affect the question of the measure of punishment. So, as to all such objections as are properly matters of defense under the general issue—for example, that the accused committed the offense charged when insane, or intoxicated, or in obedience to a military order, or under a mistake of fact or law, etc.—these are not within the scope or purpose of special pleas in bar, nor can they properly be raised in an interlocutory form, or otherwise than upon the trial and by the testimony, being, as they are, of the very substance of the defense. (*Idem.*, p. 412.)

153. Action Upon Special Pleas. (a) Each special plea should be stated briefly and clearly. It must also be supported by evidence or legal argument to show that it is well taken. The burden of supporting a special plea by a preponderance of proof rests on the accused. Both sides should be heard and the proceedings and arguments under the plea in trial by general or special court-martial recorded. The accused may make several special pleas to any charge or specification.

(b) When a special plea to the jurisdiction or in bar of trial as to all the charges and specifications has been sustained by a court, the record of the proceedings as far as had will be forwarded to the reviewing authority with a statement of reasons which, in the opinion of the court, sustain its action. If the reviewing authority is in disagreement with the court in respect of the validity of the plea, the proceedings will be returned by him to the court, with reasons for such disagreement and with instructions to the court to reconvene and reconsider its action. To the extent that such pleas present issues of law, the court properly defers to the views of the reviewing authority. The order returning the proceedings for reconsideration should direct the court, upon vacating its prior action, to proceed with the trial of the case. If the reviewing authority approves the action of the court in sustaining such pleas his action will be indorsed on the proceedings and published in the final review of the case.

(c) If the charge and specification to which a special plea has been sustained are not capable of amendment and there are other charges and specifications in the case, the trial may proceed on the other charges and specifications. (G. O. 28, W. D., 1905.)

(d) When all the special pleas to a given charge or specification are overruled, the accused must plead to the general issue as to that charge or specification.

154. Pleas to the General Issue. (a) Usually the plea of the accused is "guilty" or "not guilty" to each charge and specification; or, guilty to a specification excepting certain words, and to the excepted words not guilty; or, as when charged with an offense which includes a lesser one of a kindred nature, guilty to the specification except certain words, substituting therefor certain others, to the excepted words "not guilty," to the substituted words "guilty," and to the charge not guilty, but guilty of the lesser included offense.

(b) A court-martial is authorized, in any case, in its discretion, to permit an accused to withdraw a plea of not guilty and substitute one of guilty, and vice versa, or to withdraw either of these general pleas and substitute a special plea. And wherever the accused applies to be allowed to change or modify his plea, the court should, in general, consent, provided the application is made in good faith and not for the purpose of delay.

(c) A plea of guilty does not necessarily exclude the taking of evidence, on behalf of either the accused or the prosecution, or at the request of the court. In cases where the punishment is discretionary a full knowledge of the circum-

stances attending the offense is essential to the court in measuring the punishment, and to the reviewing authority in acting on the sentence. In cases where the punishment is mandatory, a full knowledge of the attendant circumstances is necessary to the reviewing authority to enable him to comprehend the entire case and correctly judge whether the sentence should be approved or disapproved or clemency granted. The court should therefore take evidence after a plea of guilty, except when the specification is so descriptive as to disclose all the circumstances of mitigation or aggravation. When evidence is taken after a plea of "guilty," the witnesses may be cross-examined, evidence may be produced to rebut their testimony, and the court may be addressed by the prosecution or defense on the merits of the evidence and in extenuation of the offense or in mitigation of punishment. After a plea of guilty the accused will always be given an opportunity to offer evidence in mitigation of the offense charged if he desires to do so.

(d) In each case tried by a general court-martial in which the accused enters a plea of guilty in whole or in part as to any charge or specification the president of the court shall explain to him as to that part:

First. The various elements which constitute the offense charged, as set forth in Chapter XVII, defining the punitive articles of war; and

Second. The maximum punishment which may be adjudged by the court for the offense to which he has pleaded guilty.

The accused will then be asked whether he fully understands that by pleading guilty to such a charge or specification he admits having committed all the elements of the crime or offense charged and that he may be punished as stated. If he replies in the affirmative, the plea of guilty will stand; otherwise a plea of not guilty will be entered. The explanation of the president and the reply of the accused thereto shall appear in the record. The same rule will apply in cases tried by special court-martial when the evidence heard is made of record.

(e) When the accused pleads "guilty," and, without any evidence being introduced, makes a statement inconsistent with his plea, the statement and plea will be considered together, and if guilt is not conclusively admitted the court will direct the entry of a plea of "not guilty" and proceed to try the case on the general issue thus made. The most frequent instances of inconsistency are in cases involving a specific intent, as in desertion, larceny, etc. In such cases, where after a plea of guilty the accused makes a statement, the latter should be carefully scrutinized by the court, and if in the case of desertion in any part there is a statement that the accused had no intention of remaining away, that he expected to return when he had earned some money, or that when arrested he was on his way back to his organization, etc.; or, in the case of larceny, that he intended to return the property alleged to have been stolen, etc., the court should direct the entry of a plea of "not guilty," but the criminality of an intent once formed is not affected by a subsequent change of intent.

(f) A plea of "guilty without criminality" is irregular and contradictory. (Winthrop, p. 414.) It is practically equivalent to a plea of "not guilty" and the court and judge advocate should proceed as if that plea were entered. Unless a plea of guilty is unqualified the prosecution must prove all allegations that are not specifically admitted by the accused.

(g) Insanity at the time of the commission of the acts charged is a defense which may be properly made under a plea of not guilty. Insanity at the time of arraignment, or at a later stage of the trial, is a proper ground for the arrest of further proceedings on the charges. (See par. 219.)

SECTION III.

REFUSAL TO PLEAD.

155. Action. When the accused, arraigned before a court-martial, from obstinacy and deliberate design stands mute or answers foreign to the purpose, the court may proceed to trial and judgment as if he had pleaded not guilty. (A. W. 21.) If the court finds that the failure to plead is the result of insanity, it will proceed as indicated in Section II, paragraph 154 (g), *supra*.

SECTION IV.

MOTIONS.

156. Motion to Sever. A motion to sever is a motion by one of two or more joint accused to be tried separately from the other or others. It will regularly be made at the arraignment. Except where the essence of the charge is combination between the parties (as in mutiny), the motion may properly be granted for good cause shown. The more common grounds of motions for severance are that the mover desires to avail himself on his trial of the testimony of one or more of his co-accused, or of the testimony of the wife of one, or that the defenses of the other accused are antagonistic to his own, or that the evidence as to them will in some manner prejudice his defense. This motion has rarely been presented to the court in our military practice. Where the prosecution desires to use one of two or more joint accused as a witness against another or others, the practice is not to move to sever, but, by order of the convening authority, to withdraw charges as to such one. (See Winthrop, p. 379, and authorities there quoted.)

157. Motion to Elect. The prosecution is at liberty to charge an act under two or more forms, where it is doubtful under which it will more properly be brought by the testimony. In the military practice the accused is not entitled to call upon the prosecution to "elect" under which charge it will proceed in such, or indeed in any, case. (Digest, p. 504, V, F.)

158. Nolle Prosequi. A nolle prosequi is a declaration of record on the part of the prosecution that it withdraws a charge or specification from the investigation and will not pursue the same further at the present trial. This authority can only be exercised by the superior who, as the representative of the United States, ordered the court, and in a proper case he may, on his own initiative or on application duly made to him, instruct the judge advocate to enter a nolle prosequi. The principal grounds for this proceeding when duly authorized will be—

(a) The fact that the charge or specification is discovered to be substantially defective and insufficient in law, or

(b) That it is ascertained that the allegations can not be proved, or

(c) That the testimony available is not sufficient to sustain them, or

(d) That the criminality of one of the accused, where there are several, can not be established, or

(e) That it is proposed to use one of the accused as a witness.

The withdrawal of such a charge or specification is not in itself equivalent to an acquittal or to a grant of pardon and can not be so pleaded. It simply removes from the pending case a particular charge or specification without prejudice to its being subsequently renewed in its original or a revised form. In court-martial practice when authorized by the appointing authority a nolle prosequi may be entered either before or after arraignment and plea. If after arraignment it is found that a charge or specification can not be sustained, or

it is determined for other reasons that the same shall not be pursued, while it would be legal to enter a *nolle prosequi* thereto, it will be the preferable course, as well as most just to the accused, not to do so, but to allow the accused to be formally acquitted thereon at the finding. (See Winthrop, pp. 369-371.)

CHAPTER X. COURTS-MARTIAL—WITNESSES AND DEPOSITIONS.

SECTION I.

ATTENDANCE OF WITNESSES.

159. Process to Obtain Witnesses. Every judge advocate of a general or special court-martial, and every summary court-martial, shall have power to issue the like process to compel witnesses to appear and testify which courts of the United States, having criminal jurisdiction, may lawfully issue; but such process shall run to any part of the United States, its Territories, and possessions. (A. W. 22.) The authority to issue such process is in terms vested solely in the judge advocate of a general or special court-martial and in a summary court-martial, and it is by him alone that the process can be initiated. The judge advocate, however, will sometimes properly consult the court as to the desirability of resorting to an attachment; especially where any considerable time may be required for the service and return of the same, and an unusual adjournment may thus be necessitated. He will also properly resort to it whenever the court in its desire to secure the best or material evidence not otherwise procurable calls upon him for the purpose. (Winthrop, p. 298.)

[Note: 1. For power to issue process to secure the attendance and testimony of witnesses before courts-martial in the National Guard, not in the service of the United States, see sec. 108, act of June 3, 1916, 39 Stat., 209, Appendix 2. 2. Wherever in this section reference is made to issue of such process by a judge advocate, a summary court-martial will be understood to be included.]

160. Service of Subpœna. A subpœna for the attendance of a civilian witness is issued in duplicate. It may be legally served by either a person in the military service or a civilian. Usually, service is made by an officer or non-commissioned officer. Service is made by personal delivery of one of the copies to the witness. The proof of service is made by indorsing on the remaining copy a sworn statement that service was made. (For service by mail and acceptance of same, see par. 164, below.) After making service a copy of the subpœna will be promptly returned to the judge advocate of the court, with the proof of service. If the witness can not be found, the judge advocate should be promptly so informed. A judge advocate can not subpœna a civilian witness to appear before himself for preliminary examination.

[Note: For form of subpœna and proof of service, see Appendix 13.]

161. Summoning of Witnesses. The judge advocate will summon the necessary witnesses for the trial, but will not summon witnesses at the expense of the Government without the order of the court, unless satisfied that their testimony is material and necessary. In order that the accused may not be denied a full opportunity to make his defense any witness requested by him is usually summoned. But a reasonable discretion should be exercised where the summoning of the number of witnesses requested by the defense would result in an unreasonable inconvenience or expense to the Government. In such instances the judge advocate should ascertain whether the testimony required of the witness is not merely cumulative, or as to an unimportant point that one

witness would be sufficient to render conclusive, or as to which the judge advocate would be willing to admit the facts expected from the witness's testimony.

162. Advance Notice to Witnesses. The judge advocate will endeavor to issue subpoenas to civilian witnesses and to make request for the attendance of military witnesses at such time as will give each witness at least 24 hours' notice before starting to attend the meeting of the court.

163. Attendance of Military Witnesses. The attendance of persons in the military service stationed at the place of meeting of the court, or so near that no expense of transportation will be involved, will ordinarily be obtained by informal notice served by the judge advocate on the person concerned that his attendance as a witness is desired. If for any reason formal notice is required, the judge advocate will request the proper commanding officer to order him to attend; but if mileage is involved, the department commander or other proper superior will be requested to issue the necessary order. Fees will not be paid to military witnesses on the active list, and they are entitled only to the mileage allowances due them under their travel orders. The attendance as witnesses of persons on the retired list (not assigned to active duty) should be obtained in the same manner, and they are entitled to the same fees and mileage as civilian witness not in the Government employ. No travel order will be issued in such cases.

164. Procedure to Secure Attendance of Civilian Witness. Unless he has reason to believe that a formal service of subpoena will be required, the judge advocate will endeavor to secure the attendance of a civilian witness by correspondence with him, sending him duplicate subpoena properly filled out, with a request to accept service on one by signing the printed statement, "I hereby accept service of the above subpoena," and to return same to the judge advocate, for which purpose a return addressed penalty envelope should be inclosed. Ordinarily there will be no difficulty in securing the voluntary attendance of a civilian witness if he is informed that his fees and mileage will not be reduced by reason of his voluntary attendance, and that a voucher for his fees and mileage going to and returning from the place of the sitting of the court-martial will be delivered to him promptly on being discharged from attendance on the court. If such informal methods are ineffective, formal duplicate subpoena will be issued by the judge advocate with a view to service on the witness. If the witness is at or near the post where the court is sitting, the service will be by the judge advocate or by some person designated by him. If the witness is not at or near the post where the court is sitting, but is at or near another military post, command, or detachment, the judge advocate will send the duplicate subpoena direct to the commanding officer of such post, command, or detachment, requesting service of the same. Upon receipt of the request the officer receiving it will serve the subpoena or cause it to be served. The service will be made without delay, and the retained copy of the subpoena, with proof of service indorsed on it, will be sent at once direct to the judge advocate. If in any instance travel is necessary to serve the subpoena, a request will promptly be made by the commanding officer of the post, command, or detachment, on the proper authority for travel orders. If the witness does not reside near a post, command, or detachment, the subpoena will be sent direct to the department or other proper commander requesting service of the same.

165. When Accused Must be Confronted With Witness. Depositions can not be introduced by the prosecution in capital cases. (See A. W. 25, Chap. XI, Evidence, and Chap. IV, Sec. III.) In such cases, therefore, as well as in others in which the judge advocate believes that the interests of justice demand that the accused be confronted by a witness against him, or believes that for any reason a witness should testify in the presence of the court, he will take the necessary steps to secure the attendance of such witness or witnesses.

166. Procedure to Obtain Books, Documents, or Papers. If a civilian has in his possession a book, document, or paper desired to be introduced in evidence, a subpoena duces tecum will be prepared and issued by the judge advocate, directing the person to appear in court and to bring with him such book, document, or paper, which should be described in sufficient detail to enable it to be readily identified.

[Note: For form, see Appendix 13.]

167. Civilian Witness in Confinement. The testimony of a witness who is in confinement in the hands of the civil authorities will ordinarily be obtained by means of a deposition (A. W. 25), but if for any reason it is necessary that such a witness testify in court, an endeavor should be made by the judge advocate to make arrangements with the civil authorities to obtain his appearance.

168. Warrant of Attachment. In view of the provisions of A. W. 23 providing for the punishment on information before a district court of the United States or in a court of original criminal jurisdiction in any of the territorial possessions of the United States of a civilian who willfully neglects or refuses, after he has been duly subpoenaed, to appear as a witness before any military court, commission, court of inquiry, or board, circumstances requiring the issue of a warrant of attachment will be very rare. (For form, see Appendix 14.) Whenever it becomes necessary to issue a warrant of attachment, the judge advocate or summary court-martial will direct or deliver it for execution to an officer designated by the department commander for the purpose. (12 Op. Atty. Gen., 501.) As the arrest of a person under a warrant of attachment involves depriving him of his liberty, the authority for such action may be inquired into by a writ of habeas corpus. For this reason the officer executing the warrant of attachment should be provided with the following papers to enable him to make a full return in case a writ of habeas corpus is served upon him:

(a) A copy of the charges in the case, sworn to be a full and true copy of the original by the judge advocate of the court (or summary court-martial).

(b) A copy of the order appointing the court-martial, sworn to be a full and true copy of the original by the judge advocate of the court (or summary court-martial).

(c) The original subpoena, showing proof of service of same.

(d) An affidavit of the judge advocate or summary court-martial that the person being attached is a material witness in the case; that he has failed and neglected to appear, although sufficient time has elapsed for that purpose; and that no valid excuse has been offered for such failure to appear.

(e) The original warrant of attachment.

In executing such process it is lawful to use only such force as may be necessary to bring the witness before the court. Wherever force is actually required the post commander nearest the residence of the witness will furnish a military detail sufficient to execute the process.

169. Habeas Corpus Proceedings in Connection With Attachments. (a) If, in executing a warrant of attachment, the officer detailed for that purpose should be served with a writ of habeas corpus from any United States court, or by a United States judge, for the production of the witness, the writ will be promptly obeyed, and the person alleged to be illegally restrained of his liberty will be taken before the court from which the writ has issued, and a return made setting forth the reasons for his restraint. The officer upon whom such a writ is served will at once report, by telegraph, the fact of such service direct to The Adjutant General of the Army and to the commanding general of the department. (See Appendix 15, Form A.)

(b) If, however, the writ of habeas corpus is issued by any State court (or a State judge) it will be the officer's duty to make respectful return, in writing,

informing the court that he holds the person named in the writ by authority of the United States pursuant to a warrant of attachment issued under section 3 of the act of Congress approved August 29, 1916 (A. W. 22), by a judge advocate of a lawfully convened general or special court-martial (or by a summary court-martial), and that the Supreme Court of the United States has decided that State courts and judges are without jurisdiction in such cases. (See Appendix 15, Form B.) After having made the above return to a writ issued by a State court or judge, it is the duty of the officer to hold the prisoner in custody under his warrant of attachment, and to refuse obedience to the mandate or process of any government except that of the United States. Consequently, it is his duty not to take the prisoner, nor suffer him to be taken, before a State judge or court upon a writ of habeas corpus issued under State authority.

170. Punishment for Refusal to Appear or Testify. Although the attendance of a witness as above described can be enforced, there is no power in a court-martial itself to compel a witness to testify or to punish him for not testifying. The only procedure is that provided in A. W. 23, as follows:

Every person not subject to military law, who being duly subpoenaed to appear as a witness before (a) any military court, commission, court of inquiry, or board, or (b) any officer, military or civil, designated to take a deposition to be read in evidence before such court, commission, court of inquiry, or board, willfully (a) neglects or refuses to appear, or (b) refuses to qualify as a witness, or to testify, or (c) produce documentary evidence which such person may have been legally subpoenaed to produce, shall be deemed guilty of a misdemeanor, for which such person shall be punished on information in the district court of the United States, or in a court of original criminal jurisdiction in any of the Territorial possessions of the United States, jurisdiction being hereby conferred upon such courts for such purpose; and it shall be the duty of the United States district attorney or the officer prosecuting for the Government in any such court of original criminal jurisdiction, on the certification of the facts to him by the military court, commission, court of inquiry, or board, to file an information against and prosecute the person so offending, and the punishment of such person, on conviction, shall be a fine of not more than \$500, or imprisonment not to exceed six months, or both, at the discretion of the court: Provided, That the fees of such witness and his mileage, at the rates allowed to witnesses attending the courts of the United States, shall be duly paid or tendered said witness, such amounts to be paid out of the appropriation for the compensation of witnesses. (A. W. 23.)

[Note: If an officer who is charged with serving a subpoena pays the necessary fees and mileage to a witness, taking a receipt therefor, he is entitled to reimbursement. (Dec. Comp. Treas., Sept. 10, 1901, published in Cir. 38, A. G. O., 1901.)]

171. Same in Philippine Islands. Every person not belonging to the Army of the United States, who, in the Philippine Islands, being duly subpoenaed to appear therein as a witness before a general court-martial of said Army (or naval court), willfully neglects or refuses to appear, or refuses to qualify as a witness, or to testify, or produce documentary evidence, which such person may have been legally subpoenaed to produce, shall be punished by a fine of not more than \$500, United States currency, or imprisonment not to exceed six months, or both, at the discretion of the court, and it shall be the duty of the proper fiscal or prosecuting officer, on the certification of the facts to him by the general court-martial, to file in the proper court a complaint against and prosecute the person so offending: Provided, That \$1.50, United States currency, for each day's attendance, and 5 cents, United States currency, per mile for going

from his residence to the place of trial or hearing, and 5 cents per mile for returning, shall be duly tendered to said witness: Provided further, That no witness shall be compelled to incriminate himself or to answer any question which may tend to incriminate him. (Acts 1130 and 1243, P. I. Commission.) The provisions of this paragraph do not apply to witnesses before special and summary courts.

[Note: Employees of the civil government of the Philippine Islands, paid from insular funds of the islands, are held not to be in the employ of the United States. (Dec. Comp. Treas., Aug. 20, 1902, published in Cir. 45, A. G. O., 1902.)]

172. Tender of Fees Preliminary to Prosecution. In case a civilian witness is duly subpoenaed under the authority of A. W. 22 and willfully neglects or refuses to appear or refuses to qualify as a witness, or to testify or produce documentary evidence which he may have been legally subpoenaed to produce, he will at once be tendered or paid by the nearest quartermaster one day's fees and mileage for the journeys to and from the court, and will thereupon be again called upon to comply with the requirements of the law. Upon failing the second time to comply with the requirements of the law a complete report of the case will be made to the officer exercising general court-martial jurisdiction over the command with a view to presenting the facts to the Department of Justice for the punitive action contemplated in A. W. 23.

173. Contempts. (a) Authority to Punish. A court-martial may punish, at discretion, subject to the limitations contained in A. W. 14, any person who uses any menacing words, signs, or gestures in its presence, or who disturbs its proceedings by any riot or disorder. (A. W. 32.) The power to so punish is vested in general, special, and summary courts-martial. Punishments adjudged for contempt, like other punishments adjudged by courts-martial, require the approval of the reviewing authority in order to be effective.

(b) Persons Who May be Punished for Contempt. The words "any person," as used in A. W. 32, appear to include civilians as well as military persons. In view, however, of the embarrassment liable to attend the execution, through military machinery, of a punishment adjudged against a civilian for a contempt under the article, it would generally be advisable for the court to confine itself to causing the party to be removed as a disorderly person, and, in an aggravated instance, to procure a complaint to be lodged against him for breach of the public peace. (Winthrop, p. 462.)

(c) Direct and Constructive Contempts. A direct contempt is one committed in the presence or immediate proximity of a court while it is in session. An indirect or constructive contempt is one not so committed. The conduct described in A. W. 32 constitutes direct contempt. But conduct on the part of a person subject to military law and amounting to a constructive contempt may be punished like any other conduct that is prejudicial to good order and military discipline, by bringing the person to trial before another court on charges under A. W. 96.

(d) Procedure. Where a contempt within the description of A. W. 32 has been committed and the court deems it proper that the offender shall be punished, the proper course is to suspend the regular business and, after giving the party an opportunity to be heard in explanation, to proceed, if the explanation is insufficient, to impose a punishment, resuming thereupon the original proceedings. The action taken is properly summary, a formal trial not being called for. Close confinement in quarters or in the guardhouse during trial of the pending case or forfeiture of a reasonable amount of pay has been the more usual punishment. A full record of the proceeding is at once made, not separate from, but in and as a part of the regular record of the case on trial,

showing the occasion and circumstances of the contempt, the words or acts which constituted it, the excuse or statement, if any, of the party, the action taken by the court, its judgment and the disposition of the offender. (Winthrop, p. 469.) Instead of proceeding against a military person for contempt in the manner contemplated by this article, the alternative course may be pursued of bringing him to trial before a new court on a charge of a disorder under A. W. 96.

SECTION II.

DEPOSITIONS.

174. When Admissible. A duly authenticated deposition taken upon reasonable notice to the opposite party may be read in evidence before any military court or commission in any case not capital, or in any proceeding before a court of inquiry or a military board, if such deposition be taken when the witness resides, is found, or is about to go beyond the State, Territory, or District in which the court, commission, or board is ordered to sit, or beyond the distance of 100 miles from the place of trial or hearing, or when it appears to the satisfaction of the court, commission, board, or appointing authority that the witness, by reason of age, sickness, bodily infirmity, imprisonment, or other reasonable cause, is unable to appear and testify in person at the place of trial or hearing: Provided, That testimony by deposition may be adduced for the defense in capital cases. (A. W. 25.)

[Note: For form for interrogatories and depositions, see Appendix 12.]

175. Before Whom Taken. Depositions to be read in evidence before military courts, commissions, courts of inquiry, or military boards, or for other use in military administration, may be taken before and authenticated by any officer, military or civil, authorized by the laws of the United States or by the laws of the place where the deposition is taken to administer oaths. (A. W. 26.)

176. Interrogatories, How Submitted. The procedure for submitting interrogatories for a deposition is as follows:

(a) The party desiring the deposition submits to the opposite party the interrogatories which he wishes propounded to the person whose deposition he desires, and the opposite party then submits to him such cross-interrogatories, if any, as he may desire. Such additional direct and cross-interrogatories may be submitted as desired; or

(b) The party desiring the deposition submits to the court, military commission, or board the interrogatories which he wishes propounded to the person whose deposition he desires. The opposite party then submits to the court, military commission, or board such cross-interrogatories, if any, as he may desire. The court, military commission, or board then submits such additional interrogatories as they may deem proper and desirable, and such additional direct and cross-interrogatories may be submitted as are desired.

(c) Where the court, military commission, or board desires that the deposition of a particular person be obtained, it will cause interrogatories to be prepared accordingly. The prosecution and defense (or other party or parties in interest) then submit such interrogatories as they may desire. Such additional interrogatories may be included as are desired by the court, military commission or board, or by a party in interest.

177. Procedure to Obtain Deposition. (a) All the interrogatories to be propounded to the person are entered upon the form for interrogatories and deposition, and the trial judge advocate, summary court, or recorder will take appropriate steps to cause the desired deposition to be taken with the least practicable delay. In an ordinary case he will either send the interrogatories to the com-

manding officer of the post, recruiting station, or other military command at or nearest which the person whose deposition is desired is stationed, resides, or is understood to be, or will send them to some other responsible person, preferably a person competent to administer oaths, at or near the place at which the person whose deposition is desired is understood to be. In a proper case the interrogatories may be sent to the department or other superior commander or to the witness himself, and in any case they will, when necessary, be accompanied by a proper explanatory letter.

(b) When interrogatories are received by a commanding officer he will either take or cause to be taken the deposition thereon. He may send an intelligent enlisted man—preferably a noncommissioned officer, if available—to the necessary place for the purpose of obtaining the deposition, or he may properly arrange by mail or otherwise that the deposition be taken. The deposition will be taken with the least practicable delay, and when taken will be sent at once direct to the judge advocate of the court-martial trying the case or other proper person.

(c) If the witness whose deposition is desired is a civilian, the judge advocate or other proper person sending interrogatories as above will inclose with them a prepared voucher for the fees and mileage of the witness, leaving blank such spaces provided therein as it may be necessary to leave blank, accompanied by the required number of copies of the orders appointing the court, military commission, or board. The judge advocate, summary court, or recorder will also send with the interrogatories duplicate subpoena requiring the witness to appear in person at a time and place to be fixed by the officer, military or civil, who is to take the deposition. If the name of this officer is not known, the space provided for it will be left blank. If a military officer takes the deposition, he will complete the witness voucher, certify it, and transmit it to the nearest disbursing quartermaster for payment. When the deposition is to be taken by a civil officer he will be asked to obtain and furnish to the military officer, requested or designated to cause the deposition to be taken, the necessary data for the completion of the witness voucher, and the latter will complete the voucher, certify it, and transmit it to the nearest disbursing quartermaster for payment.

In the case of a military witness subpoena will not accompany the interrogatories, but the officer before whom the deposition is to be taken will take the necessary steps to have the witness appear at the proper time and place.

178. Tracing Delayed Depositions. Judge advocates will be prompt in preparing and forwarding interrogatories. If the deposition is not received within a reasonable time, a letter of inquiry will be sent; and, if a prompt explanation of the delay is not received, the department commander or other proper superior will be advised.

179. Designation of Deponent by Official Title. Where it is desired to take the deposition of some person holding a certain office or position, as, for instance, a troop commander, first sergeant, quartermaster sergeant, cashier of a bank, post exchange officer, etc., and the name of the person is unknown, interrogatories may be prepared in the usual way for submission to the person holding the office or position, without naming him, unless it shall appear that the accused will be prejudiced thereby.

180. Deponent's Answer to be Responsive. Before a witness gives his answers to the interrogatories they should be read and, if necessary, explained to him, or he should be permitted to read them over in order that his answers may be clear, full, and to the point. The person taking the deposition should not advise the witness how he should answer, but he should endeavor to see that the witness understands the questions, and what is desired to be brought out by them, and that his answers are clear, full, and to the point.

181. Fees for Taking Depositions. Civil officers before whom depositions are taken for use before courts-martial will be paid the fees allowed by the law of the place where the depositions are taken.

182. Taking Depositions in Foreign Country. If the evidence desired from a witness residing in a foreign country is necessary and material and is desired to be read before a court-martial, military commission, court of inquiry, or military board sitting within any of the States of the Union or the District of Columbia, interrogatories (accompanied by the necessary vouchers for fees and mileage) will ordinarily be forwarded through military channels to The Adjutant General of the Army. They will then be transmitted by the Secretary of War to the Secretary of State, with the request that they be sent to the proper consul of the United States and the deposition of the witness be taken. In the case of troops serving along the international boundaries, outside of the United States proper, or in foreign countries, the officer exercising general court-martial jurisdiction may, in his discretion, detail an officer to take the deposition of a civilian witness, or he may send the interrogatories direct to the consul of the United States nearest the place of residence of the witness with the request that the deposition be taken. In the latter case the interrogatories will be accompanied by the proper vouchers for the fees and mileage of the witness.

[Note: For use of depositions as evidence, see Chap. XI, Evidence.]

SECTION III.

FEES, MILEAGE, AND EXPENSES OF WITNESSES.

183. Officers and Soldiers, Active or Retired. Officers and soldiers on the active list required to attend a court-martial as witnesses are not entitled to receive mileage and fees like civilian witnesses but are entitled to such travel allowances as the law allows to officers and soldiers traveling under orders; but a retired officer, not assigned to active duty, or a retired soldier, is entitled to the per diem and mileage provided for civilian witnesses not in Government employ.

[Note: The fees, mileage, and expenses of persons in the military service or of civilians in the Government employ duly subpoenaed and appearing before civil courts, whether State or Federal, are payable by the civil authorities.]

184. Civilians in Government Employ. Civilians in the employ of the Government when traveling upon summons as witnesses before military courts are entitled to transportation in kind from their place of residence to the place where the court is in session and return. If no transportation be furnished, they are entitled to reimbursement of the cost of travel actually performed by the shortest usually traveled route, including transfers to and from railway stations, at rates not exceeding 50 cents for each transfer, and the cost of sleeping-car accommodations to which entitled or steamer berth when an extra charge is made therefor. They are also entitled to reimbursement of the actual cost of meals and rooms at a rate not exceeding \$3 per day for each day actually and unavoidably consumed in travel or in attendance upon the court under the order or summons. No allowance will be made to them when attendance upon court does not require them to leave their stations.

185. Civilians Not in Government Employ. A civilian, not in Government employ, duly summoned to appear as a witness before a military court, commission, or board or at a place where his deposition is to be taken for use before such court, commission, or board, will receive \$1.50 for each day of his actual attendance before such court, commission, or board or for the purpose of having his deposition taken, and 5 cents a mile for going from his place of

residence to the place of trial or of the taking of his deposition, and 5 cents a mile for returning, except as follows:

(a) In Porto Rico and Cuba he will receive \$1.50 a day while in attendance as above stated and 15 cents for each mile necessarily traveled over stage line or by private conveyance and 10 cents for each mile over any railway or steamship line.

(b) In Alaska, east of the one hundred and forty-first degree of west longitude, he will receive \$2 a day while in attendance as above stated and 10 cents a mile, and west of said degree \$4 a day and 15 cents a mile.

(c) In the States of Wyoming, Montana, Washington, Oregon, California, Nevada, Idaho, Colorado, Utah, New Mexico, and Arizona will receive \$3 a day for the time of actual attendance as above stated, and for the time necessarily occupied in going to and returning from the same, and 15 cents for each mile necessarily traveled over any stage line or by private conveyance and 5 cents for each mile by any railway or steamship.

[Note: 1. Travel must be estimated by the shortest usually traveled route—by established lines of railroad, stage, or steamer—the time occupied to be determined by the official schedules, reasonable allowance being made for unavoidable detention.

2. These rates apply to the Philippine Islands. (See Cir. 45, A. G. O., 1902.)

3. A civilian not in Government employ, when furnished transportation on transport or other Government conveyance, is entitled to 57.142 per cent of 5 cents per mile (equal to 2.857 cents per mile). (Comp. Dec., Aug. 20, 1902, published in Cir. 45, A. G. O., 1902.)]

186. Payment for Return Journey. The charges for return journeys of witnesses will be made upon the basis of the actual charges allowed for travel to the place of giving testimony, and the entire account thus completed will be paid upon discharge from attendance, without waiting for completion of return travel.

187. Contents of Vouchers. The items of expenditure authorized for civilian witnesses will be set forth in detail and made a part of each voucher for reimbursement. No other items will be allowed.

The certificate of the judge advocate, or other officer, will be evidence of the fact and period of attendance, and will be made upon the voucher.

When payment is made under the provisions of paragraph 184, the correctness of the items will be attested by the affidavit of the witness, to be made, when practicable, before the officer who certifies the voucher.

188. Witness in Several Trials on Same Day. A civilian attending as a witness in several court-martial trials on the same day is entitled to a separate fee for attendance in each case (Dig. Dec. Comp., 1894 to 1902, p. 476), but will receive mileage in only one case.

189. Voucher to be Delivered to Witness. A civilian witness not in Government employ who appears to testify is entitled, upon his discharge from attendance, to receive from the judge advocate, if any (or summary court, recorder of court of inquiry or board, etc.), his witness voucher properly filled out. If not practicable to deliver to the witness his voucher at that time his address will be obtained and his witness voucher will be promptly forwarded to the nearest disbursing quartermaster. To entitle a witness to the payment of fees and mileage it is not essential that he should produce a subpoena.

190. Lost Voucher. Where the voucher of a witness has been lost, a new voucher may be issued by the judge advocate upon a satisfactory showing of such loss, supported by affidavit. The new voucher should be so noted as to indicate its character and should be forwarded to the Quartermaster General for settlement.

191. Fees for Service of Subpœnas. There is no fee or compensation fixed by statute or regulation for the service of subpœnas to secure the attendance of witnesses before military courts. Ordinarily service will be made by an officer or soldier, but if service by a civilian is deemed by the judge advocate or department commander to be preferable, the services of a civilian may be used, and the fees and mileage allowed by law in that locality for similar services may be paid by a quartermaster from the appropriation "for expenses of courts-martial, etc."

192. Employment of Experts. When the employment of an expert is necessary during a trial by court-martial the necessity for such employment should be made to appear by a resolution of the court. This resolution will be forwarded by the judge advocate, in advance of the employment, to the Secretary of War through the authority appointing the court, with a request for authority to employ the expert and for a decision as to the compensation to be paid him. The request should, if practicable, state the compensation that is recommended by the judge advocate. The compensation of the expert, including the compensation for photographs that may be necessary in connection with his testimony, will be paid out of the appropriation "for expenses of courts-martial, etc."

[Note: Where, in advance of trial, the judge advocate knows that the employment of an expert will be necessary, he should, without delay, apply through the appointing authority to the Secretary of War for authority to employ the expert, stating the necessity therefor and probable cost thereof.]

193. Expenses of Courts-martial, Etc., How Payable. The fees of civilian witnesses, the mileage of both civil and military witnesses, the legal fee of the proper official for certified copy of a marriage certificate, the expense of procuring a transcript of a stenographer's notes of testimony taken before a United States commissioner, the fees of a notary for swearing a witness, and the expenses (including railway fare and hotel bills) of a United States consul stationed in a foreign country in taking depositions, when such items are incurred in connection with a trial before a court-martial or military commission, or investigation before a court of inquiry, are paid by the Quartermaster Corps out of the annual appropriation "for expenses of courts-martial, etc." If no quartermaster be present at the place where the court is sitting the vouchers may be transmitted direct to any quartermaster. Such vouchers are not transferable.

[Note: Blank vouchers may be procured from any disbursing quartermaster.]

CHAPTER XI.

COURTS-MARTIAL—EVIDENCE.

(Revised and approved by Professor Wigmore.)

SECTION I.

INTRODUCTORY PROVISIONS.

194. General Remarks. The oath taken by members of general and special courts require them to try and determine "according to evidence" the matter before them. A summary court, although it does not take such an oath, will also determine the matter before it solely on the evidence in the case, and no evidence would be admissible before a summary court that is not admissible before general and special courts. The evidence thus referred to, according to which the court must decide the case, means all the matters of fact which

the court permits to be introduced, or of which it takes judicial notice, with a view to prove or disprove the charges. Every item of this evidence must be introduced in open court, and it would be seriously irregular and improper for any member of the court to convey to other members, or to consider himself, any personal information that he possessed as to the merits of the case or the character of the accused, without stating it in open court and, if a witness for the prosecution, retiring as a member of the court, as provided in A. W. 8. But while their knowledge of the facts must come to them from the evidence, the members are expected to utilize their common sense, their knowledge of human nature and the ways of the world in weighing the evidence and arriving at a finding. In the light of all the circumstances of the case they should consider the inherent probability or improbability of the evidence given by the several witnesses, and with this in mind the court may properly believe one witness and disbelieve several whose testimony is in conflict with that of the one.

The methods which are employed by courts of justice to ascertain the facts—that is, the truth—respecting any past transaction closely resemble those resorted to by an individual for a similar purpose. If A desires to ascertain whether a particular act did or did not take place, he addresses himself to those who were in a situation to witness the occurrence itself, and so endeavors to obtain from each person present his version of the occurrence. From the testimony thus obtained he forms his conclusion as to whether or not the act took place. In the course of his investigation, however, he finds that all who were present and witnessed the occurrence as bystanders do not give testimony of equal importance or value. Some having greater powers of observation or better memories than others give in consequence more valuable testimony. Some of the witnesses, being children or persons of weak or unsound mind, are without the requisite mental capacity to observe facts or to appreciate their relations to each other; others, by reason of their bad character, are not regarded as worthy of belief by their fellow citizens; still others were insane or quite under the influence of intoxicating liquor at the time of the occurrence, and so were incapacitated from observing. A, therefore, rejects some of the statements as entirely untrustworthy; to others he attaches weight in proportion to their worthiness of belief, and so endeavors to reach a conclusion as to the truth of the occurrence or event which was the original subject of his inquiry. (Davis, p. 244.)

195. The Issues. It is well to understand, in the beginning of this consideration of the rules of evidence, the purpose for which the evidence is to be introduced in the manner prescribed and laid down by the rules. The purpose is to elucidate and settle the issues raised in the case and to confine, under a well devised and developed system of limitations that experience has shown to best conserve the interests of all concerned, the evidence to such issues.

In every criminal case the burden is on the prosecution to prove, by relevant evidence, (a) that the offense charged was really committed, (b) that the accused committed it, and (c) that the accused had the requisite criminal intent at the time. These three facts broadly constitute the issues in the case. Incidental issues will be formed by the necessity for proof of the essentials—that is, the gist—of an offense and as to character. Not only the allegations set out in the charges and specifications, but the component parts of such allegations as well, raise the issues to be decided. For instance, in a case of larceny, where it is charged that the accused “did take, steal, and carry away” certain articles of value, the component parts of the allegation not specifically set out are that such articles were taken (a) fraudulently and (b) with the felonious intent of depriving the owner of them.

196. Analysis of Evidence by Judge Advocate and Counsel. The ends of justice and saving of time of all concerned imperatively demand careful analysis by both judge advocate and counsel for accused of the evidence requisite for proof of and defense against the offenses charged. As a prerequisite to such analysis the law as to the offenses charged should be studied with a view to determining the essential elements of the offense; that is, the things that must be proved by the judge advocate in order to justify a conviction and those that must be proved by the defense to disprove or place in reasonable doubt the proof offered by the prosecution. In other words, the prosecution and defense should limit the proffer of testimony to that which is relevant to these issues, and these only, and should prepare the case with only that in view. The essentials or gist of the offense (see Chap. XVII) should be so clearly defined in the preparation of the case that both the judge advocate and counsel for accused may be ready, by appropriate objections before the court, to limit the introduction of evidence to relevant matter only, bearing in mind that only the essentials of the offense must be proved and that what may be properly considered surplusage may be disregarded.

Before trial an examination of all the sources of the evidence to be submitted should be made by the judge advocate and counsel for accused and a determination as to the order in which it will be introduced should be reached. The case should be presented in sequence of events as nearly as possible, just as a story would be told by one party who had seen everything to which the different witnesses will testify. When several offenses are charged, especially if unrelated, the evidence should be directed to the development of their proof in the order charged, so that neither the court nor the accused may be in doubt at any time as to the specific offense to which the testimony being given refers. Counsel for accused should adhere to the same principle in presenting evidence for the defense.

197. Duties of Court—Opening Statements. If the court will augment the preparation invoked in the preceding paragraph by constantly bearing in mind what the issues are and holding judge advocate and counsel strictly to them, it will tend to the expedition of business, the securing of justice, and the conservation of the interests of all concerned. The court should have before it as a guide, always by reference to this manual in each case, the following essential considerations as to any evidence that may be tendered: (1) That it is relevant to the issue; (2) that it is not within the rule rejecting hearsay evidence; (3) that, if it is a confession or admission, it is legally admissible; (4) that where documents are used the original should be obtained (except when a copy is admissible) and that the genuineness should be verified; (5) that any witnesses called are legally competent to give evidence; (6) that the examination of witnesses is fairly and properly conducted. (British Manual.)

Further reference will always be had to the paragraph of the manual that sets out the gist of the offenses charged (see Chap. XVII), and this will be read to the court in each case by the judge advocate immediately after the accused has pleaded to the charges and specifications.

It will be appropriate in all cases—and in an important or complicated case it will be required by the court—for the judge advocate, before proceeding with the introduction of evidence, to make a brief statement of “the nature of the issues to be tried and what he expects to prove” (1 Thompson on Trials, 246) to sustain them. Counsel for the accused may also make an opening statement as to his defense, either just following the statement of the judge advocate or just after the judge advocate has rested his case, as counsel deems better, but the latter course is customary. It would be highly reprehensible

for either judge advocate or counsel to get before the court in such opening statement, as a probable means of influencing its judgment, matters as to which no evidence is intended to be offered or as to which it is known that the evidence to be offered is clearly inadmissible, just as it would be so reprehensible for either to suggest for the same purpose, by questions propounded to a witness, matters known not to exist or that the rules of evidence clearly make inadmissible.

198. Rules of Evidence for Courts-Martial. Prior to the act of August 29, 1916 (A. W., 38), courts-martial followed in general the rules of evidence, including the rules as to competency of witnesses to testify, that are applied by Federal courts in criminal cases. These consisted of the rules of the common law as they existed in the several States at the adoption of the Federal Constitution in 1789, as modified from time to time by subsequent acts of Congress. But courts-martial were, however, not required by express statute to follow these rules, and have always been allowed to pursue a more liberal course in regard to the admission of testimony than do, habitually, the civil tribunals. Their purpose was to do justice; and if the effect of a technical rule was found to be to exclude material facts or otherwise obstruct a full investigation, it was deemed that the rule may and should be departed from. Proper occasions, however, for such departures were regarded as exceptional and unfrequent. (Winthrop, 473.) It was believed that "courts-martial had much better err on the side of liberality toward a prisoner than, by endeavoring to solve nice and technical refinements of the laws of evidence, assume the risk of injuriously denying him a proper latitude for defense." (G. C. M. O. 32, 1872; see 3 Greenleaf, secs. 469, 476.) And now, by the provisions of the act of August 29, 1916 (38 A. W.):

The President may, by regulations which he may modify from time to time, prescribe the procedure, including modes of proof, in cases before courts-martial, courts of inquiry, military commissions, and other military tribunals: Provided, That nothing contrary to or inconsistent with these articles shall be so prescribed: Provided further, That all rules made in pursuance of this article shall be laid before the Congress annually.

The modes of proof, therefore, including the rules of admissibility for witnesses and other evidence, are now by express congressional enactment placed under the authority of Executive regulation; and the rules laid down in this Manual have the force of such regulation. They therefore form the only binding rules, except such rules of evidence as are expressly prescribed (1) in the Articles of War; (2) in the Federal Constitution; and (3) in such Federal statutes as expressly mention courts-martial.

199. Rules, Where Found. The common-law rules, with their legislative modifications, will be found in the various textbooks on the subject of evidence. These rules have been the subject of much interpretation by the courts, which will be found in the published decisions of such courts. While resort to textbooks and decisions will sometimes be necessary in the trial of an especially difficult case, it is the purpose of this chapter to state the rules of evidence applicable to trials by courts-martial in sufficient fullness to cover the field in practically all cases. Where the rule herein laid down is clear it should be taken as law (subject to the discretionary relaxation noted in par. 198), unless modified by Federal statute or some decision of the Federal courts made since the date of the publication of the Manual.

Where, in the preparation of a case, the judge advocate or counsel finds that the rules laid down in this chapter are not sufficiently specific clearly to settle a specially important question as to the competency of a witness to testify or

as to the admissibility of evidence intended to be introduced or the exclusion of such as the nature of the case or other information indicates will be offered, he should secure in advance of the trial and have with him in court authorities to sustain his contentions for such admission or exclusion.

But it should be kept in mind that the use of such authorities is merely to inform the court of the reason of a rule or the good sense and fairness of a proposed ruling, and not to control the decision of the court with binding effect. This caution rests on the two grounds of principle: First, because the State decisions and statutes, and the writers of treatises, never have had any binding effect on courts-martial, the Federal statutes and decisions being the only ones that are entitled to such effect; and, secondly, because since the Federal statute of August 29, 1916 (A. W., 38), the modes of proof in courts-martial are governed by regulations issued by presidential order, as explained in par. 198.

200. Rules of Evidence to be Applied Irrespective of Rank. The rules of evidence should be applied by military courts irrespective of the rank of the person to be affected. Thus a witness for the prosecution, whatever be his rank or office, may always be asked on cross-examination whether he has not expressed animosity toward the accused, as well as whether he has not on a previous occasion made a statement contradictory to or materially different from that embraced in his testimony. Such questions are admissible by the established law of evidence and imply no disrespect to the witness, nor can the witness properly decline to answer them on the ground that it is disrespectful to him thus to attempt to discredit him. (Digest, p. 529, XI, A, 3.)

201. Protection of Witnesses. It is the duty of the court to protect every witness from irrelevant, insulting, or improper questions; from harsh or insulting treatment; and from unnecessary inquiry into his private affairs. The court must forbid any question which appears to be intended merely to insult or annoy a witness, or which, though proper in itself, appears to be needlessly offensive in form. (Proposed codification, N. Y. Rules.)

202. Evidence Must be Material and Relevant. Evidence to be admissible must be not only material but relevant to the issues in the case. Evidence is not material when the fact which it aims to prove is not a part of the issues in the case. Evidence is not relevant when, though the fact which it aims to prove is material, yet the evidence itself is too remote or far-fetched to have any probative value for that purpose. Where evidence is apparently irrelevant it may, however, be admitted provisionally upon a statement of the judge advocate or counsel that other facts to be proved will show its relevancy, but the court should afterwards exclude it, if its relevancy is not shown. Indirect evidence is known as circumstantial evidence, and signifies merely any and all evidence which is not testimonial; i.e., the assertion of a witness or other person. For example, on a charge of larceny of a wallet, the statement of a witness that he saw the accused take the wallet from the owner's overcoat is testimonial evidence; the finding of the wallet hidden in the blanket belonging to the accused is circumstantial evidence. Obviously, a fact constituting circumstantial evidence must itself usually be proved in its turn by testimonial evidence; for example, the finding of the wallet as indicated above would be evidenced by a sergeant's testimony that he searched the accused's blanket and found the wallet.

Testimonial evidence is thus classed by itself, because the weight to be given to testimony is subject to a group of considerations which affect all human assertions alike.

SECTION II.

CIRCUMSTANTIAL EVIDENCE.

203. Circumstantial Evidence. Circumstantial evidence is not resorted to because there is an absence of direct or testimonial evidence. It is introduced even when there is direct evidence; nor is it an inferior substitute for direct evidence. Circumstantial evidence may furnish a safe and satisfactory ground for belief, while on the other hand direct or testimonial evidence may leave the court in doubt. The proper effect of circumstantial as compared with direct evidence has been stated as follows:

When circumstances connect themselves closely with each other, when they form a large and strong body so as to carry conviction to the minds of a jury, it may be proof of a more satisfactory sort than that which is direct. In some lamentable instances it has been known that a short story has been got by heart by two or three witnesses; they have been consistent with themselves, they have been consistent with each other, swearing positively to a fact, which fact has turned out afterwards not to be true. It is almost impossible for a variety of witnesses, speaking to a variety of circumstances, so to concoct a story as to impose upon a jury by a fabrication of that sort, so that where it is cogent, strong, and powerful, where the witnesses do not contradict each other or do not contradict themselves, it may be evidence more satisfactory than even direct evidence, and there are more instances than one where that has been the case. (Wigmore, 26.) In a case depending upon circumstantial evidence the court, in order to convict, must find the circumstances to be satisfactorily proved as facts, and must also find that those facts clearly and unequivocally imply the guilt of the accused and can not reasonably be reconciled with any hypothesis of his innocence. (Davis, p. 265.)

204. Illustration of Difference Between Good and Bad Circumstantial Evidence. The accused is charged with stealing clothes from the locker of a comrade. The following circumstances are not admissible as circumstantial evidence:

- (1) The accused is very much disliked by other members of his company.
- (2) A number of thefts from comrades have taken place in the company, and the general belief in the company is that he was connected with them.
- (3) He was tried once before for larceny of clothes from a comrade and was convicted.
- (4) He is suspected of being a deserter from a foreign army.
- (5) He belongs to a race or enlisted in a locality that does not entertain very strict notions of right and wrong as to the manner of acquiring possession of property.

But the following series of circumstances should be admitted in evidence:

- (1) The clothes were taken while the company was at drill, and there was no one known to have been in the room where the locker was.
- (2) The accused was not at drill, but was detailed as kitchen police that day.
- (3) He was absent from his duty as kitchen police a short while during the time when the clothes disappeared.
- (4) One of the articles stolen was found in the locker of the accused.
- (5) The accused was known to be without money the day before the larceny, and that evening left the post with a bundle under his arm and was seen to enter a certain house and the same night had money in his possession.
- (6) Upon the house being searched next day most of the missing clothes were found there.
- (7) The person found in the house identified the accused as the one from whom he had purchased the missing clothes.

205. Evidence of Character of Accused and of His Services. In trials by court-martial the good character of the accused, as evidenced by his reputation, may become of importance in four classes of cases: First, when the evidence of guilt is not strong, evidence of the good reputation of the accused will strengthen the presumption of innocence; second, when the punishment is discretionary such evidence may be introduced with a view to inducing the court to impose a milder sentence in the case of a plea of guilty or a conviction; third, when the punishment is mandatory such evidence may be introduced with a view to inducing the court to recommend clemency; fourth, in any case such evidence may be introduced with a view to inducing the reviewing authority to extend clemency. An accused may also introduce evidence of his character and services. In any such case, if the accused offers evidence as to character, record, or services, as shown by statement of service or otherwise, the prosecution may rebut such evidence. (See 1, 2, 4, and 5, par. 204, p. 1342, for illustrations of what may not be used in rebuttal to evidence bad character.) Evidence as to the bad character of an accused, offered by the prosecution or at the solicitation of the court prior to the introduction by the accused of evidence as to his good character, is inadmissible. Not even the fact that before the introduction of such evidence the accused consented to its introduction will make it any the less irregular. If, however, the accused takes the witness stand his character for veracity as a witness may be attacked as in the case of any other witness.

206. Motive, Etc. Motive or lack of motive as impelling the accused toward or against the act charged or that class of acts often throws a flood of light upon the issue as to guilt or innocence. So important has it been deemed for the ascertainment of truth that it has invoked exceptions to the character rule. Thus the doing of another criminal act, not a part of the issue, while not admissible as evidence of the doing of the criminal act charged, or of the bad moral character of the accused, is admissible when offered for the specific purpose of evidencing design, plan, motive, identity, knowledge, or other relevant facts distinct from moral character. (Wigmore's P. C. 64, 65.)

Illustrations. (1) In a trial for arson of a barn, the defendant's attempt on two former occasions to burn houses in other parts of the town is not admissible, unless for the purpose of evidencing intent or motive.

(2) On a charge of murder by poison, the defendant's murders of other members of the same family by poison, if admissible to show motive or intent, are not excluded because they are criminal acts and might cause undue prejudice. (Wigmore's P. C. 64, 65.)

(3) The declarations, threats—especially his other similar criminal acts—of the accused are admissible.

(4) When the accused is charged with having knowingly committed an offense or having knowledge of the essence of the offense, prior similar acts that would probably have led to some knowledge or warning would be admissible.

SECTION III.

TESTIMONIAL EVIDENCE.

207. Testimonial Evidence. Testimonial evidence is the statement of some person offered as evidencing the fact asserted by it. For example, a statement that a rifle was discharged at a certain hour and place is testimonial evidence that it was so discharged.

Such statements may be made either in court or out of court. If made in court as a witness, then the witness must be "competent." If made out of

court, then even if he is competent, the statement is not admissible, because the hearsay rule forbids.

The competency of the witness is therefore the important thing to determine before admitting testimonial evidence.

208. Competency Rule in General. The modern tendency, as evidenced to a great extent by statutes of different States, and to a limited extent by Federal statutes, is to recognize practically no grounds for incompetency, but to admit the material and relevant testimony of a witness offered by either side and leave his credit to be estimated according to all the circumstances.

Among the few common-law grounds of incompetency (see par. 198) now remaining in some States, but no longer to be recognized in courts-martial, are (1) conviction of felony and of misdemeanors involving dishonesty ("crimen falsi"), especially perjury; (2) relationship, as wife or husband of the accused. (See pars. 211 and 213.)

209. Competency of Witness. The competency of a witness depends upon several elements, which may be divided thus: (1) His general moral and mental capacity; (2) his special expertness in subjects on which expertness is required; (3) his knowledge of the specific facts on which he testifies.

210. General Capacity of Witness. The general capacity of an adult witness is always presumed; i.e., the party disputing it must always prove to the court the specific ground of incapacity or else the witness should be allowed to testify. The admissibility of children as witnesses is not regulated by their age, but by their apparent sense and understanding. Children, therefore, of any age, may be examined, if capable of distinguishing between good and evil, but always under oath.

There are very few grounds of incapacity to-day recognized by the law.

211. Moral Incapacity of Witness. Moral incapacity was recognized in the common-law rule that rendered incompetent as a witness any person convicted of treason, felony, or the crimen falsi.

But this incapacity has been abolished in almost all States, except that several retain it with a restriction to convictions for perjury. In courts-martial, conviction of any offense does not disqualify a witness. But it may, of course, be shown to diminish his credit. (See Credibility of witnesses, Sec. VI, post.)

212. Mental Incapacity of Witness. Mental incapacity is a disqualification, but only to a limited extent, as follows: Insanity or intoxication may disqualify, but only to the extent to which they affect the subject of the testimony. For example, a religious hallucination as to angels saving a man from bullets does not disqualify the person from testifying as to the time of lighting a camp fire or the persons on duty at a certain post. Intoxication would disqualify only if it was so complete as to render the person senseless at the time of the event to be testified to.

213. Interest or Bias. Interest or bias does not disqualify; i.e., the fact that a person owes a party money or has a property interest with or against a party, does not disqualify him from testifying for or against that party. A person who is a relative or an avowed enemy of the accused is not disqualified from testifying for or against the accused. The weight of such testimony when admitted is a different matter. (See Credibility of witnesses, Sec. VI, post.)

Marital relationship was a disqualification at common law. Except in certain cases, husband or wife could not testify either for or against one another. This rule has been abolished in most States. In courts-martial the rule is as follows:

(1) Wife or husband of an accused may testify on behalf of the accused without restriction.

(2) Wife or husband of an accused may not be called to testify against the

accused without the consent of both accused and witness, unless on a charge of an offense committed by the accused against the witness.

(3) Wife or husband of any person may not testify to confidential communications of the other, unless the other give consent.

The last two rules are rules of privilege, and are more fully stated under "Privilege."

214. Where Accused is Witness. It was provided by act of Congress of March 16, 1878 (20 Stat., 30), that in trials by courts-martial and courts of inquiry as well as by United States courts and Territorial courts, the accused "shall at his own request, but not otherwise, be a competent witness," and that "his failure to make such request shall not create any presumption against him." An accused person thus may, at his option, take the stand as a witness, but in so doing he occupies no exceptional status and becomes subject to cross-examination like any other witness. The same rules as to the admissibility of evidence, privilege of the witness, impeaching of his credit, etc., will apply to him as to any other witness, and the only noticeable difference between his examination and that of other witnesses will be that he will in general, naturally and properly, be exposed to a more searching cross-examination. (Winthrop, 508.) So far as the latitude of the cross-examination is discretionary with the court, a greater latitude may properly be allowed in his cross-examination than in that of other witnesses (*id.*, 545), but, like them, he may not be cross-examined beyond the field of his direct examination, except to test his credibility as a witness. Where he is charged with a series of offenses and, taking the stand in his own defense, testifies as to a part of them only, he can not be cross-examined as to the others.

215. Procedure Where Accused Fails to Testify or Make a Statement. In each case tried by a general court-martial in which the accused does not testify or make any statement in his own behalf, it shall appear on record that the president of the court explained to the accused that he may testify in his own behalf if he so desire, or may make an unsworn statement to the court in denial, in explanation, or in extenuation of the offense with which he stands charged. The explanation by the president and the reply of the accused thereto shall appear upon the record of trial. The same rule will apply in cases tried by special court-martial when the evidence heard is made of record.

216. Effect of Turning State's Evidence. The fact that an accomplice turns state's evidence does not make him immune from trial, unless immunity has been promised him by the authority competent to order his trial. But, if an accomplice goes on the stand and makes a full and frank statement of the circumstances of the offense, it is customary to pardon his offense, or impose upon him a milder punishment than upon his accomplices.

217. Competency of Accused When Testifying Against an Accomplice. The rule of the common law was that an accused person was incompetent to testify for or against his accomplices. This rule is nullified by the act making the accused a competent witness when testifying at his own request. The rule now is that when an accused chooses to testify he may do so, and that it does not matter whether his testimony is for or against himself or for or against his codefendant. (Wolfson v. U. S., 101 Fed. Rep., 436.)

218. Expert Capacity. On most matters, the ordinary experience of any adult qualifies him to observe and testify. Hence, all persons are ordinarily qualified to testify on ordinary matter. But, when the subject is one upon which special experience is required, it will not be presumed that a witness possesses such special experience, for ordinarily he does not. Hence, a witness called upon such a subject must be shown to possess such special experience; he is therefore called an "expert" on that subject. A person may be an expert

on one subject, but not on another. Hence, whenever such a topic calls for testimony, the witness's special experience in it must first be shown. Whether a piece of leather has been recently tanned; whether a stain is human blood or animal blood, are instances of topics which might well require experts, if important to the issue.

In applying this rule, pedantry would be out of place. Experts on all subjects are seldom within reach of a court-martial, and liberality of application is a necessity. Good sense and ordinary caution will determine whether an expert is needful for accurate discovery of the truth. For example, an expert in alcohol would hardly be needed to testify to whether the contents of a certain bottle were sufficiently alcoholic to be intoxicating, but in a homicide case, where the cause of death was disputed, obviously a medical man's testimony should be secured.

219. Insanity of Accused. Where the existence of mental disease or derangement on the part of the accused, either at the time of the trial or at the time of the commission of the alleged wrongful act, becomes an issue in the trial of the case, the court will stop its proceedings and immediately report the fact to the convening authority. The convening authority will forthwith order a board of medical officers to take the accused under their personal observation for such length of time as may be sufficient to determine the nature and extent of the disease or derangement, if any, and to extend their examination, in a case of any doubt, to written inquiries directed to probation officers, physicians, clergymen, school and prison authorities, mayors, postmasters, etc., for the purpose of fully developing, from any trustworthy sources, the question as to any mental, moral, or physical defects of childhood, or later, that may throw light upon the question as to whether the accused at the time of the wrongful act had the necessary criminal mind to commit the wrongful act charged. Where the information from any source indicates the absence of insanity, the accused will be entitled to cross-examine the party giving such information. Such information and its source will be brought to the attention of the judge advocate, who will confer with the counsel for the accused for the purpose of securing the presence of the informant for cross-examination before the court, or his deposition if he is not available to testify.

The medical board will make a written circumstantial report as to the character of their observations, attach thereto such written evidence as may have been considered, and state their opinion as a board, or individually if there is any difference of opinion, as to whether or not the accused had at the time of their report sufficient mental capacity to justify his being brought to trial, or had at the time of the wrongful act the necessary criminal mind to commit the wrongful act charged, and will further state their opinion, if it is found that the accused did not have the necessary criminal mind to commit the wrongful act charged, as to whether the accused would be now a menace to the public safety.

The medical report as a whole will be admissible in evidence, and when admitted the court will have called as a witness for the court at least one of the members of the board to be thoroughly examined, as if on cross-examination, by counsel for the accused, the judge advocate or the court, as to any feature of the report, and on request of the accused the remaining members of the board shall be called for cross-examination.

If insanity is indicated to either judge advocate or counsel for accused prior to the assembling of the court it would be appropriate for the judge advocate, at request of counsel for accused or of his own motion, to report such indications to the reviewing authority with the idea of obviating the necessity for

the assembling of the court until a medical board had been convened and reported as outlined above.

In any case where the convening authority accepts the finding of the board on the question as to necessary criminal mind and decides to withdraw the case from consideration of the court-martial it would accord with modern ideas of justice, if any doubt whatsoever existed as to the accused having committed the wrongful act charged against him, to grant, upon request of counsel or a member of the accused's family, a trial upon the charge with a view to relieving him, though insane, of the stigma attached to the accusation. In such instance the case should be proceeded with, and if the court determines that the accused committed the wrongful act charged but was insane at the time of its commission or at the time of trial the findings will be to that effect. And in any case where a finding by the court of "not guilty" would be based upon lack of criminal mind, the findings should be in accordance with those prescribed by the preceding sentence.

220. Testimonial Knowledge. A prime qualification in a witness is that he should speak only of what he has observed with his senses, or had an opportunity to observe. E.g., a witness on sentry post at night might testify that he heard three shots and saw two persons running in the distance, but should stop with telling what he heard and saw. To proceed further and state that the shots killed a mule and that the accused was one of the persons running may involve beliefs of his that are based on rumors and gossip picked up afterwards, beliefs for which he has no status as a witness. An important feature of correct trial methods is to summon every person who saw or heard anything relevant, but to require every such person to limit his testimony to what he himself saw or heard. In this way the court arrives (if the testimony be credited) at the basic circumstances on which the proof must be built up.

This rule also has, of course, its liberal side, based on practical experience. For example, if the issue be as to a stolen case of soap, and the quartermaster has an invoice showing 400 cases received, and he is asked how many are remaining in stock, it is not necessary that he should personally count every case; it might suffice if he ticked off 39 large bales of 10 cases, each intact, and then found a bale of 9 with 1 missing.

This fundamental principle of requiring personal knowledge (or opportunity to observe) leads up to the hearsay rule, applicable to statements made by persons not in court. The hearsay rule signifies that when a witness testifies not to what he himself saw or heard but to what he heard some one else say, his testimony on that point shall be rejected, and the person who said it shall be produced in the court to testify, the object being to get at the first-hand source of knowledge. Experience shows again and again that when that other person is produced either what he actually said was something very different or else when cross-examined he turns out to have only a scanty trustworthiness. For example, if the sentry in the above instance testifies that he did not identify the person running, but afterwards in barracks Sergt. S said that it was X, the court would exclude what Sergt. S said, would summon S to testify in person, and then it might appear that all Sergt. S knows about it is that X came into barracks half an hour later looking as if he were out of breath, and this might be connected up with an errand on which X had been sent, by testimony of his captain. The hearsay rule, therefore, is a corollary of the principle that a witness must testify from what he has himself seen and heard, and not from what another person has told him or written to him.

221. Hearsay Evidence. The hearsay rule is subject to some well-established exceptions; most of them are based on the general principle that there is an unavoidable necessity for using the hearsay, because the person is deceased or

for some other reason can not be secured as a witness. These exceptions are now settled, however, into fixed rules, irrespective of the above principle.

Nevertheless, in courts-martial the liberal principle, now adopted in one or two States, may well be followed in extreme cases, viz., wherever the person whose statement is desired to be offered (whether written or oral) is deceased at the time of the trial, and was a person having personal knowledge of the facts, his statement may be admitted, in the discretion of the court. The following are familiar instances of hearsay in court-martial cases:

(1) A soldier is being tried for desertion. Pvt. A is able to testify that Pvt. B told Pvt. A that the accused told Pvt. B that he (the accused) intended to desert at the first opportunity. Such testimony from Pvt. A would be hearsay and would be inadmissible.

(2) A soldier is being tried for larceny of clothes from a locker. Pvt. A is able to testify that Pvt. B told Pvt. A that he (Pvt. B) about the time the clothes were stolen saw the accused leave the quarters with a bundle resembling clothes. Such testimony from Pvt. A would be hearsay and would be inadmissible.

(3) A soldier is being tried for selling clothing. Policeman A is able to testify that, while on duty as policeman, he saw the accused with a bundle under his arm go into a shop, that he (the policeman) entered the shop and the accused ran away and the policeman was unable to catch him. The policeman the next day asked the proprietor of the shop what the accused was doing there, and the proprietor replied that the accused sold him some clothes issued by the Government and that he paid the accused \$2.50 for them. The testimony of the policeman as to the reply of the proprietor would be hearsay and would be inadmissible. The fact that the policeman was acting in the line of his duty at the time the proprietor made the statement would not render the evidence admissible.

In the foregoing instances the fact that the accused said he intended to desert, that the accused left the quarters with a bundle, and that the accused sold the proprietor the clothes, constitute most important evidence and can be proved in the first two instances by Pvt. B, and in the third instance by the proprietor, but they can not be proved by hearsay evidence.

If evidence is hearsay it does not become admissible because it was made to an officer in the course of an official investigation. For instance, in illustration (1), if Pvt. B had made his statement to Capt. C in the course of an official investigation by Capt. C, the statement would still be hearsay and inadmissible.

Official statements and opinions as to either guilt or innocence expressed by an officer; as, for instance, a company, regimental, or department commander, or by a staff officer, in an indorsement, is not admissible in evidence by reason of its official character or the rank or position of the officer making it, as it would be hearsay. Nor is such a statement or opinion evidence because it is among papers referred to the trial judge advocate with the charges. It would be irregular to permit such statements or opinions to come to the attention of the court. If they do become known to the court they should, of course, not be considered in arriving at a finding or sentence.

222. Dying Declarations. On trials for murder and manslaughter, the law recognizes an exception to the rule rejecting hearsay by allowing the dying declarations of the victim of the crime, in regard to the circumstances which produced his condition, and especially as to the person by whom the violence was committed, to be detailed in evidence by one who heard them. The reason for admitting such declarations where the victim believes death is impending is that his belief is equal to the sanctity of an oath in causing him to tell the truth. It is no objection to their admissibility that they were brought out

in answer to leading questions or upon urgent solicitations addressed to him by any person or persons; and if, instead of speaking, he answered the questions by intelligible signs these signs may equally be testified to. Dying declarations are admissible as well in favor of the accused as against him. It is to be remarked that evidence of dying declarations made as such usually are under circumstances of mental and physical depreciation and without being subjected to the ordinary legal tests are generally to be received with great caution. (Winthrop, p. 493.)

223. Res Gestæ. Another exception to the hearsay rule consists of the inculpatory or exculpatory declarations or statements that constitute part of the *res gestæ*. By the *res gestæ* is meant the circumstances and occurrences substantially contemporaneous with the facts at issue that explain and elucidate the character and quality of such facts. Such are threats or declarations of the accused in connection with his commission of the crime that indicate his intent or knowledge; declarations or exclamations of a party injured that go to indicate the nature of the violence and the parties responsible; language of accomplices; cries of bystanders; facts, circumstances, and declarations showing premeditation and preparation for the crime. All such may be established by the testimony of persons who heard the utterances, etc. All such declarations and statements must be made so near in time to the principal transaction as to preclude the idea of deliberate design or afterthought in making them, but it is not essential that they should have been made in the presence or hearing of the accused. Nor does it matter that the party making them would be incompetent to testify in the case. For instance, the statements of a wife under such circumstances would be admissible against her husband. Where the crime committed is the culmination of a series of acts, such as in riots, etc., the *res gestæ* rule applies to all acts and declarations of the rioters and of bystanders that would tend to indicate purpose, motive, etc.

For instance, the exclamation of a bystander who was witnessing the building of barricades in a street: "My God, they are getting ready to resist the police!" would be admissible as tending to indicate the purpose of that transaction where the killing of certain of the police resulted from a fire directed from such barricades, though the killing did not occur until the next day. The *res gestæ* is considered as an act connected with or an incident of a main transaction, and not as testimony, and, as soon as it assumes the character of a narration, rather than a spontaneous exclamation that there is no probable ground for belief was inspired by a desire to influence the case, it is inadmissible as falling under the hearsay rule. The application of the rule of *res gestæ* is not limited strictly to circumstances and occurrences contemporaneous with the principal facts at issue nor with the transactions leading up to the principal facts, but would extend to a case of identification, as when, for instance, a party who has seen the commission of a crime and afterwards sees the accused and spontaneously identifies him by some such exclamation as "There's the man that did the killing," although such statement as to identification may have been made days after the principal act was committed. The following examples illustrate what constitute the *res gestæ*:

Where the accused is charged with sleeping on post, and it appears that the officer of the day or corporal of the guard, in searching for the accused, found him sitting down with his rifle across his knees and his chin on his chest, what they did and said to each other and to the accused, and the accused to them, in what led up to and immediately followed their efforts to ascertain whether or not he was asleep, all constitute parts of the *res gestæ*.

Where a soldier is charged with murder, manslaughter, or assault, and the party against whom the violence is offered is another soldier, and the wife of

the former, while walking with the latter, exclaims, "Run! here comes my jealous husband, and he will kill you!" her exclamations would be admitted as part of the *res gestæ*. If the soldier had then fled to his house pursued by her husband, and she had followed to deter him from injuring the other party and later had run from the house shouting, "My husband is killing Jones!" or "has just killed Jones!" her exclamations would be admissible as constituting part of the *res gestæ*. If a party in the next room had heard a shot and then a voice that he recognized as Pvt. Jones's say, "You shot me for revenge and nothing else," the declaration would be considered as a part of the *res gestæ*.

A liberal use of this exception may well be made.

224. Evidence of Conspirators and Accomplices. In cases where several persons join with a common design in committing an offense all acts and statements of each of them made in furtherance of the offense are admissible against each of the others. Only where the statements of such conspirator fall within the rule laid down for admission of evidence as a part of the *res gestæ* could such statements be admissible for the defense. The declaration of a conspirator, however, made after the common design is accomplished or abandoned, is not admissible against the others. Such accomplishment or abandonment, however, should be considered as extending to any acts and statements in furtherance of an escape. It is immaterial whether such acts or statements were made in the presence or hearing of the other parties. They are binding upon all parties if they are in furtherance of the common design. Foundation must first be laid by either direct or circumstantial evidence sufficient to establish *prima facie* the fact of conspiracy between the parties, unless the judge advocate states that the conspiracy will later appear from evidence to be adduced. While in Federal courts and courts-martial corroboration of the testimony of a coconspirator, or accomplice, need not be required, yet from the character of the associations formed the uncorroborated testimony of a coconspirator, or accomplice, should be received with great caution.

225. Confessions. Another exception to the rule excluding hearsay evidence is the rule that admits testimony as to confessions of guilt made by the accused. The most common form of confession is that contained in the plea of guilty made by the accused in open court in answer to a charge. This is not the kind of confession referred to as constituting an exception to the hearsay rule. The confessions referred to are those made out of court, and to be admissible must be offered in their entirety and not merely the parts disadvantageous to the accused. Before a confession of the accused not made in open court can be testified to the following foundations must be laid by the judge advocate.

(a) There must be corroborating evidence, either direct or circumstantial, outside of the confession itself, that the crime charged has been committed. This is what is technically known as the rule requiring proof of the *corpus delicti*; that is, some proof of the fact that the crime charged has probably been committed by some one, so that there will be some corroboration of the confession. It is not requisite that this outside evidence constituting proof of the *corpus delicti* shall be sufficient to convince the court beyond a reasonable doubt of the guilt of the accused, nor need it cover every element contained in the charge. For instance, where desertion is charged proof of absence without leave would be considered as proving the *corpus delicti*; where the charge is that a sentinel had left his post before being regularly relieved it would be sufficient to prove that he was not on his post during his period of duty; where a homicide is charged the proof of the death of the person charged to have been killed amounts to proof of the *corpus delicti*; and in cases of larceny and

selling clothing the fact that the property alleged to have been stolen or sold was missing is sufficient proof.

(b) It must be affirmatively shown that the confession was entirely voluntary on the part of the accused. A confession is, in a legal sense, "voluntary" when it is not induced or materially influenced by hope of release or other benefit or fear of punishment or injury inspired by one in authority, or, more specifically, where it is not induced or influenced by words or acts, such as promises, assurances, threats, harsh treatment, or the like, on the part of an official or other person competent to effectuate what is promised, threatened, etc., or at least believed to be thus competent by the party confessing. And the reason of the rule is that where the confession is not thus voluntary there is always ground to believe that it may not be true. (Winthrop, p. 496.) In military cases, in view of the authority and influence of superior rank, confessions made by inferiors, especially when ignorant or inexperienced and held in confinement or close arrest, should be regarded as incompetent unless very clearly shown not to have been unduly influenced. Statements, by way of confession, made by an inferior under charges to a commanding officer, judge advocate, or other superior whom the accused could reasonably believe capable of making good his words upon even a slight assurance of relief or benefit by such superior should not in general be admitted. Thus in a case where a confession was made to his captain by a soldier upon being told by the former that "matters would be easier for him," or "as easy as possible," if he confessed, such confession was held not to have been voluntary and therefore improperly admitted. And it has been similarly ruled in cases of confessions made by soldiers upon assurances being held out or intimidation resorted to by non-commissioned officers. (Winthrop, p. 498.) But confessions made by private soldiers to officers or noncommissioned officers, though not shown to have been made under the influence of promises or threats, etc., should, yet, in view of the military relations of the parties, be received with caution. Of course, the above principles apply to a written confession as well as to a verbal one. In some cases before courts-martial it appears that the accused has signed a paper confessing his guilt, stating in the paper that he confesses freely without hope of reward or fear of punishment, etc. Such statements are not conclusive that the confession was voluntary. Evidence may be introduced. If the evidence shows the statement was not in fact voluntary, it should not be considered by the court.

Considering, however, the relation that exists between officers and enlisted men and between an investigating officer and a person whose conduct is being investigated, and the obligation devolving upon an investigating officer to warn the person investigated that he need not answer any question that might tend to incriminate him, confessions made by soldiers to officers or by persons under investigation to investigating officers should not be received unless it is shown that the accused was warned that his confession might be used against him or it is shown clearly in some other manner that the confession was entirely voluntary.

In view of the peculiar conditions of mind and body under which accused persons are often placed when making confessions, of the liability to mistake on the part of the witnesses who repeat them when oral, and of the tendency of these latter to exaggerate through a zeal for conviction, evidence of confessions, unless corroborated by other reliable evidence, is in general to be received with caution. Where, however, a confession is explicit and deliberate as well as voluntary, and, if oral, is proved by a witness or witnesses by whom it has not been misunderstood and is not misrepresented, it is indeed one of the strongest forms of proof known to the law. (Winthrop, p. 499.)

Courts should bear in mind that mere silence on the part of an accused when questioned as to his supposed offense is not to be treated as a confession.

Although the confession, because not voluntary, is inadmissible, yet any information given in the confession that leads to the discovery of relevant facts will not render testimony of such facts inadmissible, and it may be further shown, by way of corroboration of such facts, that the discovery was either wholly or partially due to the information thus obtained.

226. Admissions Against Interest. Somewhat connected with the subject of confessions is that of declarations or admissions against one's own interest. This constitutes another exception to the rule excluding hearsay. In many instances the accused, after the commission of an offense, makes statements which fall short of a full confession of guilt but do constitute important admissions as to his connection with the offense. The rule is that such admissions if against his own interest may be admitted in evidence. For instance, in a case of homicide in a dance hall, if the accused when arrested made the statement that he was in the hall when the homicide took place, such a statement is admissible as against his interest.

Admissions against penal interests of parties other than the accused or those connected with him in the commission of the crime charged, are not admissible as evidence. Such persons ought to be summoned as witnesses and examined as to such supposed admissions or confessions.

227. Privileged Communications. A privileged communication is one that relates to matters occurring during a confidential relation, which it is the public policy to protect. A witness can decline to answer a question touching such a communication. The confidential relations that were protected at common law and which are met with in court-martial practice are the following:

State Secrets. Communications made by informants to public officers engaged in the discovery of crime are privileged. The deliberations of courts and of grand and petit juries are privileged, but the results of their deliberations are not privileged. Diplomatic correspondence, and, in general, all oral or written official communications which, in the opinion of the President, would be detrimental to the public interests, and official communications between the heads of the departments of the Government and their subordinate officers are privileged. Were it otherwise it would be impossible for such superiors to administer effectually the public affairs with which they are intrusted.

Husband and Wife. Communications between husband and wife are privileged.

Attorney and Client. The testimony of the attorney, his clerk, interpreter, stenographer, agent, or other employee as to communications between the client and the attorney, made while the relation of attorney and client existed and in connection with the matter for which the attorney was engaged, will not be received by a court, unless such communications clearly contemplate the commission of a crime; i.e., perjury, subornation of perjury, etc. Of course, communications prior to or subsequent to the relation are not privileged. The client, but not the attorney, may waive this privilege.

Police Secrets. The privilege that extends to communications made by informants to public officers engaged in the discovery of crime should be given a common-sense interpretation. The public interests would ordinarily be prejudiced by reason of the disclosure of such communications in a case—and this might very reasonably occur where, for instance, the admission of such communications would disclose the identity of parties employed for the detection of criminals or would endanger the party who made such communication, or would injuriously affect the chances of securing such agents for the detection of crime in the future. But the material interests of the accused to vindicate

his innocence should not be allowed to suffer by reason of the exclusion of such evidence.

The purpose of the privilege, extended to communications between husband and wife and attorney and client, which grows out of a recognition of the public advantage that accrues from encouraging free communication in such circumstances, is not disregarded by allowing outside parties who overhear such privileged communications to testify to what they have overheard. It would not be permitted, however, for one of the minor children of the parents, who might reasonably be presumed by the parents not to understand what they were talking about, to testify to communications overheard by such child.

228. Privilege of Wife and Husband to Testify. At common law the early rule was that neither husband nor wife is competent as a witness against the other, but later admitted an exception in a case of bodily injury inflicted by one of them upon the other.

Certain departures have been made from the common-law rule by Federal statutes and decisions of the courts which, giving consideration to the reasons—i.e., the necessities of justice that demand relaxation of the rule in cases of bodily injury—have extended the field of instances to which the necessities of justice must necessarily apply.

In any prosecution for bigamy, polygamy, or unlawful cohabitation under any statute of the United States, the lawful husband or wife of the accused shall be a competent witness, and may be called, but shall not be compelled to testify in such proceedings, and shall not be compelled to testify * * * without the consent of the husband or wife, as the case may be. (Act of Mar. 3, 1887, 24 Stat., 635.) A married woman is excluded as a witness from motives of public policy. (*Lucas v. Brooks*, 18 Wall., 436, 453.)

Whenever, therefore, the policy or necessity of admitting her as a witness against her husband is sufficiently strong to overbalance the principle of public policy, upon which the general rule of exclusion is based, she ought to be received as a witness. (*People v. Mercein*, 8 Paige (N. Y.), 47.) And so the wife should be permitted to testify against the husband whenever she is the particular individual directly injured by the crime committed by her husband and the facts are peculiarly within her knowledge and impossible or difficult of proof by any witness other than the wife. (*State (Mo.) v. Bean*, 78 S. W., 640.) It would therefore be appropriate in such cases against a husband as bodily injury of any character inflicted by him upon her, bigamy, polygamy, or unlawful cohabitation, abandonment of wife and children, or failure to support them, for the wife to be permitted to testify against her husband.

The principle enunciated above as to permission of the wife to testify should be extended to a husband in analogous cases.

229. Telegrams Not Privileged. Neither private telegrams nor the information regarding them that comes to the knowledge of telegraph operators, either military or civil, are privileged. Telegraph operators, both military and civil, may be subpoenaed to testify before a court-martial as to private telegrams, and private telegrams may be brought before a court-martial by the usual process.

230. Confidential Papers. The reports of special inspections by the Inspector General's Department are confidential documents and the testimony taken is considered a part and parcel of such reports. There is no law or regulation which requires copies of the evidence contained in these confidential reports to be furnished to officers whose conduct has been under investigation. So also the reports of the Judge Advocate General to the Secretary of War have always been regarded as confidential communications and it has not been the practice to furnish copies of them to parties outside the department in the absence of

special authority from the Secretary of War. If the prosecution has had access to any such document, fairness requires that the accused should have equal access to it.

231. Communication from Officers or Soldiers to Medical Officers Not Privileged. It is the duty of medical officers of the Army to attend officers and soldiers when sick, to make the annual physical examination of officers, and examine recruits for enlistment, and they may be specially directed to observe an officer or soldier or specially to examine or attend them; such observations, examination, or attendance would be official and the information acquired would be official. While the ethics of the medical profession forbid them to divulge to unauthorized persons the information thus obtained and statements thus made to them, such information and statements do not possess the character of privileged communications. If the medical officer, when called as a witness before a court-martial, refuses to testify to such matters, he is subject to charges under A. W. 96.

232. Communications Between Civilian Physicians and Patients Not Privileged. Neither are the communications between civilian physician and patient privileged, and the refusal of a physician to testify to such communications would subject him to the prosecution provided by A. W. 23.

233. Compulsory Self-crimination Prohibited. The fifth amendment to the Constitution of the United States provides that in a criminal case the person shall not be compelled "to be a witness against himself." The principle embodied in this provision applies to trials by courts-martial and is not limited to the person on trial, but extends to any person who may be called as a witness. A. W. 24, in furtherance of this principle, provides that no witness before a military court, commission, court of inquiry, or board, or before any officer, military or civil, designated to take a deposition to be read in evidence before a military court, commission, court of inquiry, or board, shall be compelled to incriminate himself or to answer any questions which may tend to incriminate or degrade him.

The constitutional guaranty contained in the fifth amendment is predicated upon the "well established and universally accepted maxim of the common law that a witness shall not be compelled to answer any question that tends to criminate him or to expose him to criminal prosecution or to a penalty" (Rice, p. 298), nor to answer any question not material to the issue that may tend to degrade him. It must be noted that this rule draws a distinction between questions that tend to criminate and those that tend to degrade, the protection extending in the first instance against questions whether material or not, while in the second instance it extends only to questions which are not material to the issue. And this is not limited to the main issues in the case; for instance, "as the credibility of a witness is always an issue, he must, therefore, answer questions which are no other way material than as affecting his credibility." (Roscoe, p. 149.)

(a) Rule as to Questions Tending to Degrade. Where common-law rules have been written into our Constitution and laws they have been given the construction that attach to them under common-law practice, and so the provisions of A. W. 24 must be presumed to have been declaratory of the common-law protection afforded witnesses and, as to questions tending to "degrade," must be accepted with the distinction drawn by the common law—that is, as extending only to questions, not material to the issue, that tend to "degrade."

(b) Where Privilege as to Self-crimination Ceases. As in the following cases the witness would not be liable to the law's punishment, his privilege as to self-incrimination ceases:

Conviction and the suffering of the punishment; acquittal, or other former

jeopardy; abolition of the general crime, subsequent to its commission (provided the rule of criminal law thereby exonerates prior offenders); lapse of time barring prosecution of the particular offense; executive pardon for the particular offense; statutory amnesty, before or after the act, for the particular criminal act or for the offender. (Wigmore, p. 3163.)

234. Privilege Against Self-crimination is a Personal One. The privilege of a witness to refuse to respond to a question, the answer to which may incriminate him, is a personal one, which the witness may exercise or waive as he may see fit. It is not for the judge advocate or accused to object to the question or to check the witness, or for the court to exclude the question or direct the witness not to answer. Where it appears that the witness is ignorant of his rights and that the answer to a question might incriminate him, the president of the court will inform him of his right to decline to make any answer which might tend to incriminate him.

235. Procedure Where Alleged Incriminating Question is Asked. Where the court overrules an objection made by a witness that the answer to a question will incriminate him the witness should answer the question. If he is a person subject to military law and refuses to answer, charges may be preferred against him under A. W. 96. If he is a civilian witness the facts should be certified to the United States district attorney by the court with a view to his prosecution as provided in A. W. 23. (See A. W. 23 as to other tribunals and agencies.) In any case of refusal to answer a question after the court has held it to be a proper one, the refusal may be commented on by the judge advocate or counsel in his remarks to the court.

As to civilians, as well as those in the military service, the national-defense act (sec. 108, Act June 3, 1916, 39 Stat., 209) provides that presidents of courts-martial and summary court officers of the National Guard, not in the service of the United States, shall have power "to issue subpoenas and subpoenas duces tecum and to enforce by attachment attendance of witnesses and production of books and papers and to sentence for refusal to be sworn or to answer as provided in actions before civil courts." In such cases the punishment would be for contempt of court.

236. Not Self-crimination to Require Accused to Submit to Physical Examination. "The prohibition of the fifth amendment against compelling a man to give evidence against himself is a prohibition of the use of physical or moral compulsion to extort communications from him and not an exclusion of his body as evidence when it is material." (Holt v. U. S., 218 U. S., 245.) In addition to this rule of general application in the Federal courts it has been decided that:

When a person enlists in the military service he waives or surrenders, during the period of his enlistment, some of the rights which he possessed as a citizen. He does this without compulsion, the surrender resulting from his voluntary enlistment in the military service. (U. S. v. Grimley, 137 U. S., 147.)

Among other incidents of the military status to which he voluntarily submits himself is that of physical examination by proper military authority such, for example, as is required by regulation when he enlists in the military establishment, at which time his finger and thumb prints are taken, and any marks or scars which appear on any part of his body are made the subject of official record on a card provided for that purpose by The Adjutant General, and the right to impose, and the corresponding duty to submit to, a proper physical examination, at the discretion and upon the order of a competent military superior, continues to exist so long as he remains in the military service in the operation of his contract of enlistment.

The following are illustrations of what might be required without violating the privilege contained in the fifth amendment:

(a) The admission of testimony as to marks and scars found upon the person of a defendant, in a criminal prosecution, during a forcible examination of him with a view to ascertaining his identity for the purpose of arresting him, is not prohibited. (*O'Brien v. Indiana*, L. R. A., Book 9, 1890, p. 323; see also 12 Cyc., 401.)

(b) Upon the trial, a question was raised as to the identity of the defendant. One witness testified that he knew the defendant, and knew that he had tattoo marks (a female head and bust) on his right forearm. The court thereupon compelled the defendant, against his objection, to exhibit his arm, in such a manner as to show the marks to the jury. (*State v. Ah Chuey*, alias Sam Good, 14 Nev., 79.)

(c) An officer also of the Army was ordered to a place for identification by civilian witnesses in relation to charges which were pending against the officer, and it was held that such an order would not be in violation of the officer's privilege, as it called for no testimonial communication from him.

It follows that it would be appropriate for the court to order the accused to remove his clothing for the purpose of examination by the court or by a surgeon who would later testify as to the results of his examination and, upon refusal to obey the order, might have his clothing removed by force. The accused might likewise be compelled to try on clothing or shoes or place his bare foot in tracks, etc., but where resort to extreme force would be necessary to compel compliance in the presence of the court it would comport more with the dignity of the court to have a surgeon make the examination out of the presence of the court and testify as to the result of the examination, or to advise the accused as to the purpose of the examination and to warn him that his refusal to obey would be considered as an admission on his part of what was sought to be ascertained by the examination. This conclusion would be quite within legal bounds as to presumption of facts.

237. Manner of Proving Contents of Writing. A writing is the best evidence of its own contents and must be introduced to prove its contents. But if it has been lost or destroyed or it is otherwise satisfactorily shown that the writing can not be produced, then the contents may be proved by a copy or by oral testimony of witnesses who have seen the writing. Under this rule if it is desired to prove the contents of a private letter or other unofficial paper, or an official paper such as a pay voucher, written claim against the Government, pay roll or muster roll, company morning report, enlistment paper, etc., the strict and formal method of doing so is to prove by proper evidence that the writing is in fact what it purports to be, and then introduce in evidence the original or a properly authenticated copy.

In order to prove that a writing is what it purports to be, in case of a private letter, the person who received the letter should testify that he received it and he should identify it. Then it should be proved that the signature is in the handwriting of the purported writer of the letter. But in proving the genuineness of letters the rule is that the arrival by mail of a reply purporting to be from the addressee of a prior letter duly addressed and mailed, is sufficient evidence of the genuineness of the reply to justify its introduction in evidence. A similar rule prevails as to telegrams purporting to be from the addressee of a prior telegram or telephone message.

If the writing is an official document such as a pay voucher, the person having official custody should produce it in court and testify that he is the custodian of the writing and that it is the pay voucher of the person whose name is signed. The signature to the voucher should be proved to be genuine if that is not

admitted. In court-martial practice the opposing party usually admits a public document without requiring such strict proof. The entries in pay vouchers, muster and pay rolls, company morning reports, and other public records used in the Army, are open to inspection by both parties, and contain numerous entries not pertaining to the case being tried. It is the practice, in the absence of an objection, to prove their contents by the oral testimony of a witness, usually the custodian, reading the material matter in court.

When the original consists of numerous writings which can not conveniently be examined by the court, and the fact to be proved is the general result of the whole collection, and that result is capable of being ascertained by calculation, the calculation may be made by some competent person and the result of the calculation testified to by him, as, for instance, if the fact to be proved is the balance shown by account books. In such case the opposite party should have access to the books and papers from which the calculation is made.

It is customary for the party introducing a writing in evidence to read it to the court. But unless the court directs it to be read at once it may be read at any time.

SECTION IV.

DOCUMENTS.

238. Public Records. An important exception to the rule that the contents of a writing must be proved by the writing itself is in the case of public records required to be preserved on file in a public office, in which case duly authenticated copies may be admitted in evidence equally with originals without first proving that the originals have been lost, destroyed, or their absence accounted for in some other way. This exception is made necessary by the inconvenience to the public business that would result if such records were removed. The following order covers this exception so far as concerns records and papers in the War Department and its bureaus and in military offices:

Copies of any records or papers in the War Department, in any of its bureaus, or in an office of any of the supply departments; or at the headquarters of an army, field army, division, brigade, or regiment; or of a territorial division, territorial department, or post, if authenticated by the impressed stamp of the bureau, office, or headquarters having custody of the originals (for example, "The Adjutant General's Office, official copy"), may be admitted in evidence equally with the originals thereof before any military court, commission, or board, or in any administrative matter under the War Department. (G. O. 16, W. D., 1912.)

239. Certain Official Writings Are Evidence of Facts Recited Therein. Where the law requires that the evidence of certain facts and events shall be recorded in certain writings, the original writing containing this evidence is competent, i.e., prima facie evidence of the facts and events recorded in it. For instance, the original of an enlistment paper, the physical examination paper, outline figure card and finger-print card, and the original morning report sheet are competent evidence of the facts recited in them. By authority of the War Department order, properly authenticated copies of these papers may be admitted in evidence equally with the original. (See par. 238.) A descriptive and assignment card, however, is not an original paper. All the information it contains is compiled from other original sources, and therefore it is not evidence of the facts recited in it.

240. Comparison of Handwriting. The common-law rule of evidence would not permit a comparison of handwriting unless the writing to be used as a standard was properly in the case for other purposes than mere comparison.

This rule was changed by act of Congress approved February 26, 1913 (37 Stat., 683), which provides—

That in any proceeding before a court or judicial officer of the United States where the genuineness of the handwriting of any person may be involved, any admitted or proved handwriting of such person shall be competent evidence as a basis for comparison by witnesses, or by the jury, court, or officer conducting such proceeding to prove or disprove such genuineness.

But before admitting such specimens of handwriting, satisfactory evidence should be offered as to the genuineness of the same.

The rule prescribed by Congress will govern in courts-martial procedure.

241. Use of Memoranda. Memoranda may be used to aid the memory or to supply facts once known but now forgotten. Memoranda are therefore of two sorts: First, if the witness does not actually remember the facts but relies on the memorandum exclusively (as in the case of a bookkeeper using an old account book), then the witness must be able to guarantee that the record accurately represented his knowledge and recollection at the time of its making, but it is not necessary that he should himself have made the record if he can state from his present recollection that it was correct when made and the entries must have been made at or near the time, and the recollection at such time must have been fresh as to the facts recorded. Second, if the witness can actually remember the facts and merely needs the memorandum to stimulate or revive his memory, or a part of it, then the above limitations do not strictly apply. But the court should see to it that no attempt is made to use such a paper to impose a false memory on the court under guise of refreshing it.

The memorandum to be used must always, on demand, be shown to the opponent for purposes of inspection and cross-examination, and fairness and justice require that where a memorandum is consulted before trial for refreshing a witness's recollection, statement should be made by the judge advocate or counsel to that effect, and the memorandum should be brought into court by the side whose witness has so consulted it.

242. Memorandum as Evidence. Where a memorandum does not serve to refresh the recollection of the witness, but he can state that it was made when his memory was fresh and can give the guaranty of accuracy and recollection called for by the preceding section, the memorandum itself will be admissible. Where the witness's certainty rests on his usual habit or course of business in making memoranda or records, it is sufficient.

243. Memorandum for Refreshing Recollection. Where a witness states that the memorandum to be used refreshes his recollection to the extent of his now remembering the data contained therein, the common rule is to have him testify as to such facts without admitting in evidence the memorandum itself.

244. Books of Account. Entries in books of account, where such books are proven to have been kept in the regular course of business, and the entrant is dead, insane, out of the jurisdiction of the court, or otherwise unavailable to testify, are admissible as evidence. Also the lack of an entry in a series of written entries is admissible as an implied statement that no events occurred of the kind that would have been recorded.

Where the entrant is available to testify in court, books of account will be used, just as memoranda are used for the purpose of refreshing the recollection of the witness, and may be introduced in evidence in connection with his testimony.

Where the entrant only records an oral report or written memorandum made in the regular course of business by another person or persons, such other person or persons, if available, must be called to testify.

The original document of entry must be produced or accounted for. Where

a composite entry is used, the extent to which intermediate memoranda must be produced depends on the circumstances of each case. As between ledger and daybook or other kinds, the book required is that which contains the first regular and collected record of the transactions. (Wigmore, sec. 1530.)

245. Maps, Photographs, Etc. Maps, photographs, sketches, etc., as to localities, wounds, etc., are admissible as evidence when properly verified by the party that made them or when coming from official sources that are a guaranty of truthfulness and accuracy. This character of evidence is capable of gross misrepresentation of facts and should be carefully scrutinized. Finger prints, upon such verification or guaranty, are admissible.

SECTION V.

EXAMINATION OF WITNESSES.

246. Witnesses Examined Apart From Each Other. Witnesses, after having been first sworn as provided in par. 134, are usually examined apart from each other, no witness being allowed to be present during the examination of another who is called before him. But this rule is not inflexible; it is in practice subject to the discretion of the court, nor is it ever so rigidly observed as to exclude the testimony of a person because he has been present at the examination of other witnesses.

247. Objections to Competency; When Made. Any objection to the witness's competency should be made before he is sworn. If his incompetency should later appear, however, a valid objection should be sustained.

248. Number of Witnesses Required. Though there are occasional dangers in trusting to a single witness, the testimony of a single qualified witness to the facts in issue would suffice to sustain a conviction, except as to (1) treason, where there must be two witnesses testifying credibly to the same overt act, or (2) perjury, where there must be either (a) a second witness to the falsity alleged or (b) a corroboration of a single witness by some other form of evidence. The rule as to perjury does not apply, however, where the falsity can be inferred from a contradictory statement made by the accused. (Wigmore's P. C., 338, 339.) For instance, where a person is charged with a perjury as to facts directly disproved by documentary or written testimony springing from himself, with circumstances showing the corrupt intent; in cases where the perjury charged is contradicted by a public record, proved to have been well known to the defendant when he took the oath; and in cases where the false swearing can be proved by his own letters relating to the fact sworn to, or by other written testimony existing and being found in the possession of a defendant and which has been treated by him as containing the evidence of the fact recited in it. (U. S. v. Wood, 14 Pet., 430.)

(See par. 224 as to corroboration of an accomplice and see par. 225 as to corroboration of a confession.)

249. Order of Examination of Witnesses. While the proper and usual order and sequence of examination of witnesses contemplates that the witnesses for the prosecution shall be called first and then the witnesses for the accused, and afterwards the witnesses for the prosecution in rebuttal of testimony brought out by the accused, and then the witnesses for the accused in rebuttal of those last introduced by the prosecution, and then witnesses by the court; and that the method of examining each witness shall be direct examination, cross-examination, redirect examination, recross-examination, and examination by the court, the court may, in the interest of truth and justice, call or recall witnesses, or permit their recall at any stage of the proceedings; it

may permit material testimony to be introduced by either party quite out of its regular order and place, or permit a case once closed by either or both sides to be reopened for the introduction of testimony previously omitted, if convinced that such testimony is so material that its omission would leave the investigation incomplete. In all such cases both parties must be present, and any testimony thus received would be subject to cross-examination and rebuttal by the party to whom it may be adverse.

250. Direct Examination. The first question to be asked each witness, whether called for the prosecution or defense or by the court, will be, whether he knows the accused and if he does to state who he is. This question is always asked by the judge advocate. The accused having been identified the examination of the witness is continued by the person calling him. All questions and answers are recorded in full, and as far as possible in the exact language of the witness. If an objection is made to a question, the reason for the objection will be stated.

251. Cross-examination. In general the cross-examination must be limited to matters brought out by the direct examination of the witness, but in the discretion of the court exceptions may be made to this rule. As it is the purpose of the cross-examination to test the credibility of the witness it is permissible to investigate the situation of the witness with respect to the parties and to the subject of the litigation, his interest, his motives, inclinations, and prejudices, his means of obtaining a correct and certain knowledge of the facts to which he bears testimony, the manner in which he has used those means, his powers of discernment, memory, and description. Leading questions may be freely used on cross-examination. (Davis, p. 285.)

252. Redirect and Recross-examination. Ordinarily the redirect examination will be confined to matters brought out on the cross-examination, and the recross-examination will be confined to matters brought out on the redirect examination. But in these matters the court, in the interest of truth and justice, should be liberal in relaxing the rule.

253. Examination by the Court. The court or a member may ask questions of a witness when it is apparent that the examination of the witness already made has failed to bring out matters material to the issues, and for the same reasons a witness may be recalled or a new witness summoned by the court.

254. Leading Questions. Leading questions, that is, questions which suggest the answer it is desired the witness shall make, or which, embodying a material fact, are susceptible of being answered by a simple yes or no, should not be asked. For example, "Did you not see the accused leave his quarters with a bundle under his arm?" is a leading question. In such case the question should be "Did you see the accused?" If the answer is in the affirmative, add "What was he doing?" Again, for example, the question, "Did you hear the accused say he did not intend to come back?" would be leading. The proper form of the question should be: "Did the accused say anything?" If the answer is in the affirmative, add "State what he said." So, where a knife is introduced in evidence a witness should not be asked whether that is the knife he saw the accused stab Pvt. A with, but he should be asked whether he recognizes the knife, and if he does, where he saw it and what was done with it, etc. The following are the exceptions to the rule that leading questions will not be asked:

(1) Leading questions may be asked on cross-examination.

(2) To abridge the proceedings, the witness may be led at once to points on which he is to testify, and the admitted facts in the case may be recapitulated to him. The rule is therefore not applicable to that part of the examination of a witness which is merely introductory. For example, in a desertion case where the accused admits that on a certain day at a certain place he

was apprehended as a deserter by a policeman, the latter when on the stand may have his attention directed at once to the occasion by such a question as whether at a certain time and place he arrested the accused as a deserter. The witness having answered the question in the affirmative, in the next question he might properly be asked to state the details connected with the arrest. So in a case of disobedience of orders where there is no dispute that the alleged disobedience took place at a certain time and place and that it involved certain persons, the witness might properly be asked whether he was present at the place where and time when the accused was placed in arrest by a certain officer for not carrying out a certain order. The witness having answered in the affirmative, he may be asked to state all the circumstances.

(3) When the witness appears to be hostile to the party calling him or is manifestly unwilling to give evidence.

(4) When there is an erroneous statement in the testimony of the witness, evidently caused by want of recollection, which a suggestion may assist, as, for instance, where he misstates a date or an hour.

(5) Where, from the nature of the case, the mind of the witness can not be directed to the subject of the inquiry without a particular specification of it, as where he is called to contradict another witness who has testified that the accused made a certain statement on a certain occasion in the hearing of a number of soldiers, each of them may be asked whether he heard the accused make the statement.

The court, in its discretion, would be justified in allowing liberal departures from the rule.

255. Recalling of Witnesses. Where a witness is recalled to the witness stand he will not be sworn again, but will be reminded that he has been sworn in the case and is still under oath. A failure to so remind him, however, does not affect the validity of the trial and will not be ground for rejecting the testimony.

SECTION VI.

CREDIBILITY OF WITNESSES.

256. What Credibility Consists In. The credibility of a witness is his worthiness of belief, and is determined by his character, by the acuteness of his powers of observation, the accuracy and retentiveness of his memory, by his general manner in giving evidence, his relation to the matter in issue, his appearance and deportment, prejudices, by his general reputation for truth and veracity in the community where he lives, by comparison of his testimony with other statements made by him out of court, by comparison of his testimony with that of others, etc. From all these the court will draw its own conclusions as to the credibility of the witness, attaching only such weight to his evidence as all the facts seem to warrant. There may even be cases in which the court will reject all the testimony of a witness. This may be for any of the reasons set forth above. No statement will be made by the court of the weight given to any testimony or the amount rejected, except as it may desire to inform the reviewing authority of the reasons which have led to its findings.

257. Proof of Character by General Reputation. Where impeachment of a witness for bad character is undertaken it must be limited to proof of his general reputation for truth and veracity in the community in which he lives. For a military man this would mean the reputation that he bore amongst the members of his regiment or company, or amongst those stationed at a post, and, if stationed at or near a town, amongst the residents of the town. Personal observation as to his character is not admissible.

258. Conviction of Crime. Evidence of the conviction of any crime, even by a foreign tribunal and whether felony or misdemeanor, is admissible for the purpose of diminishing the credit due to his testimony. (1 Greenleaf, sec. 376.) It is allowable to ask a witness on cross-examination whether he has ever been convicted of a crime, but if he denies it, proof may only be made by copy of the record of his conviction.

259. Self-contradiction. Proof may be offered of inconsistent statements made by the witness on specific facts, but on collateral facts the inconsistency can not be evidenced by calling other witnesses to testify to his self-contradictory assertion.

Where, on cross-examination, a witness is questioned as to his self-contradictory statements, his attention should be called to the time, place, and surrounding circumstances and to the person to whom he is assumed to have made the contradictory statements.

Where the contradictory statement is contained in a writing, it need not be shown to the witness before questioning him about it.

260. Prejudice, Bias, Etc. Prejudice, bias, relationship, etc., may be shown to diminish the credibility of the witness, either by the testimony of other witnesses or by cross-examination of the witness himself. Such matters are never regarded as collateral.

261. Credibility of Accused as a Witness. If the accused testifies, his credibility as a witness may be attacked on any of the grounds stated in the preceding paragraphs.

262. Proof of Contradictory Statements Out of Court. The strict rule is that, before testimony can be admitted to prove that a witness has made out of court statements that are in conflict with his testimony in court, a foundation therefor must be laid by asking the witness on cross-examination whether he has not made on a certain occasion at a certain time or under certain circumstances the alleged contradictory statement. If the witness admits making such a contradictory statement he will be permitted to explain it. If he denies making it, evidence may be introduced to prove it.

SECTION VII.

DEPOSITIONS AND FORMER TESTIMONY.

263. Depositions Admissible. Depositions taken under the provision of A. W. 25 and 26 "may be read in evidence before any military court or commission in any case not capital or in any proceeding before a court of inquiry or a military court."

264. Depositions for Defense in Capital Cases. Deposition testimony may be adduced for the defense in capital cases. (A. W. 26.) Where the defense calls for such testimony in capital cases the witnesses may be cross-examined as fully as witnesses in a case not capital.

265. Objections as to Competency of Witness and Admissibility of Evidence. The same rules as to competency of witnesses and admissibility of evidence apply in the taking of evidence by deposition that apply in the examination of a witness before the court, except that a wider latitude than usual should be allowed as to leading questions.

If the interrogatories and cross-interrogatories for depositions are prepared for acceptance by the court, in open session, objection to the competency of the deponent, if grounds of objection are known at the time, as well as objections to questions, should be raised at such session, and ordinarily be passed upon by the court at that time. The court should, however, in the interests of justice,

entertain such objections when the depositions are offered in evidence, but might in a proper case call upon judge advocate or counsel for explanation as to why they had failed to make the objection at the proper time.

If the interrogatories and cross-interrogatories are agreed upon by both parties in advance of the assembling of the court—and this is the usual practice—objections to questions and to the admissibility of evidence will be made when the depositions are offered in evidence.

266. Examination of Deposition by Counsel. Upon receipt of the deposition the judge advocate will advise the accused or his counsel of that fact and will give them an opportunity to examine the deposition before the trial.

267. Reading of Depositions. Ordinarily depositions will be read to the court by the party in whose behalf they are taken, but if the accused is not represented by counsel the judge advocate will read to the court the deposition taken on his behalf, unless the accused requests to read them. After being read to the court a deposition will be properly marked for identification purposes and attached to the record, and the record will show that it has been introduced and read to the court.

268. Miscellaneous Provisions as to Depositions. The party at whose instance a deposition has been taken should not be permitted to introduce only such parts of the deposition as are favorable to him or as he may elect to use; he must offer the deposition in evidence as a whole or not offer it at all. If the party at whose instance a deposition has been taken decides not to put it in, it may be put in evidence by the other party.

269. Affidavits Not Admissible. Affidavits taken without notice and not as depositions under the provisions of A. W. 25 and 26 are in no case admissible as evidence unless expressly consented to by the judge advocate and the accused with full knowledge of his rights.

270. Certificate of Discharge. The "certificate of discharge" may be used by the defense, either before or after the findings, for proof of good character.

271. Statement of Service. The statement of service and number of previous convictions of the accused, as found in the upper quarter of the front page of the charge sheet, will not be permitted to be seen or examined by members of the general or special court-martial trying a soldier until after they have reached their findings. In the event of conviction the accused, if a soldier, will be asked whether such statement of service is correct, and such statement will be examined and considered by the court for the purpose of determining proper punishment in view of length of service.

The statement of service may be used by the defense, either before or after the findings, for proof of good character.

272. Former Testimony Before Court of Inquiry. The record of the proceedings of a court of inquiry may be read in evidence before any court-martial or military commission in any case not capital nor extending to the dismissal of an officer, and may also be read in evidence in any proceeding before a court of inquiry or a military board: Provided, That such evidence may be adduced by the defense in capital cases or cases extending to the dismissal of an officer. (A. W. 27.)

The ends of justice would require that the reasonable tests for admissibility laid down in par. 275, as to examination and cross-examination on the same issues and as to correctness and completeness of the record where former testimony before civil courts and courts-martial is offered, should be applied as to the admission of the record of a court of inquiry.

273. Evidence of Pardon. When a special plea in bar of trial, based on a pardon, is offered by the defense, the best evidence of such pardon, if in the nature of an individual pardon, will be the document signed by the President

himself, and, if in the nature of a general amnesty, by an official copy of the proclamation or order publishing such amnesty. If such document or order is not sufficiently explicit to determine whether or not the offense for which the accused is on trial is the same as that covered by the pardon, then other evidence must be introduced to fill the gap. Where the pardon is in the nature of a constructive pardon, the evidence will be of such facts and circumstances as it is contended constitute such pardon.

274. Evidence of Former Trial by Court-martial or Civil Court. Where a plea in bar of trial, based on a former trial by court-martial for the same offense, and conviction or acquittal of the same is offered for the defense, the best evidence of such conviction or acquittal will be the order of the reviewing authority publishing the case. Where such order is not sufficiently explicit to determine whether or not the offense for which the accused is on trial is the same as that the conviction or acquittal of which he pleads in bar, then the original court-martial record should be offered in evidence.

Where a plea in bar is on a former trial and conviction or acquittal by a Federal court—the action of a State or any other than a Federal court does not operate as a bar to second trial—the best evidence of such conviction or acquittal will be a duly certified copy of the indictment and findings and conviction or acquittal, given by the public officer whose duty it is to keep the original.

275. Former Testimony in Civil Courts and Courts-martial. Where a witness, who has testified in either a Federal or State court at a former trial on the same issues raised in the case on trial and was fully examined and cross-examined, is dead or is beyond the reach of the process of the court and his personal attendance can not be secured, then the stenographic report of his testimony, if proven to be correct and complete by the person by whom it was reported, will be admissible and may very properly be accorded the same weight as a deposition duly taken on notice. (Chicago, St. P., M. & O. Ry. Co. v. Myers, 80 Fed. Rep., 361, 365.) Ordinarily, however, this situation should be met by the judge advocate and counsel for accused procuring in advance of trial a transcript of the stenographer's notes, duly sworn to by him as correct and complete, and submitting it to the opposite party for his inspection. If acknowledged to be correct and complete, then such transcript will be received in evidence.

Where the testimony desired is of a witness who had testified in a former trial by court-martial, all conditions being approximately the same as those cited in the first paragraph of this section, the original court-martial record itself will be admissible, and the stenographic reporter will only be called where a question is raised as to the correctness or completeness of the recorded testimony.

SECTION VIII.

PRESUMPTIONS.

276. Presumptions. Presumptions constitute a large part of the law of evidence. They are of two kinds—presumptions of law and presumptions of fact.

277. Presumptions of Law. Broadly speaking, a presumption of law is a rule of law that when certain circumstances exist the court must presume certain other circumstances. Presumptions of law are divided into conclusive and disputable presumptions. In case of a conclusive presumption of law the presumption can not be contradicted. For example, all residents of a country are conclusively presumed to know its laws. This presumption is in force in the practice of courts-martial so far as concerns offenses that constitute civil crimes. (As to the modification of the rule as regards knowledge of the

Articles of War in case of recruits, see par. 282; as to intent, par. 281; as to ignorance of law, par. 282.) In case of a disputable presumption of law, the presumption can be contradicted. For example, it is presumed that a sane person intends the natural and probable consequences of his acts; a person is presumed to be innocent until proven guilty; all persons are presumed to be sane; persons acting as public officers are presumed to be legally in office and to properly perform their duties; and malice is presumed from the use of a deadly weapon. Evidence may be introduced to rebut such presumptions.

278. Presumptions of Fact. Presumptions of fact are nothing more than logical inferences, from facts already proved, as to the existence of other facts. This kind of a presumption is not made as a rule of law but as a matter of human reason. All evidence in a case, except that which directly proves the allegations in the specifications, leads at once to presumptions of fact. Such presumptions are the basis of all circumstantial evidence. (See par. 204.) It is in making such presumptions that the members of the court should especially exercise their common sense and their knowledge of human nature and the ways of the world. Facts in evidence showing a motive or absence of motive on the part of the accused, preparations or the absence of preparations for the commission of crime, a failure to account for suspicious circumstances, acts showing a criminal consciousness (as concealment, disguise, or flight), the suppression of evidence, the possession of weapons or instruments that might have been used in the commission of the offense, the possession soon after larceny or embezzlement of the articles stolen or embezzled, are a proper basis for presumptions of fact.

Also where the existence at one time of a certain condition or state of things of a continuing nature is shown, the general presumption arises that such condition or state continues to exist, until the contrary is shown, so long as is usual with conditions or things of that particular nature. For example, there is a presumption of continuance as to one's residence until a change is shown, also that one holding an office continues to hold it until the end of the term for which appointed or elected and that personal habits have not changed. There is a presumption of fact from the regular course of business in the Post Office Department that a letter when properly deposited in a post-office box or in the place in which letters for mailing are usually deposited, postage prepaid, is received by the addressee. The presumption with regard to the delivery of letters duly posted has been extended and applied to the delivery of telegrams deposited with a telegraph company for transmission; but delivery of the message to the telegraph company must of course be shown. There is also a presumption of fact that persons of the same name are the same person. The strength of this presumption will of course depend upon how common the name is and other circumstances.

279. Prima Facie Evidence. Prima facie evidence is that which suffices for the proof of a particular fact until contradicted and overcome by other evidence. In other words, prima facie evidence justifies the court in finding the facts presumed, but in view of the doctrine of reasonable doubt that always inures to the benefit of the accused from a consideration of all of the evidence presented the court is not required to find the facts presumed. The court may decide, for instance, that the prima facie evidence presented does not outweigh the presumption of innocence.

280. Intent in Connection With Crimes. In respect to the element of intent, crimes are distinguished as follows: Those in which a distinct and specific intent, independent of the mere act, is essential to constitute the offense, as murder, larceny, burglary, desertion, and mutiny; and those in which the act is the principal feature, the existence of the wrongful intent being simply infer-

able therefrom, as rape, perjury, sleeping on post, drunkenness on duty, neglect of duty. In cases of the former class the characteristic intent must be established affirmatively as a separate fact; in the latter class of cases it is only necessary to prove the unlawful act, for every man is presumed in law to have intended to do what he actually does; and the burden of proof is upon him to show the contrary. (Winthrop, p. 475.)

281. Intent in Military Cases. Military offenses being created by statute, the peculiar statutory intent described in the article, if there be one, must be alleged in the specification. The enlistments prohibited in A. W. 54, for example, must have been "knowingly" made in order to constitute an offense under the statute. It is similarly essential to some of the offenses described in A. W. 55, 56, and 57 that they be "knowingly" committed; offenses under A. W. 83 and 84 must have been committed "willfully" or "through neglect"; an officer quitting his post on tender of resignation must do so "with intent to absent himself permanently therefrom" to be triable for the offense described in A. W. 28; and an officer who refuses or "willfully neglects" to deliver an offender to the civil authorities upon application duly made by such authorities subjects himself by such refusal or willful neglect to the penalties set forth in A. W. 74. (Davis, 642.) In some instances, however, as in the offenses described in A. W. 61 and 86, no statutory intent is set forth in the article, and none need be alleged in the specifications. In other cases, while no intent is embodied in the article, a particular intent is necessary to the completeness of the offense, and though not set forth in the specification must be established in evidence. Such is the case with respect to the offense of desertion, the intent being not to return. But whether the intent that is presumed from the commission of an unlawful act or the specific one that must be proved raises a point in issue the accused in his defense may prove there was actually no intent. If the accused can substantiate such a defense, he must be acquitted or the grade of the offense reduced, as, for instance, from assault with intent to kill to assault. The usual defenses of this character in military practice are ignorance of military law, ignorance of fact, drunkenness, and insanity.

282. Ignorance of Law. Every person is usually presumed to know the provisions of Federal, State, and municipal law applicable to the community in which he lives, and a person subject to military law is presumed, in addition thereto, to know the statute law as particularly applicable to the Army, as well as Army regulations, the different manuals, orders, and circulars issued for the information and government of the Army. This really means that on grounds of public policy a person is responsible whether he knows the law or not. His ignorance is immaterial.

An exception may sometimes be made where enlisted men are charged with the knowledge of the Articles of War. This exception would be based primarily upon the fact that A. W. 110 makes it one of the features of enlistments into the military service that certain of the "Articles of War shall be read to every enlisted man at the time of, or within six days after, his enlistment." A. W. 109 enjoins that he shall take an enlistment oath in which, among other things, he swears that he will observe and obey military orders "according to the rules and Articles of War." While in the case of an old or reenlisted soldier, or one who had been for a considerable period in the service and had had a sufficient opportunity to inform himself as to the provisions of the code, a failure to have complied with the injunction of this article could scarcely constitute a defense, such failure might perhaps have this effect, or should usually at least act as an extenuation in the case of a recruit, especially one imperfectly

acquainted with the English language. In such a case it would certainly be admissible for the accused to show the fact, and if the offense charged was one of the criminality of which he could not, in his ignorance of military law, have been aware, or the gravity of which he could not have appreciated, the omission of the reading of the articles upon his enlistment would properly be regarded by the court, if not as a defense, certainly as a palliation of his misconduct. (Winthrop, p. 438.)

283. Ignorance of Fact. It is generally laid down that ignorance of fact excuses crime. But this must be an honest or innocent ignorance and not an ignorance which is the result of carelessness or fault. The theory, of course, is that where a bona fide ignorance of fact exists there would be an absence of the requisite wrongful intent. The general rule applies equally to military cases, and the ignorance, to constitute a defense therein, must appear not to have proceeded from any want of vigilance, or from failure to make the inquiries or obtain the information reasonably called for by the obligations and usages of the service. Thus a soldier who neglects to report for guard or other duty because ignorant of the fact that he has been duly detailed therefor is not guilty of a breach of A. W. 61 unless his ignorance is a result of his own neglect or wrongdoing (Winthrop, p. 436); and if the soldier should disobey an order given to him by an officer in civilian clothing without the officer having first stated to the soldier that he was an officer, where the soldier did not know that he was an officer nor have reason to believe that he was an officer, then his ignorance would be excuse for his act of disobedience which might otherwise have been a very serious offense. Of course, a soldier is presumed—it is his duty—to know the officers of his command where reasonable time and opportunity after joining the command are shown to have existed for this purpose.

[Note: See Insanity of accused, par. 219.]

284. Evidence of Desertion. Absence without leave is usually proved by the evidence of an officer or noncommissioned officer of the company of the accused to the effect that he was absent from his organization without authority for a certain period, but if such witnesses are not available it may be proved by the entries on the muster rolls. In making the latter kind of proof, that portion of the muster roll relating to the accused, or a copy of it certified by the officer having official custody thereof, showing the accused was absent without leave, beginning a certain date, and (if such is the case) was dropped as a deserter, should be attached to the proceedings as an exhibit. But the muster roll, even though it refers to the accused as a "deserter," is not complete evidence of desertion; it is evidence only of absence without leave, and it is still necessary for the judge advocate to prove an intent to remain permanently absent; that is, to desert.

The condition of absence without leave having once been shown to exist will be presumed to continue in the absence of evidence to the contrary until the accused came again under military control. It is therefore necessary to prove only that the accused went absent without leave a certain date and came under military control a certain date. During the intermediate time it is presumed he was absent without leave.

If the condition of absence without leave is much prolonged, and there is no satisfactory explanation of it, the court may be justified in presuming from that alone an intent to remain permanently absent. The presumption of such intent will be strengthened by such circumstances as that the accused attempted to dispose of his uniform or other property; that substantially all his clothes were

missing from his locker when his absence was discovered; that his civilian clothes were missing; that he attempted to board a train that took him away from his station; that he purchased a ticket for a distant point or was arrested or surrendered at a considerable distance from his station; that while absent he was in the neighborhood of military posts and did not surrender to the military authorities; that he was dissatisfied in his company or with the military service; that he had made remarks indicating an intention to desert the service; that he was under charges or had escaped from confinement at the time he absented himself; that just previous to absenting himself he stole or took without authority money, civilian clothes, or other property that would assist him in getting away, etc.

On the other hand, such incidents are not always inconsistent with a guilt of mere absence without leave. They should be carefully weighed by the court. Previous excellent and long service, the fact that none of the property of the accused was missing from his locker, and the fact that he was under the influence of intoxicating liquor or drugs when he absented himself, and that he continued for some time under their influence, etc., are incidents going to show there was not an intent to remain permanently absent.

The fact that a reward has been paid for the apprehension of the accused as a deserter neither proves nor disproves an intent to desert. So also the opinions of witnesses as to whether the accused intended to desert and statements from them that the accused is a "deserter" or "deserted" are not only incompetent, but are valueless for any purpose to prove desertion.

(a) Statutory Rules of Evidence. A. W. 28 provides that it shall be sufficient proof of the offense of desertion by an officer that, having tendered his resignation and prior to due notice of the acceptance of the same, he quits his post or proper duties without leave and with intent to absent himself permanently therefrom. And similarly in the case of a soldier, A. W. 29 provides that it shall be sufficient proof of desertion in his case when it is proved that, without having first received a regular discharge, he again enlists in the Army or in the militia when in the service of the United States, or in the Navy or Marine Corps of the United States, or in any foreign army; and shall be further proof of fraudulent enlistment where the enlistment is in one of the forces of the United States mentioned above.

285. Drunkenness as Showing Absence of Intent. It is a general rule of law that voluntary drunkenness is not an excuse for crime committed in that condition. But the question whether or not the accused was drunk at the time of the commission of the criminal act may be material as going to indicate what species or kind of offense was actually committed. Thus, there are crimes which can be consummated only where a peculiar and distinctive intent or a conscious deliberation or premeditation has concurred with the act which could not well be possessed or entertained by an intoxicated person. In such cases evidence of the drunken condition of the party at the time of the commission of the alleged crime is held admissible, not to excuse or extenuate the act as such, but to aid in determining whether, in view of the state of his mind, such act amounted to the specific crime charged or which of two or more crimes similar but distinguished in degree it really was in law. Thus, in cases of such offenses as larceny, robbery, burglary, and passing counterfeit money, which require for their commission a certain specific intent, evidence of drunkenness is admissible as indicating whether the offender was capable of entertaining this intent or whether his act was anything more than a mere battery, trespass, or mistake. So, upon an indictment for murder, testimony as to the drunkenness

of the accused at the time of the killing may ordinarily be admitted as indicating a mental excitement, confusion, or unconsciousness incompatible under the circumstances of the case with premeditation or a deliberate intent to take life and as reducing the crime to the grade of manslaughter. On the other hand, where, to constitute the legal crime, there is required no peculiar intent—no wrongful intent other than that inferable from the act itself—as in cases of assault and battery, rape, or arson, evidence that the offender was intoxicated would, strictly, not be admissible in defense. (Winthrop, p. 440.)

Where drunkenness is pleaded as an excuse for crime such excuse should be received with caution. Drunkenness is easily simulated. It is sometimes resorted to for the purpose of stimulating the nerves to the point of committing the act. Where premeditation and intent first exist, followed by voluntary drunkenness and the commission of the crime during such state of drunkenness, the necessary intent to commit the crime will be presumed, whatever the state of drunkenness at the time of its commission may have been.

286. Drunkenness in Military Cases. In military cases, the fact of the drunkenness of the accused, as indicating his state of mind at the time of the alleged offense, whether it may be considered as properly affecting the issue to be tried, or only the measure of punishment to be adjudged in the event of conviction, is in practice always admitted in evidence. And where a deliberate purpose or specific intent is necessary to constitute the offense, as in cases of disobedience of orders in violation of A. W. 64, desertion, mutiny, cowardice, or fraud in violation of A. W. 94, the drunkenness, if clearly shown in evidence to have been such as to have incapacitated the party from entertaining such purpose or intent, will ordinarily be treated as constituting a legal defense to the specific act charged.

In such cases, however, if the drunken act has involved a disorder or neglect of duty prejudicial to good order and military discipline the accused may be convicted of that offense under A. W. 96. (Winthrop, p. 441.)

287. Proof of Drunkenness. Upon a trial for drunkenness it is not essential to confine the testimony to a description of the conduct and demeanor of the accused, but it is admissible to ask a witness directly if the accused "was drunk," or for a witness to state that the accused "was drunk," on the occasion or under the circumstances charged. Such a statement is not viewed by the authorities as of the class of expressions of opinion which are properly ruled out on objection unless given by experts, but as a mere statement of a matter of observation, palpable to persons in general, and so, proper to be given by any witness as a fact in his knowledge. It is preferable that all witnesses introduced to prove drunkenness should describe the conduct and demeanor of the accused in addition to giving their opinion as to whether the accused was drunk.

288. Reasonable Doubt and Burden of Proof. In order to convict, the court must be satisfied, beyond a reasonable doubt, that the accused is guilty as charged.

By "reasonable doubt" is intended not fanciful or ingenious doubt or conjecture but substantial, honest, conscientious doubt suggested by the material evidence in the case. It is an honest, substantial misgiving, generated by insufficiency of proof. It is not a captious doubt, nor a doubt suggested by the ingenuity of counsel or jury and unwarranted by the testimony; nor is it a doubt born of a merciful inclination to permit the defendant to escape conviction, nor prompted by sympathy for him or those connected with him. The meaning of the rule is that the proof must be such as to exclude not every hypothesis or possibility of innocence, but any fair and rational hypothesis

except that of guilt; what is required being not an absolute or mathematical but a moral certainty. A court-martial which acquits because, upon the evidence, the accused may possibly be innocent falls as far short of appreciating the proper amount of proof required in a criminal trial as does a court which convicts because the accused is probably guilty. (Winthrop, p. 476.)

In trials before courts-martial the prosecution has upon it the burden of proving the guilt of the accused beyond a reasonable doubt, and, whatever the defense of the accused may be, this burden never changes. After the evidence is all in the court must be convinced beyond a reasonable doubt of every element necessary to constitute the offense in order to justify it in convicting the accused of the offense charged.

In collateral issues arising in the course of the trial as to the competency of witnesses, the admissibility of testimony, and the like, the burden of proof rests upon the party who alleges incompetency or objects to the admission of particular testimony. (Davis, p. 267.)

SECTION IX.

JUDICIAL NOTICE.

289. Judicial Notice. Courts will recognize the existence and truth of certain matters bearing upon the issue before them of their own motion and without requiring the production of evidence. Such acceptance is known as "taking judicial notice" of them. This is done as to all matters of law and all facts which are so notorious as to need no evidence. To the former class belong the laws which the court applies in the decision of the cases before it, including the Constitution, laws, and treaties of the United States, those of the State in which it sits, the common law, and the law of nations. They also take notice of the great seal of the United States, those of the several States, the seal of courts of record, notaries public, etc. Under the latter head they will take judicial notice of the ordinary divisions of time, of calendar and lunar months, of weeks and days, and of the hours of the day; of astronomical and physical facts; of the laws of nature, including their ordinary operations and consequences; of the Government of the United States and those of the several States and their heads; of war and peace; and of the great facts of history as recorded in the works of writers of standard authority. So in addition all courts-martial will take judicial notice of the organization of the Army, the statutes relating to the Army, the Army Regulations, the contents of the several manuals issued, the existence and situation of military departments, reservations, and posts, and the stations of troops as published to the Army, the fact that an officer belongs to a certain organization, etc. General and special orders, general court-martial orders, and bulletins of the War Department and the headquarters of the several military departments may ordinarily be proved by printed official copies in the usual form. A court-martial will in general properly take judicial notice of the printed order as genuine and correct. A court-martial, however, should not in general accept in evidence, if objected to, a printed or written order which has not been made public to the Army without some proof of its genuineness and official character. Special and summary courts will take judicial notice of the published orders of the regimental and post commander. Where the price of an article furnished by the Government is published to the Army in orders, bulletins, or price lists, it will not be necessary to prove the price, as the court will take judicial notice of it.

It is proper, although not necessary, for the judge advocate to state to the court that the price as set out in the charges is the same as that fixed by the order, bulletin, or price list. If the court is uncertain as to the fact which it is called upon to notice judicially, it may refer to any person or to any document or book of reference to satisfy itself with regard thereto, or it may refuse to take judicial notice of the fact unless and until the party calling upon it to do so shall produce such document or book of reference.

CHAPTER XII.

COURTS-MARTIAL—CONCLUDING INCIDENTS OF THE TRIAL.

SECTION I.

STATEMENTS AND ARGUMENTS.

290. Scope of Statement. After the introduction of evidence has been completed the accused, personally or by counsel, and whether or not he has testified as a witness, may make an unsworn verbal or written statement as to the case. If the statement is in writing it should be signed by the accused, or by counsel in his behalf, and appended to the record. The statement may consist of a brief summary or version of the evidence, with such explanation or allegation of motive, excuse, matter of extenuation, etc., as the party may desire to offer, or it may embrace, with the facts, a presentation also of the law of the case and an argument both upon the facts and the law. (Winthrop, p. 450.) Such statement is not testimony and, therefore, is not subject to cross-examination, but as a personal defense or argument, however, it may and properly should be taken into consideration by the court. (Digest, p. 506, V, H, 1.)

291. Freedom of Expression. A large freedom of expression in his statement to the court is allowable to an accused, especially in his comments upon the evidence. So, an accused may be permitted to reflect within reasonable limits upon the apparent animus of his accuser or prosecutor, though a superior officer and of high rank. But an attack upon such a superior of a personal character and not apposite to the facts of the case is not legitimate; nor is language of marked disrespect employed toward the court. Matter of this description may indeed be required by the court to be omitted by the accused as a condition to his continuing his address or filing it with the record. (Digest, p. 506, V, H, 3.)

292. Admissions. While the statement proper can not, as previously stated, be regarded as evidence, and the accused is not in general to be held bound by the argumentative declarations it contains, yet if he clearly and unequivocally admits in his statement certain facts material to the prosecution, such may properly be viewed by the court and reviewing authority in the case. Such facts must, of course, not be inconsistent with the plea. But admissions of this sort can scarcely in any event constitute a sufficient basis for a conviction unless supported by material testimony on the trial.

[Note: See Chap. IX, par. 154, as to procedure where, after a plea of guilty, the accused makes a statement inconsistent with his plea.]

293. Arguments. After the accused has made a statement, if any, arguments

may be presented to the court by the judge advocate, the accused, and his counsel. The judge advocate has the right to make the opening and closing argument, but the court, in its discretion, may permit the defense to answer any new matter in the closing argument of the judge advocate.

SECTION II.

FINDINGS.

294. Voting. After the statements and arguments, if any are made, have been concluded the court will proceed to its judgment which consists of the findings and sentence. Members of a general or special court-martial, in giving their votes, shall begin with the junior in rank. (A. W. 31.) The votes of the members must be based upon and governed by the testimony in the case considered in connection with the plea. The charges and specifications are voted upon in the same order that is followed in arraigning the accused, the first specification to the first charge being voted upon, then the second, third, and thereafter in order, followed by a vote upon the charge itself; and so on with the other charges. A tie vote on a finding is a finding of not guilty.

[Note: For refusal to vote a member is chargeable under A. W. 96, see Chap. VII, par. 90.]

295. Majority Necessary to Convict—Exception. All convictions whether by general or special court-martial may be determined by a majority of the members present, except that no person shall by general court-martial be convicted of an offense for which the death penalty is made mandatory by law, unless by the concurrence of two-thirds of the members of said court-martial and for an offense in the Articles of War expressly made punishable by death. (A. W. 43.)

296. Reasonable Doubt. Where issues arise during the progress of a trial, as for instance as to the competency of members or witnesses, and evidence is taken, the question at issue is determined by preponderance of evidence; but in order to convict of the charges and specifications or any part of them the court must be satisfied of the guilt of the accused beyond a reasonable doubt.

[Note: For description of reasonable doubt, see Chap. XI, par. 288.]

297. General Principles Controlling Findings. The finding on the charge should be supported by the finding on the specification (or specifications), and the two findings should be consistent with each other. A finding of guilty on the charge would be quite inconsistent with a finding of not guilty on the specification. So a finding of guilty on a well-pleaded specification apposite to the charge, followed by a finding of not guilty either of the article charged or of some other proper article, would be an incongruous verdict. No matter how many specifications there may be, it requires a finding of guilty on but one specification (apposite to the charge) to support a similar finding upon the charge. (Digest, p. 536, XII, A, 2.) Evidence can not be taken after a finding has been reached.

298. Guilty of a Lesser Included Offense. If the evidence proves the commission of an offense which is included in that with which the accused is charged the court may except words of the specification, and if necessary substitute others instead, pronounce the innocence and guilt of the excepted and substituted words, respectively, and then find the accused either guilty of the charge or not guilty of the charge, but guilty of a violation of another proper article of war as the finding on the specification may require. Of this form of

verdict the most familiar is the finding of guilty of absence without leave under a charge of desertion. In such a case the court should find as follows where the charges are in the usual form:

Of the specification, guilty except the words "desert" and "in desertion," substituting therefor respectively the words "absent himself without leave from" and "without leave," of the excepted words not guilty, of the substituted words guilty.

Of the charge, not guilty but guilty of violation of the sixty-first article of war.

[Note: For a discussion of the incidental power of appointing and confirming the authorities to approve and confirm a finding of guilty of a lesser included offense see Chap. XVI, pars. 377 and 379.]

299. Guilty With Exceptions and Substitutions. It is a peculiarity of the finding at military law that a court-martial, where of opinion that any portion of the allegations in a specification is not proved, is authorized to find the accused guilty of a part of a specification only, excepting the remainder; or, in finding him guilty of the whole (or any part), to substitute correct words or allegations in the place of such as are shown by the evidence to be incorrect. And provided the exceptions or substitutions leave the specification still appropriate to the charge and legally sufficient thereunder, the court may then properly find the accused guilty of the charge in the usual manner. Familiar instances of the exercise of the authority to except and substitute in a finding of guilty occur in cases where, in the specification, the name or rank of the accused or some other person is erroneously designated, or there is an erroneous averment of time or place, or a mistaken date, or an incorrect statement as to amount, quantity, quality, or other particular, of funds or other property. But the authority to find guilty of a lesser included offense, or otherwise to make exceptions and substitutions in the findings, does not justify the conviction of the accused of an offense entirely separate and distinct in its nature from that charged, thus "selling" and "through neglect losing" property are separate offenses, though each is a violation of A. W. 84.

300. Substitution of General for Specific Article in the Charge. Another legal and now common form of finding is where an accused is charged with an offense, made punishable by an article of war other than the ninety-sixth (as for instance the ninety-fifth article), and the court is of the opinion that, while the material allegations in the specification are proved, they do not fully sustain the charge as laid, but do clearly constitute a violation of the ninety-sixth article of war. In this case the accused may properly be found guilty of the specification and not guilty of the charge, but guilty of "violation of the ninety-sixth article of war." It should be remembered, however, that the court can not in its findings legally substitute the ninety-sixth article of war for any other, unless the proof fails to substantiate the specification under the original charge.

301. Joint Charges. Where joint charges are tried, if one or more of the accused persons is acquitted and one or more is convicted, the findings should by proper exceptions eliminate the words showing that the acquitted person or persons was a joint participant in the offense, and should expressly acquit those persons whom it finds not guilty.

302. Reasons for Findings. A court-martial may spread upon the record of trial a brief statement of reasons upon which its findings are based. In many cases such a statement will aid the reviewing authority in determining the action to be taken by him.

303. Findings Where No Criminality is Involved. A finding of "guilty without criminality" is not consistent and should not be made. If the accused is found to have committed the act and done the things alleged in the specification, but without the guilty intent or knowledge essential to constitute the offense, the court should, as to the specification, find the accused "not guilty."

304. Findings Under Charge of Drunkenness. A person "under the influence of intoxicating liquor" or "intoxicated" is "drunk." Therefore, under the eighty-fifth article of war, in charging that the accused was found "drunk" the word "drunk" will be used. So in charging other offenses involving drunkenness no other word or phrase will be used as a substitute for "drunk." Under such charges the court should not in its findings substitute such phrases as "under the influence of intoxicating liquor" and "intoxicated" for "drunk."

305. Recording of Finding or Sentence by Reporter. A court-martial, member of court, or judge advocate can not, of course, lawfully communicate to a reporter or clerk, by allowing him to record the same or otherwise, the finding or sentence of the court. But the fact that the finding or sentence or both may have been made known to a reporter or clerk can not affect the legality of its proceedings or sentence. (Digest, p. 558, XIV, E, 7, g.)

SECTION III.

PREVIOUS CONVICTIONS.

306. Procedure as to Previous Convictions. Courts-martial will, in the case of a soldier, after a finding of guilty, be opened for the purpose of ascertaining whether evidence of previous convictions has been referred to the court by the appointing authority, and if so, of receiving it. The introduction and use of evidence of previous convictions will be limited to that pertaining to convictions by courts-martial of an offense or offenses committed by the accused during the current enlistment and within one year next preceding the commission of any of the offenses of which he stands convicted before the court. These convictions may be proved only by the records of previous trials and convictions or by duly authenticated copies of such records, or by duly authenticated copies of orders promulgating such trials and convictions. Copies of such records and orders promulgating such trials and convictions are duly authenticated through the impressed stamp of the bureau, office, or headquarters having custody of the original. The proper evidence of a previous conviction by summary court is a copy of the summary court record furnished to the company or other commander or one authenticated as an official copy by the signature of the commanding officer or his adjutant, or by the impressed stamp of the headquarters having custody of the original record and furnished for the purpose. In a trial by general court-martial, when the proof is the copy furnished to the company or other commander it will be returned to him and a certified copy of it attached to the record. The evidence of previous convictions referred to a special or summary court will, after trial, be returned to the appointing authority and will, after action by the latter on the case, be returned to the company or other command to which it pertains.

307. Character of Previous Convictions. By "previous conviction" is meant a previous conviction by a court-martial where the sentence has been approved by competent authority. A previous conviction by a civil or naval court, an acquittal, or an approved conviction by a court-martial that has been set aside as illegal is not a "previous conviction" as the phrase is used here. Previous

convictions are not limited to those for offenses similar to the one for which the accused is on trial. The object is to see if the accused is an old offender and therefore less entitled to leniency than if on trial for his first offense. This information might not be fully obtained if evidence of previous convictions of similar offenses only were laid before the court. The consideration of previous convictions has no bearing upon the question of guilt of the particular charge on trial, but only upon the amount and kind of punishment to be awarded. They are not considered until after the findings have been reached.

SECTION IV.

SENTENCES.

308. Voting. After the findings have been determined upon and resulted in a conviction upon the charge or some one at least of the charges when there are several, or in a conviction of a lesser offense included in the one charged, and, in the case of a soldier, the evidence of previous convictions, if any, have been introduced, the court proceeds to adjudge the sentence. In voting, the thirty-first article of war requires that the junior in rank shall vote first, and the votes are therefore taken in the inverse order of rank. Those members desiring to propose a sentence usually write it on a slip of paper and hand it to the president. The president reads the proposed sentences to the court and the members vote on them in order, beginning with the lightest, until a majority present, or, in cases where the death penalty is mandatory, two-thirds of the members of the general court-martial, agree upon a sentence. (See A. W. 43.) Even in a case where the punishment is fixed, as, for instance, under the eighty-second article where the punishment for lurking or acting as a spy is death, and under the ninety-fifth article where the punishment is dismissal, the members must by vote impose this punishment. All the members of the court, those who voted for an acquittal equally with those who voted for conviction, should vote for some sentence.

309. Mandatory and Discretionary Punishments. Punishment, under the Articles of War, is either mandatory, that is, a certain punishment is prescribed by the terms of the article, or is discretionary, that is, it is left to the discretion of the court-martial. If the punishment is prescribed in the article violated, any other punishment than that prescribed is illegal. For instance the punishment imposed by a court for a violation of the ninety-fifth article of war must be dismissal, it can not be less and it can not be more, though a conviction under other articles at the same trial might authorize the inclusion of other forms of punishment in the sentence. Before pronouncing sentence, the court should, therefore, examine the article violated to see what punishment may be legally awarded. As to discretionary punishments the President, by virtue of an act of Congress, has by executive order prescribed maximum limits of punishment for certain offenses when committed by soldiers. The latest order is found in Chapter XIII, par. 349. If the punishment is discretionary the court, before proceeding to award a punishment, will ascertain whether a limit is fixed in the order, and if no limit is fixed the court may impose any punishment that is sanctioned by the custom of the service.

[Note: See mandatory and discretionary punishment, Chap. IV, Sec. II, par. 40.]

310. Sentences for Officers. For officers the legal sentences by court-martial, depending on the nature of the offense, include death, dismissal with confine-

ment at hard labor, dismissal, loss of rank, suspension from rank, command, or duty, with or without loss of pay or part of pay, fine or forfeiture of pay, confinement to limits of post or reservation, reprimand, and admonition.

[Note: Immediately upon the promulgation of any sentence of court-martial in the case of a commissioned officer involving suspension from rank and command, confinement, reduction in lineal rank, or any other material change in the officer's status, the commander who has authority to approve such sentence and carry it into execution will advise The Adjutant General of the Army, by telegraph, of the sentence imposed as approved or mitigated and the date of promulgation thereof. (G. O. No. 6, War Dept., 1910.)]

311. Sentences for Soldiers. For soldiers, the legal sentences, depending on the nature of the offense and the jurisdiction of the court, include death, dishonorable discharge, confinement at hard labor, hard labor without confinement, forfeiture of pay, detention of pay, and reprimand; for noncommissioned officers, reduction to the ranks; for privates, first class, reduction to second-class privates and privates; for cooks of the Quartermaster Corps (where sentence is imposed by a general court-martial) reduction to the ranks; and for those holding a certificate of eligibility to promotion, deprivation of all rights and privileges arising from such a certificate.

[Note: 1. Confinement without hard labor should never be imposed. 2. For forms for sentences, see Appendix 9.]

312. Dismissal. Under the article of war which prescribes the sentence of dismissal upon conviction, no punishment in addition to dismissal is authorized. Therefore no punishment in addition to dismissal can legally be imposed upon conviction of an offense under the ninety-fifth article of war alone.

[Note: For statement by whom a sentence of dismissal or dishonorable discharge imposed by National Guard courts-martial, not in the service of the United States, must be approved, see sec. 107, act of June 3, 1916; 39 Stat., 166; Appendix 2, post.]

313. Loss of Rank. Loss of rank is accomplished by a sentence directing that an accused be placed at the foot of the list of officers of his grade and arm, or that he remain at the foot of such list until he shall have lost a certain number of files, or for a certain length of time, or that he lose a certain number of files, or that his name shall appear in the lineal list of officers of his arm next below that of a certain officer named.

314. Suspension From Rank. Suspension from rank includes suspension from command. It deprives an officer of the right to promotion to a vacancy in a higher grade occurring pending the term of suspension and which he would have been entitled to receive by virtue of seniority had he not been suspended. It does not, however, deprive the officer of the right to rise in files in his grade. Suspension from rank also makes an officer ineligible to sit upon a court-martial, court of inquiry, or military board, and deprives him of privileges that depend on rank, such as the selection of quarters.

315. Suspension From Command. This punishment merely deprives the officer of authority to exercise his proper military command and, consequently, of his right to give orders to or exact obedience from his juniors or perform any other duties that go with the exercise of command. It does not affect his right of promotion or any military rights or privileges other than those attaching to command. It is therefore not an appropriate punishment for a staff officer.

316. Suspension From Duty. Suspension from duty is practically equivalent to a sentence of suspension from command. It is appropriate in the case of an officer holding a position involving the performance of administrative duty,

as distinguished from actual military command, as in the case of officers of the staff.

317. Fine. A fine is distinguished from a forfeiture in that it is a punishment which imposes a pecuniary liability in general, not necessarily affecting pay. It is especially recognized as a form of punishment in the ninety-fourth article of war. It is usually accompanied in the sentence by a provision, in order to enforce collection, that the person fined shall be imprisoned until the fine is paid or until a fixed portion of time considered as an equivalent punishment has expired. Fines as well as forfeitures accrue to the United States and can not be imposed or collected for the benefit of any individual.

318. Reprimand. This sentence is usually awarded to officers only and for minor offenses where a mild penalty is to be inflicted. In general it is not appropriate for enlisted men, but is authorized in the cases of noncommissioned officers. The proper authority to administer the reprimand is the reviewing authority, and he may vary it in severity or mildness, according to his views of the case.

319. Confinement to Limits of Post or Reservation. This form of punishment is rather a deprivation of a privilege than confinement. Where it is imposed on an officer on duty with troops it is customary to so qualify it as to enable him to take part in maneuvers, practice marches, and perform other duties connected with his command.

320. Dishonorable Discharge. A dishonorable discharge can be imposed only pursuant to a sentence of a general court-martial. The discharge should be dated as of the day on which the order promulgating such approval is received at the post where the soldier is held. A sentence adjudging a dishonorable discharge to take effect at such period during a term of confinement as may be designated by the reviewing authority is illegal.

321. Suspension of Dishonorable Discharge. Members of a court-martial may properly recommend, in a communication made separately but forwarded to the reviewing authority with the record, that sentence of dishonorable discharge be suspended. (See par. 332.)

322. Confinement at Hard Labor. In the case of officers this punishment is imposed only in connection with a sentence of dismissal. Where "hard labor" is intended, it should be stated in the sentence, but the omission of these words will not prevent such punishment being required where it is authorized in the maximum-punishment order. (See A. W. 37.)

[Note: Chap. XVI, Sec. I, pars. 396-398, state the rules as to whether a post, the United States Disciplinary Barracks or one of its branches, or a penitentiary shall be designated as the place of confinement.]

323. Hard Labor Without Confinement. This punishment is regulated by the provisions of the Executive order fixing the maximum limits of punishment, Chapter XIII, Section VI, par. 349.

324. Forfeiture of Pay and Allowances. Pay and allowances can not be forfeited in a sentence by implication. If the court intends to forfeit pay or pay and allowances, the penalty of forfeiture should be adjudged in express terms in the sentence. No other punishment imposable by court-martial—not even a sentence of death, dismissal, suspension, dishonorable discharge, or imprisonment—involves of itself a forfeiture or deprivation of any part of the pay or allowances due the party at the time of the approval or taking effect of the sentence. It is not customary to provide in sentences for a forfeiture of allowances unless the sentence also imposes a dishonorable discharge and forfeiture of pay. A sentence of forfeiture of a certain number of days' pay, or two-thirds of a soldier's pay for a certain period, does not forfeit extra-duty pay. (Digest, p. 544, XII, B, 3, e (1); Bul. 18, War Dept., 1915, pp. 8, 9.)

325. Courts Can Not Stop Pay in Favor of Government or an Individual. A court-martial can direct a forfeiture only in favor of the United States, and can not assign the pay of a soldier to any other person; nor can a soldier be required to receipt for money paid without his consent. A sentence can not appropriate, or stop pay for the reimbursement or benefit of the Government or a Government agency, such as a company fund, post fund, hospital fund, nor of an individual civil or military, however justly the same may be due him, either for money borrowed, stolen, or embezzled by the accused or to satisfy any other pecuniary liability of the accused, whether in the nature of debt or damages. The "stoppage" of pay to reimburse the Government or a Government agency on account of losses for which officers and enlisted men are responsible is purely an administrative matter with which courts-martial have nothing to do. Sentences providing that a soldier shall be dishonorably discharged, forfeiting all pay and allowances due or to become due, "except such amounts as may be due the post exchange, Fort ———, and the company fund, Company ———, ——— Infantry," in no way hasten or facilitate the settlement of the debts due the exchange or company fund. Such matters in a sentence are mere surplusage.

326. Forfeiture of Deposits. Deposits of soldiers and interest thereon are forfeited by desertion, but the forfeiture can not be imposed by sentence of a court-martial. They are exempt from liability to meet a sentence of a court-martial imposing forfeiture of pay or allowances. A sentence that a soldier shall deposit a certain part of his pay is illegal. (Digest, p. 547, XII, B, 4, c.)

327. Reduction of Noncommissioned Officer. This punishment is regulated by the provisions of the Executive order fixing maximum limits of punishment, Chapter XIII, Section VI, par. 349.

328. Detention of Pay. This punishment was revived by the Executive order of September 5, 1914, fixing the maximum limits of punishment, and is regulated by the provisions of the Executive order contained in Chapter XIII, Section VI, par. 349.

329. When Reward for Apprehending Deserter Not to be Stopped. If a soldier be brought to trial under a charge of desertion and acquitted, or convicted of absence without leave only, any amount paid as a reward for his arrest will not be stopped against his pay, and a sentence providing for such a stoppage is not authorized.

330. Sentences of General Prisoners. Courts-martial in imposing sentences upon general prisoners are restricted to imposing additional confinement at hard labor to be served upon the completion or termination of their existing sentences, and will not interfere with the manner of executing such sentences by prescribing loss of good-conduct time, solitary confinement, or confinement on bread-and-water diet, leaving all such punishments to be imposed by the commanding officer as the ordinary means of enforcing discipline.

331. Reasons for Sentence. A court-martial may spread upon the record of trial a brief statement of reasons upon which its sentence is based. In many cases such a statement will aid the reviewing authority in determining the action to be taken by him.

332. Recommendations to Clemency. When a court-martial, or any member thereof, desires to submit a recommendation to clemency, including a recommendation for the suspension of the whole or of any part of the sentence imposed by the court, such recommendation will be signed by each member of the court desiring to participate therein. The communication carrying the recommendation will include a statement in succinct form of the reasons upon which the recommendation is based and will be appended to the record of trial. (See par. 357 (d).)

CHAPTER XIII. COURTS-MARTIAL—PUNISHMENTS.

SECTION I.

DISCIPLINARY POWER OF COMMANDING OFFICER.

333. Authority For. While courts-martial are the judicial machinery provided by law for the trial of military offenses, the law also recognizes that the legal power of command, when wisely and justly exercised to that end, is a powerful agency for the maintenance of discipline. Courts-martial and the disciplinary powers of commanding officers have their respective fields in which they most effectually function. The tendency, however, is to resort unnecessarily to courts-martial. To invoke court-martial jurisdiction rather than to exercise this power of command in matters to which it is peculiarly applicable and effective, is to choose the wrong instrument, disturb unnecessarily military functions, injure rather than maintain discipline, and fail to exercise an authority the use of which develops and increases the capacity for command.

Legal sanction is now given to the exercise of such disciplinary power by the following article of war:

"Art. 104. Under such regulations as the President may prescribe, and which he may from time to time revoke, alter, or add to, the commanding officer of any detachment, company, or higher command may, for minor offenses not denied by the accused, impose disciplinary punishments upon persons of his command without the intervention of a court-martial, unless the accused demands trial by court-martial.

"The disciplinary punishments authorized by this article may include admonition, reprimand, withholding of privileges, extra fatigue, and restriction to certain specified limits, but shall not include forfeiture of pay or confinement under guard. A person punished under authority of this article who deems his punishment unjust or disproportionate to the offense may, through the proper channel, appeal to the next superior authority, but may in the meantime be required to undergo the punishment adjudged. The commanding officer who imposes the punishment, his successor in command, and superior authority shall have power to mitigate or remit any unexecuted portion of the punishment. The imposition and enforcement of disciplinary punishment under authority of this article for any act or omission shall not be a bar to trial by court-martial for a crime or offense growing out of the same act or omission; but the fact that a disciplinary punishment has been enforced may be shown by the accused upon trial, and when so shown shall be considered in determining the measure of punishment to be adjudged in the event of a finding of guilty."

While commanding officers should always use their utmost influence to prevent breaches of discipline and compose conditions likely to give rise to such breaches, they should also impose and enforce the disciplinary punishment authorized by the above article. This authority, involving the power, judgment, and discretion of the commander, can not be delegated to or in any manner participated in by others, but must be exercised by the commander upon his own judgment and in strict compliance with the article and the regulations prescribed by the President pursuant thereto. Accordingly, the commanding officer of a detachment, company, or higher command will usually dispose of, and may award disciplinary punishment for, any offense committed by any enlisted man of his command which would ordinarily be

disposed of by summary court-martial, when the accused does not deny that he committed the offense and does not demand trial by court-martial before the commanding officer has made and announced his decision in the case.

334. Record of Punishment. For each punishment awarded, the commander will cause a brief record to be made showing—

(a) Name of accused.

(b) Brief statement of offense, including time and place.

(c) Statement as to whether or not accused demanded trial by court-martial. To be effective such demand must be made before award of punishment by commanding officer.

(d) Disposition of case, with date and punishment awarded, if any.

(e) Whether or not appeal was made to higher authority.

(f) Decision of higher authority on appeal.

(g) Whether or not accused was required to serve punishment pending appeal.

335. Appeals. If an appeal is made to the next superior authority it shall be in writing through the immediate commander awarding the punishment or his successor, who will immediately forward it to the superior with a copy of the record. An appeal shall consist of a brief statement signed by the accused, giving his reasons for regarding the punishment as unjust or disproportionate, and shall be accompanied by a like brief statement by the commander in support of the punishment awarded. The superior will, in passing upon the appeal, hear no witnesses and will consider no statements other than those forwarded with the appeal, but will be limited strictly to the consideration of the punishment awarded. He will be reluctant to disturb the award of punishment, but when justice clearly requires such action he may modify, set aside, or even increase the punishment awarded, but in no case will he award a different kind of punishment. After having considered the appeal he will return the record to the commanding officer from whom received, with a statement of his disposition of the case.

336. Not Limited to Soldiers. The power is not limited in its application, either in law or principle, to enlisted men, but may with propriety be applied as well to commissioned officers, especially those of junior grades. Obviously in the case of officers the occasion for such action will be less frequent, the variety of punishment available more restricted, and the selection of the most effectual punishment more perplexing, but when the best interests of discipline require such action it shall be taken with firmness and in no wise restrained by an unwarranted regard for the commissioned grade of the offender.

If the accused demands a court-martial, steps will promptly be taken to bring him to trial and notation of the demand will appear upon the charges.

SECTION II.

CONFINEMENT IN A PENITENTIARY.

337. When Authorized. The forty-second article of war follows the rules of the Federal Penal Code and practice respecting the imposition of penitentiary confinement in so far as they can be applied to court-martial procedure. Under the Federal Penal Code any offense is a felony which is punishable under the code or other statute of the United States by confinement in excess of one year. But no person may be confined in a penitentiary unless the punishment actually adjudged for an offense of which he has been convicted exceeds one year. Under civil procedure it is not permissible to join in a single indictment and trial offenses of a different nature. As a matter of practice,

also, confinement is never ordered to be executed in a penitentiary unless among the offenses upon which the sentence is awarded is found a felony; that is to say, an offense of a civil nature, separately punishable by confinement to exceed one year. The practical result is that no person is confined in a penitentiary unless both of the following conditions subsist:

(1) The confinement that could lawfully be awarded as punishment of some one of the offenses of which he stands convicted (if that conviction stood alone) would exceed one year.

(2) The confinement actually adjudged exceeds one year.

The ninety-third and ninety-sixth articles of war now confer upon courts-martial jurisdiction to try all crimes and offenses, not capital, of which persons subject to military law may be guilty. Under the military practice, dissimilar offenses may be joined in the same set of charges; convictions may be had on one set of charges joining crimes of a civil nature with purely military offenses, and a single sentence may be adjudged on all the convictions. Also, there are certain purely military offenses which are by statute made punishable by confinement in a penitentiary, regardless of the term of confinement imposed. Notwithstanding these departures from the practice of Federal courts, the jurisdiction granted to courts-martial to punish offenses of a civil nature ought not to be exercised with greater harshness than is practiced under the criminal jurisdiction of United States courts, and the analogies with the penal rules of those courts ought carefully to be maintained. The forty-second article of war and the following rules of practice which result from that article preserve these analogies as far as they can be preserved under court-martial procedure.

338. Classes of Sentences to be Executed in a Penitentiary. Sentences of the following classes may be executed in a penitentiary:

Class 1: Commutation of Death Sentence. Any confinement, whether more or less than a year, awarded by way of commutation of a death sentence, may be executed in a penitentiary; and this is true whether the offense for which the sentence of death was awarded was of a military or of a civil nature, and whether the sentence was awarded on conviction of a capital charge alone or on conviction on a capital charge coupled with conviction on other charges not capital.

Class 2: Military Offenses. A sentence of confinement awarded upon conviction of one or more of the military offenses enumerated in this class may be executed in a penitentiary, regardless of the length of the sentence imposed, but, in practice, a penitentiary should not be designated unless the confinement adjudged exceeds one year. However, if a conviction is had on several offenses, either military or civil in nature, one of which is included in this class, and the sentence adjudged on all the convictions together exceeds one year, the confinement may be executed in a penitentiary. The military offenses comprised in this class are:

- (a) Desertion in time of war.
- (b) Repeated desertion in time of peace.
- (c) Mutiny.

Class 3: Offenses of a Civil Nature. A sentence exceeding one year's confinement, awarded, either on conviction of any one or more of the several offenses of a civil nature described below, coupled with a conviction or convictions of one or more military offenses, may be executed in a penitentiary, if any one of the several offenses of a civil nature standing alone would be punishable by confinement exceeding one year by the limits of punishment order, or, if not covered by said order, then by the law denouncing the offense, or by any other Federal statute.

The civil offenses contemplated in class 3 are:

(a) An act or omission specified and denounced as an offense in the Penal Code of the United States.

(b) An act or omission specified and denounced as an offense in any other statute of the United States. This heading has reference particularly to penal provisions not properly separable from the administrative laws of the several branches and departments of government, and not included in the Penal Code. Such offenses will rarely be encountered in court-martial practice.

(c) An act or omission committed or omitted in any place over which the United States has exclusive jurisdiction as provided in the third paragraph of section 272, Penal Code of the United States, where such act is recognized as an offense by the law of the State, Territory, or District in which such place is situate, and when such act is not specifically denounced in the laws of Congress, but is adopted by section 289 of said code. Such offenses, known to local law and not specifically provided for by Federal law, will constitute a small class, infrequently encountered.

(d) An act or omission recognized as an offense at the common law as the same exists in the District of Columbia, wherever committed or omitted. The offenses under this head that may be encountered in court-martial practice include the offense of sodomy.

339. Authority for Penitentiary Sentence to be Cited. In each case tried by general court-martial in which a penitentiary is designated as the place of confinement of the person tried, the record of trial, when forwarded to the Judge Advocate General of the Army, will be accompanied by a signed statement indicating the law or laws authorizing the confinement in a penitentiary of the person sentenced.

In each case tried by general court-martial in which the confinement of the offender in a penitentiary is authorized by law, but in which a place other than a penitentiary is designated as the place of confinement, the record of trial, when forwarded to the Judge Advocate General of the Army, will be accompanied by a signed statement indicating the law authorizing the confinement in a penitentiary of the person sentenced and the reasons, briefly expressed, for designating a place other than a penitentiary, instead of a penitentiary, as the place of confinement in the particular case.

If the law relied upon as authorizing confinement in a penitentiary be a Federal statute an accurate citation will be regarded as sufficient to indicate the law, but if any other law is relied upon as authorizing such confinement, the law will be quoted in full in the required statement.

SECTION III.

WAR DEPARTMENT POLICY REGARDING PUNISHMENTS.

340. Desertion. The policy of the War Department respecting punishment for desertion was announced in General Orders, No. 77, War Department, June 10, 1911. Corrective confinement and forfeiture were suggested in cases of inexperienced soldiers who by surrender manifested a disposition to atone for their offenses. The number so punished and saved to the service has so increased each year that this policy has been enforced with fairly satisfactory results. In addition a limited number of this class of offenders has been restored to duty without trial under the provisions of A. R. 131.

Since that order was issued important changes have been introduced in our military penology. Purely military offenders serving sentences in the United States Disciplinary Barracks at Fort Leavenworth and its branches may

be restored to an honorable status and complete their enlistment. By the act of August 22, 1912 (37 Stat., 356), re-enlistment of this class of offenders is authorized with the approval, in each case, of the Secretary of War. Under the provisions of the act of April 27, 1914 (38 Stat., 354), dishonorable discharge may be suspended with a view to restoration to duty by remission thereof should the conduct of the offender warrant. There are now additional means of saving men to the colors—men whose offenses are thoughtless acts due to youth or inexperience or committed under some special stress, and for these reasons have in them less of the element of culpability. Supplementing these methods is the establishment of disciplinary organizations at the United States Disciplinary Barracks where the offenders of this class who desire re-enlistment or restoration may receive an intensive practical training to fit them for efficient service from the moment of rejoining. It is confidently believed that men restored in this way will make better soldiers than those restored by the old methods, viz., without trial under A. R. 131 or with trial and a short period of corrective punishment.

These old methods may be continued in the limited number of cases where there are good grounds for belief that a soldier restored by such methods will creditably complete his enlistment period, but all doubtful cases should be sent before a court competent to adjudge dishonorable discharge and the longer periods of confinement, to the end that advantage may be taken of the more effective methods of reformation and training by hard labor and intensive practical military instruction now provided at the United States Disciplinary Barracks. These periods of confinement are graduated so as to prevent inequalities of punishment for like degrees of culpability and are sufficient, it is believed, to meet the ends of punishment where restoration to duty is not in contemplation. Where restoration is in contemplation, as in case of purely military offenders, including deserters, the period of confinement imposed is, under the new policy, in practical effect the maximum of an indeterminate sentence. In other words, the period for which the offender is held depends entirely upon himself. With good conduct and proper progress toward reform evidencing efficiency in training and fitness to resume service relations the sentence of confinement terminates and the honorable status of duty with the colors is resumed.

While it is the effect of this policy to mitigate the condition of the peace deserter who desires to redeem his record and earn an honorable restoration to duty with the colors, it carries no substantial mitigation as to other classes of deserters. Experience has not thus far demonstrated the wisdom of any change in the policy of severe punishment for this latter class. An engagement for military service has little in common with an ordinary private contract for personal service, and the fact that an individual may abandon such a contract with only minor consequences to himself furnishes no suggestion that a corresponding rule may be properly adopted in the Army. Nor does the fact that the early requirement of the common law that a call to civil office or civil employment under the Government could not be disregarded by the citizen, nor the obligations of such office or employment be laid down at his will, no longer obtains, furnish any such suggestion. An engagement for military service creates a special status, and many obligations flow from that status which are not obligations of the citizen in the civil service of the Government or under a private contract for personal service. Other closely related considerations inherent in the nature of military service support this view. The Army is an emergent arm of the public service which the Nation holds ready for a time of great peril. Military service is an obligation which every citizen owes the Government. It is settled law that such service may be com-

pelled, if necessary, by draft. Nor is the obligation of the soldier who volunteers for a fixed period different from that of the drafted soldier. By his act of volunteering he consecrates himself to the military service. His engagement, supported by an oath of allegiance, is that the Nation may depend upon him for such service during the fixed period, whatever may be the emergency. When this engagement is breached a high obligation to the Nation is disregarded, a solemn oath of allegiance is violated, and the Government is defrauded in the amount of its outlay incident to inducting the soldier into the military service, training, clothing, and caring for him while he remains in that service, and transporting him to the station from which he deserts. Desertion is thus seen to be, not simply a breach of contract for personal service, but a grave crime against the Government; in time of war perhaps the gravest that a soldier can commit, and at such times punishable with death. These facts furnish ample justification for a continuance of the policy of severe punishment for the offense of desertion in time of peace, subject only to the qualification that it should not be severe to the degree of barring an honorable restoration to duty of the thoughtless, young, or inexperienced offenders who desert and who, on return, manifest a desire to atone for their desertions and qualify themselves in character and training for such restoration by service in the disciplinary battalions and companies now organized at the United States Disciplinary Barracks.

341. Segregation of Prisoners. It is the policy of the War Department to separate, so far as practicable, general prisoners convicted of offenses punishable by penitentiary confinement from general prisoners convicted of purely military offenses or of misdemeanors in connection with purely military offenses. In furtherance of this policy, reviewing authorities will designate a penitentiary as the place of confinement of general prisoners sentenced to be confined for more than one year according to the rules laid down in Section II, *supra*, except in individual cases in which the proved circumstances show that the holding of the prisoners so convicted in barracks associations with misdemeanants and military offenders will not be to the detriment of the latter. For general prisoners to be confined in penitentiaries, reviewing authorities in the United States, Canal Zone, Hawaii, or the Philippine Islands will designate the United States penitentiary at Leavenworth, Kan., as the place of confinement, except that such prisoners as are residents of Hawaii, Porto Rico, and the Canal Zone may be confined in local penitentiaries, and reviewing authorities in the Philippine Islands will designate the penitentiary at Bilibid, Manila, P. I., as the place of confinement for prisoners who are residents of the Philippine Islands.

342. Adaptation of Punishments. In cases where the punishment is discretionary the best interests of the service and of society demand thoughtful application of the following principles: That because of the effect of confinement upon the soldier's self-respect confinement is not to be ordered when the interests of the service permit it to be avoided; that a man against whom there is no evidence of previous convictions for the same or similar offenses should be punished less severely than one who has offended repeatedly; that the presence or absence of extenuating or aggravating circumstances should be taken into consideration in determining the measure of punishment in any case; that the maximum limits of punishment authorized are to be applied only in cases in which, from the nature and circumstances of the offense and the general conduct of the offender, severe punishment appears to be necessary to meet the ends of discipline; and that in adjudging punishment the court should take into consideration the individual characteristics of the accused, with a view to determining the nature of the punishment best suited to pro-

duce the desired results in the case in question, as the individual factor in one case may be such that punishment of one kind would serve the ends of discipline, while in another case punishment of a different kind would be required. As an instance of the necessity for adapting punishment to the particular case under consideration, it is to be noted that prior experience with detention of pay by sentence of court-martial indicates that this form of punishment, while not generally applicable, was nevertheless found to be an effective means of restraint and discipline for a considerable number of offenders.

343. Relative Severity of Punishments. The usual punishments imposed upon soldiers are the following, beginning with the least severe:

- (1) Detention of pay,
- (2) Forfeiture of pay,
- (3) Reduction,
- (4) Hard labor without confinement,
- (5) Confinement at hard labor, and
- (6) Dishonorable discharge.

In the absence of evidence of two or more previous convictions, a minor offense, the nature of which appears to demand punishment by hard labor, should ordinarily be punished by hard labor without confinement, rather than by confinement at hard labor. For offenses properly punishable by detention of pay, forfeiture of pay, reduction, or hard labor without confinement, those forms of punishment should, as a rule, be resorted to before confinement at hard labor is imposed.

SECTION IV.

PROHIBITED PUNISHMENTS.

344. By Statute. Punishment by flogging, or by branding, marking, or tattooing on the body is prohibited. (A. W. 41.)

345. By Custom and Regulations. Many punishments formerly sanctioned have now, under a more enlightened spirit of penology, become so obsolete as to be effectually prohibited by custom without the necessity of regulations; among these, are carrying a loaded knapsack, wearing irons (both handcuffs and leg irons—these are now used only in exceptional cases for the purpose of preventing escape and not as a punishment), shaving the head, placarding, pillory, stocks, and tying up by the thumbs. To impose military duty in any form as a punishment must tend to degrade it, to the prejudice of the best interests of the service; such punishments, therefore, as imposing tours of guard duty or requiring a soldier to sound all calls at the post for a certain period, are forbidden. Solitary confinement on a bread and water diet and the placing of a prisoner in irons are regarded as means of enforcing prison discipline. They will not be imposed as a punishment by a court-martial.

SECTION V.

DEATH—COWARDICE—FRAUD.

346. Death Penalty. No person shall, by general court-martial, be convicted of an offense for which the death penalty is made mandatory by law, nor sentenced to suffer death, except by the concurrence of two-thirds of the members of said court-martial and for an offense in these articles expressly made punishable by death. (A. W. 43.) A court-martial, in imposing the sentence of death, should not designate the time and place for its execution,

such designation not being within its province, but pertaining to that of the reviewing or confirming authority. If it does so designate, this part of the sentence may be disregarded, and a different time and place be fixed by the reviewing or confirming authority. (Digest, p. 165, XCVI, B.) If the designated day passes without execution, the same authority, or his superior, may name another day. Death by hanging is considered more ignominious than death by shooting and is the usual method of execution designated in the case of spies, of persons guilty of murder in connection with mutiny, or sometimes for desertion in the face of the enemy; but in case of a purely military offense, as sleeping on post, such sentence when imposed is usually "to be shot to death with musketry." Hanging is the proper method of executing a death sentence when imposed for violation of A. W. 92. For the sake of example and to deter others from committing like offenses the death sentence may, when deemed advisable, be executed in the presence of the troops of the command.

347. Cowardice—Fraud—Accessory Penalty. When an officer is dismissed from the service for cowardice or fraud, the crime, punishment, name, and place of abode of the delinquent shall be published in the newspapers in and about the camp and in the State from which the offender came or where he usually resides; and after such publication it shall be scandalous for an officer to associate with him. (A. W. 44.) The terms "cowardice" and "fraud" as employed in this article refer mainly to the offenses made punishable by A. W. 75 and 94. With these, however, may be regarded as included all offenses in which fraud or cowardice is necessarily involved, though the same be not expressed in terms in the charge or specification. (Digest, p. 166, C, A.) The publication throughout the United States in press dispatches of "the crime, punishment, name, and place of abode" of the accused is a sufficient compliance with the article. (See Digest, p. 167, C, B.)

SECTION VI.

MAXIMUM LIMITS.

348. By Whom Prescribed. Whenever the punishment for a crime or offense made punishable by these articles is left to the discretion of the court-martial, the punishment shall not, in time of peace, exceed such limit or limits as the President may from time to time prescribe. (A. W. 45.)

349. Executive Order. The following Executive order becomes operative on March 1, 1917, as to offenses committed on and after that date and as to criminal acts, committed prior to that date, whose maximum punishment was not prescribed in the Executive order of September 5, 1914. The Executive order of September 5, 1914, published in General Orders, No. 70, War Department, 1914, prescribing limits of punishment, remains operative as to offenses committed before March 1, 1917, except as to criminal acts whose maximum punishment has been decreased by this order, which will not be followed by severer punishment than is hereinafter prescribed.

EXECUTIVE ORDER.

Under authority of an act of Congress approved September 27, 1890 (26 Stat., 491), as re-enacted in article 45 of section 3 of an act of Congress approved August 29, 1916 (39 Stat., 657), the following maximum limits, in time of peace, of punishment of soldiers are prescribed:

| | Uttering a forged instrument. | Yes..... | 5 | | | | |
| | Violation of condition of parole by general prisoner. | | | 3 | | | |

ARTICLE II.

EQUIVALENTS.

Section 1. Subject to the limitations set forth elsewhere in this order, substitutions for punishments specified in Article I thereof are authorized at the discretion of the court, at the rates indicated in the following table of equivalents:

| Forfeiture. | Confinement at hard labor. | Detention. | Hard labor without confinement. |
|---------------|----------------------------|---------------|---------------------------------|
| 1 day's pay.. | 1 day..... | 1½ day's pay. | 1½ days. |

ARTICLE III.

GENERAL LIMITATIONS.

Section 1. A court shall not, by a single sentence which does not include dishonorable discharge, adjudge against a soldier:

(a) Forfeiture of pay at a rate greater than two-thirds of his pay per month.

(b) Forfeiture of pay in an amount greater than two-thirds of his pay for six months.

(c) Confinement at hard labor for a period greater than six months.

Sec. 2. A court shall not, by a single sentence, adjudge against a soldier:

(a) Detention of pay at a rate greater than two-thirds of his pay per month.

(b) Detention of pay in an amount greater than two-thirds of his pay for three months.

(c) Hard labor without confinement for a period greater than three months.

ARTICLE IV.

NONCOMMISSIONED OFFICERS.

Section 1. A court shall not, unless they in the same sentence adjudge reduction to the ranks, adjudge against a noncommissioned officer confinement at hard labor, nor hard labor without confinement.

Sec. 2. A court may, upon his conviction of an offense or offenses for which they may adjudge confinement at hard labor for a period of five or more days, authorized substitution considered, adjudge, in addition to the punishments otherwise authorized, reduction against a noncommissioned officer or against a private, first class.

ARTICLE V.

PREVIOUS CONVICTIONS.

Section 1. A general or special court shall, upon conviction of a soldier, be opened and shall thereupon ascertain whether there is evidence of a previous conviction or convictions, which has been referred to the court by the convening authority, and, if there be such evidence, shall receive it.

Sec. 2. A court may, under the authority contained in section 1 of this article, receive evidence only of convictions by court-martial of an offense or offenses committed by the accused during his current enlistment and within one year next preceding the commission by him of an offense of which he stands convicted before the court. These convictions may be proved only by the records of the trials in which they were had, or by duly authenticated copies of such records, or by duly authenticated copies of orders promulgating such trials and convictions.

ARTICLE VI.

DISHONORABLE DISCHARGE.

Section 1. A court may, upon his conviction of an offense or offenses for none of which dishonorable discharge and forfeiture of all pay and allowances due and to become due is, in Article I of this order or by the custom of the service, authorized, upon proof of five or more previous convictions, adjudge against a soldier, in addition to the confinement at hard labor without substitution authorized in said article or by the custom of the service for the offense or offenses of which he is convicted, dishonorable discharge and forfeiture of all pay and allowances due and to become due, and, in any such case in which such confinement so authorized is less than three months, a court may adjudge, in addition to such discharge and forfeiture, confinement at hard labor for three months.

Sec. 2. A court may, upon his conviction upon one arraignment of two or more offenses for none of which dishonorable discharge, confinement at hard labor and forfeiture of all pay and allowances due and to become due is, in Article I of this order or by the custom of the service, authorized, but the aggregate term of confinement at hard labor for which, as authorized in said article or by the custom of the service, without substitution, equals or exceeds six months, adjudge against a soldier, in addition to the confinement at hard labor, without substitution, authorized in said article or by the custom of the service for the offense or offenses of which he is convicted, dishonorable discharge and forfeiture of all pay and allowances due and to become due.

ARTICLE VII.

EFFECT AND APPLICATION OF THIS ORDER.

Section 1. This order prescribes the maximum limit of punishment for each of the offenses therein specified, and thus indicates an appropriate punishment for an offense which is attended by aggravating circumstances, or after conviction of which there is received by the court evidence of several previous convictions. In other cases the punishment will be graded down according to the circumstances thereof.

Sec. 2. Offenses not herein provided for remain punishable as authorized by statute or the custom of the service, but, in cases for which maximum punishments are not prescribed, courts will be guided by limits of punishment prescribed for closely related offenses.

ARTICLE VIII.

ADMINISTRATIVE RULES.

Section 1. Hard labor without confinement, when imposed as a punishment, shall be performed in addition to other duties which fall to the soldier, and no soldier shall be excused or relieved from any military duty for the purpose of performing hard labor without confinement which has been imposed as a punishment, but a sentence imposing such punishment shall be considered as satisfied when the soldier shall have performed hard labor during available time in addition to performing his military duties.

Sec. 2. Pay detained pursuant to the sentence of a court-martial will be detained by the Government until the soldier is furloughed to the reserve, discharged from the service, or mustered out of active Federal service.

ARTICLE IX.

DATE ON WHICH OPERATIVE.

This order shall become operative on March 1, 1917, as to offenses committed on and after that date and as to criminal acts, committed prior to that date, whose maximum punishment was not prescribed in the Executive order of September 5, 1914. The Executive order of September 5, 1914, published in General Orders, No. 70, War Department, 1914, prescribing limits of punishment, shall remain operative as to offenses committed before March 1, 1917, except as to criminal acts whose maximum punishment has been decreased by this order, which will not be followed by severer punishment than is hereinbefore prescribed.

WOODROW WILSON.

THE WHITE HOUSE,
December 15, 1916.

[Note: Nothing in the foregoing Executive order is applicable to the National Guard not in the service of the United States. Sec. 102, act of June 3, 1916 (39 Stat., 208).]

CHAPTER XIV.

COURTS-MARTIAL—PROCEDURE OF SPECIAL AND SUMMARY COURTS AND PROCEDURE ON REVISION.

SECTION I.

SPECIAL COURTS-MARTIAL.

350. Procedure. The procedure of and before special courts-martial will, so far as practicable, be identical with that prescribed for general courts-martial.

SECTION II.

SUMMARY COURTS-MARTIAL.

351. Procedure. (a) The summary court will be opened at a stated hour daily, except Sundays, for the trial of such cases as have been properly referred to it for trial. Trials will be had on Sunday only when the exigencies of the service make it necessary.

(b) The summary court will at the beginning of each trial, in the order of such trial, give to and enter in the proper place on the charges in the case a serial number.

(c) The procedure of and before summary courts-martial will, so far as

practicable, be identical with that prescribed for general courts-martial. In the trial of a case the summary court represents both the Government and the accused. He will see to it that the interests of both are fully conserved.

(d) When the accused pleads guilty he will—

(1) Explain to him (a) the elements constituting the offense to which he has pleaded guilty, and (b) the maximum punishment therefor;
